Tables of Abbreviations

The following tables and notes are intended to guide readers of THE CATHOLIC ENCYCLOPEDIA in interpreting those abbreviations, signs, or technical phrases which, for economy of space, will be most frequently used in the work. For more general information see the article ABBREVIATIONS, ECCLESIASTICAL.

I.—GENERAL ABBREVIATIONS.

a.	article.	inf.	below (Lat. <i>infra</i>).
ad an.	at the year (Lat. <i>ad annum</i>).	It.	Italian.
an., ann.	the year, the years (Lat. <i>annus, anni</i>).	l. c., loc. cit.	at the place quoted (Lat. <i>loco citato</i>).
ap.	in (Lat. <i>apud</i>).	Lat.	Latin.
art.	article.	lat.	latitude.
Assyr.	Assyrian.	lib.	book (Lat. <i>liber</i>).
A. S.	Anglo-Saxon.	long.	longitude.
A. V.	Authorized Version (i.e. tr. of the Bible authorized for use in the Anglican Church—the so-called “King James”, or “Protestant” Bible.	Mon.	Lat. <i>Monumenta</i> .
b.	born.	MS., MSS.	manuscript, manuscripts.
Bk.	Book.	n., no.	number.
Bl.	Blessed.	N. T.	New Testament.
C., c.	about (Lat. <i>circa</i>); canon; chapter; <i>compagnie</i> .	Nat.	National.
can.	canon.	Old Fr., O. Fr. . .	Old French.
cap.	chapter (Lat. <i>caput</i> —used only in Latin context).	op. cit.	in the work quoted (Lat. <i>opere citato</i>).
cf.	compare (Lat. <i>confer</i>).	Ord.	Order.
cod.	codex.	O. T.	Old Testament.
col.	column.	p., pp.	page, pages, or (in Latin references) <i>pars</i> (part).
concl.	conclusion.	par.	paragraph.
const., constit. . .	Lat. <i>constitutio</i> .	passim.	in various places.
curâ.	by the industry of.	pt.	part.
d.	died.	Q.	Quarterly (a periodical), e.g. “Church Quarterly”.
dict.	dictionary (Fr. <i>dictionnaire</i>).	Q., QQ., quæst. . .	question, questions (Lat. <i>quæstio</i>).
disp.	Lat. <i>disputatio</i> .	q. v.	which [title] see (Lat. <i>quod vide</i>).
diss.	Lat. <i>dissertatio</i> .	Rev.	Review (a periodical).
dist.	Lat. <i>distinctio</i> .	R. S.	Rolls Series.
D. V.	Douay Version.	R. V.	Revised Version.
ed., edit.	edited, edition, editor.	S., SS.	Lat. <i>Sanctus, Sancti</i> , “Saint”, “Saints”—used in this Encyclopedia only in Latin context.
Ep., Epp.	letter, letters (Lat. <i>epistola</i>).	Sept.	Septuagint.
Fr.	French.	Sess.	Session.
gen.	genus.	Skt.	Sanskrit.
Gr.	Greek.	Sp.	Spanish.
H. E., Hist. Eccl.	Ecclesiastical History.	sq., sqq.	following page, or pages (Lat. <i>sequens</i>).
Heb., Hebr.	Hebrew.	St., Sts.	Saint, Saints.
ib., ibid.	in the same place (Lat. <i>ibidem</i>).	sup.	Above (Lat. <i>supra</i>).
Id.	the same person, or author (Lat. <i>idem</i>).	s. v.	Under the corresponding title (Lat. <i>sub voce</i>).
		tom.	volume (Lat. <i>tomus</i>).

TABLES OF ABBREVIATIONS.

tr. translation or translated. By itself it means "English translation", or "translated into English by". Where a translation is into any other language, the language is stated.
 tr., tract. tractate.
 v. see (Lat. *vide*).
 Ven. Venerable.
 Vol. Volume.

II.—ABBREVIATIONS OF TITLES.

Acta SS. *Acta Sanctorum* (Bollandists).
 Ann. pont. cath. Battandier, *Annuaire pontifical catholique*.
 Bibl. Dict. Eng. Cath. Gillow, *Bibliographical Dictionary of the English Catholics*.
 Dict. Christ. Antiq. . . . Smith and Cheetham (ed.), *Dictionary of Christian Antiquities*.

Dict. Christ. Biog. . . . Smith and Wace (ed.), *Dictionary of Christian Biography*.
 Dict. d'arch. chrét. . . . Cabrol (ed.), *Dictionnaire d'archéologie chrétienne et de liturgie*.
 Dict. de théol. cath. . . . Vacant and Mangenot (ed.), *Dictionnaire de théologie catholique*.
 Dict. Nat. Biog. . . . Stephen (ed.), *Dictionary of National Biography*.
 Hast., Dict. of the Bible Hastings (ed.), *A Dictionary of the Bible*.
 Kirchenlex. Wetzer and Welte, *Kirchenlexicon*.
 P. G. Migne (ed.), *Patres Græci*.
 P. L. Migne (ed.), *Patres Latini*.
 Vig., Dict. de la Bible. Vigouroux (ed.), *Dictionnaire de la Bible*.

NOTE I.—Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate chapters. Arabic numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus "Rashdall, Universities of Europe, I, ix" refers the reader to the ninth chapter of the first volume of that work; "I, p. ix" would indicate the ninth page of the preface of the same volume.

NOTE II.—Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to "Summa Theologica" (not to "Summa Philosophiæ"). The divisions of the "Summa Theol." are indicated by a system which may best be understood by the following example: "I-II, Q. vi, a. 7, ad 2^{um}" refers the reader to the *seventh* article of the *sixth* question in the *first* part of the *second* part, in the response to the *second* objection.

NOTE III.—The abbreviations employed for the various books of the Bible are obvious. Ecclesiasticus is indicated by *Ecclus.*, to distinguish it from Ecclesiastes (*Ecclæs.*). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parenthesis.

THE CATHOLIC ENCYCLOPEDIA

C

Clandestinity (IN CANON LAW).—Strictly speaking, clandestinity signifies a matrimonial impediment introduced by the Council of Trent (Sess. XXIV, c. i) to invalidate marriages contracted at variance with the exigencies of the decree "*Tametsi*", commonly so called because the first word of the Latin text is *tametsi*. The decree reads: "Those who attempt to contract matrimony otherwise than in the presence of the parish priest or of another priest with leave of the parish priest or of the ordinary, and before two or three witnesses, the Holy Synod renders altogether incapable of such a contract, and declares such contracts null and void." The Council of Trent did not transmit any historical record of this question. While upholding the validity of clandestine marriages "as long as the Church does not annul them", the council asserts that "for weighty reasons the holy Church of God always abhorred and prohibited them" (Sess. XXIV, De reformatione matrimonii). That this sentence strikes the keynote of unending antipathy on the part of the Church towards clandestine marriages can be gathered by a brief review of the historical attitude of the Church. In the fifth chapter of his Epistle to Polycarp, St. Ignatius intimates how men and women about to marry should enter wedlock with the bishop's consent, so that their marriage may be in the Lord (Ante-Nicene Fathers, I, 100). Tertullian writes that matrimonial unions contracted without the intervention of ecclesiastical authority are liable to be judged tantamount to fornication and adultery (De pudicitia, iv, in Migne, P. L., II, 987). In another passage he extols the happiness of that union which is cemented by the Church, confirmed by oblation, sealed with blessing, which angels proclaim, and which the Father in heaven ratifies (Ad uxorem, in Migne, P. L., II, 9). The thirteenth canon of the so-called Fourth Council of Carthage requires parties contracting marriage to be presented to a priest of the Church by their parents or bridal attendants in order to receive the blessing of the Church (Hefele, History of the Councils, II, 412). Whatever may be the age of this canon, the custom therein enjoined had previously won the approval of St. Ambrose, who earnestly sought to have all marriages sanctified by the priestly pall and benediction (Epistle xix to Vigilus, in Migne, P. L., XVI, 984). The Code of Justinian bears evidence to the influence which this imperial legislator wielded to secure the public celebration of marriage according to some legitimate form ("Novellæ", or New Constitutions, xxii, lxiv, cxvii).

In the ninth century the Emperor Basil gave the force of written law to a widely observed custom of having a priest assist at marriages to bless and crown the married parties. Not long after, Leo the Philosopher declared that marriages celebrated without a priest's blessing were worthless. The replies of Pope Nicholas I (863) to the Bulgarians, the Pseudo-Isidorian Decretals, as well as the "Decretum" of Burchard

and that of Gratian embody ample evidence to prove that, during the ninth century and thereafter, the public celebration of nuptials was prescribed and clandestine marriage condemned. Though Gratian alleges forged decretals to show the prohibition of clandestine marriages, it must be granted that he faithfully records the usage of his age concerning the validity of such marriages. Though Alexander III (1159-1181) maintained the validity of clandestine marriage when no other impediment intervened, he obliged parties contracting such marriages to undergo penance, and suspended for three years any priest assisting thereat. (Wernz, Jus Decretalium, IV, title III, no. 516.) Another step in advance was made when Innocent III, in the Fourth Lateran Council (1215), inaugurated the proclamation of the bans.

Finally, a turning-point in the history of this question was reached when the Council of Trent enacted the "*Tametsi*" as a measure destined to check abuses and to safeguard the sacredness of the marriage contract. The principal elements of this decree pertained to the sentence of nullification affecting marriages of Christians failing to enter wedlock in the presence of the parish priest or his legitimate representative and in that of two or more witnesses; to the ways and means of publishing the decree; and to the penalty awaiting transgressors thereof. A succinct comment concerning these points will elucidate the purport of the decree. In the first place, to attain the desired end more effectually, the Council of Trent decreed a singular method of promulgation. It ordered that the decree should be published in every parish, and that it should take effect only after thirty days from its publication. When a parish comprised many churches, publication in the parochial church was sufficient. The term "parochial church" comprehends missions attended by priests on whom the faithful depend for the ministrations of religion (Cong. of the Inquisition, 14 November, 1883). Publication of the decree in churches situated in such missions had the force of law. A new publication was not necessary when a newly-organized parish results from the dismemberment of a parish wherein the law already obtained. On the contrary, if a parish subject to the law should be united to one hitherto exempt, the former would remain bound by the law and the latter retain its immunity (Cong. of Inquis., 14 Dec., 1859).

For obvious reasons, the vernacular should be used in publishing the decree. The use of Latin would, according to the principles of canon law, render the act illicit but not invalid (Gasparri, Tractatus Canonice de Matrimonio, II, v, 119). The publication would be worthless unless the decree were made known to the faithful as a Tridentine law or as an ordinance emanating from the Holy See. While one publication sufficed to induce obligation, the council suggested repeated publication during the first year of tenure. This publication might be made whenever

a congregation assembled in church. The decree was sometimes published in a parish to bind parishioners speaking one language to the exclusion of those using a different tongue. Sometimes the law was intended to oblige none but Catholics residing within the parish lines. In a parish entirely Catholic, wherein heretics settled after the law was duly promulgated, the obligation applied to all, Catholics and heretics. In such cases the "Tametsi" declared null heretical marriages or clandestine mixed marriages (Pius VIII, 25 March, 1830). In a non-Catholic district containing only a few Catholic parishes, the marriage of a Protestant with another Protestant, or the clandestine marriage of a Protestant with a Catholic, would be valid although the number of Catholics in the neighbourhood should so increase as to warrant the actual publication of the decree (Pius VII to Napoleon I, 27 June, 1805; Cong. of Inquisition, 24 November and 29 November, 1852). Finally, populations once largely Catholic in whose parishes the decree was published might be supplanted by non-Catholics. Though canonists are not unanimous in their verdict regarding the application of the law in such conditions, Gasparri, among others, holds that in such cases the law would not bind non-Catholics. For this was, says he, the case when Benedict XIV issued his Declaration for Holland (Gasparri, op. cit., II, v, 202).

After these general considerations concerning the promulgation of this decree, it may not be amiss to note where the decree was actually published. In the United States this law was published in the province of New Orleans; in the province of San Francisco, together with Utah, except that part bordering the Colorado River; in the province of Santa Fé, except the northern part of Colorado; in the Diocese of Indianapolis; in St. Louis, St. Genevieve, St. Charles (Missouri), St. Ferdinand, Kaskaskia, French Village, and Prairie du Rocher. In Europe, the decree was published in Italy and adjacent islands; in the ecclesiastical province of the Upper Rhine; in Ireland, France, Spain, Portugal, Austria, German Empire (Pius X, 18 January, 1906), Poland, Belgium, Rotterdam, Geneva (Zitelli, Apparatus Juris Eccles., I, 428), and Malta (Cong. Inquis., 18 March, 1884). It is no easy matter to give accurate specifications for regions outside Europe and the United States (Lehmkuhl, Theologia Moralis, II, 563). The decree was not published in England, Scotland, Norway, Sweden, Denmark (Zitelli, op. cit., I, 430). In some localities circumstances paved the way towards a partial promulgation of the decree (Zitelli, op. cit., I, 437). Furthermore, although the decree might have been promulgated, the action of legitimate authority could limit its binding force. Thus Benedict XIV terminated the controversy concerning the marriages of heretics in Holland. The fact that many Dutch Catholics had abjured their faith paved the way for questioning the application of the decree already promulgated in that country. To solve this difficulty Benedict XIV ruled that henceforth heretical or mixed marriages, clandestinely contracted, would be valid, provided no other impediment intervened. This declaration was subsequently extended to other localities in which the Tridentine decree was not promulgated until heretics had organized their own congregations in such places. In this way the declaration of Benedict XIV found application in Canada, Trinidad, the dioceses of the United States with the exception of the San Francisco province, the German Empire, Belgium, Russian Poland, the Malabar Coast, the Coromandel Coast, Constantinople and suburbs, Diocese of Warsaw, Archdiocese of Bombay, Diocese of Culm, Duchy of Cleves, Pondicherry, Maastricht, and the suburb of St. Peter near Maastricht.

It may be well to note here the way in which the term *heretic* is to be understood in this declaration. It comprehended individuals baptized in the Catholic

Church, but who subsequently adopted the tenets of some sect: Catholics who had reached the years of discretion and had been alienated from their Faith by the influence of Protestants whose religion they thereafter professed; apostates who allied themselves with some sect; heretics professing no religion whatever (Gasparri, op. cit., II, v, 208). Whenever the requirements of this decree were reduced to practice owing to legitimate usage, no further promulgation was necessary to render the measure effective (Cong. of Holy Office, 1 May, 1887). The decree once published in any parish, could be set aside by revocation on the part of the Holy See. It could also be abrogated by contrary usage or desuetude. Thus, Pius VII, in a letter to the Archbishop of Mainz, 8 October, 1803, decided that marriages contracted before a Protestant minister are valid where the Tridentine decree has lapsed into desuetude. In like manner, the Congregation of the Holy Office decided that the "Tametsi" had passed into desuetude in Japan (11 March, 1806). At the same time the Holy See repeatedly declared that the "Tametsi" did not lose its binding force in a given place because heretics residing there declined to observe it, no matter how long they refused to abide by its requirements (Cong. of Holy Office, 6 July, 1892).

Regarding the subjects of this law, it is necessary to note that the decree invalidating clandestine marriages was both local and personal (Cong. of Holy Office, 14 December, 1859). In its local application the law comprehended all who contracted marriage in any place where the decree had been duly promulgated, whether they were residents, aliens, travellers, transients, or persons having no fixed abode, because those who come from an exempt territory are obliged to recognize and observe universal laws. Moreover, since jurists claim that territory governs contracts, it follows that residents, aliens, travellers, transients, and those without fixed abode, must observe laws circumscribing contracts in the place where such contracts are made. A decision of the Holy Office, dated 25 January, 1900, gave new weight to this accepted axiom of canonists. On account of the personal element embodied in this decree, the obligation of observing it applied to those thereunto subjected wherever they might chance to be. For this reason parties having a domicile or quasi-domicile in a district where the law held remained liable to its obligation as often as they betook themselves to an exempt territory to evade the law. Those whose sole or whose chief object in such case was to enter wedlock, were considered guilty of evading the law. However, where one of the contracting parties had acquired a domicile or quasi-domicile in an exempt territory, their marriage, if contracted there, would be valid because the privilege enjoyed by one was here communicable to the other (Benedict XIV, De Synodo, VI, vi).

The better to complete this explanation, a word concerning the terms *domicile* and *quasi-domicile* is necessary. An ecclesiastical domicile involves two elements, namely, residence in a particular parish and an intention of abiding there for the greater part of a year. This intention is gauged by external acts whose manifestation marks the actual acquisition of a domicile which is retained thereafter notwithstanding protracted absence, provided the intention of returning perseveres. In like manner residence in a parish and an intention of dwelling there during a considerable portion of the year denote the elements giving consistency to a quasi-domicile. Hence, an individual may be domiciled in one parish and acquire a quasi-domicile in another. Six months' sojourn in the same parish entitled parties to invite the pastor of that parish to assist at their nuptials. Nevertheless, in answer to a petition made by the Fathers of the Third Plenary Council of Baltimore, the Holy See

(22 May, 1886) granted for the United States to parties moving from a parish where the "Tametsi" obtained to another parish and residing there for a full month, the privilege of a quasi-domicile so far as the matrimonial contract was concerned. Nor would the privilege be forfeited in case the contracting parties should pass thirty days in such a place in order to enter wedlock there (Putzer, *Commentarium in Facultates Apostolicas*, no. 49). Although the decree involved a personal element, clandestine marriages were valid as often as the observance of the law was physically or morally impossible, provided such impossibility was general and continued for a month (Cong. of Inquis., 1 July, 1863; 14 November, 1883). Parties whose circumstances led them to profit by this interpretation of the law were obliged to seek the nuptial blessing at their earliest convenience, and to see that their marriage was entered in the proper register (Cong. of Inquis., 14 November, 1883).

To the pastor of either contracting party belonged the right of officiating at their nuptials. Vicars appointed to exercise the functions of pastor with the fullness of the pastoral ministry enjoyed the same right so long as they held office (Cong. of Inquis., 7 Sept., 1898). The Roman pontiff alone could counteract the exercise of this pastoral prerogative. The presence of the pastor in the capacity of witness satisfied the requirements of the Tridentine decree even though he was not formally invited for that purpose (Cong. of Inquis., 17 Nov., 1835). The consent of those about to marry had to be signified in the presence of the pastor and other witnesses required by the decree. Since the sovereign pontiff enjoys universal jurisdiction in the Church, he could validly assist at any marriage whatever. Cardinals had no longer the right of assisting at marriages in their titular churches. Legates of the Holy See were qualified to assist at marriages contracted within the confines of their legation. Bishops might minister at marriages in any portion of their respective dioceses. According to Gasparri (op. cit., II, v, 154), an archbishop might exercise this right for the subjects of his suffragans provided he visited their dioceses according to the requirements of canon law. To a vicar-general was accorded the right of officiating at any marriage in the diocese. Those in whom this right was vested were at liberty to delegate another priest to act in their stead. Such delegation might be special or general. As often as the delegation was special, little danger of invalidity was feared. On the contrary, when general jurisdiction is transmitted to delegates, the Holy See questions, not so much validity, as legitimacy of action. Hence, the Congregation of the Council (20 July, 1889) reproved the conduct of those parish priests who habitually interchanged the faculty of assisting at the marriages of their respective subjects, because such methods tended to render the "Tametsi" ineffectual so far as the presence of the parish priest is concerned. At the same time this Congregation (18 March, 1893) and the Congregation of the Inquisition (9 November, 1898) approved general delegation within judicious limits. Notification of his commission to assist at nuptials had to be given directly to the delegate, either by the individual authorizing him to act or by a messenger specially chosen for this purpose (Sanchez, *De Matrimonio*, disp. xxvi, no. 8). The commission might be granted orally or in writing. No priest would be justified in presuming permission to assist at marriages. So strict was this rule that a pastor had no power to ratify marriages whose invalidity was superinduced in this way. In like manner, the Congregation of the Inquisition (7 September, 1898) decided that the ordinary faculties granted by bishops to priests, empowering them to administer the sacraments, did not qualify them to assist at marriages. Sanchez (op. cit., disp. xxxv, no. 20) claims that tacit

notification would be sufficient to justify a priest to assist at nuptials.

Besides the parish priest, at least two witnesses were required for the validity of a marriage contract. The use of reason and the possibility of actually testifying render any individual capable of exercising this particular function (Benedict XIV, *De Synodo*, xxiii, no. 6). The simultaneous presence of the pastor and witnesses was necessary to comply with the requirements of the "Tametsi" (Sanchez, op. cit., disp. xli, no. 3). Parish priests or others officiating at marriages without the necessary number of witnesses, or witnesses assisting without the pastor, rendered themselves, together with the contracting parties, liable to severe punishment at the hands of the bishop. Moreover, a parish priest, or any other priest, whether regular or secular, assisting without the pastor's consent at nuptials of parties belonging to his parish was suspended from priestly functions until absolved by the bishop of the pastor whose rights had been disregarded.

NEW LEGISLATION ON CLANDESTINE MARRIAGE.—Through the decree "Ne Temere," issued 2 August, 1907, by the Congregation of the Council, in conjunction with the pontifical commission for the new canonical code, important modifications have been made regarding the form of betrothal and of marriage. This decree was issued to render easier for the universal Church the substantial form of matrimony, to prevent more efficiently the too numerous, hasty, and clandestine marriages, and to make it easier for ecclesiastical courts to decide as to the existence or non-existence of a previous engagement to marry (see ESPOUSALS). With the exception in regard to Germany noted below, this legislation went into effect at Easter (19 April), 1908, and is thenceforth binding on all Catholics throughout the world, any contrary law or custom being totally abolished. According to this decree, marriages of Catholics are henceforth null unless celebrated before a duly qualified priest (or the bishop of the diocese) and at least two witnesses. The same is true of marriages in which either of the parties is or has been a Catholic. The law, however, does not bind those who are not and never have been Catholics. Priests charged with the care of souls in the territory where a marriage is contracted, or any approved priest whom one charged with the care of souls or whom the bishop of the diocese delegates, are qualified to assist at nuptials. Marriages contracted in a parish, district, or diocese, other than the one to which the contracting parties belong, are valid so long as the pastor of the place or his delegate assists at such marriages. However, priests are forbidden to assist at such marriages unless one of two conditions is verified. Either, one of the parties must have resided a month in the territory where the marriage occurs, or else, one of the parties must have obtained the permission of the priest or bishop under whose jurisdiction such a party resides. In cases of serious necessity such permission is not required.

The following conditions are enjoined by the decree "Ne Temere", not for the validity of the marriages of Catholics, but to bring them into complete conformity with the demands of right order. Marriages ought to be celebrated in the parish of the bride. If the contracting parties wish to marry elsewhere, they must ask the pastor of the place, or some priest authorized by him or by the bishop, to assist at the marriage, and one of the parties must have resided there for a month. When parties find this procedure inconvenient, one of them must obtain permission from his or her parish priest or bishop to contract marriage elsewhere. In such cases the parties will be obliged to give the necessary assurance regarding their freedom to marry, and to comply with the usual conditions for receiving the Sacrament of Matrimony.

When parties have no fixed abode and are travelling throughout the country, they can enter wedlock only before a priest authorized by the bishop to assist at their marriage.

The Sacred Congregation of the Council declared (11 February, 1908) that the dispensations granted in the Bull "Provida" of 18 January, 1906, for Germany will still remain in force. According to this Bull, while Catholic marriages in Germany were made subject to the decree "Tametsi", mixed marriages and those of Protestants among themselves were exempted. (See MARRIAGE; PARISH PRIEST; DOMICILE.)

J. D. O'NEILL.

Clarendon, CONSTITUTIONS OF. See THOMAS BECKET, SAINT.

Clare of Assisi, SAINT, cofoundress of the Order of Poor Ladies, or Clares, and first Abbess of San Damiano; b. at Assisi, 16 July, 1194; d. there 11 August, 1253. She was the eldest daughter of Favorino Scifi, Count of Sasso-Rosso, the wealthy representative of an ancient Roman family, who owned a large palace in Assisi and a castle on the slope of Mount Subasio. Such at least is the traditional account. Her mother, Bl. Ortolana, belonged to the noble family of Fiumi and was conspicuous for her zeal and piety. From her earliest years Clare seems to have been endowed with the rarest virtues. As a child she was most devoted to prayer and to practices of mortification, and as she passed into girlhood her distaste for the world and her yearning for a more spiritual life increased. She was eighteen years of age when St. Francis came to preach the Lenten course in the church of San Giorgio at Assisi. The inspired words of the *Poverello* kindled a flame in the heart of Clare; she sought him out secretly and begged him to help her that she too might live "after the manner of the holy Gospel". St. Francis, who at once recognized in Clare one of those chosen souls destined by God for great things, and who also, doubtless, foresaw that many would follow her example, promised to assist her. On Palm Sunday Clare, arrayed in all her finery, attended high Mass at the cathedral, but when the others pressed forward to the altar-rail to receive a branch of palm, she remained in her place as if rapt in a dream. All eyes were upon the young girl as the bishop descended from the sanctuary and placed the palm in her hand. That was the last time the world beheld Clare. On the night of the same day she secretly left her father's house, by St. Francis's advice, and, accompanied by her aunt Bianca and another companion, proceeded to the humble chapel of the Porziuncula, where St. Francis and his disciples met her with lights in their hands. Clare then laid aside her rich dress, and St. Francis, having cut off her hair, clothed her in a rough tunic and a thick veil, and in this way the young heroine vowed herself to the service of Jesus Christ. This was 20 March, 1212.

Clare was placed by St. Francis provisionally with the Benedictine nuns of San Paolo, near Bastia, but her father, who had expected her to make a splendid marriage, and who was furious at her secret flight, on discovering her retreat, did his utmost to dissuade

Clare from her heroic proposals, and even tried to drag her home by force. But Clare held her own with a firmness above her years, and Count Favorino was finally obliged to leave her in peace. A few days later St. Francis, in order to secure Clare the greater solitude she desired, transferred her to Sant' Angelo in Panzo, another monastery of the Benedictine nuns, on one of the flanks of Subasio. Here, some sixteen days after her own flight, Clare was joined by her younger sister Agnes, whom she was instrumental in delivering from the persecution of their infuriated relatives. (See AGNES, SAINT, OF ASSISI.) Clare and her sister remained with the nuns at Sant' Angelo until they and the other fugitives from the world who had followed them were established by St. Francis in a rude dwelling adjoining the poor chapel of San Damiano, situated outside the town, which he had to a great extent rebuilt with his own hands, and which he now obtained from the Benedictines as a permanent abode for his spiritual daughters. Thus was founded the first community of the Order of Poor Ladies, or of Poor Clares, as this second order of St. Francis came to be called.

The history of the Poor Clares will be dealt with in a separate article. Here it suffices to note that we may distinguish, during the lifetime of St. Clare, three stages in the complicated early history of the new order. In the beginning St. Clare and her companions had no written rule to follow beyond a very short *formula vite* given them by St. Francis, and which may be found among his works. (See "Opuscula S. P. Franciscei", ed. Quaracchi, 1904, 75, and "The Writings of St. Francis", ed. Robinson, Philadelphia, 1906, 77.) Some years later, apparently in 1219, during St. Francis's absence in the East, Cardinal Ugolino, then protector of the order, afterwards Gregory IX, drew up a written rule for the Clares at Monticelli, taking as a basis the Rule of St. Benedict, retaining the fundamental points of the latter and adding some special constitutions. This new rule, which, in effect if not in intention, took away from the Clares the Franciscan character of absolute poverty so dear to the heart of St. Francis and made them for all practical purposes a congregation of Benedictines, was approved by Honorius III (Bull., "Sacrosancta", 9 Dec., 1219). When Clare found that the new rule, though strict enough in other respects, allowed the holding of property in common, she courageously and successfully resisted the innovations of Ugolino as being entirely opposed to the intentions of St. Francis. The latter had forbidden the Poor Ladies, just as he had forbidden his friars, to possess any worldly goods even in common. Owning nothing, they were to depend entirely upon what the Friars Minor could beg for them. This complete renunciation of all property was however regarded by Ugolino as impractical for cloistered women. When, therefore, in 1228, he came to Assisi for the canonization of St. Francis (having meanwhile ascended the

TOMB AND RELICS OF ST. CLARE AT ASSISI

pontifical throne as Gregory IX), he visited St. Clare at San Damiano and pressed her to so far deviate from the practice of poverty, which had up to this time obtained at San Damiano, as to accept some provision for the unforeseen wants of the community. But Clare firmly refused. Gregory, thinking that her refusal might be due to fear of violating the vow of strict poverty she had taken, offered to absolve her from it. "Holy Father, I crave for absolution from my sins", replied Clare, "but I desire not to be absolved from the obligation of following Jesus Christ".

The heroic unworldliness of Clare filled the pope with admiration, as his letters to her, still extant, bear eloquent witness, and he so far gave way to her views as to grant her on 17 September, 1228, the celebrated *Privilegium Paupertatis* which some regard in the light of a corrective of the Rule of 1219. The original autograph copy of this unique "privilege"—the first one of its kind ever sought for, or ever issued by the Holy See—is preserved in the archive at Santa Chiara in Assisi. The text is as follows: "Gregory Bishop Servant of the Servants of God. To our beloved daughters in Christ Clare and the other handmaids of Christ, dwelling together at the Church of San Damiano in the Diocese of Assisi. Health and Apostolic benediction. It is evident that the desire of consecrating yourselves to God alone has led you to abandon every wish for temporal things. Wherefore, after having sold all your goods and having distributed them among the poor, you propose to have absolutely no possessions, in order to follow in all things the example of Him Who became poor and Who is the way, the truth, and the life. Neither does the want of necessary things deter you from such a proposal, for the left arm of your Celestial Spouse is beneath your head to sustain the infirmity of your body, which, according to the order of charity, you have subjected to the law of the spirit. Finally, He who feeds the birds of the air, and who gives the lilies of the field their raiment and their nourishment, will not leave you in want of clothing or of food until He shall come Himself to minister to you in eternity, when, namely, the right hand of His consolations shall embrace you in the plenitude of the Beatific Vision. Since, therefore, you have asked for it, we confirm by Apostolic favour your resolution of the loftiest poverty and by the authority of these present letters grant that you may not be constrained by anyone to receive possessions. To no one, therefore, be it allowed to infringe upon this page of our concession or to oppose it with rash temerity. But if anyone shall presume to attempt this, be it known to him that he shall incur the wrath of Almighty God and his Blessed Apostles, Peter and Paul. Given at Perugia on the fifteenth of the Kalends of October in the second year of our Pontificate."

That St. Clare may have solicited a "privilege" similar to the foregoing at an earlier date and obtained it *viva voce*, is not improbable. Certain it is, that after the death of Gregory IX Clare had once more to contend for the principle of absolute poverty prescribed by St. Francis, for Innocent IV would fain have given the Clares a new and mitigated rule, and the firmness with which she held to her way won over the pope. Finally, two days before her death, Innocent, no doubt at the reiterated request of the dying abbess, solemnly confirmed the definitive Rule of the Clares (Bull, "Solet Annuere", 9 August, 1253), and thus secured to them the precious treasure of poverty which Clare, in imitation of St. Francis, had taken for her portion from the beginning of her conversion. The author of this latter rule, which is largely an adaptation, *mutatis mutandis*, of the rule which St. Francis composed for the Friars Minor in 1223, seems to have been Cardinal Rainaldo, Bishop of Ostia, and protector of the order, afterwards Alexander IV, though it is most likely that St. Clare herself had a

hand in its compilation. Be this as it may, it can no longer be maintained that St. Francis was in any sense the author of this formal Rule of the Clares; he only gave to St. Clare and her companions at the outset of their religious life the brief *formula vivendi* already mentioned.

St. Clare, who in 1215 had, much against her will, been made superior at San Damiano by St. Francis, continued to rule there as abbess until her death, in 1253, nearly forty years later. There is no good reason to believe that she ever once went beyond the boundaries of San Damiano during all that time. It need not, therefore, be wondered at if so comparatively few details of St. Clare's life in the cloister, "hidden with Christ in God", have come down to us. We know that she became a living copy of the poverty, the humility, and the mortification of St. Francis; that she had a special devotion to the Holy Eucharist, and that in order to increase her love for Christ crucified she learned by heart the Office of the Passion composed by St. Francis, and that during the time that remained to her after her devotional exercises she engaged in manual labour. Needless to add, that under St. Clare's guidance the community of San Damiano became the sanctuary of every virtue, a very nursery of saints. Clare had the consolation not only of seeing her younger sister Beatrix, her mother Ortolana, and her faithful aunt Bianca follow Agnes into the order, but also of witnessing the foundation of monasteries of Clares far and wide throughout Europe. It would be difficult, moreover, to estimate how much the silent influence of the gentle abbess did towards guiding the women of mediæval Italy to higher aims. In particular, Clare threw around poverty that irresistible charm which only women can communicate to religious or civic heroism, and she became a most efficacious coadjutrix of St. Francis in promoting that spirit of unworldliness which in the counsels of God, "was to bring about a restoration of discipline in the Church and of morals and civilization in the peoples of Western Europe". Not the least important part of Clare's work was the aid and encouragement she gave St. Francis. It was to her he turned when in doubt, and it was she who urged him to continue his mission to the people at a time when he thought his vocation lay rather in a life of contemplation. When, in an attack of blindness and illness, St. Francis came for the last time to visit San Damiano, Clare erected a little wattle hut for him in an olive grove close to the monastery, and it was here that he composed his glorious "Canticle of the Sun". After St. Francis's death, the procession which accompanied his remains from the Porziuncula to the town stopped on the way at San Damiano in order that Clare and her daughters might venerate the pierced hands and feet of him who had formed them to the love of Christ crucified—a pathetic scene which Giotto has commemorated in one of his loveliest frescoes. So far, however, as Clare was concerned, St. Francis was always living, and nothing is, perhaps, more striking in her after-life than her unswerving loyalty to the ideals of the *Poverello*, and the jealous care with which she clung to his rule and teaching.

When, in 1234, the army of Frederick II was devastating the valley of Spoleto, the soldiers, preparatory to an assault upon Assisi, scaled the walls of San Damiano by night; spreading terror among the community. Clare, calmly rising from her sick bed, and taking the ciborium from the little chapel adjoining her cell, proceeded to face the invaders at an open window against which they had already placed a ladder. It is related that, as she raised the Blessed Sacrament on high, the soldiers who were about to enter the monastery fell backward as if dazzled, and the others who were ready to follow them took flight. It is with reference to this incident that St. Clare is generally represented in art bearing a ciborium.

When, some time later, a larger force returned to storm Assisi, headed by the General Vitale di Aversa who had not been present at the first attack, Clare, gathering her daughters about her, knelt with them in earnest prayer that the town might be spared. Presently a furious storm arose, scattering the tents of the soldiers in every direction, and causing such a panic that they again took refuge in flight. The gratitude of the Assisians, who with one accord attributed their deliverance to Clare's intercession, increased their love for the "Seraphic Mother". Clare had long been enshrined in the hearts of the people, and their veneration became more apparent as, wasted by illness and austerities, she drew towards her end. Brave and cheerful to the last, in spite of her long and painful infirmities, Clare caused herself to be raised in bed and, thus reclining, says her contemporary biographer, "she spun the finest thread for the purpose of having it woven into the most delicate material from which she afterwards made more than one hundred corporals, and, enclosing them in a silken burse, ordered them to be given to the churches in the plain and on the mountains of Assisi". When at length she felt the day of her death approaching, Clare, calling her sorrowing religious around her, reminded them of the many benefits they had received from God and exhorted them to persevere faithfully in the observance of evangelical poverty. Pope Innocent IV came from Perugia to visit the dying saint, who had already received the last sacraments from the hands of Cardinal Rainaldo. Her own sister, St. Agnes, had returned from Florence to console Clare in her last illness; Leo, Angelo, and Juniper, three of the early companions of St. Francis, were also present at the saint's death-bed, and at St. Clare's request read aloud the Passion of Our Lord according to St. John, even as they had done twenty-seven years before, when Francis lay dying at the Porziuncula. At length before dawn on 11 August, 1253, the holy foundress of the Poor Ladies passed peacefully away amid scenes which her contemporary biographer has recorded with touching simplicity. The pope, with his court, came to San Damiano for the saint's funeral, which partook rather of the nature of a triumphal procession.

The Clares desired to retain the body of their foundress among them at San Damiano, but the magistrates of Assisi interfered and took measures to secure for the town the venerated remains of her whose prayers, as they all believed, had on two occasions saved it from destruction. Clare's miracles too were talked of far and wide. It was not safe, the Assisians urged, to leave Clare's body in a lonely spot without the walls; it was only right, too, that Clare, "the chief rival of the Blessed Francis in the observance of Gospel perfection", should also have a church in Assisi built in her honour. Meanwhile, Clare's remains were placed in the chapel of San Giorgio, where St. Francis's preaching had first touched her young heart, and where his own body had likewise been interred pending the erection of the Basilica of San Francesco. Two years later, 26 September, 1255, Clare was solemnly canonized by Alexander IV, and not long afterwards the building of the church of Santa Chiara, in honour of Assisi's second great saint, was begun under the direction of Filippo Campello, one of the foremost architects of the time. On 3 October, 1260, Clare's remains were transferred from the chapel of San Giorgio and buried deep down in the earth, under the high altar in the new church, far out of sight and reach. After having remained hidden for six centuries—like the remains of St. Francis—and after much search had been made, Clare's tomb was found in 1850, to the great joy of the Assisians. On 23 September in that year the coffin was unearthed and opened; the flesh and clothing of the saint had been reduced to dust, but the skeleton was

in a perfect state of preservation. Finally, on the 29th of September, 1872, the saint's bones were transferred, with much pomp, by Archbishop Pecci, afterwards Leo XIII, to the shrine, in the crypt at Santa Chiara, erected to receive them, and where they may now be seen. The feast of St. Clare is celebrated throughout the Church on 12 August; the feast of her first translation is kept in the order on 3 October, and that of the finding of her body on 23 September.

The sources of the history of St. Clare at our disposal are few in number. They include (1) a *Testament* attributed to the saint and some charming *Letters* written by her to Blessed Agnes, Princess of Bohemia; (2) the *Rule of the Clares*, and a certain number of early *Pontifical Bulls relating to the Order*; (3) a contemporary *Biography*, written in 1256 by order of Alexander IV. This life, which is now generally ascribed to Thomas of Celano, is the source from which St. Clare's subsequent biographers have derived most of their information. It was published by SURIUS in *De Probatis Sanctorum historiis* (Cologne, 1573), IV, 609–26; by SEDULIUS in his *Historia Seraphica* (Antwerp, 1613), 526–44; and by the BOLLANDISTS in the *Acta SS.*, Aug., II (12 Aug.), 754–68, with a *Comment. Præfatus* by CUPER (pp. 739–54). A new critical edition of this early life, according to the Assisi MS. 338, is in course of preparation by PROP. PENACCHI (Assisi, 1908). Many early vernacular versions of this biography were made, and some of these have recently been re-edited, v. g. CRISTOFANI, *La Leggenda di S. Chiara* (Assisi, 1872); SCHOUTENS, *Legende der Glorioser Maghet Sinte Clara* (Hoogstraeten, 1904); GOFFIN, *La vie et légende de Madame Sainte Claire* (Paris, 1906). An English translation, based on the text of the Bollandists, is given by FIEGE in *The Princess of Poverty* (Evansville, Indiana, 1900). *The Biography of St. Clare*, by GIUSEPPE DA MADRID, which appeared in 1727, was published in Italian at Rome in 1832, and in French at Paris in 1880. More recent lives of the saint are those by VINC. LOCATELLI, *Vita di S. Chiara d'Assisi* (Naples, 1854); DEMORE, *Le Vie de Ste Claire* (Paris, 1856), new German tr. by SCHMID (Ratisbon, 1906); TOMMASO LOCATELLI, *Vita di S. Chiara* (Assisi, 1882); RICHARD, *Ste Claire d'Assise* (Paris, 1895), Italian version by PENACCHI (1900); CHERANCE, *Ste Claire d'Assise* (Paris, 1902). The *Privilegium Paupertatis*, *Testament of the saint*, and *Rule of the Clares* are printed in the *Seraphicus Legationis Textus Originalis* (Quaracchi, 1897), and the *Bulls* bearing upon the beginnings of the order in the *Bullarium Franciscanum*, ed. SBARALEA-EUBEL (Rome, 1759–1898), passim. On the vexed question of the origin and evolution of the Rule of the Clares, see LEMPP, *Anfänge des Clarissenordens* in BRIEGER, *Zeitschrift f. Kirchengeschichte* (Gotha, 1892), XIII, 181 sq.; *ibid.*, XXIII (1903), 626–29, and XXIV (1904), 321–23; LEMMENS, *Anfänge*, etc. in *Römische Quartalschrift* (1902), XVI, 93 sq., and WAGNER, *Entstehung und Ausbreitung des Klarissenordens*, etc. (Leipzig, 1906), 535–40 sq. See also *Chron. XXIV generalium in Analacta Franciscana* (Quaracchi, 1897), III, 175, 182–84; BARTH, *Pis. Liber Conformitatum in Analacta Franc.* (Quaracchi, 1906), IV, 351–57; WADDING, *Annales Minorum*, I, ad an. 1212, and III, ad an. 1253; SBARALEA, *Supplementum* (1806), 195; CRISTOFANI, *Storia della Chiesa e Chiosiro di San Damiano* (3d ed., Assisi, 1882), passim; CLARY, *Lives of the Saints and Blessed of the Three Orders of St. Francis* (Taunton, 1886), II, 557–78; BONAV. PASCHAL ROBINSON.

Clare of Montefalco, SAINT, b. at Montefalco about 1268; d. there, 18 August, 1308. Much dispute has existed as to whether St. Clare of Montefalco was a Franciscan or an Augustinian; and while Wadding, with Franciscan biographers of the saint, contends that she was a member of the Third Order of St. Francis, Augustinian writers, whom the Bollandists seem to favour, hold that she belonged to their order. It seems, however, more probable to say that St. Clare, when she was still a very young girl, embraced the rule of the Third Order of St. Francis (secular), together with her older sister and a number of other pious young maidens, who wore the habit of the Third Order of St. Francis and followed that particular mode of life in community which their piety and fervour suggested. When later, however, they became desirous of entering the religious state in its strict sense, and of professing the three vows of religion, they petitioned the Bishop of Spoleto for an approved rule of life; and, the Third Order of St. Francis (regular) not being then in existence as an approved religious institute, the bishop imposed upon them in 1290 the rule of the Third Order

(regular) of St. Augustine. From her very childhood, St. Clare gave evidence of the exalted sanctity to which she was one day to attain, and which made her the recipient of so many signal favours from God. Upon the death of her older sister in 1295, Clare was chosen to succeed her in the office of abbess of the community at Santa Croce; but it was only in obedience to the command of the Bishop of Spoleto that she could be prevailed upon to accept this new dignity. Kind and indulgent towards others, she treated herself with the most unrelenting severity, multiplying her fasts, vigils, and other austerities to such an extent that at one time her life was even feared for. To these acts of penance she added the practice of the most profound humility and the most perfect charity, while the suffering of her Redeemer formed the continual subject of her meditation. Shortly after the death of St. Clare, inquiry into her virtues and the miracles wrought through her intercession was instituted, preparatory to her canonization. It was not, however, until several centuries later that she was canonized by Pope Leo XIII in 1881.

Wadding, *Annales Minorum*, VI, 140; XIV, 519, and *passim*; *Acta SS.*, August, III, 664-88; LEO, *Lives of the Saints and Blessed of the Three Orders of St. Francis* (Taunton, 1886), III, 22-26.

STEPHEN M. DONOVAN.

Clare of Rimini, BLESSED (CHIARA AGOLANTI), of the order of Poor Clares, b. at Rimini in 1282; d. there 10 February, 1346. Deprived at an early age of the support and guidance of her parents and of her pious husband, Clare soon fell a prey to the dangers to which her youth and beauty exposed her, and began to lead a life of sinful dissipation. As she was one day assisting at Mass in the church of the Friars Minor, she seemed to hear a mysterious voice that bade her say a Pater and an Ave at least once with fervour and attention. Clare obeyed the command, not knowing whence it came, and then began to reflect upon her life. Putting on the habit of the Third Order of St. Francis, she resolved to expiate her sins by a life of penance, and she soon became a model of every virtue, but more especially of charity towards the destitute and afflicted. When the Poor Clares were compelled to leave Regno on account of the prevailing wars, it was mainly through the charitable exertions of Clare that they were able to obtain a convent and means of sustenance at Rimini. Later, Clare herself entered the order of Poor Clares, along with several other pious women, and became superioress of the convent of Our Lady of the Angels at Rimini. She worked numerous miracles and towards the close of her life was favoured in an extraordinary manner with the gift of contemplation. Her body now reposes in the cathedral of Rimini. In 1784 the cult of Blessed Clare was approved by Pius VI, who permitted her feast to be celebrated in the city and Diocese of Rimini on the tenth of February.

Clark, B. T. See ADEN, VICARIATE APOSTOLIC OF.

Clark, WILLIAM, English priest, date of birth unknown, executed at Winchester, 29 Nov., 1603. He was educated at Douai College, which he entered 6 August, 1587. Passing to the English College at Rome in 1589, he was ordained priest and returned to England in April, 1592. Active in the disputes between the seculars and the Jesuits on the appointment of Blackwell as archpriest, he was one of the thirty-three priests who signed the appeal against Blackwell dated from Wisbeach Castle, 17 November, 1600.

Consequently he was included in the attack which Father Persons made against the characters of his opponents. When Clement VIII declared in favour of the appellant clergy (5 October, 1602) and restored to them their faculties, an attempt was made, but in vain, to exclude Clark from participation in the privilege. At this time he was in the Clink prison. On Low Sunday he was discovered preparing to say Mass in the prison and was placed in still closer confinement. Shortly after this he became connected with the mysterious conspiracy known as the "Bye Plot". He was committed to the Gatehouse, Westminster, thence to the Tower, and finally to the Castle at Winchester. Nothing was proved against him in relation to the plot save various practices in favour of Catholic interests; nevertheless he was condemned to death 15 November, and executed a fortnight later. He protested that his death was a kind of martyrdom. He is the author of "A Replie unto a certain Libell lately set forth by Fa. Parsons", etc. (1603, s. l.).

Claudia (Κλαυδία), a Christian woman of Rome, whose greeting to Timothy St. Paul conveys with those of Eubulus, Pudens, Linus, "and all the brethren" (II Tim., iv, 21). Evidently, Claudia was quite prominent in the Roman community. The Linus mentioned in the text is identified by St. Irenæus (*Adv. hær.*, III, iii, 3) with the successor of St. Peter as Bishop of Rome; and in the "Apost. Const.", VII, 46, he is called the son of Claudia, *Αἶμος ὁ Κλαυδίας*, which seems to imply that Claudia was at least as well known as Linus. It has been attempted to prove that she was the wife of Pudens, mentioned by St. Paul; and, further, to identify her with Claudia Rufina, the wife of Aulus Pudens who was the friend of Martial (*Martial*, *Epigr.*, IV, 13; XI, 54). According to this theory Claudia would be a lady of British birth, probably the daughter of King Cogidubnus. Unfortunately there is not sufficient evidence to make this identification more than possibly true.

Acta SS., May, IV, 254; ALFORD in SMITH, *Dict. of the Bible s. v.* and his references; LIGHTFOOT, *Apost. Fathers: Clem.*, I, 29, 76-79.

W. S. REILLY.

Claudianus Mamertus (the name Ecdicius is unauthorized) a Gallo-Roman theologian and the brother of St. Mamertus, Bishop of Vienne, d. about 473. Descended probably from one of the leading families of the country, Claudianus Mamertus relinquished his worldly goods and embraced the monastic life. He assisted his brother in the discharge of his functions, and Sidonius Apollinaris describes him as directing the psalm-singing of the chanters, who were formed into groups and chanted alternate verses, whilst the bishop was at the altar celebrating the sacred mysteries. "Psalmorum hic modulator et phonascus ante altaria fratre gratulate instructas docuit sonare classes" (*Epist.*, IV, xi, 6; V, 13-15). This passage is of importance in the history of liturgical chant. In the same epigram, which constitutes the epitaph of Claudianus Mamertus, Sidonius also informs us that this distinguished scholar composed a lectionary, that is, a collection of readings from Sacred Scripture to be made on the occasion of certain celebrations during the year.

According to the same writer, Claudianus "pierced the sects with the power of eloquence", an allusion to a prose treatise entitled "On the State of the Soul", or "On the Substance of the Soul". Written between

468 and 472, this work was destined to combat the ideas of Faustus, Bishop of Reii (Riez, in the department of Basses-Alpes), particularly his thesis on the corporeity of the soul. Plato, whom he perhaps read in Greek, Porphyry, and especially Plotinus and St. Augustine furnished Claudianus with arguments. But his method was decidedly peripatetic and fore-tokened Scholasticism. Even his language had the same characteristics as that of some of the medieval philosophers: hence Claudianus used many abstract adverbs in *ter* (*essentialiter*, *accidenter*, etc.; forty according to La Broise). On the other hand he revived obsolete words and, in a letter to Sapaudus of Vienne, a rhetorician, sanctioned the imitation of Nævius, Plautus, Varro, and Gracchus. Undoubtedly his only acquaintance with these authors was through the quotations used by grammarians and the adoption of their style by Apuleius, whose works he eagerly studied. Of course this tendency to copy his predecessors led Claudianus to acquire an entirely artificial mode of expression which Sidonius, in wishing to compliment, called a modern antique (Epist., IV, iii, 3). Besides the treatise and the letter to Sapaudus, both of which are of value in the study of the progress of culture in Gaul, we have a letter from Claudianus to Sidonius Apollinaris, found among the letters of the latter (IV, ii). Some poetry has also been ascribed to him, although erroneously. For instance, he has been credited with the "Pange, lingua", which is by Venantius Fortunatus (Carm., II, ii); "Contra vanos poetas ad collegam", a poem recommending the choice of Christian subjects and written by Paulinus of Nola (Carm., xxii); two short Latin poems in honour of Christ, one by Claudius Claudianus (Birt ed., p. 330; Koch ed., p. 248) and the other by Merobaudus (Vollmer ed., p. 19), and two other Greek poems on the same subject, believed to be the work of Claudius Claudianus.

Two facts assign Claudianus Mamertus a place in the history of thought: he took part in the reaction against Semipelagianism, which took place in Gaul towards the close of the fifth century and he was the precursor of Scholasticism, forestalling the system of Roscellinus and Abelard. The logical method pursued by Claudianus commanded the esteem and investigation of Berengarius of Tours, Nicholas of Clairvaux, secretary to St. Bernard, and Richard de Fournival.

PAUL LEJAY.

Claudiopolis, a titular see of Asia Minor. It was a city in Cilicia Tracheia or Byzantine Isauria. The old name is perhaps Kardabounda; under Claudius it became a Roman colony, Colonia Julia Augusta Felix Nicaea Claudiopoliis. None of its coins are known. It was situated at the lower end of the central Calycednus valley, before the river enters the narrow gorge which conducts it to the coast lands: Leake (Journal of a Tour in Asia Minor, 107 sq.) has identified it with Mût, the chief village of a caza in the vilayet of Adana, a view which has since been confirmed by epigraphical evidence (Hogarth, Supplem. Papers, Royal Geogr. Society, 1893, III, 651). It was a suffragan of Seleucia. Only six bishops are mentioned by Lequien (II, 1027); the first, Ædesius, was present at Nicæa in 325; the last, John, was present at Constantinople in 533, and is probably identical with the prelate who was a friend of Severus in 508-11 (Brooks, The Sixth Book of the Select Letters of Severus, II, 4, 7, 11). In the tenth century Claudiopoliis is mentioned by

Constantine Porphyrogenitus (Them., xxxvi), as one of the ten cities of Isaurian Decapolis. It figures still in the "Notitiæ episcopatum" in the twelfth or thirteenth century. Mût has about 900 inhabitants, and exhibits vast ruins.

RAMSAY, *Asia Minor*, passim; RUGE in PAULY-WISSOWA, *Real-Encykl.*, III, 2662; HEADLAM, *Ecc. Sites in Isauria*, in Soc. for the Promotion of Hellenic Studies, Supplem. Papers, I, 22 sq.; CUINET, *Turquie d'Asie*, II, 78.

S. PÉTRIDÈS.

Claudiopolis, a titular see of Bithynia, in Asia Minor. Strabo (XII, 4, 7) mentions a town, Bithynium (Claudiopolis), celebrated for its pastures and cheese. According to Pausanias (VIII, 9) it was founded by Arcadians from Mantinea. As is shown by its coins, it was commonly called Claudiopoliis after Claudius. It was the birthplace of Antinuous, the favourite of Hadrian, who was very generous to the city; afterwards his name was added to that of Claudius on the coins of the city. Theodosius II (408-50) made it the capital of a new province, formed at the expense of Bithynia and Paphlagonia, and called by him Honorias in honour of the Emperor Honorius. Claudiopoliis was the religious metropolis of the province (so in all "Notitiæ episcopatum"). Lequien (I, 567) mentions twenty titulars of the see to the thirteenth century; the first is St. Autonomus, said to have suffered martyrdom under Diocletian; we may add Ignatius, a friend and correspondent of Photius. The Turkish name for Claudiopoliis is Bolou or Boli. It is now the chief town of a sanjak in the vilayet of Castamouni, with 10,000 inhabitants (700 Greeks, 400 Armenians, few Catholics). The town is on the Filias Sou (River Billeus). There are no important ruins, but many ancient fragments of friezes, cornices, funeral cippi, and stelæ.

Claudius, APOLLINARIS. See APOLLINARIS CLAUDIUS, SAINT.

Clavigero, FRANCISCO SAVERIO, b. at Vera Cruz, Mexico, 9 September, 1731; d. at Bologna, Italy, 2 April, 1787. At the age of seventeen he entered the Society of Jesus. Father José Rafael Campoi, S. J., at the College of St. Peter and St. Paul in Mexico, directed his attention to the valuable collection of documents on Mexican history and antiquities deposited there by Sigüenza y Gongora, and he became an enthusiastic investigator in these fields. When the Jesuits were expelled from Mexico in 1767, Father Clavigero went to Bologna, where he founded a literary academy and pursued diligently his documentary studies in Mexican aboriginal history. He compiled there his "Historia antica del Messico" (Cesena, 1780), in opposition to the works of De Pauw, Raynal, and Robertson. While the "Historia antica" is the principal work of Clavigero, he had already published in Mexico several writings of minor importance. After his death there appeared "Storia della California", less appreciated but still not to be neglected by students.

The "Ancient History of Mexico" made considerable impression and met with great favour. Following the book of the Cavaliere Boturini he included a list of sources, paying particular attention to the Indian pictographs, on tissue and other substances, forming part of the Boturini collection, and increasing the list by specimens then extant in various parts of Europe. The catalogue of Indian writers is also taken from Boturini, as Clavigero is careful to state. While materially enlarged since then and though much additional information has been gained, his catalogue always remains of value. Finally he added a history of the conquest of Mexico. While other Jesuit writ-

ters on America, who wrote after the expulsion of the order, like Molina for instance, maintained in their books an attitude of dignified impartiality, Clavigero has not been able to conceal his resentment against the Spaniards for that measure. He does not allude to it, but criticizes the conquerors harshly, extolling at the same time, beyond measure, the character and culture of the Indians. The writings of De Pauw, Adair, and Robertson are severely criticized. The two former have, in their hypercritical tendencies, gone entirely too far in denying to the Indians of Mexico a certain kind and degree of polity, but Robertson was much more moderate, hence nearer the truth, and more reliable than Clavigero himself. The latter is an unsafe guide in American ethnology, on account of his exaggeration of the aboriginal culture of the Mexican sedentary tribes. But the systematic arrangement of his work, his style, and the sentimental interest taken in the conquered peoples ensured to his book a popular sympathy that for a long time controlled the opinions of students as well as of general readers. The "Storia antica del Messico" was translated into English by Cullen (London, 1787); there is a German translation of the English version (Leipzig, 1789); Spanish editions (London, 1826; Mexico, 1844 and 1853).

AD. F. BANDELIER.

Clavius, CHRISTOPHER (CHRISTOPH CLAU), mathematician and astronomer, whose most important achievement related to the reform of the calendar under Gregory XIII; b. at Bamberg, Bavaria, 1538; d. at Rome, 12 February, 1612. The German form of his name was latinized into "Clavius". He entered the Society of Jesus in 1555 and his especial talent for mathematical research showed itself even in his preliminary studies at Coimbra. Called to Rome by his superiors as teacher of this branch of science at the well-known Collegium Romanum, he was engaged uninterruptedly there until his death. The greatest scholars of his time, such men as Tycho Brahé, Johann Kepler, Galileo Galilei, and Giovanni Antonio Magini, esteemed him highly. He was called the "Euclid of the sixteenth century"; and even his scientific opponents, like Scaliger, said openly that they would rather be censured by a Clavius than praised by another man. There has, however, been no lack of persistent disparagement of Catholic scholars even down to our own times; and therefore much that is inexact, false, and mythical has been put into circulation about Clavius, as for example that he was originally named "Schlüssel" (*clavis*, "key"), that he was appointed a cardinal, that he met his death by the thrust of a mad bull, etc. His relations with Galilei, with whom he remained on friendly terms until his death, have also been often misrepresented. The best evidence of the actual achievements of the great man is presented by his numerous writings, which at the end of his life he reissued at Mainz in five huge folio volumes in a collective edition under the title, "Christophori Clavii e Societate Jesu opera mathematica, quinque tomis distributa". The first contains the Euclidean geometry and the "Spheric" of Theodosius (*Sphaericorum Libri III*); the second, the practical geometry and algebra; the third is composed of a complete commentary upon the "Sphæra" of Joannes de Sacro Bosco (John Holywood), and a dissertation upon the astrolabe; the fourth contains what was up to that time the most detailed and copious discussion of gnomonics, i. e. the art of constructing all possible sun-dials; finally, the fifth contains the best and most fundamental exposition of the reform of the calendar accomplished under Gregory XIII.

Many of these writings had already appeared in

numerous previous editions, especially the "Commentarius in Sphæram Joannis de Sacro Bosco" (Rome, 1570, 1575, 1581, 1585, 1606; Venice, 1596, 1601, 1602, 1603, 1607; Lyons, 1600, 1608, etc.); likewise the "Euclidis Elementorum Libri XV" (Rome, 1574, 1589, 1591, 1603, 1605; Frankfurt, 1612). After his death also these were republished in 1617, 1627, 1654, 1663, 1717, at Cologne, Frankfurt, and Amsterdam, and were even translated into Chinese. In his "Geometria Practica" (1604) Clavius states among other things a method of dividing a measuring scale into subdivisions of any desired smallness, which is far more complete than that given by Nonius and must be considered as the precursor of the measuring instrument named after Vernier, to which perhaps the name Clavius ought accordingly to be given. The chief merit of Clavius, however, lies in the profound exposition and masterly defence of the Gregorian calendar reform, the execution and final victory of which are due chiefly to him. Cf. "Romani calendarii a Gregorio XIII restituti explicatio" (Rome, 1603); "Novi calendarii Romani apologia (adversus M. Mästlinum in Tubingensi Academiâ mathematicum)" (Rome, 1588). Distinguished pupils of Clavius were Grienberger and Blancanus, both priests of the Society of Jesus.

ADOLF MÜLLER.

Clavus, CLAUDIUS (or NICHOLAS NIGER), the latinized form of the name of the old Danish cartographer Claudius Claussøn Swart, b. in the village of Salling, on the Island of Fünen, 14 September, 1388; date of death unknown. He was the first man to make a map of North-Western Europe, which, moreover, included the first map of Greenland. He was apparently an ecclesiastic. In the course of his frequent journeys he went to Italy, where in 1424 he aroused much interest among the Humanists of Rome by announcing that in the Cistercian monastery of Sorbie, near Roeskilde, he had seen three large volumes which contained the "Ten Decades" of Livy; according to his own statement he had read the titles of the chapters (*decem Livii decades, quarum capita ipse legisset*). Through his intercourse with the Humanists he became acquainted with the maps and descriptions of Ptolemy, and was thus led to supplement the work of Ptolemy by adding to it a chart and description of the North-West country. Clavus first turned his knowledge of Scandinavia and Greenland to account in the geographical drawing and description which has been preserved in the Ptolemy MS. of 1427 of Cardinal Filiaster. The manuscript is now in the public library of Nancy. Descriptions of it have been repeatedly given by Waitz, Nordenskjöld, Storm, and others. The facsimile of Clavus's map and his description of the parts contained, which were published by Nordenskjöld and Storm, show that he gave Greenland and Iceland the correct geographical position, namely, west of the Scandinavian Peninsula.

Far more important, however, for the history of cartography is the second map and description of North-Western Europe and Greenland that Clavus produced. As yet, unfortunately, the original of this work has not been found, nor does any copy contain both the map and the description. This second map has been preserved in the works of the German cartographers, Donus Nicholas Germanus and Henricus Martellus Germanus, who lived at Florence in the second half of the fifteenth century. Until recently, the descriptive text belonging to the map has only been known by the citations of Schöner and Friedlieb (Irenicus); the complete text was not known until it was found by Björnbo in two codices in the imperial

library at Vienna. Björnbo's discovery is especially important as it is now certain that Claudius Clavus was actually in Greenland and that he claims to have pushed his journey along the west coast as far as 70° 10' N. lat. Another fact that lends importance to this discovery is that an explanation has at last been found for the incomprehensible names on the old maps of Greenland. Local names in Greenland and Iceland, so entirely different from those that appear in the Icelandic sagas, for a long time served the defenders of the Zeni as an argument that the map of Greenland was the work of the elder Zeno. It is now clear from the list of names given by Clavus that the Icelandic names on the map are not the real designations of the places, but merely the names of Runic characters. In the same manner, when he came to Greenland, Claudius Clavus used the successive words of the first stanza of an old Danish folk-song, the scene of which is laid in Greenland, to designate the headlands and rivers that seemed to him most worthy of note as he sailed from the north-east coast of Greenland around the southern end, and up the west coast. In the linguistic form of the words the dialect of the Island of Fünen is still evident. The discovery also makes clear how the younger Zeno was able to add to the forged story of a journey made in 1558 a comparatively correct map of the northern countries, and how he came to make use of the lines beginning:—*Ther boer eeynh manh ij eyn Groenenlandz aa*" etc., which run in English:—

There lives a man on Greenland's stream,
And Spieldebodh doth he be named;
More has he of white herrings
Than he has pork that is fat.
From the north drives the sand anew.

The second map of Clavus exercised a great influence on the development of cartography. As Clavus in drawing his map of North-Western Europe and Greenland made use of all the authorities to be had in his time, e. g. Ptolemy's *portolanos* (marine maps) and itineraries, so the map-makers of succeeding centuries adopted his map, either directly or indirectly: thus, in the fifteenth century, Donnus Nicholas Germanus and Henricus Martellus; in the sixteenth century, Waldseemüller, Nicolò Zeno, Ruscelli, Moletius, Ramusio, Mercator, Ortelius; in the seventeenth century, Hondius, Blaeu, and others; in the eighteenth century, Homann and his successors. It is evident that scarcely any other map has exerted so permanent an influence as the map of Greenland by Claudius Clavus, "the first cartographer of America".

STORM, *Den danske Geograf Claudius Clavus eller Nicolaus Niger* (Stockholm, 1891); BJÖRNBO and PETERSEN, *Fylenboen Claudius Claussøn Swart* (Copenhagen, 1904); FISCHER, *Die kartographische Darstellung der Entdeckungen der Normannen in Amerika in Proceedings of the Internat. Amer. Congress of 1904* (Stuttgart, 1906).

JOSEPH FISCHER.

Clayton, JAMES, priest, confessor of the faith, b. at Sheffield, England, date of birth not known; d. a prisoner in Derby gaol, 22 July, 1588. He was the son of a shoemaker, and, being apprenticed to a blacksmith for seven years, spent his leisure hours in educating himself, giving special attention to the study of Latin. His studies led him to embrace the Catholic religion, and he was sent to the English College at Reims (1582), where he was ordained priest in 1585, and immediately returned to England to labour in his native county. Four years later, while visiting the Catholic prisoners in Derby gaol, he was apprehended and condemned to death for exercising his priestly office. His brothers pleaded for his pardon and his execution was delayed, though he was still kept a prisoner. Prison life brought on a sickness of which he died.

G. E. HIND.

Clazomenæ, a titular see of Asia Minor. The city had been first founded on the southern shore of the Ionian Sea (now Gulf of Smyrna), about 15 miles from Smyrna; it was one of the twelve cities of the Ionian Confederation, and reached the acme of its importance under the Lydian kings. After the death of Cræsus its inhabitants, through fear of the Persians, took refuge on the island opposite their town (to-day St. John's Isle), which was joined to the mainland by Alexander the Great; the pier has been restored and is yet used as means of communication between the modern Vourla and the island, on which there is now an important quarantine hospital. Clazomenæ is the birthplace of the philosophers Hermotimus and Anaxagoras. The see was a suffragan of Ephesus. Lequien (I, 729) mentions two bishops: Eusebius, present at Ephesus and Chalcedon, in 431 and 451; and Macarius, at the Eighth Ecumenical Council, in 869. When Smyrna was raised to the rank of a metropolis (perhaps as early as the sixth century) Clazomenæ was attached to it, as is shown by Parthey's "Notitiæ", 3 and 10. In 1387 it was given again to Ephesus by a synodal act of the patriarch Nilus (Miklosich and Müller, "Acta Patriarchatus Constantinopol.", II, 103). After this date there is no apparent trace of its history; nothing remains of the city except the ancient pier.

LABAÏN, *De rebus Clazomeniorum* (1875); SMITH, *Dict. of Gr. and Rom. Geogr.* (London, 1878), I, 631-32.

S. PÉTRIDÈS.

Clean and Unclean.—The distinction between legal or ceremonial, as opposed to moral, cleanness and uncleanness which stands out so prominently in the Mosaic legislation (q. v.).

Cleef, JAN VAN, a Flemish painter, b. in Guelderland in 1646; d. at Ghent, 18 December, 1716. He was a pupil of Luigi Primo (Gentile) and Gaspard de Craeyer. When Craeyer died, Cleef was commissioned to complete his master's work in the churches and to finish the cartoons for the tapestry ordered by Louis XIV. The churches and convents in Flanders and Brabant are rich in his paintings.

He was a splendid draughtsman, a good colourist, celebrated for his management of drapery and for his charming portrayal of children's heads and the attractive faces of his women. In a school pre-eminent in portraiture Jan held a high place. He accomplished a vast amount of work, all showing the influence of his masters and tending more to Italian than Flemish methods. His favourite subjects were Scriptural and religious, and his treatment of them was simple and broad. His masterpiece, "Nuns Giving Aid during the Plague", in the convent of the Black Nuns, at Ghent, rivals the work of Van Dyck.

For bibliography, see CLEEF, JOOST VAN.

LEIGH HUNT.

Cleef, JOOST VAN (JOSSE VAN CLEVE), the "Madman", a Flemish painter, b. in Antwerp c. 1520; died c. 1556. He was one of twenty van Cleefs who painted in Antwerp, but whether the well-known Henry, Martin, and William (the younger) were kin of his cannot be determined. Of his father, William (the elder), we know only that he was a member of the Antwerp Academy, which body Joost joined. Joost was a brilliant and luminous colourist, rivalling, in this respect, the Italians, whose methods he followed. Severity and hardness of outline somewhat marred his otherwise fine draughtsmanship. Portraiture in the sixteenth century was represented by Joost van Cleef; and Kugler places him, artisti-

cally, between Holbein and Antonio Moro, his "Portrait of a Man" in Munich (Pinakothek) being long attributed to Holbein. He painted in France, England, and Germany. The celebrated portrait painter of Cologne, Bruyn, was his pupil. Imagining himself unappreciated, he went to Spain and was presented to Philip II by Moro, the court painter.

Because Henry VIII, according to English authorities, chose Titian's pictures in preference to his, van Cleef became infuriated, and his frenzy later developed into permanent insanity. The French contend that it was Philip, in Spain, who gave Titian the preference. The most distressing feature of Joost's insanity was that he retouched and ruined his finished pictures whenever he could gain access to them, and his family finally had to place him under restraint. Beautiful altar-pieces by van Cleef are found in many Flemish churches, notably "The Last Judgment" (Ghent). Perhaps the most celebrated of his works is the "Bacchus" (Amsterdam), whose young face is crowned with prematurely grey hair. "A Virgin" (Middleburg) is noteworthy as having a charming landscape for the background, a combination rare in those days. Other works are "Portrait of the Painter and his Wife", at Windsor Castle; "Portrait of a Young Man", at Berlin; and "Portrait of a Man", at Munich.

SIMMONDS (New York, 1904).

LEIGH HUNT.

Cleef, MARTIN VAN, Flemish painter, b. at Antwerp in 1520; d. in 1570; was the son of the painter William (the younger William) and was throughout his life closely associated with his brother Henry, who exerted great influence over his artistic career. Deschamps asserts that Martin and Joost were brothers, but the majority of writers on Flemish art agree that Joost was the son of the elder William. Martin studied under Franz Floris, "the incomparable Floris", and at first exhibited a strong predilection for landscape work. Later on, however, persuaded by Henry, he devoted himself wholly to figure-painting. Historical subjects were his favourites, but he also achieved great success in genre painting. The latter has been stigmatized as vulgar and suggestive, but while coarse, and reflecting the peasant life of the Flemings, it differed but little in this respect from the canvases of the great Dutchmen. After a few early attempts in large compositions after the Italian manner of Floris, he painted small pictures only, and these with great spirit and thorough technic. His work is delicate and refined in treatment, harmonious in colour, and excellent in draughtsmanship.

Martin van Cleef painted in the landscapes the figures of many eminent contemporaries, Gilles and Franz Floris among them, and he continually collaborated with his brother Henry in that way. Henry reciprocated and added to Martin's figure-pieces landscape backgrounds charming in colour and design, and harmonizing well with the rest of the picture. On many of his works Martin painted, as a mark, a small ape—playing thus on his name—and in consequence is frequently called the "Master of the Ape". He was admitted to the Antwerp Academy, and in 1551 became a member of the St. Luke's Guild of Artists. He never travelled from his native Flanders, and died of gout at the age of fifty, leaving four sons—all of them painters.

LEIGH HUNT.

Clémanges, or CLAMANGES, MATHIEU-NICOLAS POILLEVILLAIN DE, a French Humanist and theo-

logian, b. in Champagne about 1360; d. at Paris between 1434 and 1440. He made his studies in the College of Navarre at Paris, and in 1380 received the degree of Licentiate, later on that of Master of Arts. He studied theology under Gerson and Pierre d'Ailly, and received the degree of Bachelor of Theology in 1393. He had begun to lecture at the university in 1391 and was appointed its rector in 1393, a position he filled until 1395. The Church was then agitated by the Western Schism, and three methods were proposed to re-establish peace: compromise, concession, and a general council. From 1380 to 1394 the University of Paris advocated a general council. In 1394 another tendency was manifest; i. e. both Boniface IX and Clement VII were held responsible for the continuance of the schism, and their resignations decreed to be the means of obtaining peace. To this end a letter was written to King Charles VI by three of the most learned masters of the university, Pierre d'Ailly, Gilles des Champs, and Clémanges. The two first prepared the content, to which Clémanges gave a Ciceronian elegance of form. The letter was unsuccessful, and the university was ordered to abstain from further discussion. Clémanges, forced to resign the rectorship of the university, then became canon and dean of Saint-Cloald (1395), and later on canon and treasurer of Langres. The anti-pope Benedict XIII, who admired his Latin style, took him for his secretary in 1397, and he remained at Avignon until 1408, when he abandoned Benedict because of the latter's conflict with Charles VI. Clémanges now retired to the Carthusian monastery of Valfonds and later to Fontaine-du-Bosc. In these two retreats he wrote his best treatises, "De Fructu eremi" (dedicated to Pierre d'Ailly), "De Fructu rerum adversarum", "De novis festivitatibus non instituendis", and "De studio theologico", in which latter work he exhibits his dislike for the Scholastic method in philosophy. In 1412 he returned to Langres, and was appointed Archdeacon of Bayeux. His voice was heard successively at the Council of Constance (1414), and at Chartres (1421), where he defended the "liberties" of the Gallican Church. In 1425 he was teaching rhetoric and theology in the College of Navarre, where, most probably, he died. Clémanges is also credited with the authorship of the work "De corrupto Ecclesie statu", first edited by Cordatus (possibly Hutten) in 1513, a violent attack on the morality and discipline of the contemporary Church; hence he is sometimes considered a Reformer of the type of Wyclif and Hus. Schubert, however, in his book "Ist Nicolaus von Clémanges der Verfasser des Buches De corrupto Ecclesie statu?" (Grossenhain, 1882; Leipzig, 1888) has shown that, although a contemporary, Clémanges was not the author of the book. His works were edited in two volumes by J. Lydius, a Protestant minister of Frankfort (Leyden, 1613). His letters are in d'Achery (below) I, 473 sqq.

J. B. DELAUNAY.

Clémencet, CHARLES, Benedictine historian, b. at Painblanc, in the department of Côte-d'Or, France, 1703; d. at Paris, 5 August, 1778. Clémencet entered the Congregation of Saint-Maur at an early age; for a short time he was lector of rhetoric at Pont-le-Voy, but, on account of his great abilities, was soon called to Paris. Here he took part in almost all of the important literary labours of his congregation, showing a marked preference for historical research. At

first his superiors commissioned him to edit the "Bibliotheca" (Myriobiblion) of Photius. Clémencet soon retired from this task and devoted all his powers to a chronological work for which Dantine, another member of the congregation, had made the preparatory studies. This chronology, Clémencet's principal work, had the very prolix title: "L'art de vérifier les dates ou faits historiques des chartes, des chroniques, et anciens monuments depuis la naissance de Jésus-Christ, par le moyen d'une table chronologique, où l'on trouve les années de Jésus-Christ et de l'Ere d'Espagne, les Indictions, le Cycle pascal, les Pâques de chaque année, les Cycles solaires et lunaires. Avec un Calendrier perpétuel, l'Histoire abrégée des conciles, des papes, des empereurs romains, grecs, français, allemands et turcs; des Rois de France, d'Espagne et d'Angleterre, d'Ecosse, de Lombardie, de Sicile, de Jérusalem, etc., des Ducs de Bourgogne, de Normandie, de Bretagne; des Comtes de Toulouse, de Champagne et de Blois par des religieux bénédictins de la congrégation de Saint-Maur" (Paris, 1750). The work was compiled with extraordinary industry, and contains, as the title shows, a large amount of historical material. In its judgment of persons and facts, however, it betrayed a strong bias to Jansenism and Gallicanism, and was, consequently, frequently attacked, one opponent in particular being the Jesuit Patouillet. The assertion was made, and not without reason, that the title ought to read: "L'art de vérifier les dates et falsifier les faits".

Clémencet also wrote volumes X and XI, issued at Paris, 1756 and 1759, of the monumental work "Histoire littéraire de la France". The volumes prepared by Clémencet are a rich collection of authorities, and are of importance not only for the literary history of France but also for the history of the development of all the nations of the Middle Ages. It was intended that he should edit volume XII of the "Histoire littéraire", preparing for it the life of St. Bernard of Clairvaux, but he gave up the undertaking and wrote instead an independent work entitled: "Histoire des vies et écrits de Saint-Bernard et de Pierre le Vénérable" (Paris, 1773). His strong predilection for Jansenism is shown in two of his writings, namely: "Histoire générale de Port-Royal depuis la réforme de cette abbaye jusqu'à son entière destruction (10 vols., Amsterdam, 1755-1757), and "Conférences de la Mère Angélique de Saint-Jean, Abbess de Port-Royal" (3 vols., Utrecht, 1760). Of the former of these two works only the first half could be published, as the second part contained too strong a defence of Jansenism. On account of his leaning to Jansenism, Clémencet was a bitter opponent of the Jesuits. He attacked them in several exceedingly sharp pamphlets and worked for the suppression of the Society. Among his literary labours should also be mentioned his share in an excellent edition of the works of St. Gregory of Nazianzus. Prudentius Maranus, another member of the Congregation of Saint-Maur, had begun the task. Clémencet issued the first volume under the title: "Gregorii Theologi opera quæ extant omnia" (Paris, 1778). This edition is still valuable and far surpasses all the earlier editions.

PATRICIUS SCHLAGER.

Clemens, FRANZ JACOB, a German Catholic philosopher, b. 4 October, 1815, at Coblenz; d. 24 February, 1862, at Rome. After spending some time in an educational institution at Metz, he entered, at the age of sixteen, the Jesuit College of Fribourg, Switzerland, attended the Gymnasium at Coblenz, and thence passed to the University of Bonn. In 1835 he matriculated at the University of Berlin, where he de-

voted special attention to the study of philosophy and received the doctorate in philosophy (1839). At the end of a literary journey through Germany and Italy, he became, in 1843, instructor in philosophy at the University of Bonn, and taught there with great success until 1856. In 1848 he was elected a member of the Frankfort Parliament, and attended, at Mainz, the first General Congress of German Catholics, at which he suggested the foundation of the St. Vincent de Paul Society in Germany. In 1856 he was appointed professor of philosophy in the Academy of Münster. So great was his popularity as a teacher at Bonn that, when he removed to Münster, he was followed by some seventy students. The attendance at his lectures in the Westphalian capital was an extraordinarily large one; but his health failed after a few years. In 1861, upon the advice of his physicians, he sought relief in a southern climate; he died at Rome in the beginning of the following year and was buried at the Gesù.

Clemens was a layman of sound Catholic principles, who ably defended the Church even on theological questions. He published his first great work, "Giordano Bruno und Nikolaus von Cusa", in 1847, at Bonn. He also wrote in defence of the Holy Coat of Trier, "Der heilige Rock zu Trier und die protestantische Kritik" (1845), against Gildemeister and von Sybel. His other principal writings were connected with two controversies in which he became involved. His book, "Die speculative Theologie A. Günthers" (Cologne, 1853), a clear demonstration of the contradiction between Catholic doctrine and the views of Günther, elicited answers from Professors Baltzer and Knoodt, to which Clemens replied. His "De Scholasticorum sententiâ, philosophiam esse theologiæ ancillam, commentatio" (Münster, 1856) treated of the subordinate position which philosophy should occupy in regard to theology. It brought him into conflict with Professor Kuhn of Tübingen, against whom he published, in defence of his position: "Die Wahrheit etc." (Münster, 1860) and "Über das Verhältniss etc." (Mainz, 1860).

N. A. WEBER.

Clemens non Papa (JACQUES CLEMENT), representative of the Flemish or Netherland School of music of the sixteenth century; d. 1558. All that is known with reasonable certainty of his life is that he preceded Nicolas Gombert (1495-1570) as choirmaster at the court of Charles V. An indication of his fame is his nickname *non Papa*, given to distinguish him from the contemporaneous Pope Clement VII (1523-34). While his style is always noble and fluent, he shows the fault of his time and school of elaborating contrapuntal forms at the expense of a clear and distinct declamation of the text. Clemens was, nevertheless, one of the chief forerunners of Palestrina and Orlandus Lassus, who alone were able to overshadow him. Some of his more important works are: ten masses, one for six, five for five, and four for four voices, published by Petrus Phalesius at Louvain (1555-80), a large number of motets, and four volumes of "Souter Liedekens", that is psalms set to familiar Netherland melodies, published by Tytmann Susato at Antwerp (1556-57).

JOSEPH OTTEN.

Clemens Prudentius. See PRUDENTIUS, MARCUS AURELIUS CLEMENS.

Clement I, SAINT. POPE (called CLEMENS ROMANUS to distinguish him from the Alexandrian), is the first of the successors of St. Peter of whom anything definite is known, and he is the first of the "Apostolic

Fathers". His feast is celebrated 23 November. He has left one genuine writing, a letter to the Church of Corinth, and many others have been attributed to him.

I. THE FOURTH POPE.—According to Tertullian, writing c. 199, the Roman Church claimed that Clement was ordained by St. Peter (*De Præscript.*, xxxii), and St. Jerome tells us that in his time "most of the Latins" held that Clement was the immediate successor of the Apostle (*De viris illustr.*, xv). St. Jerome himself in several other places follows this opinion, but here he correctly states that Clement was the fourth pope. The early evidence shows great variety. The most ancient list of popes is one made by Hegesippus in the time of Pope Anicetus, c. 160 (Harnack ascribes it to an unknown author under Soter, c. 170), cited by St. Epiphanius (*Hær.*, xxvii, 6). It seems to have been used by St. Irenæus (*Hær.*, III, iii), by Julius Africanus, who composed a

chronography in 222, by the third- or fourth-century author of a Latin poem against Marcion, and by Hippolytus, whose chronology extends to 234 and is probably found in the "Liberian Catalogue" of 354. That catalogue was itself adopted in the "Liber Pontificalis". Eusebius in his chronicle and history used Africanus; in the latter he slightly corrected the dates. St. Jerome's chronicle is a

CLEMENT I, SISTINE CHAPEL, ROME
Tuscan School (Ideal)

translation of Eusebius's, and is our principal means for restoring the lost Greek of the latter; the Armenian version and Coptic epitomes of it are not to be depended on. The varieties of order are as follows:

- (1) Linus, Cletus, Clemens (Hegesippus, ap. Epiphanius, Canon of Mass).
- Linus, Anencletus, Clemens (Irenæus, Africanus ap. Eusebius).
- Linus, Anacletus, Clemens (Jerome).
- (2) Linus, Cletus, Anacletus, Clemens (Poem against Marcion).
- (3) Linus, Clemens, Cletus, Anacletus [Hippolytus (?), "Liberian Catal."; "Liber. Pont."].
- (4) Linus, Clemens, Anacletus (Optatus, Augustine).

At the present time no critic doubts that Cletus, Anacletus, Anencletus, are the same person. Anacletus is a Latin error; Cletus is a shortened (and more Christian) form of Anencletus. Lightfoot thought that the transposition of Clement in the "Liberian Catalogue" was a mere accident, like the similar error "Anicetus, Pius" for "Pius, Anicetus", further on in the same list. But it may have been a deliberate alteration by Hippolytus, on the ground of the tradition mentioned by Tertullian. St. Irenæus (III, iii) tells us that Clement "saw the blessed Apostles and conversed with them, and had yet ringing in his ears the preaching of the Apostles and had their tradition before his eyes, and not he only, for many were then surviving who had been taught by the Apostles". Similarly Epiphanius tells us (from Hegesippus) that Clement was a contemporary of Peter and Paul. Now Linus and Cletus had each twelve years attributed to them in the list. If Hippolytus found Cletus doubled by an error (Cletus

XII, Anacletus XII), the accession of Clement would appear to be thirty-six years after the death of the Apostles. As this would make it almost impossible for Clement to have been their contemporary, it may have caused Hippolytus to shift him to an earlier position. Further, St. Epiphanius says (*loc. cit.*): "Whether he received episcopal ordination from Peter in the life-time of the Apostles, and declined the office, for he says in one of his epistles 'I retire, I depart, let the people of God be in peace', (for we have found this set down in certain Memoirs), or whether he was appointed by the Bishop Cletus after he had succeeded the Apostles, we do not clearly know." The "Memoirs" were certainly those of Hegesippus. It seems unlikely that he is appealed to only for the quotation from the Epistle, c. liv; probably Epiphanius means that Hegesippus stated that Clement had been ordained by Peter and declined to be bishop, but twenty-four years later really exercised the office for nine years. Epiphanius could not reconcile these two facts; Hippolytus seems to have rejected the latter.

Chronology.—The date intended by Hegesippus is not hard to restore. Epiphanius implies that he placed the martyrdom of the Apostles in the twelfth year of Nero. Africanus calculated the fourteenth year (for he had attributed one year too little to the reigns of Caligula and Claudius), and added the imperial date for the accession of each pope; but having two years too few up to Anicetus he could not get the intervals to tally with the years of episcopate given by Hegesippus. He had a parallel difficulty in his list of the Alexandrian bishops.

Hegesippus	Africanus (from Eusebius)	Interval	Real dates A. D.
Linus 12	Nero 14 12		Nero 12 66
Cletus 12	Titus 2 12		Vesp. 10 78
Clemens 9	Dom. 12 (7)		Dom. 10 90
Euaristus 8	Trajan 2 (10)		Trajan 2 99
Alexander 10	Trajan 12 10		Trajan 10 107
Sixtus 10	Hadrian 3 (9)		Hadrian 1 117
Telesphorus 11	Hadrian 12 (10)		Hadrian 11 127
Hyginus 4	Anton. 1 4		Anton. 1 138
Pius 15	Anton. 5 15		Anton. 5 142
Anicetus	Anton. 20		Anton. 20 157

If we start, as Hegesippus intended, with Nero 12 (see last column), the sum of his years brings us right for the last three popes. But Africanus has started two years wrong, and in order to get right at Hyginus he has to allow one year too little to each of the preceding popes, Sixtus and Telesphorus. But there is one inharmonious date, Trajan 2, which gives seven and ten years to Clement and Euaristus instead of nine and eight: Evidently he felt bound to insert a traditional date; and in fact we see that Trajan 2 was the date intended by Hegesippus. Now we know that Hegesippus spoke about Clement's acquaintance with the Apostles, and said nothing about any other pope until Telesphorus, "who was a glorious martyr". It is not surprising, then, to find that Africanus had, besides the lengths of episcopate, two fixed dates from Hegesippus, those of the death of Clement in the second year of Trajan, and of the martyrdom of Telesphorus in the first year of Antoninus Pius. We may take it, therefore, that about 160 the death of St. Clement was believed to have been in 99.

Identity.—Origen identifies Pope Clement with St. Paul's fellow-labourer, Phil., iv, 3, and so do Eusebius, Epiphanius, and Jerome; but this Clement was probably a Philipian. In the middle of the nineteenth century it was the custom to identify the pope with the consul of 95, T. Flavius Clemens, who was martyred by his first cousin, the Emperor Domitian, at the end of his consulship. But the ancients never suggest this, and the pope is said to have

lived on till the reign of Trajan. It is unlikely that he was a member of the imperial family. The continual use of the Old Testament in his Epistle has suggested to Lightfoot, Funk, Nestle, and others that he was of Jewish origin. Probably he was a freedman or son of a freedman of the emperor's household, which included thousands or tens of thousands. We know that there were Christians in the household of Nero (Phil., iv, 22). It is highly probable that the bearers of Clement's letter, Claudius Ephebus and Valerius Vito, were of this number, for the names Claudius and Valerius occur with great frequency in inscriptions among the freedmen of the Emperor Claudius (and his two predecessors of the same gens) and his wife Valeria Messalina. The two messengers are described as "faithful and prudent men, who have walked among us from youth unto old age unblameably"; thus they were probably already Christians and living in Rome before the death of the Apostles about thirty years earlier. The Prefect of Rome during Nero's persecution was Titus Flavius Sabinus, elder brother of the Emperor Vespasian, and father of the martyred Clemens. Flavia Domitilla, wife of the Martyr, was a granddaughter of Vespasian, and niece of Titus and Domitian; she may have died a martyr to the rigours of her banishment. The catacomb of Domitilla is shown by existing inscriptions to have been founded by her. Whether she is distinct from another Flavia Domitilla, who is styled "Virgin and Martyr", is uncertain. (See FLAVIA DOMITILLA and NEREUS and ACHILLEUS.) The consul and his wife had two sons, Vespasian and Domitian, who had Quintilian for their tutor. Of their life nothing is known. The elder brother of the martyr Clemens was T. Flavius Sabinus, consul in 82, put to death by Domitian, whose sister he had married. Pope Clement is represented as his son in the Acts of Sts. Nereus and Achilleus, but this would make him too young to have known the Apostles.

Martyrdom.—Of the life and death of St. Clement nothing is known. The apocryphal Greek Acts of his martyrdom were printed by Cotelier in his "Patres Apost." (1724, I, 808; reprinted in Migne, P. G., II, 617; best edition by Funk, "Patr. Apost.", II, 28). They relate how he converted Theodora, wife of Sisinnius, a courtier of Nerva, and (after miracles) Sisinnius himself and four hundred and twenty-three other persons of rank. Trajan banishes the pope to the Crimea, where he slakes the thirst of two thousand Christian confessors by a miracle. The people of the country are converted, seventy-five churches are built. Trajan, in consequence, orders Clement to be thrown into the sea with an iron anchor. But the tide every year recedes two miles, revealing a Divinely built shrine which contains the martyr's bones. This story is not older than the fourth century. It is known to Gregory of Tours in the sixth. About 868 St. Cyril, when in the Crimea on the way to evangelize the Chazars, dug up some bones in a mound (not in a tomb under the sea), and also an anchor. These were believed to be the relics of St. Clement. They were carried by St. Cyril to Rome, and deposited by Adrian II with those of St. Ignatius of Antioch in the high altar of the basilica of St. Clement in Rome. The history of this translation is evidently quite truthful, but there seems to have been no tradition with regard to the mound, which simply looked a likely place to be a tomb. The anchor appears to be the only evidence of identity, but we cannot gather from the account that it belonged to the scattered bones. (See Acta SS., 9 March, II, 20.) St. Clement is first mentioned as a martyr by Rufinus (c. 400). Pope Zozimus in a letter to Africa in 417 relates the trial and partial acquittal of the heretic Cælestius in the basilica of St. Clement; the pope had chosen this

church because Clement had learned the Faith from St. Peter, and had given his life for it (Ep. ii). He is also called a martyr by the writer known as Prædestinatus (c. 430) and by the Synod of Vaison in 442. Modern critics think it possible that his martyrdom was suggested by a confusion with his namesake, the martyred consul. But the lack of tradition that he was buried in Rome is in favour of his having died in exile.

The Basilica.—The church of St. Clement at Rome lies in the valley between the Esquiline and Cælian hills, on the direct road from the Coliseum to the Lateran. It is now in the hands of the Irish Province of Dominicans. With its atrium, its choir enclosed by a wall, its ambos, it is the most perfect model of an early basilica in Rome, though it was built as late as the first years of the twelfth century by Paschal II, after the destruction of this portion of the city by the Normans under Robert Guiscard. Paschal II followed the lines of an earlier church, on a rather smaller scale, and employed some of its materials and fittings. The marble wall of the present choir is of the date of John II (533-5). In 1858 the older church was unearthed, below the present building, by the Prior, Father Mulooly, O. P. Still lower were found chambers of imperial date and walls of the Republican period. The lower church was built under Constantine (d. 337) or not much later. St. Jerome implies that it was not new in his time: "nominis eius [Clementis] memoriam usque hodie Romæ exstructa ecclesia custodit" (De viris illust., xv). It is mentioned in inscriptions of Damasus (d. 383) and Siricius (d. 398). De Rossi thought the lowest chambers belonged to the house of Clement, and that the room immediately under the altar was probably the original *memoria* of the saint. These chambers communicate with a shrine of Mithras, which lies beyond the apse of the church, on the lowest level. De Rossi supposed this to be a Christian chapel purposely polluted by the authorities during the last persecution. Lightfoot has suggested that the rooms may have belonged to the house of T. Flavius Clemens the consul, being later mistaken for the dwelling of the pope; but this seems quite gratuitous. In the sanctuary of Mithras a statue of the Good Shepherd was found.

II. PSEUDO-CLEMENTINE WRITINGS.—Many writings have been falsely attributed to Pope St. Clement I: (1) The "Second Clementine Epistle to the Corinthians", discussed under III. (2) Two "Epistles to Virgins", extant in Syriac in an Amsterdam MS. of 1470. The Greek originals are lost. Many critics have believed them genuine, for they were known in the fourth century to St. Epiphanius (who speaks of their being read in the Churches) and to St. Jerome. But it is now admitted on all hands that they cannot be by the same author as the genuine Epistle to the Corinthians. Some writers, as Hefele and Westcott, have attributed them to the second half of the second century, but the third is more probable (Harnack, Lightfoot). Harnack thinks the two letters were originally one. They were first edited by Wetstein, 1470, with Latin translation: reprinted by Gallandi, "Bibl. vett. Patr.", I, and Migne, P. G., I. They are found in Latin only in Mansi, "Concilia", I, and Funk, "Patres Apost.", II. See Lightfoot, "Clement of Rome" (London, 1890, I; Bardenhewer, "Gesch. der altkirchl. Litt." (Freiburg im Br., 1902), I; Harnack in "Sitzungsber. der k. preuss. Akad. der Wiss." (Berlin, 1891), 361 and "Chronol." (1904), II, 133. (3) At the head of the Pseudo-Isidorian decretals stand five letters attributed to St. Clement. The first is the letter of Clement to James translated by Rufinus (see III); the second is another letter to James, found in many MSS. of the "Recognitions". The other three are the work of Pseudo-Isidore.

(See FALSE DECRETALS.) (4) Ascribed to Clement are the "Apostolical Constitutions", "Apostolic Canons", and the "Testament of Our Lord", also a Jacobite Anaphora (Renaudot, Liturg. Oriental. Coll., Paris, 1716, II; Migne, P. G., II). For other attributions see Harnack, "Gesch. der altchr. Lit.", I, 777-80. (5) The "Clementines" or Pseudo-Clementines. (q. v.)

III. THE EPISTLE TO THE CORINTHIANS.—The Church of Corinth had been led by a few violent spirits into a sedition against its rulers. No appeal seems to have been made to Rome, but a letter was sent in the name of the Church of Rome by St. Clement to restore peace and unity. He begins by explaining that his delay in writing has been caused by the sudden calamities which, one after another, had just been falling upon the Roman Church. The reference is clearly to the persecution of Domitian. The former high reputation of the Corinthian Church is recalled, its piety and hospitality, its obedience and discipline. Jealousy had caused the divisions; it was jealousy that led Cain, Esau, etc., into sin, it was jealousy to which Peter and Paul and multitudes with them fell victims. The Corinthians are urged to repent after the example of the Patriarchs, and to be humble like Christ himself. Let them observe order, as all creation does. A curious passage on the Resurrection is somewhat of an interruption in the sequence: all creation proves the Resurrection, and so does the phoenix, which every five hundred years consumes itself, that its offspring may arise out of its ashes (23-6). Let us, Clement continues, forsake evil and approach God with purity, clinging to His blessing, which the Patriarchs so richly obtained, for the Lord will quickly come with His rewards; let us look to Jesus Christ, our High-Priest, above the angels at the right hand of the Father (36). Discipline and subordination are necessary as in an army and in the human body, while arrogance is absurd, for man is nothing. The Apostles foresaw feuds, and provided for a succession of bishops and deacons; such, therefore, cannot be removed at pleasure. The just have always been persecuted. Read St. Paul's first epistle to you, how he condemns party spirit. It is shocking that a few should disgrace the Church of Corinth. Let us beg for pardon; nothing is more beautiful than charity; it was shown by Christ when He gave His Flesh for our flesh, His Soul for our souls; by living in this love, we shall be in the number of the saved through Jesus Christ, by Whom is glory to God for ever and ever, Amen (58). But if any disobey, he is in great danger; but we will pray that the Creator may preserve the number of His elect in the whole world.—Here follows a beautiful Eucharistic prayer (59-61). The conclusion follows: "We have said enough, on the necessity of repentance, unity, peace; for we have been speaking to the faithful, who have deeply studied the Scriptures, and will understand the examples pointed out, and will follow them. We shall indeed be happy if you obey. We have sent two venerable messengers, to show how great is our anxiety for peace among you" (62-4). "Finally may the all-seeing God and Master of Spirits and Lord of all flesh, who chose the Lord Jesus Christ and us through Him for a peculiar people, grant unto every soul that is called after His excellent and holy Name faith, fear, peace, patience, long-suffering, temperance, chastity, and soberness, that they may be well-pleasing unto His Name through our High Priest and Guardian, Jesus Christ, through whom unto Him be glory and majesty, might and honour, both now and for ever and ever, Amen. Now send ye back speedily unto us our messengers Claudius Ephebus and Valerius Bito, together with Fortunatus also, in peace and with joy, to the end that they may the more quickly

report the peace and concord which is prayed for and earnestly desired by us, that we also may the more speedily rejoice over your good order. The grace of our Lord Jesus Christ be with you and with all men in all places who have been called by God and through Him, through whom is glory and honour, power and greatness and eternal dominion, unto Him, from the ages past and for ever and ever. Amen." (64-5.)

The style of the Epistle is earnest and simple, restrained and dignified, and sometimes eloquent. The Greek is correct, though not classical. The quotations from the Old Testament are long and numerous. The version of the Septuagint used by Clement inclines in places towards that which appears in the New Testament, yet presents sufficient evidence of independence; his readings are often with A, but are less often opposed to B than are those in the New Testament; occasionally he is found against the Septuagint with Theodotion or even Aquila (see H. B. Swete, *Introd. to the O. T. in Greek*, Cambridge, 1900). The New Testament he never quotes verbally. Sayings of Christ are now and then given, but not in the words of the Gospels. It cannot be proved, therefore, that he used any one of the Synoptic Gospels. He mentions St. Paul's First Epistle to the Corinthians, and appears to imply a second. He knows Romans and Titus, and apparently cites several other of St. Paul's Epistles. But Hebrews is most often employed of all New Testament books. James, probably, and I Peter, perhaps, are referred to. (See the lists of citations in Funk and Lightfoot, Westcott and Zahn on the Canon; Introductions to Holy Scripture, such as those of Cornely, Zahn, etc., and "The New Test. in the Apost. Fathers", by a Committee of the Oxford Society of Hist. Theology, Oxford, 1906.) The tone of authority with which the letter speaks is noteworthy, especially in the later part (56, 58, etc.): "But if certain persons should be disobedient unto the words spoken by Him through us, let them understand that they will entangle themselves in no slight transgression and danger; but we shall be guiltless of this sin" (59). "It may, perhaps, seem strange", writes Bishop Lightfoot, "to describe this noble remonstrance as the first step towards papal domination. And yet undoubtedly this is the case." (I, 70.)

Doctrine.—There is little intentional dogmatic teaching in the Epistle, for it is almost wholly hortatory. A passage on the Holy Trinity is important. Clement uses the Old Testament affirmation "The Lord liveth", substituting the Trinity thus: "As God liveth, and the Lord Jesus Christ liveth and the Holy Spirit,—the faith and hope of the elect, so surely he that performeth", etc. (58). Christ is frequently represented as the High-Priest, and redemption is often referred to. Clement speaks strongly of justification by works. His words on the Christian ministry have given rise to much discussion (42 and 44): "The Apostles received the Gospel for us from the Lord Jesus Christ; Jesus Christ was sent from God. So then Christ is from God, and the Apostles from Christ. Both [missions] therefore came in due order by the will of God. . . . So preaching everywhere in country and town, they appointed their first-fruits, having proved them by the Spirit, to be bishops and deacons for those who should believe. And this in no new fashion, for it had indeed been written from very ancient times about bishops and deacons; for thus saith the Scripture: 'I will appoint their bishops in justice and their deacons in faith'" (a strange citation of Is., lx, 17). . . . "And our Apostles knew through our Lord Jesus Christ that there would be strife over the name of the office of bishop. For this cause therefore, having received complete foreknowledge, they appointed the aforesaid persons, and afterwards they have given a

law, so that, if these should fall asleep, other approved men should succeed to their ministration." Rothe, Michiels (Origines de l'épiscopat, Louvain, 1900, 197), and others awkwardly understand "if they, the Apostles, should fall asleep". For *ἐπινομὴν δεδώκασι*, which the Latin renders *legem dederunt*, Lightfoot reads *ἐπινομὴν δεδώκασι*, "they have provided a continuance". In any case the general meaning is clear, that the Apostles provided for a lawful succession of ministers. Presbyters are mentioned several times, but are not distinguished from bishops. There is absolutely no mention of a bishop at Corinth, and the ecclesiastical authorities there are always spoken of in the plural. R. Sohm thinks there was as yet no bishop at Corinth when Clement wrote (so Michiels and many other Catholic writers; Lightfoot leaves the question open), but that a bishop must have been appointed in consequence of the letter; he thinks that Rome was the origin of all ecclesiastical institutions and laws (Kirchenrecht, 189). Harnack in 1897 (Chronol., I) upheld the paradox that the Church of Rome was so conservative as to be governed by presbyters until Anicetus; and that when the list of popes was composed, c. 170, there had been a bishop for less than twenty years; Clement and others in the list were only presbyters of special influence.

The liturgical character of parts of the Epistle is elaborately discussed by Lightfoot. The prayer (59-61) already mentioned, which reminds us of the Anaphora of early liturgies, cannot be regarded, says Duchesne, "as a reproduction of a sacred formulary, but it is an excellent example of the style of solemn prayer in which the ecclesiastical leaders of that time were accustomed to express themselves at meetings for worship" (Origines du culte chrét., 3rd ed., 50; tr., 50). The fine passage about Creation, 32-3, is almost in the style of a Preface, and concludes by introducing the Sanctus by the usual mention of the angelic powers: "Let us mark the whole host of the angels, how they stand by and minister unto His Will. For the Scripture saith: Ten thousand times ten thousand stood by Him, and thousands of thousands ministered unto Him; and they cried aloud: Holy, holy, holy is the Lord of Sabaoth; all creation is full of His glory. Yea, and let us ourselves then, being gathered together in concord with intentness of heart, cry unto Him. . ." The combination of Daniel, vii, 10, with Is., vi, 3, may be from a liturgical formula. It is interesting to note that the contemporary Apocalypse of St. John (iv, 8) shows the four living creatures, representing all creation, singing the Sanctus at the heavenly Mass.

The historical references in the letter are deeply interesting: "To pass from the examples of ancient days, let us come to those champions who lived very near to our time. Let us set before us the noble examples which belong to our generation. By reason of jealousy and envy the greatest and most righteous pillars of the Church were persecuted, and contended even until death. Let us set before our eyes the good Apostles. There was Peter, who by reason of unrighteous jealousy endured not one or two, but many labours, and thus having borne his testimony went to his appointed place of glory. By reason of jealousy and strife Paul by his example pointed out the prize of patient endurance. After that he had been seven times in bonds, had been driven into exile, had been stoned, had preached in the East and in the West, he won the noble renown which was the reward of his faith, having taught righteousness unto the whole world and having reached the farthest bounds of the West; and when he had borne his testimony before the rulers, so he departed from the world and went unto the holy place, having been found a notable pattern of patient endurance" (5). It is obvious that these two Apostles are mentioned

because they suffered at Rome. It seems that St. Paul went to Spain as he intended (Rom., xv, 28) and as is declared by the spurious Acts of Peter and by the Muratorian fragment. "Unto these men of holy lives was gathered a vast multitude of the elect, who through many indignities and tortures, being the victims of jealousy, set a brave example among ourselves. By reason of jealousy women being persecuted, after that they had suffered cruel and unholy insults as Danaïds and Dirce, safely reached the goal in the race of faith, and received a noble reward, feeble though they were in body" (6). The "vast multitude" both of men and women "among ourselves" at Rome refers to the horrible persecution of Nero, described by Tacitus, "Ann.", XV, xlv. It is in the recent past, and the writer continues: "We are in the same lists, and the same contest awaits us" (7); he is under another persecution, that of Domitian, covertly referred to as a series of "sudden and repeated calamities and reverses", which have prevented the letter from being written sooner. The martyrdom of the Consul Clement (probably patron of the pope's own family) and the exile of his wife will be among these disasters.

Date and Authenticity.—The date of the letter is determined by these notices of persecution. It is strange that even a few good scholars (such as Grotius, Grabe, Orsi, Uhlhorn, Hefele, Wieseler) should have dated it soon after Nero. It is now universally acknowledged, after Lightfoot, that it was written about the last year of Domitian (Harnack) or immediately after his death in 96 (Funk). The Roman Church had existed several decades, for the two envoys to Corinth had lived in it from youth to age. The Church of Corinth is called *ἀρχαία* (47). Bishops and deacons have succeeded to bishops and deacons appointed by the Apostles (44). Yet the time of the Apostles is "quite lately" and "our own generation" (5). The external evidence is in accord. The dates given for Clement's episcopate by Hegesippus are apparently 90-99, and that early writer states that the schism at Corinth took place under Domitian (Eusebius, Hist. Eccl., III, xvi, for *κατὰ τὸν δηλούμενον* is meaningless if it is taken to refer to Clement and not to Domitian; besides, the whole of Eusebius's account of that emperor's persecution, III, xvii-xx, is founded on Hegesippus). St. Irenæus says that Clement still remembered the Apostles, and so did many others, implying an interval of many years after their death. Volkmar placed the date in the reign of Hadrian, because the Book of Judith is quoted, which he declared to have been written in that reign. He was followed by Baur, but not by Hilgenfeld. Such a date is manifestly impossible, if only because the Epistle of Polycarp is entirely modelled on that of Clement and borrows from it freely. It is possibly employed by St. Ignatius, c. 107, and certainly in the letter of the Smyrneans on the martyrdom of St. Polycarp, c. 156.

The Epistle is in the name of the Church of Rome, but the early authorities always ascribe it to Clement. Dionysius, Bishop of Corinth, wrote c. 170 to the Romans in Pope Soter's time: "To-day we kept the holy day, the Lord's day, and on it we read your letter; and we shall ever have it to give us instruction, even as the former one written through Clement" (Eusebius, Hist. Eccl., IV, xxx). Hegesippus attributed the letter to Clement. Irenæus, c. 180-5, perhaps using Hegesippus, says: "Under this Clement no small sedition took place among the brethren at Corinth, and the Church of Rome sent a most sufficient letter to the Corinthians, establishing them in peace, and renewing their faith, and announcing the tradition it had recently received from the Apostles" (III, iii). Clement of Alexandria, c. 200, frequently quotes the Epistle as Clement's, and so do Origen and Eusebius. Lightfoot and Harnack are fond of

pointing out that we hear earlier of the importance of the Roman Church than of the authority of the Roman bishop. If Clement had spoken in his own name, they would surely have noted expressly that he wrote not as Bishop of Rome, but as an aged "presbyter" who had known the Apostles. St. John indeed was still alive, and Corinth was rather nearer to Ephesus than to Rome. Clement evidently writes officially, with all that authority of the Roman Church of which Ignatius and Irenæus have so much to say.

The Second Letter to the Corinthians.—An ancient homily by an anonymous author has come down to us in the same two Greek MSS. as the Epistle of Clement, and is called the Second Epistle of Clement to the Corinthians. It is first mentioned by Eusebius (Hist. Eccl., III, xxxvii), who considered it spurious, as being unknown to the ancients; he is followed (perhaps not independently) by Rufinus and Jerome. Its inclusion as a letter of Clement in the Codex Alexandrinus of the whole Bible in the fifth century is the earliest testimony to a belief in its authenticity; in the sixth century it is quoted by the Monophysite leaders Timothy of Alexandria and Severus of Antioch, and it was later known to many Greek writers. This witness is a great contrast to the very early veneration paid to the genuine letter. Hilgenfeld's theory that it is the letter of Pope Soter to the Corinthians, mentioned by Dionysius in the fragment quoted above, was accepted by many critics, until the discovery of the end of the work by Bryennios showed that it was not a letter at all, but a homily. Still Harnack has again and again defended this view. An apparent reference to the Isthmian Games in §7 suggests that the homily was delivered at Corinth; but this would be in character if it was a letter addressed to Corinth. Lightfoot and others think it earlier than Marcion, c. 140, but its reference to Gnostic views does not allow us to place it much earlier. The matter of the sermon is a very general exhortation, and there is no definite plan or sequence. Some citations from unknown Scriptures are interesting.

The editio princeps of the two "Epistles to the Corinthians" is that of Patrick Young, 1633 (2d ed., 1637), from the famous Codex Alexandrinus (A) of the whole Bible in Greek. A number of editions followed in the seventeenth and eighteenth centuries (enumerated by Funk, Gebhardt, and Lightfoot). In the nineteenth we may notice those of C. J. Hefele (Tübingen, 1st ed., 1839), Jacobson (Oxford, 1st ed., 1840, etc.), Dressel (Leipzig, 1857), in the editions of the Apostolic Fathers by these writers. An edition by Bishop J. B. Lightfoot appeared in 1869 (London and Cambridge), one by J. C. M. Laurent in 1870 (Leipzig), and one by O. von Gebhardt and A. Harnack in 1875 (Leipzig). All these editions are founded on the one MS., which gives both letters incompletely, and not always legibly. On its doubtful readings Tischendorf wrote in 1873 (Clementis Rom. Epistulae, Leipzig), and he gave a so-called facsimile in 1867 (Appendix codicum celeberrimorum Sinaitici et Vaticani, Leipzig). A photographic reproduction of the whole codex was published at the British Museum in 1879. In 1875 the complete text of both Epistles was published by Bryennios at Constantinople, from a MS. in the Patriarchal library of that city. It was used in Hilgenfeld's "Clementis Romani Epistulae" (2d ed., Leipzig, 1876), in the second edition of Gebhardt and Harnack (1876). In Lightfoot's edition of 1877 (London) a Syriac version was also used for the first time. The MS. was written in 1170, and is in the Cambridge University Library. It has been published in full by R. L. Bensley and R. H. Kennett, "The Epistles of St. Clement to the Corinthians in Syriac" (London, 1899). Dr. Funk's "Opera Patrum Apostolicorum" first appeared in 1878-81 (Tübingen). The great and comprehensive

posthumous edition of Lightfoot's "Clement of Rome" (which contains a photographic facsimile of the Constantinople MS.) was published in 1890 (2 vols., London). The Greek text and English translation are reprinted by Lightfoot, "The Apostolic Fathers" (1 vol., London, 1891). In 1878 Dom Germain Morin discovered a Latin translation of the genuine Epistle in an eleventh-century MS. in the library of the Seminary of Namur (Anecdota Maredsolana, 2 vols., "S. Clementis ad Corinthios Epistulae versio antiquissima", Maredsous, 1894). The version is attributed to the second century by Harnack and others. It has been employed to correct the text in Funk's latest edition (1901), and by R. Knöpf, "Der erste Clementsbrief" (in "Texte und Untere", New Series, Leipzig, 1899). Besides Lightfoot's excellent English rendering, there is a translation of the two Epistles in "Ante-Nicene Chr. Lit." (Edinburgh, 1873, 1).

On the Epistle in general the completest commentary is that of LIGHTFOOT, 1890; Dr. FUNK's, in Latin, will be found most serviceable. See also FREPPEL, *Les Pères Apostoliques* (Paris, 1859; 4th ed., 1885); HARNACK, *Gesch. der altchrist. Lit.* (Vol. I, Leipzig, 1893); (Vol. II, *Chronologie*, I, 1897); WREDE, *Untersuchungen zum ersten Clementsbrieft* (1891); BRÜLL, *Der erste Brief des Clemens von Rom* (Freiburg im Br., 1883). Detailed references to other writers and to periodicals will be found in BARDENHEWER, *Patrologie* (1894); IDEM, *Gesch. der altchrist. Lit.*; CHEVALIER, *Rép. des sources hist.*, *Bio-Bibl.*; EHRHARD, *Die altchrist. Lit.*; RICHARDSON, *Bibliographical Synopsis* (Buffalo, 1887).

On the order and chronology of the first popes, the earlier investigations are fruitless; see P. L., CXXXVI-VII. Modern research begins with MOMMSEN, *Ueber den Chronographen vom Jahre 354*, in *Abhandlungen k. Sachs. Ges. der Wiss.* (1850), I, 549, and the unsatisfactory works of LIPSIUS, *Die Papstverzeichnisse des Eusebios* (Kiel, 1868), *Chronol. der röm. Bischöfe* (Kiel, 1869). The next most important work is *Liber Pontificalis*, ed. DUCHESNE (1st part, 1884). LIGHTFOOT's long excursus in *Clement of Rome*, I, was epoch-making. Since then HARNACK, *Chronol.*, I, 70-230; TURNER, in *Journal of Th. Stud.*, Jan., 1900; FLAMION, in *Revue d'hist. ecclési.* (Dec., 1900); CHAPMAN, in *Revue Bénédicte* (Oct., 1901, Jan. and April, 1902).

On the Church of St. Clement see MULOOLY, *St. Clement and his Basilica at Rome* (1st ed., Rome, 1869; 2d, 1873); DE ROSI, *Bull. di archeol. crist.* (1863, 1864, 1865, 1867, and 1870); ROLLÉ, *Saint Clément de Rome* (Paris, 1873). Shorter accounts in GRIBAR, *Gesch. Roms und der Päpste* (Freiburg im Br., 1901); LIGHTFOOT and the various Roman guide-books, MURRAY, BAEDER, CHANDLERY, etc.

JOHN CHAPMAN.

Clement II, POPE (SUIDGER), date of birth unknown; enthroned 25 December, 1046; d. 9 October, 1047. In the autumn of 1046 the King of Germany, Henry III, crossed the Alps at the head of a large army and accompanied by a brilliant retinue of the secular and ecclesiastical princes of the empire, for the twofold purpose of receiving the imperial crown and of restoring order in the Italian peninsula. The condition of Rome in particular was deplorable. In St. Peter's, the Lateran, and St. Mary Major's, sat three rival claimants to the papacy. (See BENEDICT IX.) Two of them, Benedict IX and Sylvester III, represented rival factions of the Roman nobility. The position of the third, Gregory VI, was peculiar. The reform party, in order to free the city from the intolerable yoke of the House of Tusculum, and the Church from the stigma of Benedict's dissolute life, had stipulated with that stripling that he should resign the tiara upon receipt of a certain amount of money. That this heroic measure for delivering the Holy See from destruction was simoniacal, has been doubted by many; but that it bore the outward aspect of simony and would be considered a flaw in Gregory's title, consequently in the imperial title Henry was seeking, was the opinion of that age.

Strong in the consciousness of his good intentions, Gregory met King Henry at Piacenza, and was received with all possible honours. It was decided that he should summon a synod to meet at Sutri near Rome, at which the entire question should be ventilated. The proceedings of the Synod of Sutri, 20 December, are well summarized by Cardinal Newman

in his "Essays Critical and Historical" (II, 262 sqq.). Of the three papal claimants, Benedict refused to appear; he was again summoned and afterwards pronounced deposed at Rome. Sylvester was "stripped of his sacerdotal rank and shut up in a monastery". Gregory showed himself to be, if not an *idiota*, at least a man *miræ simplicitatis*, by explaining in straightforward speech his compact with Benedict, and he made no other defence than his good intentions, and deposed himself (Watterich, *Vitæ Rom. Pont.*, I, 76); an act by some interpreted as a voluntary resignation, by others (Hefele), in keeping with the contemporary annals, as a deposition by the synod. The Synod of Sutri adjourned to meet again in Rome 23 and 24 December. Benedict, failing to appear, was condemned and deposed in *contumaciam*, and the papal chair was declared vacant. As King Henry was not yet crowned emperor, he had no canonical right to take part in the new election; but the Romans had no candidate to propose and begged the monarch to suggest a worthy subject.

Henry's first choice, the powerful Adalbert, Archbishop of Bremen, positively refused to accept the burden and suggested his friend Suidger, Bishop of Bamberg. In spite of the latter's protests, the king took him by the hand and presented him to the ac-

claiming clergy and people as their spiritual chief. Suidger's reluctance was finally overcome, though he insisted upon retaining the bishopric of his beloved see. He might be pardoned for fearing that

SARCOPHAGUS OF CLEMENT II
(Cathedral of Bamberg)

the turbulent Romans would ere long send him back to Bamberg. Moreover, since the king refused to give back to the Roman See its possessions usurped by the nobles and the Normans, the pope was forced to look to his German bishopric for financial support. He was enthroned in St. Peter's on Christmas Day and took the name of Clement II. He was born in Saxony of noble parentage, was first a canon in Halberstadt, then chaplain at the court of King Henry, who on the death of Eberhard, the first Bishop of Bamberg, appointed him to that important see. He was a man of strictest integrity and severe morality. His first pontifical act was to place the imperial crown upon his benefactor and the queen-consort, Agnes of Aquitaine. The new emperor received from the Romans and the pope the title and diadem of a Roman *Patricius*, a dignity which, since the tenth century, owing to the uncanonical pretensions of the Roman aristocracy, was commonly supposed to give the bearer the right of appointing the pope, or, more exactly speaking, of indicating the person to be chosen (Hefele). Had not God given His Church the inalienable right of freedom and independence, and sent her champions determined to enforce this right, she would now have simply exchanged the tyranny of Roman factions for the more serious thralldom to a foreign power. The fact that Henry had protected the Roman Church and rescued her from her enemies gave him no just claim to become her lord and master. Short-sighted reformers, even men like St. Peter Damiani (*Opusc.*, VI, 36) who saw in this surrender of the freedom of papal elections to the arbitrary will of the emperor the opening of a new era, lived long enough to regret the mistake that was made. With due recognition of the prominent part taken by the Germans in the reformation of the eleventh century,

we cannot forget that neither Henry III nor his bishops understood the importance of absolute independence in the election of the officers of the Church. This lesson was taught them by Hildebrand, the young chaplain of Gregory VI, whom they took to Germany with his master, only to return with St. Leo IX to begin his immortal career. Henry III, the sworn enemy of simony, never took a penny from any of his appointees, but he claimed a right of appointment which virtually made him head of the Church and paved the way for intolerable abuses under his unworthy successors.

Clement lost no time in beginning the work of reform. At a great synod in Rome, January, 1147, the buying and selling of things spiritual was punished with excommunication; anyone who should knowingly accept ordination at the hands of a prelate guilty of simony was ordered to do canonical penance for forty days. A dispute for precedence between the Sees of Ravenna, Milan, and Aquileia was settled in favour of Ravenna, the bishop of which was, in the absence of the emperor, to take his station at the pope's right. Clement accompanied the emperor in a triumphal progress through Southern Italy and placed Benevento under an interdict for refusing to open its gates to them. Proceeding with Henry to Germany, he canonized Wiborada, a nun of St. Gall, martyred by the Huns in 925. On his way back to Rome he died near Pesaro. That he was poisoned by the partisans of Benedict IX is a mere suspicion without proof. He bequeathed his mortal remains to Bamberg, in the great cathedral of which his marble sarcophagus is to be seen at the present day. He is the only pope buried in Germany. Many zealous ecclesiastics, notably the Bishop of Liège, now exerted themselves to reseat in the papal chair Gregory VI, whom, together with his chaplain, Henry held in honourable custody; but the emperor unceremoniously appointed Poppo, Bishop of Brixen, who took the name of Damasus II. (See GREGORY VI; BENEDICT IX.)

JAMES F. LOUGHLIN.

Clement III, POPE (PAOLO SCOLARI), date of birth unknown; elected 19 December, 1187; d. 27 March, 1191. During the short space (1181-1198) which separated the glorious pontificates of Alexander III and Innocent III, no less than five pontiffs occupied in rapid succession the papal chair. They were all veterans trained in the school of Alexander, and needed only their earlier youthful vigour and length of reign to gain lasting renown in an age of great events. Gregory VIII, after a pontificate of two months, died on 17 December, 1187, at Pisa, whither he had gone to expedite the preparations for the recovery of Jerusalem; he was succeeded two days later by the Cardinal-Bishop of Palestrina, Paolo Scolari, a Roman by birth. The choice was particularly acceptable to the Romans; for he was the first native of their city who was elevated to the papacy since their rebellion in the days of Arnold of Brescia, and his well-known mildness and love of peace turned their thoughts towards a reconciliation, more necessary to them than to the pope. Overtures led to the conclusion of a formal treaty, by which the papal sovereignty and the municipal liberties were equally secured; and in the following February Clement made his entry into the city amid the boundless enthusiasm of a population which never seemed to have learned the art of living either with or without the pope.

Seated in the Lateran, Pope Clement turned his attention to the gigantic task of massing the forces of Christendom against the Saracens. He was the organizer of the Third Crusade; and if that imposing expedition produced insignificant results, the blame nowise attaches to him. He dispatched legates to the different courts, who laboured to restore harmony among the belligerent monarchs and princes, and to divert their energy towards the reconquest of the Holy Sepulchre. Fired by the example of the Emperor Barbarossa and of the Kings of France and England, a countless host of Christian warriors took the road which led them to Palestine and death. At the time of Clement's death, just before the capture of Acre, the prospects, notwithstanding the drowning of Barbarossa and the return of Philip Augustus, still seemed bright enough.

The death of the pope's chief vassal, William II of Sicily, precipitated another unfortunate quarrel between the Holy See and the Hohenstaufen. Henry VI, the son and successor of Barbarossa, claimed the kingdom by right of his wife Costanza, the only legitimate survivor of the House of Roger. The pope, whose independence was at an end, if the empire and the Two Sicilies were held by the same monarch, as well as the Italians who detested the rule of a foreigner, determined upon resistance, and when the Sicilians proclaimed Tancred of Lecce, a brave but illegitimate scion of the family of Roger, as king, the pope gave him the investiture. Henry advanced into Italy with a strong army to enforce his claim; an opportune death reserved the continuation of the contest to Clement's successor, Celestine III. By a wise moderation Clement succeeded in quieting the disturbances caused by contested elections in the Dioceses of Trier in Germany and St. Andrews in Scotland. He also delivered the Scottish Church from the jurisdiction of the Metropolitan of York and declared it directly subject to the Holy See. Clement canonized Otto of Bamberg, the Apostle of Pomerania (d. 1139), and Stephen of Thiers in Auvergne, founder of the Hermits of Grammont (d. 1124).

JAMES F. LOUGHLIN.

Clement IV, POPE (GUIDO LE GROS), b. at Saint-Gilles on the Rhone, 23 November, year unknown; elected at Perugia 5 February, 1265; d. at Viterbo, 29 November, 1268. After the death of Urban IV (2 October, 1264), the cardinals, assembled in conclave at Perugia, discussed for four months the momentous

question whether the Church should continue the war to the end against the House of Hohenstaufen by calling in Charles of Anjou, the youngest brother of St. Louis of France, or find some other means of securing the independence of the papacy. No other solution offering itself, the only possible course was to unite upon the Cardinal-Bishop of Sabina, by birth a Frenchman and a subject of Charles.

Guido Le Gros was of noble extraction. When his mother died, his father, the knight Foulquois, entered a Carthusian monastery where he ended a saintly life. Guido married, and for a short time wielded the spear and the sword. Then devoting himself to the study of law under the able direction of the famous Durandus, he gained a national reputation as an advocate. St. Louis, who entertained a great respect and affection for him, took him into his cabinet and made him one of his trusted counsellors. His wife died, leaving him two daughters, whereupon he imitated his father to the extent that

he gave up worldly concerns and took Holy orders.

His rise in the Church was rapid; 1256, he was Bishop of Puy; 1259, Archbishop of Narbonne; December, 1261, Cardinal-Bishop of Sabina. He was the first cardinal created by Urban IV (Eubel, *Hierarchia Catholica*, 7). He was in France, returning from an important legation to England, when he received an urgent message from the cardinals demanding his immediate presence in Perugia. Not until he entered the conclave, was he informed that the unanimous vote of the Sacred College had confided into his hands the destinies of the Catholic Church. He was astonished; for only a man of his large experience could fully realize the responsibility of him whose judgment, at this critical juncture, must irrevocably shape the course of Italian and ecclesiastical history for centuries to come. His prayers and tears failing to move the cardinals, he reluctantly accepted the heavy burden, was crowned at Viterbo, 22 February, and, to honour the saint of his birthday, assumed the name of Clement IV. His contemporaries are unanimous and enthusiastic in extolling his exemplary piety and rigorously ascetic life. He had a remarkable aversion to nepotism. His first act was to forbid any of his relatives to come to the Curia, or to attempt to derive any sort of temporal advantage from his elevation. Suitors for the hands of his daughters were admonished that their prospective brides were "children not of the pope, but of Guido Grossus", and that their dowries should be extremely modest. The two ladies preferred the seclusion of the convent.

The Neapolitan question occupied, almost exclusively, the thoughts of Clement IV during his short pontificate of 3 years, 9 months, and 25 days, which, however, witnessed the two decisive battles of Benevento and Tagliacozzo (1268), and the execution of Conradin. The negotiations with Charles of Anjou had progressed so far under the reign of Urban IV that it is difficult to see how the pope could now well draw back, even were he so inclined. But Clement had no intention of doing so. The power of Manfred and the insecurity of the Holy See were increasing daily. Clement had already, as cardinal, taken an active part in the negotiations with Charles and now exerted himself to the utmost in order to supply the ambitious but needy adventurer with troops and money. Papal legates and mendicant friars appeared upon the scene, preaching a formal crusade, with the amplest indulgences and most lavish promises. Soldiers were obtained in abundance among the warlike chivalry of France; the great difficulty was to find money with which to equip and maintain the army. The clergy and people failed to detect a crusade in what they deemed a personal quarrel of the pope, a "war hard by the Lateran, and not with Saracens nor with Jews" (Dante, *Inf.*, canto xxviii); though, in reality, Saracens, implanted in Italy by Frederick II, made up the main strength of Manfred's army. Although reduced at times to utter destitution, and forced to pledge everything of value and to borrow at exorbitant rates, the pope did not despair; the expedition arrived, and from the military point of view achieved a brilliant success.

Charles, preceding his army, came to Rome by sea, and upon the conclusion of a treaty, by which the liberties of the Church and the overlordship of the Holy See seemed to be most firmly secured, he received the investiture of his new kingdom. On 6 January, 1266, he was solemnly crowned in St. Peter's; not, as he had wished, by the pope, who took up his residence in Viterbo and never saw Rome, but by cardinals designated for the purpose. On 22 February was fought the battle of Benevento, in which Charles was completely victorious; Manfred was found among the slain. Naples opened her gates and the Angevin dynasty was established. Though a

ARMS OF
CLEMENT IV

good general, Charles had many weaknesses of character that made him a very different ruler from his saintly brother. He was harsh, cruel, grasping, and tyrannical. Clement was kept busy reminding him of the terms of his treaty, reproving his excesses and those of his officials, and warning him that he was gaining the enmity of his subjects. Nevertheless, when, a little later, young Conradin, disregarding papal censures and anathemas, advanced to the conquest of what he deemed his birthright, Clement remained faithful to Charles and prophesied that the gallant youth, received by the Ghibelline party everywhere, even in Rome, with unbounded enthusiasm, "was being led like a lamb to the slaughter", and that "his glory would vanish like smoke", a prophecy only too literally fulfilled when, after the fatal day of Tagliacozzo (23 August, 1268), Conradin fell into Charles' mercilese hands and was beheaded (20 October) on the market-place of Naples. The fable that Pope Clement advised the execution of the unfortunate prince by saying, "The death or life of Conradin means the life or death of Charles", is of a later date, and opposed to the truth. Even the statement of Gregorovius that Clement became an accomplice by refusing to intercede for Conradin, is equally groundless; for it has been shown conclusively, not only that he pleaded for his life and besought St. Louis to add the weight of his influence with his brother, but, moreover, that he sternly reproved Charles for his cruel deed when it was perpetrated. Clement followed "the last of the Hohenstaufen" to the grave just one month later, leaving the papacy in a much better condition than when he received the keys of St. Peter. He was buried in the church of the Dominicans at Viterbo. Owing to divergent views among the cardinals, the papal throne remained vacant for nearly three years. In 1268, Clement canonized St. Hedwig of Poland (d. 1243).

JAMES F. LOUGHLIN.

Clement V, POPE (BERTRAND de GOT), b. at Villandraut in Gascony, France, 1264; d. at Roquemaure, 20 April, 1314. He was elected, 5 June, 1305, at Perugia as successor to Benedict XI, after a conclave of eleven months, the great length of which was owing to the French and Italian factions among the cardinals.

ARMS OF CLEMENT V

Ten of the fifteen (mostly Italian) cardinals voting elected him. Giovanni Villani's story (*Hist. Florent.*, VIII, 80, in Muratori, SS. RR. Ital., XIII, 417; cf. Raynald, *Ann. Eccl.*, 1305, 2-4) of a decisive influence of Philip the Fair, and the new pope's secret conference with and abject concessions to that king in the forest of Saint-Jean-d'Angély, is quite unhistorical; on the other hand, the cardinals were willing to please the powerful French king whom the late Benedict XI had been obliged to placate by notable concessions, and it is not improbable that some kind of a mutual understanding was reached by the king and the future pope. As Archbishop of Bordeaux, Bertrand de Got was actually a subject of the King of England, but from early youth he had been a personal friend of Philip the Fair. Nevertheless, he had remained faithful to Boniface VIII. The new pope came from a distinguished family. An elder brother had been Archbishop of Lyons, and died (1297) as Cardinal-Bishop of Albano and papal legate in France. Bertrand studied the arts at Toulouse and

canon and civil law at Orléans and Bologna. He had been successively canon at Bordeaux, vicar-general of the Archbishop of Lyons (his aforesaid brother), papal chaplain, Bishop of Comminges under Boniface VIII, and eventually Archbishop of Bordeaux, then a difficult office because of the persistent conflict between England and France for the possession of Normandy. The cardinals besought him to come to Perugia and go thence to Rome for his coronation, but he ordered them to repair to Lyons, where he was crowned (14 November, 1305) in presence of Philip the Fair and with great pomp. During the usual public procession the pope was thrown from his horse by a falling wall; one of his brothers was killed on that occasion, also the aged Cardinal Matteo Orsini who had taken part in twelve conclaves and seen thirteen popes. The most precious jewel in the papal tiara (a carbuncle) was lost that day, an incident prophetically interpreted by German and Italian historians, and the next day another brother was slain in a quarrel between servants of the new pope and retainers of the cardinals. For some time (1305-1309), Pope Clement resided at different places in France (Bordeaux, Poitiers, Toulouse), but finally took up his residence at Avignon, then a fief of Naples, though within the County of Venaissin that since 1228 acknowledged the pope as overlord (in 1348 Clement VI purchased Avignon for 80,000 gold gulden from Joanna of Naples). Strong affection for his native France and an equally influential fear of the quasi-anarchical conditions of Italy, and in particular of the States of the Church and the city of Rome, led him to this fateful decision, whereby he exposed himself to the domination of a civil ruler (Philip the Fair), whose immediate aims were a universal French monarchy and a solemn humiliation of Pope Boniface VIII in return for the latter's courageous resistance to Philip's cunning, violence, and usurpations (Hergenröther).

STATES OF THE CHURCH.—The government of the States of the Church was committed by Clement to a commission of three cardinals, while at Spoleto his own brother, Arnaud Garsias de Got, held the office of papal vicar. Giacomo degli Stefaneschi, a senator and popular chief, governed within the city in a loose and personal way. Confusion and anarchy were prevalent, owing to the implacable mutual hatred of the Colonna and Orsini, the traditional turbulence of the Romans, and the frequent angry conflicts between the people and the nobles, conditions which had been growing worse all through the thirteenth century and had eventually driven even the Italian popes to such outside strongholds as Viterbo, Anagni, Orvieto, and Perugia. No more graphic illustration of the local conditions at Rome and in the Patrimony of Peter could be asked than the description of Nicholas of Butrinto, the historiographer of Emperor Henry VII, on his fateful Roman expedition of 1312 [see Von Reumont, *Geschichte der Stadt Rom*, Berlin, 1867, II (1), 743-65]. Among the untoward Roman events of Pope Clement's reign was the conflagration 6 May, 1308, that destroyed the church of St. John Lateran, soon rebuilt, however, by the Romans with the aid of the pope. Clement did not hesitate to try the conclusions of war with the Italian state of Venice that had unjustly seized on Ferrara, a fief of the Patrimony of Peter. When excommunication, interdict, and a general prohibition of all commercial intercourse failed, he outlawed the Venetians, and caused a crusade to be preached against them; finally his legate, Cardinal Pélague, overthrew in a terrific battle the haughty aggressors (28 August, 1309). The papal vicariate of Ferrara was then conferred on Robert of Naples, whose Catalonian mercenaries, however, were more odious to the people than the Venetian usurpers. In any case, the smaller powers of Italy had learned that they could not yet strip with impunity the inheritance of the

Apostolic See, and an example was furnished which the greatest soldier of the papacy, Gil d'Albornoz (q. v.), would better before the century was over.

PROCESS OF BONIFACE VIII.—Almost at once King Philip demanded from the new pope a formal condemnation of the memory of Boniface VIII; only thus could the royal hate be placated. The king wished the name of Boniface stricken from the list of popes as a heretic, his bones disinterred, burned, and the ashes scattered to the winds. This odious and disgraceful step Clement sought to avert, partly by delay, partly by new favours to the king; he renewed the absolution granted the king by Benedict XI, created nine French cardinals out of a group of ten, restored to the Colonna cardinals their places in the Sacred College, and accorded the king tithes of church property for five years. Finally, he withdrew the Bull "*Clericis Laicos*", though not the earlier legislation on which it was based, and declared that the doctrinal Bull "*Unam Sanctam*" affected in no disadvantageous manner the meritorious French king, and implied for him and his kingdom no greater degree of subjection to the papal see than formerly existed. The pope was also helpful to Charles of Valois, the king's brother, and pretender to the imperial throne of Constantinople, by granting him a two years' tithe of church revenues; Clement hoped that a crusade operating from a reconquered Constantinople would be successful. In May, 1307, at Poitiers, where peace was made between England and France, Philip again insisted on a canonical process for condemnation of the memory of Boniface VIII, as a heretic, a blasphemer, an immoral priest, etc. Eventually, the pope made answer that so grave a matter could not be settled outside of a general council, and the king for a while seemed satisfied with this solution. Nevertheless, he returned frequently and urgently to his proposition. It was in vain that the pope exhibited a willingness to sacrifice the Templars (see below); the merciless king, sure of his power, pressed for the opening of this unique trial, unheard of since the time of Pope Formosus. Clement had to yield, and designated 2 February, 1309, as the date, and Avignon as the place for the trial of his dead predecessor on the shameful charges so long cooped about Europe by the Colonna cardinals and their faction. In the document (citation) that called (13 September, 1309) for the witnesses, Clement expressed his personal conviction of the innocence of Boniface, at the same time his resolution to satisfy the king. Though the pope had soon (2 February, 1310) to protest against a false interpretation of his own words, the process was really begun in a consistory of 16 March, 1310, at Avignon. Much delay followed, on one side and the other, apropos chiefly of methods of procedure. Early in 1311, witnesses were examined outside of Avignon, in France, and in Italy, but by French commissaries and mostly on the above-mentioned charges of the Colonna (see BONIFACE VIII). Finally, in February, 1311, the king wrote to Clement abandoning the process to the future council (of Vienne) or to the pope's own action, and promising to cause the withdrawal of the charges; at the same time he protested that his intentions had been pure. One price of these welcome concessions was a formal declaration by Pope Clement (27 April, 1311) of the king's innocence and that of his friends; these representatives of France, the "Israel of the New Alliance", had acted, said the pope, in good faith and with a pure zeal, nor should they fear in the future any canonical detriment from the events of Anagni. William Nogaret was excepted, but on his protestation of innocence, and at the intercession of Philip, a penance was imposed on him and he too received absolution. Only those who detained ecclesiastical property were finally excluded from pardon. The religious zeal of Philip was again acknowl-

edged; all papal acts detrimental to him and his kingdom since November, 1302, were rescinded; the erasures are yet visible in the "*Regesta*" of Boniface VIII, in the Vatican Archives (see Tosti, "*Storia di Bonifazio VIII*", Rome, 1886, II, 343-44). This painful situation was closed for Clement V by the Council of Vienne (16 October, 1311), most of whose members were personally favourable to Boniface. It is not certain that the council took up formally the question of the guilt or innocence of Boniface. In their present shape the official Acts of the council are silent, nor do all contemporary writers mention it as a fact. It is true that Giovanni Villani describes Philip and his counsellors as urgent for the condemnation of Boniface by the council, but, he says, the memory of the pope was formally purged from all adverse charges by three cardinals and several jurists; moreover, three Catalan knights offered to defend with their swords the good name of the Gaetani pope against all comers, whereupon the king yielded, and demanded only that he be declared guiltless of any responsibility for the turn affairs had taken. With the death of his personal enemies, opposition to Boniface diminished, and his legitimacy was no longer denied even in France (Balan, "*Il processo di Bonifazio VIII*", Rome, 1881).

CLEMENT V AND THE TEMPLARS.—Since the final expulsion (1291) of the crusading forces from the Holy Land, the ecclesiastico-military orders in Europe had aroused much adverse criticism, partly because to their jealousies (Templars, Hospitallers or Knights of St. John, Teutonic Order) was attributed the humiliating defeat, partly because of the vast wealth they had acquired in their short existence. The Templars (so-called from the Temple of Jerusalem, *pauperes commilitones Christi Templique Solomonici*, i. e. poor fellow-soldiers of Christ and of the Temple of Solomon) were the richest. Their fortress-like monasteries, known as Temples, arose in every European land, and by the end of the thirteenth century sheltered the chief banking-system of Europe; the knights were trusted by popes and kings and by persons of wealth because of their uprightness, the good management of their affairs, and their solid credit based on the countless estates of the order and its widespread financial relations. Already, before the accession of Pope Clement, their status was growing perilous; apart from the envy aroused by their riches, accusations of pride, exclusiveness, usurpation of episcopal rights, etc. were raised against them. They had resisted several attempts to unite their order with the Hospitallers, and while it is no longer easy to fix the degree of their popularity with the common people, it is certain that in many quarters of Europe they had aroused the cupidity of princes and the jealousy of many higher ecclesiastics, especially in France; without the co-operation of the latter they could never have fallen in so tragic a manner. Their story is told in full in the article *TEMPLARS*; hence, to avoid repetition, it will suffice to mention here the principal facts. In the first year of the pontificate of Clement V the French king began to demand from the pope the suppression of this ecclesiastical order and to set afoot a campaign of violence and calumny such as had so far succeeded in the case of Boniface VIII. If the pope, as was naturally to be feared, refused finally to yield in the matter of the process against his predecessor's memory, he would surely be glad to buy relief with the sacrifice of the Templars. Owing to the weakness and irresolution of Pope Clement, the royal plan succeeded. After an unsuccessful attempt of the pope (in August, 1307) to unite the Templars and the Hospitallers, he yielded to the demands of King Philip and ordered an investigation of the order, against which the king brought charges of heresy (renunciation of Christ, immorality, idolatry, contempt of the Mass, denial of the sacra-

ments, etc.). Philip, however, did not wait for the ordinary operation of the Inquisition, but, with the aid of his confessor, Guillaume de Paris (the inquisitor of France), and his clever, unscrupulous jurists (Nogaret, de Plaisians, Enguerrand de Marigny) struck suddenly at the whole order, 12 October, 1307, by the arrest at Paris of Jacques de Molay, the Grand Commander, and one hundred and forty knights, followed by the inquisitor's mandate to arrest all other members throughout France, and by royal sequestration of the property of the order. Public opinion was cunningly and successfully forestalled by the aforesaid jurists. It was also falsely made to appear that the pope approved, or was consenting aware, of the royal action, while the co-operation of French inquisitors and bishops put the seal of ecclesiastical approval on an act that was certainly so far one of gross injustice.

While Philip invited the other princes of Europe to follow his example, Clement V protested (27 October) against the royal usurpation of the papal authority, demanded the transfer to his own custody of the prisoners and their property, and suspended the inquisitorial authority of the king's ecclesiastical and the French bishops. Philip made an apparent submission, but in the meantime Clement had issued another Bull (22 November) commanding an investigation of the anti-Templar charges in all European countries. (It may be said at once that the results were generally favourable to the order; nowhere, given the lack of torture, were confessions obtained like those secured in France.) The feeble efforts of Clement to obtain for the order strict canonical justice (he was himself an excellent canonist) were counteracted by the new Bull that dignified and seemed to confirm the charges of the French king, neither then nor later supported by any material evidence or documents outside of his own suborned witnesses and the confessions of the prisoners, obtained by torture or by other dubious methods of their jailers, none of whom dared resist the well-known will of Philip. The alleged secret Rule of the Templars, authorizing the aforesaid charges, was never produced. In the meantime William Nogaret had been busy defaming Pope Clement, threatening him with charges not unlike those pending against Boniface VIII, and working up successfully an anti-Templar public opinion against the next meeting (May, 1308) of the States-General. In July of that year it was agreed between the pope and the king that the guilt or innocence of the order itself should be separated from that of its individual (French) members. The former was reserved to a general council, soon to be convoked at Vienne in Southern France, and to prepare evidence for which, apart from the examinations now going on through Europe, and a hearing before the pope of seventy-two members of the order brought from the prisons of Philip (all of whom confessed themselves guilty of heresy and prayed for absolution), there were appointed various special commissions, the most important of which began its sessions at Paris in August, 1309. Its members, acting in the name and with the authority of the pope, were opposed to the use of torture, hence before them hundreds of knights maintained freely the innocence of the order, while many of those who had formerly yielded to the diocesan inquisitors now retracted their avowals as contrary to truth. When Nogaret and de Plaisians saw the probable outcome of the hearings before the papal commissions, they precipitated matters, caused the Archbishop of Sens (brother of Enguerrand de Marigny) to call a provincial council (Sens was then metropolitan of Paris and seat of the local inquisition tribunal), at which were condemned, as relapsed heretics, fifty-four knights who had recently withdrawn before the papal commissioners their former confessions on the plea that they had

been given under torture and were quite false. That same day (12 May, 1310), all these knights were publicly burned at Paris outside the Porte St-Antoine. To the end all protested their innocence.

There could no longer be any question of liberty of defence; the papal commission at Paris suspended its sessions for six months, and when it met again found before it only knights who had confessed the crimes they were charged with and had been reconciled by the local inquisitors. The fate of the Templars was finally sealed at the Council of Vienne (opened 16 October, 1311). The majority of its three hundred members were opposed to the abolition of the order, believing the alleged crimes unproven, but the king was urgent, appeared in person at the council, and finally obtained from Clement V the practical execution of his will. At the second session of the council, in presence of the king and his three sons, was read the Bull "*Vox in excelsis*", dated 22 March, 1312, in which the pope said that though he had no sufficient reasons for a formal condemnation of the order, nevertheless, because of the common weal, the hatred borne them by the King of France, the scandalous nature of their trial, and the probable dilapidation of the order's property in every Christian land, he suppressed it by virtue of his sovereign power, and not by any definitive sentence. By another Bull of 2 May he vested in the Hospitallers the title to the property of the suppressed order. In one way or another, however, Philip managed to become the chief legatee of its great wealth in France. As to the Templars themselves, those who continued to maintain their confessions were set free; those who withdrew them were considered relapsed heretics and were dealt with as such by the tribunals of the Inquisition. It was only in 1314 that the Grand Master, Jacques de Molay and Geoffroy de Charnay, Grand Preceptor of Normandy, reserved to the judgment of the pope, were condemned to perpetual imprisonment. Thereupon they proclaimed the falsity of their confessions, and accused themselves of cowardice in betraying their order to save their lives. They were at once declared relapsed heretics, turned over to the secular arm by the ecclesiastical authority, and were burned that same day (18 March, 1314). Of Pope Clement it may be said that the few measures of equity that appear in the course of this great crime were owing to him; unfortunately his sense of justice and his respect for the law were counterbalanced by a weak and vacillating character, to which perhaps his feeble and uncertain health contributed. Some think he was convinced of the Templars' guilt, especially after so many of the chief members had admitted it to himself; they explain thus his recommendation of the use of torture, also his toleration of the king's suppression of all proper liberty of defence on the part of the accused. Others believe that he feared for himself the fate of Boniface VIII, whose cruel enemy, William Nogaret, still lived, attorney-general of Philip, skilled in legal violence, and emboldened by a long career of successful infamy. His strongest motive was, in all probability, anxiety to save the memory of Boniface VIII from the injustice of a formal condemnation which the malice of Nogaret and the cold vindictiveness of Philip would have insisted on, had not the rich prey of the Temple been thrown to them; to stand for both with Apostolic courage might have meant intolerable consequences, not only personal indignities, but in the end the graver evil of schism under conditions peculiarly unfavourable for the papacy. (See PHILIP THE FAIR; VIENNE, COUNCIL OF; TEMPLARS.)

CLEMENT V AND EMPEROR HENRY VII.—In pursuance of the vast ambitions of the French monarchy (Pierre Dubois, "*De recuperatione terræ sanctæ*", ed. Langlois, Paris, 1891), King Philip was anxious to see his brother Charles of Valois chosen King of Germany

in succession to the murdered Adolph of Nassau, of course with a view of obtaining later the imperial crown. Pope Clement was apparently active in favour of Philip's plan; at the same time he made it known to the ecclesiastical electors that the selection of Count Henry of Lützelburg, brother of the Archbishop of Trier, would be pleasing to him. The pope was well aware that further extension of French authority could only reduce still more his own small measure of independence. Though elected, 6 January, 1309, as Henry VII, and soon assured of the papal agreement to his imperial consecration, it was only in 1312 that the new king reached Rome and was consecrated emperor in the church of St. John Lateran by cardinals specially delegated by the pope. Circumstances forced Henry VII to side with the Italian Ghibellines, with the result that in Rome itself he found a powerful Guelph party in possession of St. Peter's and the greater part of the city, actively supported also by King Robert of Naples. The new emperor, after the humiliating failure of his Italian expedition, undertook to compel the Angevin king to recognize the imperial authority, but was crossed by the papal action in defence of King Robert as a vassal of the Roman Church, overlord of the Two Sicilies. On the eve of a new Italian campaign in support of the imperial honour and rights Henry VII died suddenly near Siena, 24 August, 1313. He was the last hope of Dante and his fellow-Ghibellines, for whom at this time the great poet drew up in the "De Monarchiâ" his ideal of good government in Italy through the restoration of the earlier strong empire of German rulers, in whom he saw the ideal overlords of the European world, and even of the pope as a temporal prince.

CLEMENT V AND ENGLAND.—Ambassadors of Edward I assisted at the coronation of Clement V. At the request of King Edward, the pope freed him from the obligation of keeping the promises added to the Charter in 1297 and 1300, though the king afterwards took little or no advantage of the papal absolution. Moreover, to satisfy the king, he suspended and called to the papal court (1305) the Archbishop of Canterbury, Robert of Winchelsea, who had previously suffered much for adhering to the side of Boniface VIII, and whom Edward I was now pursuing with unproved charges of treason. (See CLERICUS LATCOS.) It was only in 1307, after the accession of Edward II, that this great churchman, at the royal request, was permitted by Clement to return from Bordeaux to his See of Canterbury, whose ancient right to crown the kings of England he successfully maintained. Clement excommunicated (1306) Robert Bruce of Scotland for his share in the murder of the Red Comyn, and he deprived of their sees Bishops Lamberton and Wishart for their part in the subsequent national rising of the Scots. The Lords and Commons at the Parliament of Carlisle (1307) exhibited a strong anti-papal temper, apropos, among other complaints, of the granting of rich English benefices to foreigners, and though no positive action followed, the later Statutes of Provisors and Præmunire look back to this event as indicative of English temper. (See Gasquet, "The Eve of the Reformation", essay on "Mixed Jurisdiction", and for other items of English interest the "Regesta" of Clement V, and Bliss, "Calendar of Ecclesiastical Documents relating to England", London, 1893 sqq., Rolls series.)

CLEMENT V AND THE CANON LAW.—He completed the medieval "Corpus Juris Canonici" by the publication of a collection of papal decretals known as "Clementinæ", or "Liber Clementinarum", sometimes "Liber Septimus" in reference to the "Liber Sextus" of Boniface VIII. It contains decretals of the latter pope, of Benedict XI, and of Clement himself. Together with the decrees of the Council of Vienne it was promulgated (21 March, 1314) at the papal resi-

dence of Monteaux near Carpentras. It follows the method of the "Decretals" of Gregory IX and the "Liber Sextus" of Boniface VIII, i. e. five books, with subdivision into titles and chapters. As the pope died (20 April) before this collection had been generally published, its authenticity was doubted by some, wherefore John XXII promulgated it anew, 25 October, 1317, and sent it to the University of Bologna as a genuine collection of papal decretals to be used in the courts and the schools. (Laurin, "Introd. in corpus juris canonici", Freiburg, 1889; cf. Ehrle, "Archiv f. Litteratur und Kirchengesch.", IV, 36 sqq.)

Clement's official correspondence is found in the nine folio volumes of the *Regesta Clementis V* (Benedictine ed., Rome, 1885-92); BALUZE, *Vita paparum Avenionensium* (Paris, 1693), I; RAYNALD, *Ann. Eccl.*, ad ann. 1303-13; HEFELE, *Concilien-gesch.* (2d ed.), VI, 393 sqq.; EHRLICH, *Archiv f. Litt. u. THOMAS J. SHAHAN.

Clement VI, POPE (PIERRE ROGER), b. 1291 in the castle of Maumont, department of Corrèze, France, elected pope, 7 May, 1342, at Avignon, where he died 6 December, 1352. At the age of ten he entered the Benedictine monastery of La Chaise-Dieu (Haute-Loire), where he made his religious profession. After devoting some time to study at Paris, he graduated as doctor and became professor in that city. Subsequent to his introduction to Pope John XXII by Cardinal Pierre Grouin de Mortemart, he rapidly rose from one ecclesiastical dignity to another. At first prior of Saint-Baudile at Nîmes, then Abbot of Fécamp in Normandy, he became Bishop of Arras and Chancellor of France in 1328, was promoted to the Archbishopric of Sens in 1329, and to that of Rouen the following year. In the latter city a provincial council, which promulgated several disciplinary decrees, was held under his presidency in 1335. He was created cardinal (1338) by Benedict XII, whom he succeeded as pontiff. One of the characteristic traits of his policy as head of the Universal Church was his excessive devotion to the interests of France and those of his relatives. His French sympathies impeded his efforts to restore and maintain peace between England and France, although his mediation led to the conclusion of a short general truce (Malesroit, 1343). Most of the twenty-five cardinals whom he created were French, and twelve of them were related to him. The King of France was given permission (1344) to Communicate under both kinds. Clement accepted the senatorial dignity offered him as "Knight Roger" by a Roman delegation, which numbered Petrarch as one of its members. He also granted their request for the celebration of a jubilee every fifty, instead of every hundred, years (Bull "Unigenitus", 1343), but declined their invitation to return to Rome. Greater permanency seemed to be assured to the papal residence abroad by his purchase of the sovereignty of Avignon for 80,000 florins from Joanna of Naples and Provence (9 June, 1348). About the same time he also declared this princess innocent of complicity in the murder of her husband. The

ARMS OF CLEMENT VI

pope's success in Roman affairs is evidenced by his confirmation of the ephemeral but then unavoidable rule of Cola di Rienzi (20 May to 15 Dec., 1347). His later condemnation of this arrogant tribune was largely instrumental in bringing about his fall from power. Shortly after these events the jubilee year of 1350 brought an extraordinarily large number of pilgrims to the Eternal City. In his attempt to strengthen the Guelph party in Italy the pope met with failure, and was constrained to cede the city of Bologna to the Archbishop of Milan for a period of twelve years.

Clement took up with ardour the long-standing conflict between the Emperor Louis the Bavarian and the papacy. The former had offended the religious feelings of many of his adherents by arbitrarily annulling the marriage of Marguerite Mautasch, heiress of Tyrol, and John Henry, Prince of Bohemia. The popular discontent was still further intensified when the emperor authorized his own son to marry the same princess. Louis consequently was ready to make the greatest concessions to the pope. In a writing of September, 1343, he acknowledged his unlawful assumption of the imperial title, declared his willingness to annul all his imperial acts and to submit to any papal penalty, but at the same time wished to be recognized as King of the Romans. Clement demanded as further conditions that no law should be enacted in the empire without papal sanction, that the binding-force of Louis's promulgated royal decrees should be suspended until confirmation by the Holy See, that he should depose all bishops and abbots named by himself, and waive all claim to the sovereignty of the Papal States, Sicily, Sardinia, and Corsica. Louis submitted the pope's demands to the consideration of the German princes, at a time when anti-papal feeling ran very high in Germany, as a result of the separation of the Archbishopric of Prague from the ecclesiastical province of Mainz (30 April, 1344). The princes declared them unacceptable, but also spoke of the necessity of electing a new king in place of Louis, whose rule had been so disastrous to the empire. The pope on 7 April, 1346, deposed Henry of Virneburg, Archbishop of Mainz and an ardent partisan of the reigning emperor, and named the twenty-year-old Gerlach of Nassau to the see. On 13 April of the same year he launched a severe Bull against the emperor, in which he requested the electors to give him a successor. Charles of Luxemburg, the pope's candidate and former pupil, was elected King of Germany (11 July, 1346), by his father, John of Bohemia, by Rudolf of Saxony, and the three ecclesiastical electors. Charles IV (1346-78) substantially accepted the papal demands, but his authority was not immediately recognized throughout Germany. The country was on the verge of civil war, when Louis the Bavarian suddenly died while engaged in a boar-hunt near Munich (11 October, 1347). The opposition of Günther of Schwarzburg (d. 14 June, 1349) to Charles was but of short duration. Left without a protector, through the death of Louis, William of Ockham and the schismatical Friars Minor now made their submission to the pope. About 1344 Clement VI granted the sovereignty of the Canary Islands to the Castilian Prince Louis de la Cerda, on condition that no other Christian ruler had acquired any right to their possession. The new sovereign, who was accorded the title of Prince of Fortunia, agreed to introduce Christianity into the islands and to pay tribute to the Holy See. He could not, however, take effective possession of the territory, which was not permanently converted at this time, even though a special bishop (the Carmelite Bernard) was named for the islands in 1351. The pope's attempts to reunite the Greeks and Armenians with the Roman Church led to no definite results. The East desired not so much a return to doctrinal unity as assistance against the Turks. A crusade

against the latter, which was undertaken in 1344, ended in a barren truce.

More of a temporal prince than an ecclesiastical ruler, Clement was munificent to profusion, a patron of arts and letters, a lover of good cheer, well-appointed banquets, and brilliant receptions, to which ladies were freely admitted. The heavy expenses necessitated by such pomp soon exhausted the funds which the economy of Benedict XII had provided for his successor. To open up new sources of revenue, in the absence of the ordinary income from the States of the Church, fresh taxes were imposed and an ever-increasing number of appointments to bishoprics and benefices was reserved to the pope. Such arbitrary proceedings led to resistance in several countries. In 1343 the agents of two cardinals, whom Clement had appointed to offices in England, were driven from that country. Edward III vehemently complained of the exactions of the Avignon Court, and in 1351 was passed the Statute of Provisors, according to which the king reserved the right of presentation in all cases of papal appointments to benefices. The memory of this pope is clouded by his open French partisanship and by the gross nepotism of his reign. Clement VI was nevertheless a protector of the oppressed and a helper of the needy. His courage and charity strikingly appeared at the time of the Great Pestilence, or Black Death, at Avignon (1348-49). While in many places, numerous Jews were massacred by the populace as being the cause of the pestilence, Clement issued Bulls for their protection and afforded them a refuge in his little State. He canonized St. Ivo of Tréguier, Brittany (d. 1303), the advocate of orphans (June, 1347), condemned the Flagellants, and in 1351 courageously defended the Mendicant friars against the accusations of some secular prelates. Several sermons have been preserved of this admittedly learned pope and eloquent speaker. He died after a short illness, and, according to his desire, was interred at La Chaise-Dieu. In 1562 his grave was desecrated and his remains burned by some Huguenots.

N. A. WEBER.

Clement VII, POPE (GIULIO DE' MEDICI), b. 1478; d. 25 September, 1534. Giulio de' Medici was born a few months after the death of his father, Giuliano, who was slain at Florence in the disturbances which followed the Pazzi conspiracy. Although his parents had not been properly married, they had, it was alleged, been betrothed *per sponsalia de presenti*, and Giulio, in virtue of a well-known principle of canon law, was subsequently declared legitimate. The youth was educated by his uncle, Lorenzo the Magnificent. He was made a Knight of Rhodes and Grand Prior of Capua, and, upon the election of his cousin Giovanni de' Medici to the papacy as Leo X, he at once became a person of great consequence. On 23 September, 1513,

ARMS OF CLEMENT VII

he was made cardinal, and he had the credit of being the prime mover of the papal policy during the whole of Leo's pontificate. He was one of the most favoured candidates in the protracted conclave which resulted in the election of Adrian VI; neither did the Cardinal de' Medici, in spite of his close connexion with the luxurious regime of Leo X, altogether lose influence under his austere successor. Giulio, in the words of a modern historian, was "learned, clever, respectable and industrious, though he had little enterprise and less decision" (Armstrong, Charles V., I, 166). After Adrian's death (14 September, 1523) the Cardinal de' Medici was eventually chosen pope, 18 November, 1523, and his election was hailed at Rome with enthusiastic rejoicing. But the temper of the Roman people was only one element in the complex problem which Clement VII had to face. The whole political and religious situation was one of extreme delicacy, and it may be doubted if there was one man in ten thousand who would have succeeded by natural tact and human prudence in guiding the Bark of Peter through such tempestuous waters. Clement was certainly not such a man. He had unfortunately been brought up in all the bad traditions of Italian diplomacy, and over and above this a certain fatal irresolution of character seemed to impel him, when any decision had been arrived at, to hark back upon the course agreed on and to try to make terms with the other side.

The early years of his pontificate were occupied with the negotiations which culminated in the League of Cognac. When Clement was crowned, Francis I and the Emperor Charles V were at war. Charles had supported Clement's candidature and hoped much from his friendship with the Medici, but barely a year had elapsed after his election before the new pope concluded a secret treaty with France. The pitched battle which was fought between Francis and the imperial commanders at Pavia in February, 1525, ending in the defeat and captivity of the French king, put into Charles' hands the means of avenging himself. Still he used his victory with moderation. The terms of the Treaty of Madrid (14 January, 1526) were not really extravagant, but Francis seems to have signed with the deliberate intention of breaking his promises, though confirmed by the most solemn of oaths. That Clement, instead of accepting Charles' overtures, should have made himself a party to the French king's perfidy and should have organized a league with France, Venice, and Florence, signed at Cognac, 22 May, 1526, must certainly have been regarded by the emperor as almost unpardonable provocation. No doubt Clement was moved by genuine patriotism in his distrust of imperial influence in Italy and especially by anxiety for his native Florence. Moreover, he chafed under dictation which seemed to him to threaten the freedom of the Church. But though he probably feared that the bonds might be drawn tighter, it is hard to see that he had at that time any serious ground of complaint. We cannot be much surprised at what followed. Charles' envoys, obtaining no satisfaction from the pope, allied themselves with the disaffected Colonna who had been raiding the papal territory. These last pretended reconciliation until the papal commanders were lured into a sense of security. Then the Colonna made a sudden attack upon Rome and shut up Clement in the Castle of Sant' Angelo while their followers plundered the Vatican (20 September, 1526). Charles disavowed the action of the Colonna but took advantage of the situation created by their success. A period of vacillation followed. At one time Clement concluded a truce with the emperor, at another he turned again despairingly to the League, at another, under the encouragement of a slight success, he broke off negotiations with the imperial representatives and resumed active hostilities, and then again, still later, he signed

a truce with Charles for eight months, promising the immediate payment of an indemnity of 60,000 ducats.

In the mean time the German mercenaries in the north of Italy were fast being reduced to the last extremities for lack of provisions and pay. On hearing of the indemnity of 60,000 ducats they threatened mutiny, and the imperial commissioners extracted from the pope the payment of 100,000 ducats instead of the sum first agreed upon. But the sacrifice was ineffectual. It seems probable that the Landsknechte, a very large proportion of whom were Lutherans, had really got completely out of hand, and that they practically forced the Constable Bourbon, now in supreme command, to lead them against Rome. On the 5th of May they reached the walls, which, owing to the pope's confidence in the truce he had concluded, were almost undefended. Clement had barely time to take refuge in the Castle of Sant' Angelo, and for eight days the "Sack of Rome" continued amid horrors almost unexampled in the history of war.

"The Lutherans", says an impartial authority, "rejoiced to burn and to defile what all the world had adored. Churches were desecrated, women, even the religious, violated, ambassadors pillaged, cardinals put to ransom, ecclesiastical dignitaries and ceremonies made a mockery, and the soldiers fought among themselves for the spoil" (Leathes in "Camb. Mod. History", II, 55).

It seems probable that Charles V was really not implicated in the horrors which then took place. Still he had no objection against the pope bearing the full consequences of his shifty diplomacy, and he allowed him to remain a virtual prisoner in the Castle of Sant' Angelo for more than seven months. Clement's pliability had already given offence to the other members of the League, and his appeals were not responded to very warmly. Besides this, he was sorely in need of the imperial support both to make head against the Lutherans in Germany and to reinstate the Medici in the government of Florence from which they had been driven out. The combined effect of these various considerations and of the failure of the French attempts upon Naples was to throw Clement into the emperor's arms. After a sojourn in Orvieto and Viterbo, Clement returned to Rome, and there, before the end of July, 1529, terms favourable to the Holy See were definitely arranged with Charles. The seal was set upon the compact by the meeting of the emperor and the pope at Bologna, where, on 24 February, 1530, Charles was solemnly crowned. By whatever motives the pontiff was swayed, this settlement certainly had the effect of restoring to Italy a much-needed peace.

Meanwhile events, the momentous consequence of which were not then fully foreseen, had been taking place in England. Henry VIII, tired of Queen Catherine, by whom he had no heir to the throne, but only one surviving daughter, Mary, and passionately enamoured of Anne Boleyn, had made known to Wolsey in May, 1527, that he wished to be divorced. He pretended that his conscience was uneasy at the marriage contracted under papal dispensation with his brother's widow. As his first act was to solicit

CLEMENT VII.—SEBASTIANO DEL PIOMBO
(Pinacoteca, Fatina)

from the Holy See, contingently upon the granting of the divorce, a dispensation from the impediment of affinity in the first degree (an impediment which stood between him and any legal marriage with Anne on account of his previous carnal intercourse with Anne's sister Mary), the scruple of conscience cannot have been very sincere. Moreover, as Queen Catherine solemnly swore that the marriage between herself and Henry's elder brother Arthur had never been consummated, there had consequently never been any real affinity between her and Henry but only the *impedimentum publicæ honestatis*. The king's impatience, however, was such that, without giving his full confidence to Wolsey, he sent his envoy, Knight, at once to Rome to treat with the pope about getting the marriage annulled. Knight found the pope a prisoner in Sant' Angelo and could do little until he visited Clement, after his escape, at Orvieto. Clement was anxious to gratify Henry, and he did not make much difficulty about the contingent dispensation from affinity, judging, no doubt, that, as it would only take effect when the marriage with Catherine was cancelled, it was of no practical consequence. On being pressed, however, to issue a commission to Wolsey to try the divorce case, he made a more determined stand, and Cardinal Pucci, to whom was submitted a draft instrument for the purpose, declared that such a document would reflect discredit upon all concerned. A second mission to Rome organized by Wolsey, and consisting of Gardiner and Foxe, was at first not much more successful. A commission was indeed granted and taken back to England by Foxe, but it was safeguarded in ways which rendered it practically innocuous. The bullying attitude which Gardiner adopted towards the pope seems to have passed all limits of decency, but Wolsey, fearful of losing the royal favour, egged him on to new exertions and implored him to obtain at any cost a "decretal commission". This was an instrument which decided the points of law beforehand, secure from appeal, and left only the issue of fact to be determined in England. Against this Clement seems honestly to have striven, but he at last yielded so far as to issue a secret commission to Cardinal Wolsey and Cardinal Campeggio jointly to try the case in England. The commission was to be shown to no one, and was never to leave Campeggio's hands. We do not know its exact terms; but if it followed the drafts prepared in England for the purpose, it pronounced that the Bull of dispensation granted by Julius for the marriage of Henry with his deceased brother's wife must be declared obreptitious and consequently void, if the commissioners found that the motives alleged by Julius were insufficient and contrary to the facts. For example, it had been pretended that the dispensation was necessary to cement the friendship between England and Spain, also that the young Henry himself desired the marriage, etc.

Campeggio reached England by the end of September, 1528, but the proceedings of the legatine court were at once brought to a standstill by the production of a second dispensation granted by Pope Julius in the form of a Brief. This had a double importance. Clement's commission empowered Wolsey and Campeggio to pronounce upon the sufficiency of the motives alleged in a certain specified document, viz. the Bull; but the Brief was not contemplated by, and lay outside, their commission. Moreover, the Brief did not limit the motives for granting the dispensation to certain specified allegations, but spoke of "*aliis causis animam nostram moventibus*". The production of the Brief, now commonly admitted to be quite authentic, though the king's party declared it a forgery, arrested the proceedings of the commission for eight months, and in the end, under pressure from Charles V, to whom his Aunt Catherine had vehemently appealed for support as well as to the pope, the cause was revoked to Rome. There can be no doubt that

Clement showed much weakness in the concessions he had made to the English demands; but it must also be remembered, first, that in the decision of this point of law, the technical grounds for treating the dispensation as obreptitious were in themselves serious and, secondly, that in committing the honour of the Holy See to Campeggio's keeping, Clement had known that he had to do with a man of exceptionally high principle.

How far the pope was influenced by Charles V in his resistance, it is difficult to say; but it is clear that his own sense of justice disposed him entirely in favour of Queen Catherine. Henry in consequence shifted his ground, and showed how deep was the rift which separated him from the Holy See, by now urging that a marriage with a deceased husband's brother lay beyond the papal powers of dispensation. Clement retaliated by pronouncing censure against those who threatened to have the king's divorce suit decided by an English tribunal, and forbade Henry to proceed to a new marriage before a decision was given in Rome. The king on his side (1531) extorted a vast sum of money from the English clergy upon the pretext that the penalties of *præmunire* had been incurred by them through their recognition of the papal legate, and soon afterwards he prevailed upon Parliament to prohibit under certain conditions the payment of annates (q. v.) to Rome. Other developments followed. The death of Archbishop Warham (22 August, 1532) allowed Henry to press for the institution of Cranmer as Archbishop of Canterbury, and through the intervention of the King of France this was conceded, the pallium being granted to him by Clement. Almost immediately after his consecration Cranmer proceeded to pronounce judgment upon the divorce, while Henry had previously contracted a secret marriage with Anne Boleyn, which marriage Cranmer, in May, 1533, declared to be valid. Anne Boleyn was consequently crowned on June the 1st. Meanwhile the Commons had forbidden all appeals to Rome and enacted the penalties of *præmunire* against all who introduced papal Bulls into England. It was only then that Clement at last took the step of launching a sentence of excommunication against the king, declaring at the same time Cranmer's pretended decree of divorce to be invalid and the marriage with Anne Boleyn null and void. The papal nuncio was withdrawn from England and diplomatic relations with Rome broken off. Henry appealed from the pope to a general council, and in January, 1534, the Parliament pressed on further legislation abolishing all ecclesiastical dependence on Rome. But it was only in March, 1534, that the papal tribunal finally pronounced its verdict upon the original issue raised by the king and declared the marriage between Henry and Catherine to be unquestionably valid. Clement has been much blamed for this delay and for his various concessions in the matter of the divorce; indeed he has been accused of losing England to the Catholic Faith on account of the encouragement thus given to Henry, but it is extremely doubtful whether a firmer attitude would have had a more beneficial result. The king was determined to effect his purpose, and Clement had sufficient principle not to yield the one vital point upon which all turned.

With regard to Germany, though Clement never broke away from his friendship with Charles V, which was cemented by the coronation at Bologna in 1530, he never lent to the emperor that cordial co-operation which could alone have coped with a situation the extreme difficulty and danger of which Clement probably never understood. In particular, the pope seems to have had a horror of the idea of convoking a general council, foreseeing, no doubt, grave difficulties with France in any such attempt. Things were not improved when Henry, through his envoy Bonner, who found Clement visit-

ing the French king at Marseilles, lodged his appeal to a future general council on the divorce question.

In the more ecclesiastical aspects of his pontificate Clement was free from reproach. Two Franciscan reforms, that of the Capuchins and that of the Recollets, found in him a sufficiently sympathetic patron. He was genuinely in earnest over the crusade against the Turks, and he gave much encouragement to foreign missions. As a patron of art, he was much hampered by the sack of Rome and the other disastrous events of his pontificate. But he was keenly interested in such matters, and according to Benvenuto Cellini he had excellent taste. By the commission given to the last-named artist for the famous cope-clasp of which we hear so much in the autobiography, he became the founder of Benvenuto's fortunes. (See CELLINI, *BENVENUTO*.) Clement also continued to be the patron of Raphael and of Michelangelo, whose great fresco of the Last Judgment in the Sistine Chapel was undertaken by his orders.

In their verdict upon the character of Pope Clement VII almost all historians are agreed. He was an Italian prince, a de' Medici, and a diplomat first, and a spiritual ruler afterwards. His intelligence was of a high order, though his diplomacy was feeble and irresolute. On the other hand, his private life was free from reproach, and he had many excellent impulses, but despite good intention, all qualities of heroism and greatness must emphatically be denied him.

HERBERT THURSTON.

Clement VIII, POPE (IPPOLITO ALDOBRANDINI), b. at Fano, March, 1536, of a distinguished Florentine family; d. at Rome, 5 March, 1605. He was elected pope 30 January, 1592, after a stormy conclave graphically described by Ranke (*Geschichte der*

ARMS OF CLEMENT VIII

römischen Päpste, 9th ed., II, 150 sqq.). In his youth he made excellent progress in jurisprudence under the direction of his father, an able jurist. Through the stages of consistorial advocate, auditor of the Rota and the Datary, he was advanced in 1585 to the dignity of Cardinal-Priest of the Title of St. Pancratius and was made grand penitentiary. He won the friendship of the Hapsburgs by his successful efforts, during a legation to Poland, to obtain the release of the imprisoned Archduke Maximilian, the defeated claimant to the Polish throne. During the conclave of 1592 he was the unwilling candidate of the compact minority of cardinals who were determined to deliver the Holy See from the prepotency of Philip II of Spain. His election was greeted with boundless enthusiasm by the Italians and by all who knew his character. He possessed all the qualifications needed in the Vicar of Christ. Blameless in morals from childhood, he had at an early period placed himself under the direction of St. Philip Neri, who for thirty years was his confessor. Upon Clement's elevation to the papacy, the aged saint gave over this important office to Baronius, whom the pope, notwithstanding his reluctance, created a cardinal, and to whom he made his confession every evening. The fervour with which he said his daily Mass filled all present with devotion. His long association with the Apostle of Rome caused him to imbibe the saint's spirit so thoroughly, that in him

St. Philip himself might be said to have ascended the papal chair. Though vast political problems clamoured for solution, the pope first turned his attention to the more important spiritual interests of the Church. He made a personal visitation of all the churches and educational and charitable institutions of Rome, everywhere eliminating abuses and enforcing discipline. To him we owe the institution of the Forty Hours' Devotion (q. v.). He founded at Rome the Collegio Clementino for the education of the sons of the richer classes, and augmented the number of national colleges in Rome by opening the Collegio Scozzese for the training of missionaries to Scotland. The "Bullarium Romanum" contains many important constitutions of Clement, notably one denouncing duelling and one providing for the inviolability of the States of the Church. He issued revised editions of the Vulgate (1598), the Breviary, the Missal, also the "Cærimoniale", and the "Pontificale".

POPE CLEMENT VIII

The complicated situation in France presented no insuperable difficulties to two consummate statesmen like Henry of Navarre and Clement VIII. It was clear to Henry that, notwithstanding his victories, he could not peacefully retain the French Crown without adopting the Catholic Faith. He abjured Calvinism 25 July, 1593. It was equally clear to Pope Clement that it was his duty to brave the selfish hostility of Spain by acknowledging the legitimate claims of Henry, as soon as he had convinced himself that the latter's conversion was something more than a political manoeuvre. In the autumn of 1595 he solemnly absolved Henry IV, thus putting an end to the thirty years' religious war in France and winning a powerful ally in his struggle to achieve the independence of Italy and of the Holy See. Henry's friendship was of essential importance to the pope two years later, when Alfonso II, Duke of Ferrara, died childless (27 Oct., 1597), and Pope Clement resolved to bring the stronghold of the Este dynasty under the immediate jurisdiction of the Church. Though Spain and the empire encouraged Alfonso's illegitimate cousin, Cesare d'Este, to withstand the pope, they were deterred from giving him aid by Henry's threats, and the papal army entered Ferrara almost unopposed. In 1598 Pope Clement won still more credit for the papacy by bringing about a definite treaty of peace between Spain and France in the Treaty of Vervins and between France and Savoy. He also lent valuable assistance in men and money to the emperor in his contest with the Turks in Hungary. He was as merciless as Sixtus V in crushing out brigandage and in punishing the lawlessness of the Roman nobility. He did not even spare the youthful patricide Beatrice Cenci, over whom so many tears have been shed. (Bertolotti, *Francesco Cenci e la sua famiglia*, Florence, 1879.) On 17 Feb., 1600, the apostate Giordano Bruno (q. v.) was burned at the stake on the Piazza dei Fiori. The jubilee of 1600 was a brilliant witness to the glories of the renovated papacy, three million pilgrims visiting the holy places. In 1595

was held the Synod of Brest, in Lithuania, by which a great part of the Ruthenian clergy and people were reunited to Rome (Likowski, *Union zu Brest*, 1904). Although Clement, in spite of constant fasting, was tortured with gout in feet and hands, his capacity for work was unlimited, and his powerful intellect grasped all the needs of the Church throughout the world. He entered personally into the minutest detail of every subject which came before him, e. g., in the divorce between Henry IV and Margaret of Valois, yet more in the great controversy on grace between the Jesuits and the Dominicans (see BAÑEZ, MOLINA). He was present at all the sessions of the *Congregatio de auxiliis* (q. v.), but wisely refrained from issuing a final decree on the question. Clement VIII died in his seventieth year after a pontificate of thirteen years. His remains repose in Santa Maria Maggiore, where the Borghesi, who succeed the Aldobrandini in the female line, erected a gorgeous monument to his memory.

JAMES F. LOUGHLIN.

Clement IX, POPE (GIULIO ROSPIGLIOSI), b. 28 January, 1600, at Pistoja, of an ancient family originally from Lombardy; elected 20 June, 1667; d. at Rome, 9 December, 1669. He made a brilliant course of studies at the Roman Seminary, and the

ARMS OF
CLEMENT IX

University of Pisa, where he received the doctorate in his twenty-third year and was made professor of philosophy. His talents and virtuous life brought him rapid promotion in the Roman Court at a period when Tuscan influence under Tuscan pontiffs was everywhere predominant. He enjoyed the special favour of Urban VIII, like himself fond of literature and poetry, and was made titular Archbishop of Tarsus and sent as nuncio to the Spanish Court. He lived in retirement during the pontificate of Innocent X, who disliked the Barberini and their adherents, but was recalled to office by Alexander VII and by him appointed secretary of state and Cardinal-Priest of the Title of San Sisto (1657). Ten years later, one month after the death of Alexander, Cardinal Rospigliosi was elected to the papacy by the unanimous vote of the Sacred College. He was the idol of the Romans, not so much for his erudition and application to business, as for his extreme charity and his affability towards great and small. He increased the goodwill of his subjects by buying off the monopolist who had secured the *macinato*, or privilege of selling grain, and as his predecessor had collected the money for the purpose, Clement had the decree published in the name of Alexander VII. Two days each week he occupied a confessional in St. Peter's church and heard any one who wished to confess to him. He frequently visited the hospitals, and was lavish in his alms to the poor. In an age of nepotism, he did little or nothing to advance or enrich his family. In his aversion to notoriety, he refused to permit his name to be placed on the buildings erected during his reign. On 15 April, 1668, he declared blessed, Rose of Lima, the first American saint. On 28 April, 1669, he solemnly canonized S. Maria Maddalena dei Pazzi and St. Peter of Alcantara. He reorganized the Church in Portugal, after that nation had achieved its independence from Spain. By a mild compromise in the affair of French Jansenism, known as the Clementine Peace (*Pax Clementina*), he procured a lull in

the storm, which, unfortunately, owing to the insincerity of the sectaries, was but temporary. He brought about, as arbiter, the Peace of Aix-la-Chapelle between France and Spain, and gravely admonished Louis XIV against the aggressive career upon which he was setting forth. By strict economy he brought the papal finances into good order, and was able to furnish material aid to Venice for the defence of Crete, then besieged by the Turks. Had the European powers listened to his exhortations, that important island would not have been lost to Christendom. The news of its fall, after a gallant resistance of twenty years, hastened the pope's death.

He died after a pontificate of two years, five months, and nineteen days. He ordered his remains to be buried under the pavement of Santa Maria Maggiore, with the simple inscription *Clementis IX, Cineres*, but his successor, Clement X, erected in his honour the sumptuous monument which stands at the right-hand side of the nave near the door. The death of the beloved pontiff was long lamented by the Romans, who considered him, if not the greatest, at least the most amiable of the popes.

JAMES F. LOUGHLIN.

Clement X, POPE (EMILIO ALTIERI), b. at Rome, 13 July, 1590; elected 29 April, 1670, and d. at Rome, 22 July, 1676. Unable to secure the election of any of the prominent candidates, the cardinals finally, after a conclave of four months and twenty days, resorted to the old expedient of electing a cardinal of advanced years; they united upon Cardinal Altieri, an octogenarian, whose long life had been spent in the service of the Church, and whom Clement IX, on the eve of his death, had raised to the dignity of the purple. The reason a prelate of such transcendent merits received the cardinalate so late in life seems to have been that he had waived his claims to the elevation in favour of an older brother. He protested vigorously against this use of the papal robes as a funeral shroud, but at length was persuaded to accept, and out of gratitude to his benefactor, by ten years his junior, assumed the name of Clement X. The Altieri belonged to the ancient Roman nobility, and since all but one of the male scions had chosen the ecclesiastical career, the pope, in order to save the name from extinction, adopted the Paoluzzi, one of whom was married to Laura Caterina Altieri, the sole heiress of the family.

During previous pontificates the new pope had held important offices and had been entrusted with delicate missions. Urban VIII gave him charge of the works designed to protect the territory of Ravenna from the unruly Po. Innocent X appointed him

CLEMENT IX—GAVULLI (BACCICCIO)
(Academy of San Luca, Rome)

CLEMENT X

nuncio to Naples: and he is credited with no slight share in the re-establishment of peace after the stormy days of Masaniello. Under Alexander VII he was made secretary of the Congregation of Bishops and Regulars. Clement IX named him superintendent of the papal exchequer. On his accession to the papacy, he gave to his new kinsman, Cardinal Paoluzzi-Altieri, the uncle of Laura's husband, the office of cardinal nephew, and with advancing years gradually entrusted to him the management of affairs, to such

POPE CLEMENT X

an extent that the biting Romans said he had reserved to himself only the episcopal functions of *benedicere et sanctificare*, resigning in favour of the cardinal the administrative duties of *regere et gubernare*. Nevertheless, the "Bullarium Romanum" contains many evidences of his religious activity, among which may be mentioned the canonization of Sts. Cajetan, Philip Benitius,

Francis Borgia, Louis Bertrand, and Rose of Lima; also the beatification of Pope Pius V, John of the Cross, and the Martyrs of Gorcum in Holland. He laboured to preserve the peace of Europe, menaced by the ambition of Louis XIV, and began with that imperious monarch the long struggle concerning the *régale*, or revenues of vacant dioceses and abbeys. He supported the Poles with strong financial aid in their hard struggle with their Turkish invaders. He decorated the bridge of Sant' Angelo with the ten statues of angels in Carrara marble still to be seen there. To Clement we owe the two beautiful fountains which adorn the Piazza of St. Peter's. At a cost of 300,000 scudi (dollars) he erected the extensive Palazzo Altieri. His remains lie in St. Peter's church near the tribune, where a monument has been erected to his memory.

JAMES F. LOUGHLIN.

Clement XI, POPE (GIOVANNI FRANCESCO ALBANI); b. at Urbino, 23 July, 1649; elected 23 November, 1700; d. at Rome 19 March, 1721. The Albani (q. v.) were a noble Umbrian family. Under Urban VIII the grandfather of the future pope had held for thirteen years the honourable office of Senator of Rome. An uncle, Annibale Albani, was a distinguished scholar and was Prefect of the Vatican Library. Giovanni Francesco was sent to Rome in his eleventh year to prosecute his studies at the Roman College. He made rapid progress and was known as an author at the age of eighteen, translating from the Greek into elegant Latin. He attracted the notice of the patroness of Roman *litterati*, Queen Christina of Sweden, who before he became of age enrolled him in her exclusive *Accademia*. With equal ardour and success he applied himself to the profounder branches,

theology and law, and was created doctor of canon and civil law. So brilliant an intellect, joined with stainless morals and piety, secured for him a rapid advancement at the papal court. At the age of twenty-eight he was made a prelate, and governed successively Rieti, Sabina, and Orvieto, everywhere acceptable on account of his reputation for justice and prudence. Recalled to Rome, he was appointed Vicar of St. Peter's, and on the death of Cardinal Slusio succeeded to the important position of Secretary of Papal Briefs, which he held for thirteen years, and for which his command of classical latinity singularly fitted him. On 13 February, 1690, he was created cardinal-deacon and later Cardinal-Priest of the Title of San Silvestro, and was ordained to the priesthood.

The conclave of 1700 would have terminated speedily with the election of Cardinal Mariscotti, had not the veto of France rendered the choice of that able cardinal impossible. After deliberating for forty-six days, the Sacred College united in selecting Cardinal Albani, whose virtues and ability overbalanced the objection that he was only fifty-one years old. Three days were spent in the effort to overcome his reluctance to accept a dignity the heavy burden of which none knew better than the experienced curialist (Galland in *Hist. Jahrbuch*, 1882, III, 208 sqq.). The period was critical for Europe and the papacy. During the conclave Charles II, the last of the Spanish Hapsburgs, had died childless, leaving his vast dominions a prey to French and Austrian ambition. His will, making Philip of Anjou, grandson of Louis XIV, sole heir to the Spanish Empire, was contested by the Emperor Leopold, who claimed Spain for his second son Charles. The late king, before making this will, had consulted Pope Innocent XII, and Cardinal Albani had been one of the three cardinals to whom the pontiff had entrusted the case and who advised him to pronounce secretly in its favour. This was at the time unknown to the emperor, else Austria would have vetoed the election of Albani. The latter was finally persuaded that it was his duty to obey the call from Heaven; on 30 November he was consecrated bishop, and on 8 December solemnly enthroned in the Vatican. The enthusiasm with which his elevation was greeted throughout the world is the best evidence of his worth. Even Protestants received the intelligence with joy and the city of Nuremberg struck a medal in his honour. The sincere Catholic reformers greeted his accession as the death-knell of nepotism; for, though he had many relatives, it was known that he had instigated and written the severe condemnation of that abuse issued by his predecessor. As pontiff, he did not belie his principles. He bestowed the offices of his court upon the most worthy subjects and ordered his brother to keep at a distance and refrain from adopting any new title or interfering in matters of state. In the government of the States of the Church, Clement was a capable administrator. He provided diligently for the needs of his subjects, was extremely charitable to the poor, bettered the condition of the prisons, and secured food for the populace in time of scarcity. He won the good will of artists by prohibiting the exportation of ancient masterpieces, and of scientists by commissioning Bianchini to lay down on the pavement of Sta Maria degli Angeli the meridian of Rome, known as the Clementina. His capacity for work was prodigious. He slept but little and ate so sparingly that a few pence per day sufficed for his table. Every day he confessed and celebrated Mass. He entered minutely into the details of every measure which came before him, and with his own hand prepared the numerous allocutions, Briefs, and constitutions afterwards collected and published. He also found time to preach his beautiful homilies and was frequently to be seen in the confessional. Though his powerful frame more than once

ARMS OF CLEMENT XI

the patroness of Roman *litterati*, Queen Christina of Sweden, who before he became of age enrolled him in her exclusive *Accademia*. With equal ardour and success he applied himself to the profounder branches,

sank under the weight of his labours and cares, he continued to keep rigorously the fasts of the Church, and generally allowed himself but the shortest possible respite from his labours.

In his efforts to establish peace among the Powers of Europe and to uphold the rights of the Church, he met with scant success; for the eighteenth century was eminently the age of selfishness and infidelity. One of his first public acts was to protest against the assumption (1701) by the Elector of Brandenburg of the title of King of Prussia. The pope's action, though often derided and misinterpreted, was natural enough, not only because the bestowal of royal titles had always been regarded as the privilege of the Holy See, but also because Prussia belonged by ancient right to the ecclesiastico-military institute known as the Teutonic Order. In the troubles excited by the rivalry of France and the Empire for the Spanish succession, Pope Clement resolved to maintain a neutral attitude; but this was found to be impossible. When, therefore, the Bourbon was crowned in Madrid as Philip V, amid the universal acclamations of the Spaniards, the pope acquiesced and acknowledged the validity of his title. This embittered the morose Emperor Leopold, and the relations between Austria and the Holy See became so strained that the pope did not conceal his satisfaction when the French and Bavarian troops began that march on Vienna which ended so disastrously on the field of Blenheim. Marlborough's victory, followed by Prince Eugene's successful campaign in Piedmont, placed Italy at the mercy of the Austrians. Leopold died in 1705 and was succeeded by his oldest son Joseph I, a worthy precursor of Joseph II. A contest immediately began on the question known as *Jus primarum precum*, involving the right of the crown to appoint to vacant benefices. The victorious Austrians, now masters of Northern Italy, invaded the Papal States, took possession of Piacenza and Parma, annexed Comacchio and besieged Ferrara. Clement at first offered a spirited resistance, but, abandoned by all, could not hope for success, and when a strong detachment of Protestant troops under the command of the Prince of Hesse-Cassel reached Bologna, fearing a repetition of the fearful scenes of 1527, he finally gave way (15 Jan., 1709), acknowledged the Archduke Charles as King of Spain "without detriment to the rights of another", and promised him the investiture of Naples. Though the Bourbon monarchs had done nothing to aid the pope in his unequal struggle, both Louis and Philip became very indignant and retaliated by every means in their power (see LOUIS XIV.). In the negotiations preceding the Peace of Utrecht (1713) the rights of the pope were studiously neglected; his nuncio was not accorded a hearing; his dominions were parcelled out to suit the convenience of either party. Sicily was given to Victor Amadeus II of Savoy, with whom from the first days of his pontificate Clement was involved in quarrels on the subjects of ecclesiastical immunities and appointments to vacant benefices. The new king now undertook to revive the so-called *Monarchia Sicula*, an ancient but much-disputed and abused privilege of pontifical origin which practically excluded the pope from any authority over the Church in Sicily. When Clement answered with bann and interdict, all the clergy, about 3000 in number, who remained loyal to the Holy See were banished the island, and the pope was forced to give them food and shelter. The interdict was not raised till 1718, when Spain regained possession, but the old controversy was repeatedly resumed under the Bourbons. Through the machinations of Cardinal Alberoni, Parma and Piacenza were granted to a Spanish Infante without regard to the papal overlordship. It was some consolation to the much-tried pope that Augustus of Saxony, King of Poland, returned to the Church. Clement laboured hard to restore harmony in Poland, but

without success. The Turks had taken advantage of the dissensions among the Christians to invade Europe by land and sea. Clement proclaimed a jubilee, sent money and ships to the assistance of the Venetians, and granted a tithe on all benefices to the Emperor Charles VI. When Prince Eugene won the great battle of Temesvár, which put an end to the Turkish danger, no slight share of the credit was given by the Christian world to the pope and the Holy Rosary. Clement sent the great commander a blessed hat and sword. The fleet which Philip V of Spain had raised at the instigation of the pope, and with subsidies levied on church revenues, was diverted by Alberoni to the conquest of Sardinia; and though Clement showed his indignation by demanding the dismissal of the minister, and beginning a process against him, he had much to do to convince the emperor that he was not privy to the treacherous transaction. He gave a generous hospitality to the exiled son of James II of England, James Edward Stuart, and helped him to obtain the hand of Clementina, John Sobieski's accomplished granddaughter, mother of Charles Edward.

Clement's pastoral vigilance was felt in every corner of the earth. He organized the Church in the Philippine Islands and sent missionaries to every distant spot. He erected Lisbon into a patriarchate, 7 December, 1716. He enriched the Vatican Library with the manuscript treasures gathered at the expense of the pope by Joseph Simeon Assemani in his researches throughout Egypt and Syria. In the unfortunate controversy between the Dominican and the Jesuit missionaries in China concerning the permissibility of certain rites and customs, Clement decided in favour of the former. When the Jansenists provoked a new collision with the Church under the leadership of Quesnel, Pope Clement issued his two memorable Constitutions, "Vineam Domini", 16 July, 1705, and "Unigenitus", 10 September, 1713 (see UNIGENITUS; VINEAM DOMINI; JANSENISTS). Clement XI made the feast of the Conception of the B.V.M. a Holy Day of obligation, and canonized Pius V, Andrew of Avelino, Felix of Cantalice, and Catherine of Bologna.

This great and saintly pontiff died appropriately on the feast of St. Joseph, for whom he entertained a particular devotion, and in whose honour he composed the special Office found in the Breviary. His remains rest in St. Peter's. His official acts, letters, and Briefs, also his homilies, were collected and published by his nephew, Cardinal Annibale Albani (2 vols., Rome, 1722-24).

JAMES F. LOUGHLIN.

Clement XII, POPE (LORENZO CORSINI), b. at Florence, 7 April, 1652; elected 12 July, 1730; d. at Rome 6 February, 1740. The pontificate of the saintly Orsini pope, Benedict XIII, from the standpoint of the spiritual interests of the Church, had left nothing to be desired. He had, however, given over temporal concerns into the hands of rapacious ministers; hence the finances of the Holy See were in bad condition; there was an increasing deficit, and the papal subjects were in a state of exasperation. It was no easy task to select a man who possessed all the qualities demanded by the emergency. After deliberating for four months, the Sacred College united on Cardinal

Corsini, the best possible choice, were it not for his seventy-eight years and his failing eyesight.

A Corsini by the father's side and by the mother's a Strozzi, the best blood of Florence coursed through his veins. Innumerable were the members of his

ARMS OF
CLEMENT XII

house who had risen to high positions in Church and State, but its chief ornament was St. Andrew Corsini, the canonized Bishop of Fiesole. Lorenzo made a brilliant course of studies, first in the Roman College, then at the University of Pisa, where, after five years, he received the degree of Doctor of Laws. Returning to Rome, he applied himself to the practice of law under the able direction of his uncle, Cardinal Neri Corsini, a man of the highest culture. After the death of his uncle and his father, in 1685, Lorenzo, now thirty-three years old, resigned his right of primogeniture and entered the ecclesiastical state. From Innocent XI he purchased, according to the custom of the time, for 30,000 *scudi* (dollars) a position of prelatial rank, and devoted his wealth and leisure to the enlargement of the library bequeathed to him by his uncle. In 1691 he was made titular Archbishop of Nicomedia and chosen nuncio to Vienna. He did not proceed to the imperial court, because Leopold advanced the novel claim, which Pope Alexander VIII refused to admit, of selecting a nuncio from a list of three names to be furnished by the pope. In 1696 Corsini was appointed to the arduous office of treasurer-general and governor of Castle Sant' Angelo. His good fortune increased during the pontificate of Clement XI, who employed his talents in affairs demanding tact and prudence. On 17 May, 1706, he was created Cardinal-Deacon of the Title of Santa Susanna, retaining the office of papal treasurer. He was attached to several of the most important congregations and was made protector of a score of religious institutions. He advanced still further under Benedict XIII, who assigned him to the Congregation of the Holy Office and made him prefect of the judicial tribunal known as the *Segnatura di Giustizia*. He was successively Cardinal-Priest of S. Pietro in Vincoli and Cardinal-Bishop of Frascati.

He had thus held with universal applause all the important offices of the Roman Court, and it is not surprising that his elevation to the papacy filled the Romans with joy. In token of gratitude to his benefactor, Clement XI, and as a pledge that he would make that great pontiff his model, he assumed the title of Clement XII. Unfortunately he lacked the important qualities of youth and physical strength. The infirmities of old age bore heavily upon him. In the second year of his pontificate he became totally blind; in his later years he was compelled to keep his bed, from which he gave audiences and transacted affairs of state. Notwithstanding his physical decrepitude, he displayed a wonderful activity. He demanded restitution of ill-gotten goods from the ministers who had abused the confidence of his predecessor. The chief culprit, Cardinal Coscia, was mulcted in a heavy sum and sentenced to ten years' imprisonment. Clement surrounded himself with capable officials, and won the affection of his subjects by lightening their burdens, encouraging manufacture and the arts, and infusing a modern spirit into the laws relating to commerce. The public lottery, which had been suppressed by the severe morality of Benedict XIII, was revived by Clement, and poured into his treasury an annual sum amounting to nearly a half million of *scudi* (dollars), enabling him to undertake the extensive buildings which distinguish his reign. He began the majestic facade of St. John Lateran and built in that basilica the magnificent chapel of St. Andrew Corsini. He restored the Arch of Constantine and built the governmental palace of the Consulta on

the quirinal. He purchased from Cardinal Albani for 60,000 *scudi* the fine collection of statues, inscriptions, etc. with which he adorned the gallery of the Capitol. He paved the streets of Rome and the roads leading from the city, and widened the Corso. He began the great Fontana di Trevi, one of the noted ornaments of Rome.

In order to facilitate the reunion of the Greeks, Clement XII founded at Ullano, in Calabria, the Corsini College for Greek students. With a similar intent he called to Rome Greek-Melchite monks of Mt. Lebanon, and assigned to them the ancient church of Santa Maria in Domnica. He dispatched Joseph Simeon Assemani to the East for the twofold purpose of continuing his search for manuscripts and presiding as legate over a national council of the Maronites. We make no attempt to enumerate all the operations which this wonderful blind-stricken old man directed from his bed of

sickness. His name is associated in Rome with the foundation and embellishment of institutions of all sorts. The people of Ancona hold him in well-deserved veneration and have erected on the public square a statue in his honour. He gave them a port which excited the envy of Venice, and built a highway that gave them easy access to the interior. He drained the marshes of the Chiana near Lake Trasimeno by

MONUMENT OF CLEMENT XII
(St. John Lateran, Rome)

leading the waters through a ditch fourteen miles long into the Tiber. He disavowed the arbitrary action of his legate, Cardinal Alberoni, in seizing San Marino, and restored the independence of that miniature republic. His activity in the spiritual concerns of the Church was equally pronounced. His efforts were directed towards raising the prevalent low tone of morality and securing discipline, especially in the cloisters. He issued the first papal decree against the Freemasons (1738). He fostered the new Congregation of the Passionists and gave to his fellow-Tuscan, St. Paul of the Cross, the church and monastery of Sts. John and Paul, with the beautiful garden overlooking the Colosseum. He canonized Sts. Vincent de Paul, John Francis Regis, Catherine Fieschi Adorni, Juliana Falconieri, and approved the cult of St. Gertrude. He proceeded with vigour against the French Jansenists and had the happiness to receive the submission of the Maurists to the Constitution "Unigenitus". Through the efforts of his missionaries in Egypt 10,000 Copts, with their patriarch, returned to the unity of the Church. Clement persuaded the Armenian patriarch to remove from the diptychs the anathema against the Council of Chalcedon and St. Leo I. In his dealings with the powers of Europe, he managed by a union of firmness and moderation to preserve or restore harmony; but he was unable to maintain the rights of the Holy See over the Duchies of Parma and Piacenza. It was a consequence of his blindness that he should surround himself with trusted relatives; but he advanced them only as they proved their worth, and did little for his family except to purchase and enlarge the palace built

in Trastevere for the Riarii, and now known as the Palazzo Corsini (purchased in 1884 by the Italian Government, and now the seat of the Regia Accademia dei Lincei). In 1754, his nephew, Cardinal Neri Corsini, founded there the famous Corsini Library, which in 1905 included about 70,000 books and pamphlets, 2288 *incunabula* or works printed in the first fifty or sixty years after the discovery of printing, 2511 manuscripts, and 600 autographs. Retaining his extraordinary faculties and his cheerful resignation to the end, he died in the Quirinal in his eighty-eighth year. His remains were transferred to his magnificent tomb in the Lateran, 20 July, 1742.

JAMES F. LOUGHLIN.

Clement XIII, POPE (CARLO DELLA TORRE REZZONICO), b. at Venice, 7 March, 1693; d. at Rome, 2 February, 1769. He was educated by the Jesuits at Bologna, took his degrees in law at Padua, and in 1716 was appointed at Rome referendary of the two departments known as the "Signatura Justitiæ" and the "Signatura Gratiae". He was made governor of Rieti in 1716, of Fano in 1721, and Auditor of the Rota for Venice in 1725. In 1737 he was made cardinal-deacon, and in 1743 Bishop of Padua, where he distinguished himself by his zeal for the formation and sanctification of his clergy, to promote which he held a synod in 1746, and published a very remarkable pastoral on the priestly state. His personal life was in keeping with his teaching, and the Jansenist Abbé Clément, a grudging witness, tells us that "he was called the saint (by his people), and was an exemplary man who, notwithstanding the immense revenues of his diocese and his private estate, was always without money owing to the lavishness of his alms-deeds, and would give away even his linen". In 1747 he became cardinal-priest, and on 6 July, 1758, he was elected pope to succeed Benedict XIV. It was with tears that he submitted to the will of the electors, for he gauged well the force and direction of the storm which was gathering on the political horizon.

ARMS OF
CLEMENT XIII

Regalism and Jansenism were the traditional enemies of the Holy See in its government of the Church, but a still more formidable foe was rising into power and using the other two as its instruments. This was the party of Voltaire and the Encyclopedists, the "Philosophers" as they liked to call themselves. They were men of talent and highly educated, and by means of these gifts had drawn over to themselves many admirers and adherents from among the ruling classes, with the result that by the time of Clement XIII, they had their representatives in power in the Portuguese and in all the five Bourbon Courts. Their enmity was radically against the Christian religion itself, as putting a restraint on their licence of thought and action. In their private correspondence they called it the *Infâme* (the infamous one), and looked forward to its speedy extinction through the success of their policy; but they felt that in their relations with the public, and especially with the sovereigns, it was necessary to feign some kind of Catholic belief. In planning this war against the Church, they were agreed that the first step must be the destruction of the Jesuits. "When we have destroyed the Jesuits", wrote Voltaire to Helvétius, in 1761, "we shall have easy work with the *Infâme*." And their method was to per-

suaude the sovereigns that the Jesuits were the chief obstacle to their Regalist pretensions, and thereby a danger to the peace of their realms; and to support this view by the diffusion of defamatory literature, likewise by inviting the co-operation of those who, whilst blind to the character of their ulterior ends, stood with them for doctrinal or other reasons in their antipathy to the Society of Jesus. Such was the political situation with which Clement XIII saw himself confronted when he began his pontificate.

PORTUGAL.—His attention was called in the first instance to Portugal, where the attack on the Society had already commenced. Joseph I, a weak and voluptuous prince, was a mere puppet in the hands of his minister, Sebastião Carvalho, afterwards Marquis de Pombal, a secret adherent of the Voltairian opinions, and bent on the destruction of the Society. A rebellion of the Indians in the Uruguay Reductions gave him his first opportunity. The cause of the rebellion was obvious, for the natives had been ordered to abandon forthwith their cultivated lands and migrate into the virgin forest. But, as they were under the care of the Jesuit missionaries, Carvalho declared that these must have instigated the natives. Moreover, on 3 September, 1758, Joseph I was shot at, apparently by the injured husband of a lady he had seduced. Pombal held a secret trial in which he pronounced the whole Tavora family guilty, and with them three Jesuit Fathers, against whom the sole evidence was that they had been friends of the Tavoras. Then, on the pretext that all Jesuits thought alike, he imprisoned their superiors, some hundred in number, in his subterranean dungeons, and wrote in the king's name to Rome for permission from the Holy See to punish the guilty clerics. Clement did not see his way to refuse a request backed by the king's assurances that he had good grounds for his charges, but he begged that the accused might have a careful trial, and that the innocent might not be included in a punishment they had not deserved. The pope's letter was written with exquisite courtesy and consideration, but Pombal pronounced it insulting to his master and returned it to the sender. Then he shipped off all the Jesuits from Portugal and its colonies, save the superiors who were still detained in their prisons, and sent them to Civitavecchia, "as a present to the pope", without a penny from their confiscated funds left to them for their maintenance. Clement, however, received them kindly, and provided for their needs. It was to be expected that diplomatic relations would not long continue after these events; they were severed in 1760 by Pombal, who sent back the nuncio, Acciajuoli, and recalled his own ambassador; nor were these relations restored till the next pontificate. Pombal had seen the necessity of supporting his administrative measures by an endeavour to destroy the good name of his victims with the public. For this purpose he caused various defamatory publications to be written, chief among which was the "Brief Relation", in which the American Jesuits were represented as having set up an independent kingdom in South America under their own sovereignty, and of tyrannizing over the Indians, all in the interest of an insatiable ambition and avarice. These libels were spread broadcast, especially through Portugal and Spain, and many bishops from Spain and elsewhere wrote to the pope protesting against charges so improbable in themselves, and so incompatible with their experience of the order in their own jurisdictions. The text of many of their letters and of Clement XIII's approving replies may be seen in the "Appendices" to Père de Ravignan's "Clément XIII et Clément XIV".

FRANCE.—It was to be expected that the Society's many enemies in France would be stimulated to follow in the footsteps of Pombal. The attack was opened by the Parlement, which was predominantly Jansen-

ist in its composition, in the spring of 1761. Taking advantage of the financial difficulties into which the French Jesuits had been driven over the affair of Father Lavalette, they proceeded to examine the constitutions of the Society in which they professed to find grave improprieties, and to demand that, if the Jesuits were to remain in the country, these constitutions should be remodelled on the principle of reducing the power of the general and practically substituting for him a commissioner appointed by the Crown. They also drew up a famous document, named the "Extraits des assertions", made up entirely of garbled extracts from Jesuit writers, and tending to show that their method was to establish their own domination by justifying almost every form of crime and licentiousness, particularly tyrannicide. Louis XV, like Joseph I, had a will enervated by lust, but unlike him, was by no means a fool, and had besides an underlying respect for religion. Thus he sought, in the first instance, to save a body of men whom he judged to be innocent, and for that purpose he referred their constitutions to the French bishops assembled at Paris in December, 1761. Forty-five of these bishops reported in favour of the constitutions, and of the Jesuits being left as they were, twenty-seven or more, not then in Paris, sending in their adhesion; but the king was being drawn the other way by his Voltairian statesmen and Madame de Pompadour, and accordingly preferred the advice of the one bishop who sided with the Parlement, Bishop Fitz-James of Soissons. He therefore issued an edict in March, 1762, which allowed the Society to remain in the kingdom, but prescribed some essential changes in their institute with the view of satisfying the Parlement.

Clement XIII intervened in various ways in this crisis of the French Jesuits. He wrote to the king in June, 1761, and again in January, 1762, on the former occasion to implore him to stay the proceedings of his Parlement, on the latter to protest against the scheme of setting a French vicar-general, independent of the general in Rome, over the French provinces; it was likewise on this latter occasion that, whilst blaming their general for the compliance of some of his French subjects, he used the famous words "Sint ut sunt aut non sint". To the French bishops who wrote to him protesting against the doings of the Parlement, he replied in words of thankfulness and approval, e.g. to the Bishop of Grenoble on 4 April, 1762, and to the Bishop of Sarlat (with special reference to the "Extraits des assertions") on 14 November, 1764; and to the bishops collectively in June, 1762, exhorting them to use all their influence with the king to induce him to resist his evil counsellors. To the *arrêt* of 2 August, 1762, by which the Parlement suppressed the Society in France, and imposed impossible conditions on any of its members wishing to remain in the country, Clement replied by an Allocution of 3 September, in which he protested against the invasion of the Church's rights, and annulled the *arrêts* of the Parlement against the Society. Finally, when the king, weakly yielding to the pressure of his entourage, suppressed the French provinces by his edict of November, 1764, the Holy Father felt it his duty, besought as he was by so many bishops from all parts, to publish the Bull "Apostolicum", of 9 January, 1765. Its object was to oppose to the current misrepresentations of the Society's institute, spiritual exercises, preaching, missions, and theology, a solemn and formal approbation, and to declare that the Church herself was assailed in these condemnations of what she sanctioned in so many ways.

SPAIN.—The statesmen who had the ear of Charles III were in regular correspondence with the French Encyclopedists, and had for some years previously been projecting a proscription of the Society on the same lines as in Portugal and France. But this was

not known to the public, or to the Jesuits, who believed themselves to have a warm friend in their sovereign. It came then as a surprise to all when, on the night of 2-3 April, 1767, all the Jesuit houses were suddenly surrounded, the inmates arrested and transferred to vehicles ordered to take them to the coast, thence to be shipped off for some unknown destination—bidden to take anything with them beyond the clothes which they wore. Nor was any other explanation vouchsafed to the outer world save that contained in the king's letter to Clement XIII, dated 31 March. There it was stated that the king had found it necessary to expel all his Jesuit subjects for reasons which he intended to reserve for ever in his royal breast, but that he was sending them

TOMB OF CLEMENT XIII—CANOVA (St. Peter's, Rome)

all to Civitavecchia that they might be under the pope's care, and he would allow them a maintenance of 100 piastres (i. e. Spanish dollars) a year—a maintenance, however, which would be withdrawn for the whole body, should any one of them venture at any time to write anything in self-defence or in criticism of the motives for the expulsion. The pope wrote back on 16 April a very touching letter in which he declared that this was the cruellest blow of all to his paternal heart, beseeching the king to see that if any were accused they should not be condemned without proper trial, and assuring him that the charges current against the institute and the whole body of its members were misrepresentations due to the malice of the Church's enemies. But nothing could be extracted from the king, and it is now known that this idea of a royal secret was merely a pretext devised in order to prevent the Holy See from having any say in the matter.

Foreseeing the difficulty of so large an influx of expelled religious into his states, Clement felt compelled to refuse them permission to land, and after various wanderings they had to settle down in Corsica, where they were joined by their brethren who had been similarly sent away from Spanish America. When, a year and a half later, they were forced to move again, the pope's compassion overcame his administrative prudence, and he permitted them to

take refuge in his territory. On the throne of Naples was seated a son of Charles III, and on that of Parma his nephew. Both were minors, and both had Voltairian ministers through whose instrumentality their policy was directed from Madrid. Accordingly the Jesuits in their dominions were similarly banished, and their banishment drew similar remonstrances from the pope. But in the case of Parma there was a complication, for this state having been for centuries regarded as a fief of the Holy See, the pope had felt himself bound to condemn by his *Monitorium* of 30 January, 1768, some laws passed by the duke to the detriment of the Church's liberties. The Bourbon Courts thereupon united in demanding the withdrawal of the *Monitorium*, threatening, if refused, to deprive the pope by armed force of his territories of Avignon and the Venaissin in France, and of Benevento and Montecorvo in Italy. Finally, on 18, 20, 22 January, 1769, the ambassadors of France, Spain, and Naples presented to him identical notes demanding the total and entire suppression of the Society of Jesus throughout the world. It was this that killed him. He expired under the shock on the night of 2-3 February. In one sense, no doubt, his pontificate was a failure, and he has been blamed for a lack of foresight which should have made him yield to the exigencies of the times. But in a higher sense it was a splendid success. For he had the insight to see through the plausible pretences of the Church's enemies, and to discern the ultimate ends which they were pursuing. He viewed the course of events ever in the light of faith, and was ever faithful to his trust. He always took up sound positions, and knew how to defend them with language conspicuous for its truth and justice, as well as for its moderation and Christian tenderness. His pontificate, in short, afforded the spectacle of a saint clad in moral strength contending alone against the powers of the world and their physical might; and such a spectacle is an acquisition forever.

There were other aspects under which Clement XIII had to contend with the prevailing errors of Regalism and Jansenism in France, Germany, Holland, Poland, and Venice, but these by comparison were of minor moment. Among the pernicious books condemned by him were the "Histoire du peuple de Dieu" of the Jesuit Berruyer, the "Esprit" of Helvétius, the "Exposition de la doctrine chrétienne" of Méseguy, the "Encyclopédie" of D'Alembert and Diderot, and the "De Statu Ecclesie" of Febronius. He greatly encouraged devotion to the Sacred Heart, and ordered the Preface of the Blessed Trinity to be recited on Sundays.

SYDNEY SMITH.

Clement XIV, POPE (LORENZO—OR GIOVANNI VINCENZO ANTONIO—GANGANELLI); b. at Sant' Arcangelo, near Rimini, 31 October, 1705; d. at Rome, 22 September, 1774.—At the death of Clement XIII the Church was in dire distress. Gallicanism and Jansenism, Febronianism and Rationalism were up in rebellion against the authority of the Roman pontiff; the rulers of France, Spain, Naples, Portugal, Parma were on the side of the sectarians who flattered their dynastic prejudices and, at least in appearance, worked for the strengthening of the temporal power

against the spiritual. The new pope would have to face a coalition of moral and political forces which Clement XIII had indeed manfully resisted, but failed to put down, or even materially to check. The great question between Rome and the Bourbon princes was the suppression of the Society of Jesus. In France, Spain, and Portugal the suppression had taken place *de facto*; the accession of a new pope was made the occasion for insisting on the abolition of the order root and branch, *de facto* and *de jure*, in Europe and all over the world.

The conclave assembled 15 February, 1769. Rarely, if ever, has a conclave been the victim of such overweening interference, base intrigues, and unwarranted pressure. The ambassadors of France (d'Aubeterre) and Spain (Azpuru) and the Cardinals de Bernis (France) and Orsini (Naples) led the campaign. The Sacred College, consisting of forty-seven cardinals, was divided into Court cardinals and *Zelanti*. The latter, favourable to the Jesuits and opposed to the encroaching secular powers, were in a majority. "It is easy to foresee the difficulties of our negotiations on a stage where more than three-fourths of the actors are against us." Thus wrote Bernis to Choiseul, the minister of Louis XV. The immediate object of the intriguers was to gain over a sufficient number of *Zelanti*. D'Aubeterre, inspired by Azpuru, urged Bernis to insist that the election of the future pope be made to depend on his written engagement to suppress the Jesuits. The cardinal, however, refused. In a memorandum to Choiseul, dated 12 April, 1769, he says: "To require from the future pope a promise made in writing or before witnesses, to destroy the Jesuits, would be a flagrant violation of the canon law and therefore a blot on the honour of the crowns." The King of Spain (Charles III) was willing to bear the responsibility. D'Aubeterre opined that simony and canon law had no standing against reason, which claimed the abolition of the Society for the peace of the world. Threats were now resorted to; Bernis hinted at a blockade of Rome and popular insurrections to overcome the resistance of the *Zelanti*. France and Spain, in virtue of their right of veto, excluded twenty-three of the forty-seven cardinals; nine or ten more, on account of their age or for some other reason, were not *papabili*; only four or five remained eligible. Well might the Sacred College, as Bernis feared it would, protest against violence and separate on the plea of not being free to elect a suitable candidate. But d'Aubeterre was relentless. He wished to intimidate the cardinals. "A pope elected against the wishes of the Courts", he wrote, "will not be acknowledged"; and again, "I think that a pope of that [philosophical] temper, that is without scruples, holding fast to no opinion and consulting only his own interests, might be acceptable to the Courts". The ambassadors threatened to leave Rome unless the conclave surrendered to their dictation. The arrival of the two Spanish cardinals, Solís and La Cerdá, added new strength to the Court party. Solís insisted on a written promise to suppress the Jesuits being given by the future pope, but Bernis was not to be gained over to such a breach of the law. Solís, therefore, supported in the conclave by Cardinal Malvezzi and outside by the ambassadors of France and Spain, took the matter into his own hands. He began by sounding Cardinal Ganganelli as to his willingness to give the promise required by the Bourbon princes as an indispensable condition for election.—Why Ganganelli? This cardinal was the only friar in the Sacred College. Of humble birth (his father had been a surgeon at Sant' Arcangelo), he had received his education from the Jesuits of Rimini and the Piarists of Urbino, and, in 1724, at the age of nineteen, had entered the Order of Friars Minor of St.

ARMS OF
CLEMENT XIV

Francis and changed his baptismal name (Giovanni Vincenzo Antonio) for that of Lorenzo. His talents and his virtues had raised him to the dignity of *definitior generalis* of his order (1741); Benedict XIV made him Consultor of the Holy Office, and Clement XIII gave him the cardinal's hat (1759), at the instance, it is said, of Father Ricci, the General of the Jesuits. During the conclave he endeavoured to please both the Zelanti and the Court party without committing himself to either. At any rate he signed a paper which satisfied Solis. Crétineau-Joly, the historian of the Jesuits, gives its text; the future pope declared "that he recognized in the sovereign pontiff the right to extinguish, with good conscience, the Company of Jesus, provided he observed the canon law; and that it was desirable that the pope should do everything in his power to satisfy the wishes of the Crowns". The original paper is, however, nowhere to be found, but its existence seems established by subsequent events, and also by the testimony of Bernis in letters to Choiseul (28 July, and 20 November, 1769). Ganganelli had thus secured the votes of the Court cardinals; the Zelanti looked upon him as indifferent or even favourable to the Jesuits; d'Aubeterre had always been in his favour as being "a wise and moderate theologian", and Choiseul had marked him as "very good" on the list of *papabili*. Bernis, anxious to have his share in the victory of the sovereigns, urged the election. On 18 May, 1769, Ganganelli was elected by forty-six votes out of forty-seven, the forty-seventh being his own which he had given to Cardinal Rezzonico, a nephew of Clement XIII. He took the name of Clement XIV.

The new pope's first Encyclical clearly defined his policy: to keep the peace with Catholic princes in order to secure their support in the war against irreligion. His predecessor had left him a legacy of broils with nearly every Catholic power in Europe. Clement hastened to settle as many as he could by concessions and conciliatory measures. Without revoking the constitution of Clement XIII against the young Duke of Parma's inroads on the rights of the Church, he refrained from urging its execution, and graciously granted him a dispensation to marry his cousin, the Archduchess Amelia, daughter of Maria Theresa of Austria. The King of Spain, soothed by these concessions, withdrew the uncanonical edict which, a year before, he had issued as a counterblast to the pope's proceedings against the infant Duke of Parma, the king's nephew; he also re-established the nuncio's tribunal and condemned some writings against Rome. Portugal had been severed from Rome since 1760; Clement XIV began his attempt at reconciliation by elevating to the Sacred College Paulo de Carvalho, brother of the famous minister Pombal; active negotiations terminated in the revocation, by King Joseph I, of the ordinances of 1760, the origin and cause of the rupture between Portugal and the Holy See. A grievance common to Catholic princes was the yearly publication, on Holy Thursday, of the censures reserved to the pope; Clement abolished this custom in the first Lent of his pontificate. But there remained the ominous question of the Jesuits. The Bourbon princes, though thankful for smaller concessions, would not rest till they had obtained the great object of their machinations, the total suppression of the Society. Although persecuted in France, Spain, Sicily, and Portugal, the Jesuits had still many powerful protectors: the rulers, as well as the public conscience, protected them and their numerous establishments in the ecclesiastical electorates of Germany, in the Palatinate, Bavaria, Silesia, Poland, Switzerland, and the many countries subject to the sceptre of Maria Theresa, not to mention the States of the Church and the foreign missions. The Bourbon princes were moved in their persecution by the spirit of the times, represented in

Latin countries by French irreligious philosophism, by Jansenism, Gallicanism, and Erastianism; probably also by the natural desire to receive the papal sanction for their unjust proceedings against the order, for which they stood accused at the bar of the Catholic conscience. The victim of a man's injustice often becomes the object of his hatred; thus only the conduct of Charles III, of Pombal, Tanucci, Aranda, Moniño can be accounted for.

An ever-recurring and almost solitary grievance against the Society was that the Fathers disturbed the peace wherever they were firmly established. The accusation is not unfounded: the Jesuits did indeed disturb the peace of the enemies of the Church, for, in the words of d'Alembert to Frederick II, they were "the grenadiers of the pope's guard". Cardinal de Bernis, now French ambassador in Rome, was instructed by Choiseul to follow the lead of Spain in the renewed campaign against the Jesuits. On the 22nd of July, 1769, he presented to the pope a memorandum in the name of the three ministers of the Bourbon kings. "The three monarchs", it ran,

POPE CLEMENT XIV

"still believe the destruction of the Jesuits to be useful and necessary; they have already made their request to Your Holiness, and they renew it this day." Clement answered that "he had his conscience and honour to consult"; he asked for a delay. On 30 September he made some vague promises to Louis XV, who was less eager in the fray than Charles III. This latter, bent on the immediate suppression of the order, obtained from Clement XIV, under the strong pressure of Azpuru, the written promise "to submit to His Majesty a scheme for the absolute extinction of the Society" (30 November, 1769). To prove his sincerity the pope now commenced open hostilities against the Jesuits. He refused to see their general, Father Ricci, and gradually removed from his entourage their best friends; his only confidants were two friars of his own order, Buontempo and Francesco; no princes or cardinals surrounded his throne. The Roman people, dissatisfied with this state of things and reduced to starvation by maladministration, openly showed their discontent, but Clement, bound by his promises and caught in the meshes of Bourbon diplomacy, was unable to retrace his steps. The college and seminary of Frascati were taken from the Jesuits and handed over to the bishop of the town, the Cardinal of York. Their Lenten catechisms were prohibited for 1770. A congregation of cardinals hostile to the order visited the Roman College and had the Fathers expelled; the novitiate and the German College were also attacked. The German College won its cause, but the sentence was never executed. The novices and students were sent back to their families. A similar system of persecution was extended to Bologna, Ravenna, Ferrara, Modena, Macerata. Nowhere did the Jesuits offer any resistance; they knew that their efforts were futile. Father Garnier wrote: "You ask me why the Jesuits offer no defence: they can do nothing here. All approaches, direct and indirect, are completely closed, walled up with double walls. Not the most insignificant memorandum can

find its way in. There is no one who would undertake to hand it in" (19th Jan., 1773).

On 4 July, 1772, appeared on the scene a new Spanish ambassador, Joseph Moniño, Count of Florida Blanca. At once he made an onslaught on the perplexed pope. He openly threatened him with a schism in Spain and probably in the other Bourbon states, such as had existed in Portugal from 1760 to 1770. On the other hand, he promised the restitution of Avignon and Benevento, still held by France and Naples. Whilst Clement's anger was roused by this latter simoniacal proposal, his good, but feeble, heart could not overcome the fear of a widespread schism. Moniño had conquered. He now ransacked the archives of Rome and Spain to supply Clement with facts justifying the promised suppression. Moniño must be held responsible for the matter of the Brief "Dominus ac Redemptor", i. e. for its facts and provisions; the pope contributed little more to it than the form of his supreme authority. Meanwhile Clement continued to harass the Jesuits of his own dominions, perhaps with a view to preparing the Catholic world for the Brief of suppression, or perhaps hoping by his severity to soothe the anger of Charles III and to stave off the abolition of the whole order. Until the end of 1772 he still found some support against the Bourbons in King Charles Emmanuel of Sardinia and in the Empress Maria Theresa of Austria. But Charles Emmanuel died, and Maria Theresa, giving way to the importunate prayers of her son Joseph II and her daughter the Queen of Naples, ceased to plead for the maintenance of the Society. Thus left to himself, or rather to the will of Charles III and the wiles of Moniño, Clement began, in November, 1772, the composition of the Brief of abolition, which took him seven months to finish. It was signed 8 June, 1773; at the same time a congregation of cardinals was appointed to administer the property of the suppressed order. On 21 July the bells of the Gesù rang the opening of the annual novena preceding the feast of St. Ignatius; the pope, hearing them, remarked: "They are not ringing for the saints but for the dead". The Brief of suppression, signed on 8 June, bears the date 21 July, 1773. It was made known at the Gesù to the general (Father Ricci) and his assistants on the evening of 16 August; the following day they were taken first to the English College, then to Castel Sant' Angelo, where their long trial was commenced. Ricci never saw the end of it. He died in prison, to his last moment protesting his innocence and that of his order. His companions were set free under Pius VI, their judges having found them "not guilty".

The Brief "Dominus ac Redemptor" opens with the statement that it is the pope's office to secure in the world the unity of mind in the bonds of peace. He must therefore be prepared, for the sake of charity, to uproot and destroy the things most dear to him, whatever pains and bitterness their loss may entail. Often the popes, his predecessors, have made use of their supreme authority for reforming, and even dissolving, religious orders which had become harmful and disturbed the peace of the nations rather than promoted it. Numerous examples are quoted, then the Brief continues: "Our predecessors, in virtue of the plenitude of power which is theirs as Vicars of Christ, have suppressed such orders without allowing them to state their claims or to refute the grave accusations brought against them, or to impugn the motives of the pope." Clement has now to deal with a similar case, that of the Society of Jesus. Having enumerated the principal favours granted it by former popes, he remarks that "the very tenor and terms of the said Apostolic constitutions show that the Society from its earliest days bore the germs of dissensions and jealousies which tore its own members asunder, led them to rise against other religious orders, against the secular clergy and the universities, nay

even against the sovereigns who had received them in their states". Then follows a list of the quarrels in which the Jesuits had been engaged, from Sixtus V to Benedict XIV. Clement XIII had hoped to silence their enemies by renewing the approbation of their Institute, "but the Holy See derived no consolation, the Society no help, Christianity no advantage from the Apostolic letters of Clement XIII, of blessed memory, letters which were wrung from him rather than freely given". At the end of this pope's reign "the outcry and the complaints against the Society increasing day by day, the very princes whose piety and hereditary benevolence towards it are favourably known of all nations—our beloved Sons in Jesus Christ the Kings of France, Spain, Portugal, and the two Sicilies—were forced to expel from their kingdoms, states and provinces, all the religious of this Order, well knowing that this extreme measure was the only remedy to such great evils." Now the complete abolition of the order is demanded by the same princes. After long and mature consideration the pope, "compelled by his office, which imposes on him the obligation to procure, maintain, and consolidate with all his power the peace and tranquillity of the Christian people—persuaded, moreover, that the Society of Jesus is no longer able to produce the abundant fruit and the great good for which it was instituted—and considering that, as long as this order subsists, it is impossible for the Church to enjoy free and solid peace", resolves to "suppress and abolish" the Society, "to annul and abrogate all and each of its offices, functions, and administrations". The authority of the superiors was transferred to the bishops; minute provisions were made for the maintenance and the employment of the members of the order. The Brief concludes with a prohibition to suspend or impede its execution, to make it the occasion of insulting or attacking anyone, least of all the former Jesuits; finally it exhorts the faithful to live in peace with all men and to love one another.

The one and only motive for the suppression of the Society set forth in this Brief is to restore the peace of the Church by removing one of the contending parties from the battlefield. No blame is laid by the pope on the rules of the order, or the personal conduct of its members, or the orthodoxy of their teaching. Moreover, Father Sydney Smith, S. J. (in "The Month", CII, 62, July, 1903), observes: "The fact remains that the condemnation is not pronounced in the straightforward language of direct statement, but is merely insinuated with the aid of dexterous phrasing"; and he contrasts this method of stating grounds for the suppression of the Society with the vigorous and direct language used by former popes in suppressing the Humiliati and other orders. If Clement XIV hoped to stop the storm of unbelief raging against the Bark of Peter by throwing its best oarsmen overboard, he was sorely mistaken. But it is unlikely that he entertained such a fallacy. He loved the Jesuits, who had been his first teachers, his trusty advisers, the best defenders of the Church over which he ruled. No personal animosity guided his action; the Jesuits themselves, in agreement with all serious historians, attribute their suppression to Clement's weakness of character, unskilled diplomacy, and that kind of goodness of heart which is more bent on doing what is pleasing than what is right. He was not built to hold his head above the tempest; his hesitations and his struggles were of no avail against the enemies of the order, and his friends found no better excuse for him than that of St. Alphonsus: What could the poor pope do when all the Courts insisted on the suppression? The Jesuit Cordara expresses the same mind: "I think we should not condemn the pontiff who, after so many hesitations, has judged it his duty to suppress the Society of Jesus. I love my order as much as any man, yet, had I been in the pope's place

I should probably have acted as he did. The Company, founded and maintained for the good of the Church, perished for the same good: it could not have ended more gloriously."

It should be noted that the Brief was not promulgated in the form customary for papal Constitutions intended as laws of the Church. It was not a Bull, but a Brief, i. e. a decree of less binding force and easier of revocation; it was not affixed to the gates of St. Peter's or in the Campo di Fiore; it was not even communicated in legal form to the Jesuits in Rome; the general and his assistants alone received the notification of their suppression. In France it was not published, the Gallican Church, and especially Beaumont, Archbishop of Paris, resolutely opposing it as being the pope's personal deed, not supported by the whole Church and therefore not binding on the Church of France. The King of Spain thought the Brief too lenient, for it condemned neither the doctrine, nor the morals, nor the discipline of his victims. The Court of Naples forbade its publication under pain of death. Maria Theresa allowed her son Joseph II to seize the property of the Jesuits (some \$10,000,000) and then, "reserving her rights", acquiesced in the suppression "for the peace of the Church". Poland resisted a while; the Swiss cantons of Lucerne, Fribourg, and Solothurn never allowed the Fathers to give up their colleges. Two non-Catholic sovereigns, Frederick of Prussia and Catherine of Russia, took the Jesuits under their protection. Whatever may have been their motives, whether it was to spite the pope and the Bourbon Courts or to please their Catholic subjects and preserve for them the services of the best educators, their intervention kept the order alive until its complete restoration in 1804. Frederick persevered in his opposition only for a few years; in 1780 the Brief was promulgated in his dominions. The Jesuits retained possession of all their colleges and of the University of Breslau until 1806 and 1811, but they ranked as secular priests and admitted no more novices. But Catherine II resisted to the end. By her order the bishops of White Russia ignored the Brief of suppression and commanded the Jesuits to continue to live in communities and to go on with their usual work. Clement XIV seems to have approved of their conduct. The empress, in order to set at rest the scruples of the Fathers, engaged in several negotiations with the pope and had her will. In France, too, the persecuted Jesuits were not altogether without friends. Madame Louise de France, daughter of Louis XV, who had entered the Carmelite Order and was, with her sisters, the leader of a band of pious women at the court of her royal father, had worked out a scheme for re-establishing the Jesuits in six provinces under the authority of the bishops. Bernis, however, defeated their good intentions. He obtained from the pope a new Brief, addressed to himself and requesting him to see that the French bishops conformed, each in his diocese, to the Brief "Dominus ac Redemptor".

After the death of Clement XIV it was rumoured that he had retracted the Brief of abolition by a letter of 29 June, 1774. That letter, it was said, had been entrusted to his confessor to be given to the next pope. It was published for the first time in 1789, at Zurich, in P. Ph. Wolf's "Allgemeine Geschichte der Jesuiten". Although Pius VI never protested against this statement, the authenticity of the document in question is not sufficiently established (De la Servière).

The first and almost the only advantage the pope reaped from his policy of concessions was the restoration to the Holy See of Avignon and Benevento. These provinces had been seized by the Kings of France and Naples when Clement XIII had excommunicated their kinsman the young Duke of Parma (1768). The restitution, following so closely on the suppression of the Jesuits, seemed the price paid

for it, although, to save appearances, the duke interceded with the two kings in favour of the pope, and Clement, in the consistory of 17 January, 1774, took occasion from it to load the Bourbon princes with praises they little deserved. The hostile and schismatical manoeuvres against the Church continued unabated in many Catholic countries. In France a royal commission for the reformation of the religious orders had been at work for several years, notwithstanding the energetic protests of Clement XIII; without the pope's consent it had abolished in 1770 the congregations of Grandmont and of the exempt Benedictines; it had threatened the Premonstratensians, the Trinitarians, and the Minims with the same fate. The pope protested, through his nuncio in Paris, against such abuses of the secular power, but in vain. The Celestines and the Camaldolese were secularized that same year, 1770. The only concessions Louis XV deigned to make was to submit to Clement the general edict for the reformation of the French religious before its publication. This was in 1773. The pope succeeded in obtaining its modification in several points.

In 1768 Genoa had ceded the Island of Corsica to France. At once a conflict arose as to the introduction of "Gallican usages". The pope sent a visitor apostolic to the island and had the gratification of preventing the adoption of usages in opposition to the Roman practice. Louis XV, however, revenged himself by absolutely refusing to acknowledge the pope's suzerainty over Corsica. Louis XV died in 1774, and one is rather surprised at the eulogy which Clement XIV pronounced in a consistory on "the king's deep love for the Church, and his admirable zeal for the defence of the Catholic religion". He also hoped that the penitent death of the prince had secured his salvation. It may be surmised that he was prompted by a desire to please the king's youngest daughter, Madame Louise de France, Prioress of the Carmelites of Saint-Denis, for whom he had always shown a great affection, attested by numerous favours granted to herself and to her convent.

During Clement XIV's pontificate the chief rulers in German lands were Maria Theresa, of Austria, and Frederick the Great, of Prussia. Frederick, by preserving the Jesuits in his dominions, rendered the Church a good, though perhaps unintended, service. He also authorized the erection of a Catholic church in Berlin; the pope sent a generous contribution and ordered collections for the same purpose to be made in Belgium, the Rhineland, and Austria. Maria Theresa lived up to the title of *Regina Apostolica* bestowed on her by Clement XIII. But the doctrines of Febronius were prevalent at her court, and more than once she came into conflict with the pope. She refused to suppress a new edition of Febronius, as Clement XIV requested; she lent a willing ear to the "Grievances of the German nation", a scheme of reforms in the Church making it more dependent on

MONUMENT OF CLEMENT XIV—CANOVA
(Church of the Apostles, Rome)

the princes than on the pope; she legislated for the religious orders of her dominions without consulting Rome. She maintained her edict on the religious against all the pope's remonstrances, but withdrew her protection from the authors of the "Grievances", the Electors of Cologne, Mainz, and Trier. She also obtained from Clement (in 1770) the institution of a Ruthenian bishop for the Ruthenian Catholics of Hungary. In other parts of Germany the pope had to face similar difficulties. The number and wealth of the religious houses, in some instances their uselessness, and occasionally their disorders, tempted the princes to lay violent and rapacious hands on them. Numerous houses were to be suppressed in Bavaria for the endowment of the new University of Ebersberg, in the Palatinate the reception of new religious was to be stopped; Clement opposed both measures with success. Westphalia is indebted to him for the University of Münster, erected 27 May, 1773.

In Spain Clement approved the Order of the Knights of the Immaculate Conception, instituted by Charles III. The king also desired him to define the dogma of the Immaculate Conception, but France blocked the way. Portugal, whilst it made a certain outward show of goodwill towards Rome, continued to interfere in ecclesiastical affairs and to impose on colleges and seminaries an education more in accord with French philosophism than with the spirit of the Church. At Naples the minister Tanucci hindered the recruitment of religious orders; episcopal acts required the royal *placet*; the anti-religious press enjoyed high protection. Poland and Russia were another source of deep grief for Clement XIV. Whilst, politically, Poland was preparing its own ruin, the Piarists openly taught the worst philosophism in their schools and refused to have their houses visited by the papal nuncio at Warsaw. King Stanislaus planned the extinction of the religious orders and favoured the Freemasons. The pope was powerless; the few concessions he obtained from Catherine II for the Catholics of her new province were set at naught by that headstrong woman as soon as it suited her politics. Of her own authority she created for the annexed Catholic Ruthenians a new diocese (Mohileff) administered by a bishop (Siestrenciewicz) of schismatic temper. Clement XIV had the satisfaction of seeing his nuncio, Caprara, favourably received at the Court of England, and of initiating measures for the emancipation of English Catholics. This turn in the relations between Rome and England was due to the granting of royal honours to the king's brother when he visited Rome in 1772; the same honours being refused to the Pretender. In the East, the Nestorian Patriarch, Mar Simeon, and six of his suffragans, were reunited to Rome. In Rome the pope found little favour with either the Roman patriciate or the Sacred College; none of the many measures he took for the betterment of his people could atone, in their eyes, for his subservieny to the Bourbon Courts and for the suppression of the Jesuits. The last months of his life were embittered by the consciousness of his failures; at times he seemed crushed under the weight of sorrow. On the 10th of September, 1774, he took to his bed, received Extreme Unction on the 21st, and died piously on the 22nd of the same month. Many witnesses in the process of canonization of St. Alphonsus of Liguori attested that the saint had been miraculously present at the death-bed of Clement XIV to console and fortify him in his last hour. The doctors, who opened the dead body in presence of many spectators, ascribed death to scorbutic and hæmorrhoidal dispositions of long standing, aggravated by excessive labour and by the habit of provoking artificial perspiration even during the greatest heat. Notwithstanding the doctors' certificate, the "Spanish party" and historical romancers attributed death to poison administered by the Jesuits. The mortal remains of

Clement XIV rest in the church of the Twelve Apostles. (See also SOCIETY OF JESUS.)

Bullarium Romanum; *Clementis XIV epistolæ et brevium*, ed. TURPIN (Paris, 1852); CORBARA, *Memoirs on the suppression of the Jesuits*, published by DOLLINGER in *Beiträge zur politischen, kirchlichen u. Culturgeschichte* (Vienna, 1882).—As to the *Lettres intéressantes de Clément XIV*, published by the MARCHESE CARACCIOLI in 1776, Father Sydney Smith, S. J., says, in a note to one of the articles in *The Month* (Cl. 180, Feb., 1903) referred to below: "There has been much discussion about these letters. The Marchese Caraccioli in his Preface is suspiciously reticent as to the channels through which he obtained them, and gives them in a French translation instead of in the original Italian. On this account, and because it is difficult to believe that some of the contents come from Fra Lorenzo [as Clement XIV was called in religion], many critics have rejected the entire collection as spurious. But VON REUMONT thinks (*Ganganelli—Pape Clément—seine Briefe und seine Zeit*, 1847, Preface 40-42) that it is in substance a genuine collection, though some of the letters are spurious and interpolated. Von Reumont argues very justly that it would hardly be possible to fabricate so many letters, addressed to correspondents most of whom were alive at the time of the publication, and yet impart to them the unity, distinctness, and spontaneity of a living character."—CRÉTINEAU-JOLY, *Clément XIV et les Jésuites* (Paris, 1847); *Le Pape Clément XIV, Lettres au P. J. WILHELM.

Clement, CÆSAR, date of birth uncertain; d. at Brussels 28 Aug., 1626, great-nephew of Sir Thomas More's friend, Dr. John Clement. He was a student at Douai when in 1578 the college was removed to Reims, but was shortly sent to the English College, Rome, being admitted 5th September, 1579. He was ordained priest in 1585, but remained in Rome till Oct., 1587. He took the degree of Doctor of Theology in Italy, probably in Rome itself. Though originally destined for the English mission, he never went to England, but held the important positions of Dean of St. Gudule's, Brussels, and vicar-general of the King of Spain's army in Flanders. He was a great benefactor to all English exiles, especially the Augustinian Canonesses of Louvain. In 1612 he, with the Rev. Robert Chambers, was commissioned from Rome to make a visitation of Douai College so as to put an end to the dissatisfaction with the administration there. (See Dodd, "Church Hist. of Eng.", Tierney ed., V, 3 sqq.)

EDWIN BURTON.

Clément, FRANÇOIS, a member of the Benedictine Congregation of Saint-Maur and historian, b. at Bèze in the department of Côte-d'Or, France, 1714; d. at Paris, 29 March, 1793. He made his first studies at the college of the Jesuits at Dijon. Soon after his profession in 1731 his superiors sent him to the monastery of the "Blancs-Manteaux" at Paris to assist in the learned labours of the congregation. To great intellectual gifts Clément added scientific acumen and an unflagging industry which especially fitted him for his task. He knew no fatigue and at night gave barely two or three hours to sleep. He first busied himself with the preparations for volumes XI and XII of the "Histoire littéraire de la France"; these volumes covered the years 1141-1167 and were edited by Clément. He then edited, in collaboration with Dom Brial, a fellow-Benedictine, volumes XII and XIII of the work begun by Bouquet in 1738, "Recueil des historiens des Gaules et de la France" (Paris, 1786), or as the title is generally given "Scriptores rerum gallicarum et francicarum". These volumes contain altogether 439 original documents,

accompanied by exhaustive introductions, numerous explanatory remarks, and acute critical notes. Clément's chief work is a revised edition of the chronology first issued by Clémentine in one volume, entitled: "L'art de vérifier les dates des faits historiques". The new edition in which the original work appeared in an entirely changed form was published at Paris in 1770. A third edition (Paris, 1783-1787) embraced three folio volumes; in this the original underwent even greater alterations, and the labour on it cost Clément more than ten years of toil. In contrast to Clémentine he treated his matter objectively, and was influenced neither by prejudices against the Jesuits nor by a blind predilection for the Jansenists. His position met with the approval of scholars and he was made a member of the "Académie des Inscriptions". The work is still of value, and it has been well called "the finest memorial of French learning of the eighteenth century". Clément was engaged in the preparation of a fourth and much enlarged edition when a stroke of apoplexy caused his death. The unfinished work was completed by Viton de Saint-Allais and appeared with additional matter in eighteen volumes (Paris, 1818-19). Viton de Saint-Allais also published from the literary remains of Clément the treatise "L'art de vérifier les dates des faits historiques avant l'ère chrétienne" (Paris, 1820). A work of less importance was one begun by Dom Poncet and edited by Clément, entitled: "Nouveaux éclaircissements sur l'origine et le Pentateuque des Samaritains" (Paris, 1760). Clément's industry in collecting material is shown by the "Catalogus manuseriorum codicum Collegii Claramontani, quem excipit catalogus domus professe Parisiensis, uterque digestus et notis ornatus" (Paris, 1764). For information concerning his letters see the "Revue bénédictine", XII, 508.

PATRICIUS SCHLAGER.

Clement, JOHN, President of the College of Physicians and tutor to St. Thomas More's children. b. in Yorkshire about 1500; d. 1 July, 1572, in the Bloostrate, St. John's parish, Mechlin. Educated at St. Paul's School and Oxford, St. Thomas More admitted Clement as one of his household to help in the education of his children and to assist him in linguistic studies. In 1519 we find Clement at Corpus Christi College, Oxford, when Wolsey constituted him the Rhetoric Reader in the university; later he became professor of Greek there. About 1526 he married the daughter of a Norfolk gentleman, Margaret Gibbs, who lived and studied with More's family. Applying himself to the study of medicine, he was admitted a Fellow of the College of Physicians (1 Feb., 1528), and was chosen by Henry VIII to attend Wolsey when the latter was dangerously ill at Esher (1529). He was *consiliarius* of the college from 1529 to 1531, in 1547, and again from 1556 to 1558. He held the office of president in 1544, and that of censor in 1555. After the accession of Edward VI he retired to Louvain to escape religious persecution; so obnoxious was he to the Protestant authorities that he was exempted from the general pardon granted by Edward VI. He returned to England in Mary's reign and practised his profession in Essex, but fled abroad again when Elizabeth came to the throne. Mechlin was his last place of exile. He lies buried in the cathedral church of St. Rumbold in that city. He wrote: "Epigrammatum et aliorum carminum liber"; and also translated from Greek into Latin: (1) "The Epistles of St. Gregory Nazianzen"; (2) "The Homilies of Nicephorus Callistus concerning the Greek Saints"; (3) "The Epistles of Pope Celestine I to Cyril, Bishop of Alexandria".

Clementine Liturgy. See CLEMENT I, ST., POPE.

Clementines (Κλημენტια), (CLEMENTINE PSEUDO-WRITINGS), the name given to the curious religious romance which has come down to us in two forms as composed by Pope St. Clement I. The Greek form is preserved only in two MSS. and consists of twenty books of homilies. The Latin form is a translation made from the Greek by Rufinus, who died in 410. It is called the "Recognitions". Two later epitomes of the Homilies exist also, and there is a partial Syriac translation, embracing Recog. i-iii, and Hom. x-xiv, preserved in two British Museum MSS., one of which was written in the year 411. Some fragments are known in Arabic and in Slavonic. The writings are curious rather than admirable, and their main interest lies in the extraordinary theories which they have been made to support during the nineteenth century. The existence of the Clementine Homilies was first made known in 1572 and 1578 by the Jesuit Turrianus, who was a diligent searcher of libraries. He seems to have found a MS. of quite a different version from that which we possess. The first edition was that of G. B. Cotelier, 1672, from the Paris MS., in which the 20th book and part of the 19th are wanting. This was re-edited in 1847 by Schwegler. The complete Vatican MS. was first used in Dressel's edition, 1853, reprinted in Migne, P. G., II; another edition by Lagarde, 1865. The "Recognitions" are found in numerous MSS., for they were very popular in the Middle Ages; indeed the strange history of Clement and his father Faustus, or Faustianus, is said to have originated the Faust legend (cf. Richardson, "Papers of Amer. Soc. of Ch. Hist.", VI, 1894). The first edition, by Faber Stapulensis, appeared in 1504; Migne, P. G., I, gives a reprint of Gersdorf's edition of 1838. A new and much-needed edition is expected from E. C. Richardson. To the Homilies are prefixed two letters and an account of the reception of one of them. That from Clement to James was translated by Rufinus at an earlier date than the Recognitions (best edition by Fritzsche, 1873).

CONTENTS.—Large portions of the Homilies (H.) and Recognitions (R.) are almost word for word the same. Yet larger portions correspond in subject and more or less in treatment. Other parts contained only in one of the two works appear to be referred to or presupposed in the other. The two works are roughly of the same length, and contain the same framework of romance. H. was considered to be the original by Neander, Baur, Schliemann, Schwegler, and others. Lehmann thought the first three books of R. to be original, and H. for the remainder. Uhlhorn argued that both were recensions of an earlier book, "Preachings of Peter", R. having best preserved the narrative, H. the dogmatic teaching. Cave, Whiston, Rosenmüller, Ritschl, Hilgenfeld, and others held R. to be the original. It is now almost universally held (after Hort, Harnack, Waitz) that H. and R. are two versions of an original Clementine romance, which was longer than either, and embraced most of the contents of both. Sometimes H., sometimes R., is the more faithful to the archetype. With the elaborate philosophical and dogmatic discourse which forms the bulk of both works is interwoven a story which, when we consider its date, may be described as positively exciting and romantic. It differs slightly in the two books. The narrative is addressed to St. James, the Bishop of Jerusalem, and is related in the person of Clement himself. He

begins by detailing his religious questionings, his doubts about immortality, etc. He hears at Rome the preaching of a man of Judea who relates the miracles of Christ. This man (R.) was Barnabas; Clement defends him from the mob, and follows him to Palestine. (In H., evidently the original form, no name is given. Clement sets out for Palestine, but is driven by storms to Alexandria; there he is directed by philosophers to Barnabas, whom he defends from the mob and follows to Caesarea.) At Caesarea Clement hears that Peter is there and is about to hold a disputation with Simon Magus. At Peter's lodging he finds Barnabas, who introduces him. Peter invites Clement to accompany him from city to city, on his way to Rome, in order to hear his discourses. Clement (so R., or Peter himself, H.) sends a report of this to James, from whom Peter has an order to transmit to him accounts of all his teaching.

So far H. i. and R. i., 1-21. Then the two recensions vary. The original order may have been as follows: Clement arises at dawn (H. ii, 1) and finds Peter, who continues to instruct him (2-18, cf. R. ii, 33 and iii, 61). Peter sends for two of his disciples, Nicetas and Aquila, whom he describes as foster-sons of Justa, the Syro-Phoenician woman who was healed by Christ. They had been educated from boyhood by Simon Magus, but had been converted by Zacchæus, another disciple of Peter (19-21). Aquila relates Simon's parentage and his Samaritan origin, and declares that he claims to be greater than the God who created the world (H. ii, 22, R. ii, 7). He had been a disciple of St. John the Baptist, who is represented in H. as the head of a sect of "daily baptizers"; Dositheus succeeded John as head of it, and Simon supplanted Dositheus (23-4). In R. the Baptist has been omitted, and the sect is that of Dositheus. The woman, Helena, whom Simon took about with him, is described (in R. she is called the moon—R. ii, 12, H. ii, 26), and the sham miracles he claimed to do (H. ii, 32, R. ii, 10). He can make himself visible or invisible at will, can pass through rocks as if they were clay, throw himself down from a mountain unhurt, loose himself when bound; he can animate statues, make trees spring up; he can throw himself into the fire without harm, can appear with two faces: "I shall change myself into a sheep or a goat. I shall make a beard to grow upon little boys. I shall ascend by flight into the air, I shall exhibit abundance of gold, I shall make and unmake kings. I shall be worshipped as God, I shall have divine honours publicly assigned to me, so that an image of me shall be set up, and I shall be adored as God." (R. ii, 9.) Next day at noon Zacchæus announces that Simon has put off the promised dispute (H. ii, 35-7, R. ii, 20-1). Peter instructs Clement till evening (H. ii, 38-53). [Probably before this should come a long passage of R. (i, 22-74) in which Peter speaks of Old Testament history (27-41) and then gives an account of the coming of the true Prophet, His rejection, Passion, and Resurrection, and relates the preaching to the Gentiles. The Church at Jerusalem having been governed by James for a week of years, the Apostles return from their travels, and at James's request state what they have accomplished. Caiphas sends to ask if Jesus was the Christ. Here Peter, in a digression, explains why the true Prophet is called Christ and describes the Jewish sects. Then we are told how the Apostles argued before Caiphas, and refuted successively the Sadducees, Samaritans, Scribes, Pharisees, disciples of John, and Caiphas himself. When Peter foretells the destruction of the Temple, the priests are enraged, but Gamaliel quells the tumult, and next day makes a speech. St. James preaches for seven days, and the people are on the point of being baptized, when an enemy (not named, but obviously Simon) excites them against James, who is thrown down the steps of the Temple and left

for dead. He is carried to Jericho, with 5000*disciples. On recovering he sends Peter to Caesarea to refute Simon. He is welcomed by Zacchæus, who relates Simon's doings to him. The author of H. probably thought all this story inconsistent with Acts, and omitted it.] Next morning before dawn Peter arouses his disciples (H. iii, 1, R. ii, 1), who are enumerated (H. ii, 1, R. ii, 1). Peter gives a private preparatory discourse (H.) and then goes out to the public discussion with Simon. Only one day of it is related in H. (iii, 38-57), but the whole matter of the three days is given in R. (ii, 24-70, iii, 12-30, 33-48). But what H. has omitted R. gives largely, though in a different form, in xvi, xvii, xviii, and partly in xix, as another discussion with Simon in Laodicea. It is clear that R. has the original order. Simon, being worsted, flies in the night to Tyre. Peter determines to follow, leaving Zacchæus as bishop at Caesarea (H. iii, 58-72, R. iii, 63-6). H. adds that Peter remained seven days longer and baptized 10,000 people, sending on Nicetas and Aquila to stay at Tyre with Bernice, daughter of their stepmother, Justa (iii, 73). But R. relates that seven other disciples were sent on, while Clement remained at Caesarea for three months with Peter, who repeated in private at night the public instructions he gave during the day. All this Clement wrote down and sent to James. In ch. 74 are described the contents of the ten books of these sermons as sent to Jerusalem. H. now makes Clement, Nicetas, and Aquila go on to Tyre. Bernice tells them how Simon has been raising ghosts, infecting the people with diseases, and bringing demons upon them, and has gone to Sidon. Clement has a discussion with Simon's disciple Apion (H. v, 7-vi, 25). All this is omitted by R., but the same subjects are discussed in R. x, 17-51. Peter goes on northward by Tyre, Sidon, Berytus, and Byblus to Tripolis (H. vii, 5-12). (R. adds Dora and Ptolemais, omitting Byblus, iv, 1.) Peter's discourses to the multitude at Tripolis are detailed in H. viii, ix, x, xi, and in R. (three days only) iv, v, vi, with considerable differences. Clement is baptized (H. xi, 35, R. vi, 15). After a stay of three months he goes through Ortosias to Antarat (H. xii, 1, R. vii, 1).

At this point Clement recounts his history to the Apostle. He was closely related to the emperor. Soon after his birth his mother had a vision that unless she speedily left Rome with her twin elder sons, she and they would perish miserably. His father therefore sent them with many servants to Athens, but they disappeared, and nothing could be learned of their fate. At last, when Clement was twelve years old, his father himself set out upon the search; and he too was no more heard of (H. xii, 9-11, R. vii, 8-10). In the island of Aradus, opposite the town, Peter finds a miserable beggar woman, who turns out to be Clement's mother. Peter unites them, and heals the woman (H. xii, 12-23, R. vii, 11-23). H. adds a discourse by Peter on philanthropy (25-33). The party now leave Aradus (Mattidia, Clement's mother, journeying with Peter's wife) and go by Balanæ, Paltos, and Gabala to Laodicea of Syria. Nicetas and Aquila receive them, and hear Clement's story with amazement; they declare themselves to be Faustus and Faustianus, the twin sons of Mattidia and brothers of Clement. They had been saved on a fragment of wreck, and some men in a boat had taken them up. They had been beaten and starved, and finally sold at Caesarea Stratonis to Justa, who had educated them as her own sons. Later they had adhered to Simon, but were brought by Zacchæus to Peter. Mattidia is now baptized, and Peter discourses on the rewards given to chastity (H. xii, R. vii, 24-38). Next morning Peter is interrupted at his prayers by an old man, who assures him that prayer is a mistake, since all things are governed by

genesis or fate. Peter replies (H. xiv, 1-5—in R. Nicetas); Aquila and Clement try also to refute him (viii, 5—ix, 33; cf. H. xv, 1-5), but without success, for the old man had traced the horoscope of himself and his wife, and it came true. He tells his story. Clement, Nicetas, and Aquila guess that this is their father. Peter asks his name and those of his children. The mother rushes in, and all embrace in floods of tears. Faustus is then converted by a long series of discourses on evil and on mythology (R. x, 1-51, to which correspond H. xx, 1-10 and iv, 7—vi, 25—the discussion between Clement and Appion at Tyre. The long discussions with Simon before Faustus in H. xvi, xvii, xviii were in their right place in R. as part of the debate at Cæsarea). Simon is driven away by the threats of Cornelius the Centurion, but first he changes the face of Faustus into his own likeness by smearing it with a magic juice, in hopes that Faustus will be put to death instead of himself. Peter frightens away Simon's disciples by what are simply lies, and he sends Faustus to Antioch to unsay in the person of Simon all the abuse Simon has been pouring on the Apostle there. The people of Antioch in consequence long for Peter's coming, and nearly put the false Simon to death. Peter restores him to his proper form, and thenceforth they all live happily.

A letter from Clement to James forms an epilogue to H. In it Clement relates how Peter before his death gave his last instructions and set Clement in his own chair as his successor in the See of Rome. James is addressed as "Bishop of bishops, who rules Jerusalem, the holy Church of the Hebrews, and the Churches everywhere". To him Clement sends a book, "Clement's Epitome of the Preachings of Peter from place to place". Another letter, that of Peter to James, forms an introduction. The Apostle urges that the book of his teachings is not to be committed to anyone before initiation and probation. A note follows the letter, relating that James on receipt of the letter called the elders and read it to them. The book is to be given only to one who is pious, and a teacher, *and circumcised*, and even then only a part at a time. A form of promise (not an oath, which is unlawful) is prescribed for the reader, by heaven, earth, water, and air, that he will take extraordinary care of the writings and communicate them to no one; he invokes upon himself terrible curses in case he should be unfaithful to this covenant. The most curious passage is: "Even if I should come to acknowledge another God, I now swear by him, whether he exist or not." After the adjuration he shall partake of bread and salt. The elders, on hearing of this solemnity, are terrified, but James pacifies them. The whole of this elaborate mystification is obviously intended to explain how the Clementine writings came to be unknown from Clement's time until the date of their unknown author. Many parallels can be found in modern times; Sir Walter Scott's prefaces—the imaginary Mr. Oldbuck and his friends—will occur to everyone. Nevertheless a good many modern critics accept the "adjuration" with the utmost gravity as the secret rite of an obscure and very early sect of Judaizers.

DOCTRINE.—The central and all-important doctrine of the Clementines is the Unity of God. Though transcendent and unknowable, He is the Creator of the World. Though infinite, He has (according to the Homilies) shape and body, for He is the Archetype of all beauty, and in particular the exemplar after which man was fashioned. He, therefore, even has members, in some eminent way. He is the self-begotten or unbegotten, from whom proceeds His Wisdom like a hand. To His Wisdom He said: "Let us make man", and He is the "Parents" (i. e., Father and Mother) of men.

The Homilies also explain that the elements pro-

ceed from God as His Child. From them the Evil One proceeded by an accidental mingling. He is therefore not the Son, nor even to be called brother of the Son. God is infinitely changeable, and can assume all forms at will. The Son proceeds from the most perfect of these modifications of the Divine nature and is consubstantial with that modification, but not with the Divine nature itself. The Son is not God, therefore, in the full sense, nor has He all the power of God. He cannot change Himself, though He can be changed at will by God. Of the Holy Ghost we learn nothing definite. The whole of this extraordinary teaching is omitted in R., except the accidental generation of the devil. Instead we find a long passage, R. iii, 2-11, in corrupt and unintelligible Latin, preserved also in the early Syriac MSS. Rufinus in his preface tells us that he omitted it, and in his work on the adulteration of the books of Origen he declares that it is so Eunomian in doctrine that one seems to hear Eunomius himself speaking. It is naturally not found in the best MSS. of R., but as preserved in many MSS. it is an interpolation by some Arian editor, who seems to have translated it from the original Greek without always understanding the meaning. The doctrine is, as Rufinus says, the Arianism of the second half of the fourth century. The Son is a creature; the Holy Ghost the creature of the Son.

Of demons much is said. They have great power over the self-indulgent, and are swallowed with food by those who eat too much. Magic is constantly mentioned, and its use reprobated. Idolatry is argued against at length. The immorality of the Greek stories of the gods is ridiculed, and attempts at mystical explanation are refuted. Various virtues are praised: temperance, kindness or philanthropy, chastity in the married state; asceticism of a most rigorous kind is practised by St. Peter. The introduction after the Deluge of eating meat, according to the Book of Genesis, is violently denounced, as having naturally led to cannibalism. The use of meat is, however, not forbidden as a sin, and is probably permitted as a bad, but ineradicable, custom. There is no trace of any Judaistic observance, for though the letter of Peter and the speech of James allow the books to be given to none who is not "a circumcised believer", this is only a part of the mystification, by which the number of adepts is limited as far as possible.

It is now becoming recognized by all critics that the original writings were not intended for the use of baptized Christians of any sect. Most of the latest critics say they are meant for catechumens, and indeed the office of a teacher is highly commended; but it would be more exact to say that the arguments are adapted to the needs of inquiring heathens. Of baptism much is said, but of repentance little. There is little characteristically Christian doctrine to be found; atonement and the sacrifice of the Cross, sin and its penalty, forgiveness, grace, are far to seek. Once the Eucharist is mentioned by name: "Peter broke the Eucharist" (H. xi, 36, R. vi, 15). Christ is always spoken of as "the true Prophet", as the revealer to men of God, of truth, of the answers to the riddle of life. The writer knows a complete system of ecclesiastical organization. Peter sets a bishop over each city, with priest and deacons under him; the office of bishop is well defined. It was principally this fact which prevented critics of the Tübingen School from dating H. and R. earlier than the middle of the second century. The writer was not an Ebionite, since he believes in the pre-existence of the Son, His Incarnation and miraculous conception, while he enjoins no Jewish observances.

Antagonism to St. Paul is commonly asserted to be a characteristic of the Clementines. He is never mentioned, for the supposed date of the dialogues is

before his conversion, and the writer is very careful to avoid anachronisms. But his Epistles are regularly used, and the grounds for supposing that Simon always or sometimes represents St. Paul are exceedingly feeble. The latest critics, who still admit that St. Paul is occasionally combated, do not attribute this attitude to the Clementine writer, but only to one of some presumed sources. In fact, there is a clear prophetic reference to St. Paul as the teacher of the nations in R. iii, 61. But it is not safe to admit any polemic against St. Paul's person in any part of the writings, for the simple reason that there is nowhere any trace of antagonism to his doctrines.

It seems to be universally held that the Clementines are based upon the doctrines of the Book of Elchasai or Helxai, which was much used by the Ebionites. The contents of it were said to have been revealed by an angel ninety-six miles high to a holy man Elchasai in the year 100, and this is gravely accepted by Hilgenfeld and Waitz as its real date. It does not, however, seem to have been known until it was brought to Rome about the year 220, by a certain Alcibiades of Apamea. We know its doctrines from the "Philosophumena" and from Epiphanius. It taught a second baptism (in running streams with all the clothes on) for the remission of sins, to be accompanied by an adjuration of seven elements; the same process was recommended as a cure for the bite of mad dogs and for similar evils. This is not particularly like the calling of four (not seven) elements to witness a solemn promise by the side of water (without bathing) in the Clementines. For the rest, Elchasai taught magic and astrology, made marriage compulsory, celebrated the Eucharist with bread and water, caused all believers to be circumcised and to live by the Jewish law, held that Christ was born of a human father. All this is contradictory to the Clementines. The only point of resemblance seems to be that the Homilies represent Christ as having been in Adam and Moses, while Elchasai said He had been frequently incarnate in Adam and since, and would be again. The Clementine writer is fond of pairs of antitheses, or *οὐνόμα*, such as Christ and the tempter, Peter and Simon. But these have no connexion with any Gnostic or Marcionite antitheses, nor is there any trace of the Gnostic genealogies. He is simply airing his own pseudo-philosophic speculations. Polemic against Marcionism has often been pointed out. But the denial of two Gods, a transcendental God and a Creator, is directed against popular neo-Platonism, and not against Marcion. Again, replies are made to objections to Christianity drawn from immorality or anthropomorphism in the Old Testament, but these objections are not Marcionite. The writer is fond of citing sayings of Christ not found in Scripture. His Scripture text has been analyzed by Hilgenfeld, Waitz, and others. He never cites a book of the N. T. by name, which would be an anachronism at the date he has chosen.

EARLY USE OF THE CLEMENTINES.—It was long believed that the early date of the Clementines was proved by the fact that they were twice quoted by Origen. One of these quotations occurs in the "Philocalia" of Sts. Gregory of Nazianzus and Basil (c. 360). Dr. Armitage Robinson showed in his edition of that work (1893) that the citation is an addition to the passage of Origen made by the compilers, or possibly by a later editor. The other citation occurs in the old Latin translation of Origen on Matthew. This translation is full of interpolations and alterations, and the passage of Pseudo-Clement is apparently an interpolation by the translator from the Arian "Opus imperfectum in Matt." (See Journal of Theol. Studies, III, 436.) Omitting Origen, the earliest witness is Eusebius. In his "Hist. Eccl.", III, xxxviii (A. D. 325) he mentions some short writings and adds: "And now some have only the other day

brought forward other wordy and lengthy compositions as being Clement's, containing dialogues of Peter and Appion, of which there is absolutely no mention in the ancients." These dialogues need not have been the complete romance, but may have been an earlier draft of part of it. Next we find the Clementines used by Ebionites c. 360 (Epiphanius, Hær., xxx, 15). They are quoted as the "Period" by St. Jerome in 387 and 392 (On Gal., i, 18, and "Adv. Jovin.", i, 26). Two forms of the "Recognitions" were known to Rufinus, and one of them was translated by him c. 400. About 408 St. Paulinus of Nola, in a letter to Rufinus, mentions having himself translated a part or all, perhaps as an exercise in Greek. The "Opus imperfectum" above mentioned has five quotations. It is apparently by an Arian of the beginning of the fifth century, possibly by a bishop called Maximus. The Syriac translation was made before 411, the date of one of the MSS. After this time citations occur in many Byzantine writers, and from the commendation given by Nicephorus Callisti (fourteenth century) we may gather that an orthodox version was current. In the West the translation by Rufinus became very popular, and citations are found in Syriac and Arabic writings.

MODERN THEORIES OF ORIGIN AND DATE.—Baur, the founder of the "Tübingen School" of New Testament criticism, rested his ideas about the New Testament on the Clementines, and his ideas about the Clementines on St. Epiphanius, who found the writings used by an Ebionite sect in the fourth century. This Judæo-Christian sect at that date rejected St. Paul as an apostate. It was assumed that this fourth-century opinion represented the Christianity of the Twelve Apostles; Paulinism was originally a heresy, and a schism from the Jewish Christianity of James and Peter and the rest; Marcion was a leader of the Pauline sect in its survival in the second century, using only the Pauline Gospel, St. Luke (in its original form), and the Epistles of St. Paul (without the Pastoral Epistles). The Clementine literature had its first origin in the Apostolic Age, and belonged to the original Jewish, Petrine, legal Church. It is directed wholly against St. Paul and his sect. Simon Magus never existed; it is a nickname for St. Paul. The Acts of the Apostles, compiled in the second century, have borrowed their mention of Simon from the earliest form of the Clementines. Catholicism under the presidency of Rome was the result of the adjustment between the Petrine and Pauline sections of the Church in the second half of the second century. The Fourth Gospel is a monument of this reconciliation, in which Rome took a leading part, having invented the fiction that both Peter and Paul were the founders of her Church, both having been martyred at Rome, and on the same day, in perfect union.

Throughout the middle of the nineteenth century this theory, in many forms, was dominant in Germany. The demonstration, mainly by English scholars, of the impossibility of the late dates ascribed to the New Testament documents (four Epistles of St. Paul and the Apocalypse were the only documents generally admitted as being of early date), and the proofs of the authenticity of the Apostolic Fathers and of the use of St. John's Gospel by Justin, Papias, and Ignatius gradually brought Baur's theories into discredit. Of the original school, Adolf Hilgenfeld may be considered the last survivor (d. 1907). He was induced many years ago to admit that Simon Magus was a real personage, though he persists that in the Clementines he is meant for St. Paul. To a priori critics it counts as nothing that Simon holds no Pauline doctrine and that the author shows no signs of being a Judæo-Christian. In 1847 Hilgenfeld dated the original nucleus (Preachings of Peter) soon after the Jewish war of 70; successive revisions of it were anti-Basilidian, anti-Valentinian, and anti-

Marcionite respectively. Baur placed the completed form, H., soon after the middle of the second century, and Schliemann (1844) agreed, placing R., as a revision, between 211 and 230. This writer sums up the opinions of his predecessors thus:

R. 2nd century: Sixtus Senensis, Blondellus, Nourri, Cotelierius, Natalis Alexander, Cave, Oudin, Heinsius, Rosenmüller, Flügge, Gieseler, Tholuck, Bretschneider, Engelhardt, Gröfner.

R. 2nd or 3rd century: Schröck, Stark, Lumper, Krabbe, Locherer, Gersdorf.

R. 3rd century: Strunzian (on Bardesanes, 1710), Weismann (1718), Mosheim, Kleuker, Schmidt (Kirchengesch.).

R. 4th century: Corrodi, Lentz (Dogmengesch.).

H. 2nd century (beginning): Credner, Bretschneider, Kern, Rothe.

H. 2nd century: Clericus, Beausobre, Flügge, Müncher, Hoffmann, Döllinger, Hilgers; (middle of 2nd) Hase.

H. end of 2nd century: Schröck, Cölln, Gieseler (3rd ed.), Schenkel, Gröfner, Lücke.

H. 3rd century: Mill, Mosheim, Gallandi, Gieseler (2nd ed.).

H. 2nd or 3rd century: Neander, Krabbe, Baur, Ritter, Paniel, Dähne.

H. 4th century: Lentz.

Uhlhorn in his valuable monograph (1854) placed the original document, or *Grundschrift*, in East Syria, after 150; H. in the same region after 160; R. in Rome after 170. Lehmann (1869) put the source (Preaching of Peter) very early, H. and R. i-ii before 160, the rest of R. before 170. In England Salmon set R. about 200, H. about 218. Dr. Bigg makes H. the original, Syrian, first half of second century, R. being a recasting in an orthodox sense. H. was originally written by a Catholic, and the heretical parts belong to a later recension. Dr. Headlam, in a very interesting article, considers that the original form was rather a collection of works than a single book, yet all products of one design and plan, coming from one writer, of a curious, versatile, unequally developed mind. While accepting the dependence on the Book of Elchasai, Dr. Headlam sees no antagonism to St. Paul, and declares that the writer is quite ignorant of Judaism. Under the impression that the original work was known to Origen, he is obliged to date it at the end of the second century or the beginning of the third. In 1883 Bestmann made the Clementines the basis of an unsuccessful theory which, as Harnack puts it, "claimed for Jewish Christianity the glory of having developed by itself the whole doctrine, worship, and constitution of Catholicism, and of having transmitted it to Gentile Christianity as a finished product which only required to be divested of a few Jewish husks" (Hist. of Dogma, I, 310).

Another popular theory based upon the Clementines has been that it was the Epistle of Clement to James which originated the notion that St. Peter was the first Bishop of Rome. This has been asserted by no lesser authorities than Lightfoot, Salmon, and Bright, and it has been made an important point in the controversial work of the Rev. F. W. Puller, "Primitive Saints and the Roman See". It is acknowledged that in St. Cyprian's time (c. 250) it was universally believed that St. Peter was Bishop of Rome, and that he was looked upon as the type and origin of episcopacy. Modern criticism has long since put the letter of Clement too late to allow this theory to be tenable, and now Waitz places it after 220, and Harnack after 260. We shall presently see that it probably belongs to the fourth century.

The "Old Catholic" Professor Langen in 1890 elaborated a new theory. Until the destruction of Jerusalem in 135, he says, that city was the centre of the Christian Church. A new pivot was then needed. The Church of the capital made a bold bid for the

vacant post of pre-eminence. Shortly after 135 was published the original form of the Clementine romance. It was a Roman forgery, claiming for the Church of Peter the succession to a part of the headship of the Church of James. James indeed had been "bishop of bishops", and Peter's successor could not claim to be more than Peter was among the Apostles, *primus inter pares*. The Roman attempt was eventually successful, but not without a struggle. Casarea, the metropolis of Palestine, also claimed the succession to Jerusalem. The monument of this claim is H., a recension of the Roman work made at Casarea before the end of the second century in order to fight Rome with her own weapons. (The intention must be admitted to have been closely veiled.) In the beginning of the third century the metropolis of the Orient, Antioch, produced a new edition, R., claiming for that city the vacant primacy. Langen's view has found no adherents.

Dr. Hort complained that the Clementines have left no traces in the eighty years between Origen and Eusebius, but he felt obliged to date them before Origen, and placed the original c. 200 as the work of a Syrian Helxaite. Harnack, in his "History of Dogma", saw that they had no influence in the third century; he dated R. and H. not earlier than the first half of that century, or even a few decades later. All the foregoing writers presupposed that the Clementines were known to Origen. Since this has been shown to be not proven (1903), Waitz's elaborate study has appeared (1904), but his view was evidently formed earlier. His view is that H. is the work of an Aramæan Christian after 325 (for he uses the word *ὑποούριος*) and earlier than 411 (the Syriac MS.), R. probably after 350, also in the East. But the *Grundschrift*, or archetype, was written at Rome, perhaps under the syncretistic system of cult in favour at the court of Alexander Severus, probably between 220 and 250. Harnack, in his "Chronologie" (II), gives 260 or later as the date, but he thinks H. and R. may be ante-Nicene. Waitz supposes two earlier sources to have been employed in the romance, the "Preachings of Peter" (origin in first century, but used in a later anti-Marcionite recension) and the "Acts of Peter" (written in a Catholic circle at Antioch c. 210). Harnack accepts the existence of these sources, but thinks neither was earlier than about 200. They are carefully to be distinguished from the well-known second-century works, the "Preaching of Peter" and "Acts of Peter", of which fragments still exist. These are quoted by many early writers, whereas the supposed sources of the Clementines are otherwise unknown, and therefore probably never existed at all. A long passage from Pseudo-Bardesanes' "De Fato" occurs in R. ix, 19 sqq. Hilgenfeld, Ritschl, and some earlier critics characteristically held that Bardesanes used the Clementines. Merx, Waitz, and most others hold that R. cites Bardesanes directly. Nau and Harnack are certainly right, that R. has borrowed the citation at second hand from Eusebius (Præp. Evang., vi, 10, 11-48, A. D. 313).

PROBABLE DATE OF THE CLEMENTINES.—We now know that the Clementine writer need not have lived before Origen. Let us add that there is no reason to think he was a Judæo-Christian, an Elchasaite, or anti-Pauline, or anti-Marcionite, that he employed ancient sources, that he belonged to a secretive sect. We are free, then, to look out for indications of date without prejudice.

R. is certainly post-Nicene, as Waitz has shown. But we may go further. The curious passage R. iii, 2-11, which Rufinus omitted, and in which he seemed to hear Eunomius himself speaking, gives in fact the doctrine of Eunomius so exactly that it frequently almost cites the "Apologeticus" (c. 362-3) of that heretic word for word. (The Eunomian doctrine is

that the essence of God is to be unborn, consequently the Son Who is begotten is not God. He is a creature, the first-born of all creation and the Image of God. The Holy Ghost is the creature of the Son.) The agreement with Eunomius's *ἐκθεσις πιστῶν* of 381-3 is less close. As the Eunomian passage was found by Rufinus in both the recensions of Clement known to him, we may suppose that the interpolation was made in the original work by a Eunomian about 365-70, before the abridgment R. was made about 370-80. (The word *archiepiscopus* used of St. James suggests the end of the fourth century. It occurs in the middle of that century in some Meletian documents cited by Athanasius, and then not till the Council of Ephesus, 431.)

H. has also a disquisition on the generation of the Son (xvi, 15-18, and xx, 7-8). The writer calls God *αὐτοπάτωρ* and *αὐτογέννητος*, and both Mother and Father of men. His idea of a changeable God and an unchangeable Son projected from the best modification of God has been mentioned above. This ingenious doctrine enables the writer to accept the words of the Nicene definition, while denying their sense. The Son may be called God, for so may men be, but not in the strict sense. He is *ὁμοούσιος τῷ Πατρὶ*, begotten *ἐκ τῆς οὐσίας*, He is not *τρεπτός* or *ἀλλοιωτός*. Apparently He is not *κτιστός*, nor was there a time when He was not, though this is not quite distinctly enunciated. The writer is clearly an Arian who manages to accept the formula of Nicæa by an acrobatic feat, in order to save himself. The date is therefore probably within the reign of Constantine (d. 337), while the great council was still imposed on all by the emperor—say, about 330.

But this is not the date of H., but of the original behind both H. and R.; for it is clear that the Eunomian interpolator of R. attacks the doctrine we find in H. He ridicules *αὐτοπάτωρ* and *αὐτογέννητος*, he declares God to be unchangeable, and the Son to be created, not begotten from the Father's essence and consubstantial. God is not *masculo-femina*. It is clear that the interpolator had before him the doctrine of H. in a yet clearer form, and that he substituted his own view for it (R. iii, 2-11). But it is remarkable that he retained one integral part of H.'s theory, viz., the origin of the Evil One from an accidental mixture of elements, for Rufinus tells us (De Adult. libr. Origenis) that he found this doctrine in R. and omitted it. The date of the original is therefore fixed as after Nicæa, 325, probably c. 330; that of H. may be anywhere in the second half of the fourth century. The Eunomian interpolator is about 365-70, and the compilation of R. about 370-80.

The original author shows a detailed knowledge of the towns on the Phœnician coast from Cæsarea to Antioch. He was an Arian, and Arianism had its home in the civil diocese of the Orient. He uses the "Præp. Evang." of Eusebius of Cæsarea (written about 313). In 325 that historian mentions the dialogues of Peter and Appion as just published—presumably in his own region; these were probably the nucleus of the larger work completed by the same hand a few years later. Citations of Pseudo-Clement are by the Palestinian Epiphanius, who found the romance among the Ebionites of Palestine; by St. Jerome, who had dwelt in the Syrian desert and settled at Bethlehem; by the travelled Rufinus; by the "Apostolical Constitutions", compiled in Syria or Palestine. The work is rendered into Syriac before 411. The Arian author of the "Opus imperfectum" cited it freely. It was interpolated by a Eunomian about 365-70. All these indications suggest an Arian author before 350 in the East, probably not far from Cæsarea.

The author, though an Arian, probably belonged nominally to the Catholic Church. He wrote for the heathens of his day, and observed the stiff and often

merely formal *disciplina arcani* which the fourth century enforced. Atonement, grace, sacraments are omitted for this cause only. "The true Prophet" is not a name for Christ used by Christians, but the office of Christ which the author puts forward towards the pagan world. He shows Peter keeping the evening agape and Eucharist secret from Clement when unbaptized; it was no doubt a Eucharist of bread and wine, not of bread and salt.

The great pagan antagonist of the third century was the neo-Platonic philosopher, Porphyry; but under Constantine his disciple Iamblichus was the chief restorer and defender of the old gods, and his system of defence is that which we find made the official religion by Julian (361-3). Consequently, it is not astonishing to find that Simon and his disciples represent not St. Paul, but Iamblichus. The doctrines and practices repelled are the theurgy and magic, astrology and mantic, absurd miracles and claims to union with the Divinity, which characterized the debased neo-Platonism of 320-30. It is not against Marcion but against Plato that Pseudo-Clement teaches the supremacy of the Creator of all. He defends the Old Testament against the school of Porphyry, and when he declares it to be interpolated, he is using Porphyry's own higher criticism in a clumsy way. The elaborate discussion of ancient history, the ridicule cast on the obscene mythology of the Greeks, and the philosophical explanations of a higher meaning are also against Porphyry. The refutation of the grossest idolatry is against Iamblichus.

It is perhaps mere accident that we hear nothing of the Clementines from 330 till 360. But about 360-410 they are interpolated, they are revised and abridged in H., yet more revised and abridged in R., translated into Latin, translated into Syriac, and frequently cited. It seems, therefore, that it was the policy of Julian which drew them from obscurity. They were useful weapons against the momentary resurrection of polytheism, mythology, theurgy, and idolatry.

The principal editions have been mentioned above. The literature is so enormous that a selection from it must suffice. Somewhat fuller lists will be found in HARNACK, *Chronologie*, II, in BARDENHEWER, *Patrologie und Geschichte der kirchlichen Litteratur* and in CHEVALIER, *Répertoire*.—SCHLEMMANN, *Die Clementinen* (1844); HILGENFELD, *Die Clem. Recogn. und Hom. nach ihrem Ursprung und Inhalt* (Jena, 1848); *Kritische Untersuchungen über die Evangelien Justins, der Clem. Hom. und Marcions* (Halle, 1850); UHLKORN, *Die Hom. und Recogn. des Clemens Romanus* (Göttingen, 1854); LEHMANN, *Die clementinischen Schriften* (Gotha, 1869); LIPSITZ, *Quellen der römischen Petrusage* (1872) and *Apok. Apostelgeschichte* (1887); II, SALMON in *Dict. Chr. Biog.* (1877); LANGEN, *Die Clemensromane* (Gotha, 1890); FUNK in *Kirchenlex.* (1884); BIGG, *The Clementine Homilies in Studia Biblica* (Oxford, 1890); II, BUSSELL, *The Purpose of the World-Process and the Problem of Evil in the Clementine and Lactantian Writings in Studia Biblica* (1896); IV, W. CHAWNER, *Index of noteworthy words and phrases found in the Clementine writings in Lightfoot Fund Public.* (London, 1893); HORT, *Clementine Recognitions* (lectures delivered in 1884; pub. London, 1901); MEYBOOM, *De Clemens Roman.* (1902); HEADLAM, *The Clementine Literature in Journ. Theol. Stud.* (1903), III, 41; CHAPMAN, *Origen and Pseudo-Clement in Journ. Theol. Stud.*, III, 436; HILGENFELD, *Origenes und Pseudo-Clemens in Zeitschr. für Wiss. Theol.* (1903), XLVI, 342; FREUSCHEN in HARNACK, *Gesch. der altchristl. Litteratur* (1893), I, 212; and II, *Chronologie*, 518; WALTZ, *Die Pseudoclementinen in Texte und Unters.*, New Series, X, 4; CHAPMAN, *The Date of the Clementines in Zeitschr. für New-Test. Wiss.* (1908). An English translation of the *Recognitions*, by the REV. T. SMITH, D.D., will be found in the Ante-Nicene Library, III, and of the *Homilies*, *ibid.*, XVII (Edinburgh, 1871-2).

JOHN CHAPMAN.

Clement Mary Hofbauer (JOHN DVOŘÁK), BLESSED, the second founder of the Redemptorist Congregation, called "the Apostle of Vienna", b. at Tasswitz in Moravia, 26 December, 1751; d. at Vienna, 15 March, 1821. The family name of Dvořák was better known by its German equivalent, Hofbauer. The youngest of twelve children, and son of a grazier and butcher, he was six years old when his father died. His great

desire was to become a priest, but his family being unable to give him the necessary education he became a baker's assistant, devoting all his spare time to study. He was a servant in the Premonstratensian monastery of Bruck from 1771 to 1775, and then lived for some time as a hermit. When the Emperor Joseph II abolished hermitages he went to Vienna, where he worked once more as a baker. After two pilgrimages to Rome he again tried a hermit's life (1782-3), this time under the protection of Barnaba Chiaramonti, Bishop of Tivoli, afterwards Pope Pius VII, taking the name of Clement, by which he was ever afterwards known. He once more returned to Vienna, where at length by the generosity of benefactors he was enabled to go to the university and complete his studies. In 1784 he made a third pilgrimage on foot to Rome with a friend, Thaddäus Hübl, and the two were received into the Redemptorist novitiate at San Giuliano on the Esquiline. After a shortened probation they were professed on 19 March, 1785, and ordained priests a few days later. They were sent, towards the end of the same year, to found a house north of the Alps, St. Alphonsus, who was still alive, prophesying their success. It being impossible under Joseph II to found a house in Vienna, Clement and Thaddäus turned to Warsaw, where King Stanislaus Poniatowski, at the nuncio's request, placed St. Benno's, the German national church, at their disposal. Here, in 1795, they saw the end of Polish independence. The labours of Clement and his companions in Warsaw from 1786 to 1808 are wellnigh incredible. In addition to St. Benno's, another large church was reserved for them, where sermons were preached in French, and there were daily classes of instruction for Protestants and Jews. Besides this Clement founded an orphanage and a school for boys. His chief helper, Thaddäus Hübl, died in 1807. In the next year, on orders from Paris, the house at Warsaw and three other houses which Clement had founded were suppressed, and the Redemptorists were expelled from the Grand Duchy. Clement with one companion went to Vienna, where for the last twelve years of his life he acted as chaplain and director at an Ursuline convent. During these years he exercised a veritable apostolate among all classes in the capital from the Emperor Francis downward. Unable to found a regular house of his congregation, which was however established, as he had predicted, almost immediately after his death, he devoted himself in a special way to the conversion and training of young men. "I know but three men of superhuman energy", his friend Werner had said, "Napoleon, Goethe, and Clement Hofbauer." "Religion in Austria", said Pius VII, "has lost its chief support." Indeed it was to Clement Hofbauer perhaps more than to any single individual that the extinction of Josephinism was due. He was beatified by Leo XIII, 29 January, 1888. (See AUSTRO-HUNGARIAN MONARCHY, II, 129.)

His life in German by HARINGER, translated into English by LADY HERBERT (New York, 1883). Another life by O. R. VASSALL PHILLIPS (New York, 1893); BERTHE, *Saint Alphonse de Liguori* (Paris, 1900), tr. *Life of St. Alphonse de Liguori* (Dublin, 1905).

J. MAGNIER.

Clement of Alexandria (properly TITUS FLAVIUS CLEMENS, but known in church history by the former designation to distinguish him from Clement of Rome), date of birth unknown; d. about the year 215; an early Greek theologian and head of the catechetical school of Alexandria. Athens is given as the starting-point of his journeyings, and was probably his birthplace. He became a convert to the Faith and travelled from place to place in search of higher instruction, attaching himself successively to different masters: to a Greek of Ionia, to another of Magna Græcia, to a third of Coele-Syria, after all of whom he addressed himself in turn to an Egyptian, an Assy-

rian, and a converted Palestinian Jew. At last he met Pantænus in Alexandria, and in his teaching "found rest".

The place itself was well chosen. It was natural that Christian speculation should have a home at Alexandria. This great city was at the time a centre of culture as well as of trade. A great university had grown up under the long-continued patronage of the State. The intellectual temper was broad and tolerant, as became a city where so many races mingled. The philosophers were critics or eclectics, and Plato was the most favoured of the old masters. Neo-Platonism, the philosophy of the new pagan renaissance, had a prophet at Alexandria in the person of Ammonius Saccas. The Jews, too, who were there in very large numbers, breathed its liberal atmosphere, and had assimilated secular culture. They there formed the most enlightened colony of the Dispersion. Having lost the use of Hebrew, they found it necessary to translate the Scriptures into the more familiar Greek. Philo, their foremost thinker, became a sort of Jewish Plato. Alexandria was, in addition, one of the chief seats of that peculiar mixed pagan and Christian speculation known as Gnosticism. Basilides and Valentinus taught there. It is no matter of surprise, therefore, to find some of the Christians affected in turn by the scientific spirit. At an uncertain date, in the latter half of the second century, "a school of oral instruction" was founded. Lectures were given to which pagan hearers were admitted, and advanced teaching to Christians separately. It was an official institution of the Church. Pantænus is the earliest teacher whose name has been preserved. Clement first assisted and then succeeded Pantænus in the direction of the school, about A.D. 190. He was already known as a Christian writer before the days of Pope Victor (188-199).

About this time he may have composed the "Hortatory Discourse to the Greeks" (*Προτρεπτικός πρὸς Ἕλληνας*). It is a persuasive appeal for the Faith, written in a lofty strain. The discourse opens with passages which fall on the ear with the effect of sweet music. Amphion and Arion by their minstrelsy drew after them savage monsters and moved the very stones; Christ is the noblest minstrel. His harp and lyre are men. He draws music from their hearts by the Holy Spirit: nay, Christ is Himself the New Canticle, whose melody subdues the fiercest and hardest natures. Clement then proceeds to show the transcendence of the Christian religion. He contrasts Christianity with the vileness of pagan rites, and with the faint hopes of pagan poets and philosophers. Man is born for God. The Word calls men to Himself. The full truth is found in Christ alone. The work ends with a description of the God-fearing Christian. He answers those who urge that it is wrong to desert one's ancestral religion.

The work entitled "Outlines" (*Ἰστορικαὶ αὐτῆς*) is likewise believed to be a production of the early activity of Clement. It was translated into Latin by Rufinus under the title "Dispositiones". It was in eight books, but is no longer extant, though numerous fragments have been preserved in Greek by Eusebius, Ecumenius, Maximus Confessor, John Moschos, and Photius. According to Zahn, a Latin fragment, "Adumbrationes Clementis Alexandrini in epistolas canonicas", translated by Cassiodorus and purged of objectionable passages, represents in part the text of Clement. Eusebius represents the "Outlines" as an abridged commentary, with doctrinal and historical remarks on the entire Bible and on the non-canonical "Epistle of Barnabas" and "Apocalypse of Peter". Photius, who had also read it, describes it as a series of explanations of Biblical texts, especially of Genesis, Exodus, the Psalms, Ecclesiastes, and the Pauline and Catholic Epistles. He declares the work sound on some points, but adds that it con-

tains "impieties and fables", such as the eternity of matter, the creatureship of the Word, plurality of Words (*Λόγοι*), Docetism, metempsychosis, etc. Conservative scholars are inclined to believe that Photius has thrown the mistakes of Clement, whatever they may have been, into undue relief. Clement's style is difficult, his works are full of borrowed excerpts, and his teaching is with difficulty reduced to a coherent body of doctrine. And this early work, being a scattered commentary on Holy Writ, must have been peculiarly liable to misconstruction. It is certain that several of the more serious charges can rest upon nothing but mistakes. At any rate, his extant writings show Clement in a better light.

Other works of his are the "Miscellanies" (*Στρωματεῖς*) and "The Tutor" (*Παιδαγωγός*). The "Miscellanies" comprise seven entire books, of which the first four are earlier than "The Tutor". When he had finished this latter work he returned to the "Miscellanies", which he was never able to finish. The first pages of the work are now missing. What has been known as the eighth book since the time of Eusebius is nothing more than a collection of extracts drawn from pagan philosophers. It is likely, as von Arnim has suggested, that Clement had intended to make use of these materials together with the abridgment of Theodotus (Excerpts from Theodotus and the Eastern School of Valentinus) and the "Eclogæ Prophetiæ", Extracts from the Prophets (not extracts, but notes at random on texts or Scriptural topics) for the continuation of the "Miscellanies". In the "Miscellanies" Clement disclaims order and plan. He compares the work to a meadow where all kinds of flowers grow at random and, again, to a shady hill or mountain planted with trees of every sort. In fact, it is a loosely related series of remarks, possibly notes of his lectures in the school. It is the fullest of Clement's works. He starts with the importance of philosophy for the pursuit of Christian knowledge. Here he is perhaps defending his own scientific labours from local criticism of conservative brethren. He shows how faith is related to knowledge, and emphasizes the superiority of revelation to philosophy. God's truth is to be found in revelation, another portion of it in philosophy. It is the duty of the Christian to neglect neither. Religious science, drawn from this twofold source, is even an element of perfection; the instructed Christian "the true Gnostic"—is the perfect Christian. He who has risen to this height is far from the disturbance of passion; he is united to God, and in a mysterious sense is one with Him. Such is the line of thought indicated in the work, which is full of digressions.

"The Tutor" is a practical treatise in three books. Its purpose is to fit the ordinary Christian by a disciplined life to become an instructed Christian. In ancient times the *paidagogos* was the slave who had constant charge of a boy, his companion at all times. On him depended the formation of the boy's character. Such is the office of the Word Incarnate towards men. He first summons them to be His, then He trains them in His ways. His ways are temperate, orderly, calm, and simple. Nothing is too common or trivial for the Tutor's care. His influence tells on the minute details of life, on one's manner of eating, drinking, sleeping, dressing, taking recreation, etc. The moral tone of this work is kindly; very beautiful is the ideal of a transfigured life described at the close. In the editions of Clement "The Tutor" is followed by two short poems, the second of which, addressed to the Tutor, is from some pious reader of the work; the first, entitled "A Hymn of the Saviour Christ" (*Ὕμνος τοῦ Σωτῆρος Χριστοῦ*), is, in the manuscripts which contain it, attributed to Clement. The hymn may be the work of Clement (Bardenhewer), or it may be of as early a date as the Gloria in Excelsis (Westcott).

Some scholars see in the chief writings of Clement, the "Exhortation", "The Tutor", the "Miscellanies", a great trilogy representing a graduated initiation into the Christian life—belief, discipline, knowledge—three states corresponding to the three degrees of the neo-Platonic mysteries—purification, initiation, and vision. Some such underlying conception was doubtless before the mind of Clement, but it can hardly be said to have been realized. He was too unsystematic. Besides these more important works, he wrote the beautiful tract, "Who is the rich man who shall be saved?" (*τίς ὁ σωζόμενος πλούσιος;*). It is an exposition of St. Mark, x, 17-31, wherein Clement shows that wealth is not condemned by the Gospel as intrinsically evil; its morality depends on the good or ill use made of it. The work concludes with the narrative of the young man who was baptized, lost, and again won by the Apostle St. John. The date of the composition cannot be fixed. We have the work almost in its entirety. Clement wrote homilies on fasting and on evil-speaking, and he also used his pen in the controversy on the Paschal question.

Duchesne (*Hist. ancienne de l'Eglise*, I, 334 sqq.) thus summarizes the remaining years of Clement's life. He did not end his life at Alexandria. The persecution fell upon Egypt in the year 202, and catechumens were pursued with special intent of law. The catechetical school suffered accordingly. In the first two books of the "Miscellanies", written at this time, we find more than one allusion to the crisis. At length Clement felt obliged to withdraw. We find him shortly after at Cæsarea in Cappadocia beside his friend and former pupil Bishop Alexander. The persecution is active there also, and Clement is fulfilling a ministry of love. Alexander is in prison for Christ's sake, Clement takes charge of the Church in his stead, strengthens the faithful, and is even able to draw in additional converts. We learn this from a letter written in 211 or 212 by Alexander to congratulate the Church of Antioch on the election of Asclepiades to the bishopric. Clement himself undertook to deliver the letter in person, being known to the faithful of Antioch. In another letter written about 215 to Origen Alexander speaks of Clement as of one then dead.

Clement has had no notable influence on the course of theology beyond his personal influence on the young Origen. His writings were occasionally copied, as by Hippolytus in his "Chronicon", by Amobius, and by Theodoret of Cyrus. St. Jerome admired his learning. Pope Gelasius in the catalogue attributed to him mentions Clement's works, but adds, "they are in no case to be received amongst us". Photius in the "Bibliotheca" censures a list of errors drawn from his writings, but shows a kindly feeling towards Clement, assuming that the original text had been tampered with. Clement has in fact been dwarfed in history by the towering grandeur of the great Origen, who succeeded him at Alexandria. Down to the seventeenth century he was venerated as a saint. His name was to be found in the martyrologies, and his feast fell on the fourth of December. But when the Roman Martyrology was revised by Pope Clement VIII his name was dropped from the calendar on the advice of Cardinal Baronius. Benedict XIV maintained this decision of his predecessor on the grounds that Clement's life was little known, that he had never obtained public cultus in the Church, and that some of his doctrines were, if not erroneous, at least suspect. In more recent times Clement has grown in favour for his charming literary temper, his attractive candour, the brave spirit which made him a pioneer in theology, and his leaning to the claims of philosophy. He is modern in spirit. He was exceptionally well-read. He had a thorough knowledge of the whole range of Biblical and Chris-

tian literature, of orthodox and heretical works. He was fond of letters also, and had a fine knowledge of the pagan poets and philosophers; he loved to quote them, too, and has thus preserved a number of fragments of lost works. The mass of facts and citations collected by him and pieced together in his writings is in fact unexampled in antiquity, though it is not unlikely that he drew at times upon the *florilegia*, or anthologies, exhibiting choice passages of literature.

Scholars have found it no easy task to sum up the chief points of Clement's teaching. As has already been intimated, he lacks technical precision and makes no pretence to orderly exposition. It is easy, therefore, to misjudge him. We accept the discriminating judgment of Tixeront. Clement's rule of faith was sound. He admitted the authority of the Church's tradition. He would be, first of all, a Christian, accepting "the ecclesiastical rule", but he would also strive to remain a philosopher, and bring his reason to bear in matters of religion. "Few are they", he said, "who have taken the spoils of the Egyptians, and made of them the furniture of the Tabernacle." He set himself, therefore, with philosophy as an instrument, to transform faith into science, and revelation into theology. The Gnostics had already pretended to possess the science of faith, but they were, in fact, mere rationalists, or rather dreamers of fantastic dreams. Clement would have nothing but faith for the basis of his speculations. He cannot, therefore, be accused of disloyalty in will. But he was a pioneer in a difficult undertaking, and it must be admitted that he failed at times in his high endeavour. He was careful to go to Holy Scripture for his doctrine; but he misused the text by his faulty exegesis. He had read all the Books of the New Testament except the Second Epistle of St. Peter and the Third Epistle of St. John. "In fact", Tixeront says, "his evidence as to the primitive form of the Apostolic writings is of the highest value." Unfortunately, he interpreted the Scripture after the manner of Philo. He was ready to find allegory everywhere. The facts of the Old Testament became mere symbols to him. He did not, however, permit himself so much freedom with the New Testament.

The special field which Clement cultivated led him to insist on the difference between the faith of the ordinary Christian and the science of the perfect, and his teaching on this point is most characteristic of him. The perfect Christian has an insight into "the great mysteries"—of man, of nature, of virtue— which the ordinary Christian accepts without such clear insight. Clement has seemed to some to exaggerate the moral worth of religious knowledge; it must however be remembered that he praises not mere sterile knowledge, but knowledge which turns to love. It is Christian perfection that he extols. The perfect Christian—the true Gnostic whom Clement loves to describe—leads a life of unalterable calm. And here Clement's teaching is undoubtedly coloured by Stoicism. He is really describing not so much the Christian with his sensitive feelings and desires under due control, but the ideal Stoic who has deadened his feelings altogether. The perfect Christian leads a life of utter devotion; the love in his heart prompts him to live always in closest union with God by prayer, to labour for the conversion of souls, to love his enemies, and even to endure martyrdom itself.

Clement preceded the days of the Trinitarian controversies. He taught in the Godhead three Terms. Some critics doubt whether he distinguished them as Persons, but a careful reading of him proves that he did. The Second Term of the Trinity is the Word. Photius believed that Clement taught a plurality of Words, whereas in reality Clement merely drew a distinction between the Father's Divine immanent attribute of intelligence and the Personal Word Who

is the Son. The Son is eternally begotten, and has the very attributes of the Father. They are but one God. So far, in fact, does Clement push this notion of unity as to seem to approach Modalism. And yet, so loose a writer is he that elsewhere are found disquieting traces of the very opposite error of Subordinationism. These, however, may be explained away. In fact, he needs to be judged, more than writers generally, not by a chance phrase here or there, but by the general drift of his teaching. Of the Holy Ghost he says little, and when he does refer to the Third Person of the Blessed Trinity he adheres closely to the language of Scripture. He acknowledges two natures in Christ. Christ is the Man-God, who profits us both as God and as man. Clement evidently regards Christ as one Person—the Word. Instances of the interchange of idioms are frequent in his writings. Photius has accused Clement of Docetism. Clement, however, clearly admits in Christ a real body, but he thought this body exempt from the common needs of life, as eating and drinking, and the soul of Christ exempt from the movement of the passions, of joy, and of sadness.

EDITIONS.—The works of Clement of Alexandria were first edited by P. Victorius (Florence, 1550). The most complete edition is that of J. Potter, "*Clementis Alexandrini opera quæ extant omnia*" (Oxford, 1715; Venice, 1757), reproduced in Migne, P. G., VIII, IX. The edition of G. Dindorf (Oxford, 1869) is declared unsatisfactory by competent judges. A new complete edition by O. Stählin is appearing in the Berlin "*Griechischen christlichen Schriftsteller*", etc. So far (1908) two volumes have been published: the "*Protrepticus*" and the "*Pædagogus*" (Leipzig, 1905), and the "*Stromata*" (Bks. I-VI, *ibid.*, 1906). The preface to the first volume (pp. i-lxxxiii) contains the best account of the manuscripts and editions of Clement. Among the separate editions of his works the following are noteworthy: Hort and Mayor, "*Miscellanies*", Bk. VII, with English translation (London, 1902); Zahn, "*Adumbrationes*" in "*Forschungen zur Geschichte des Neutestamentlichen Kanons*", III, and "*Supplementum Clementinum*" (Erlangen, 1884); Köster, "*Quis dives salvetur?*" (Freiburg, 1893). The last-mentioned work was also edited by P. M. Barnard in "*Cambridge Texts and Studies*" by W. Wilson (1897), and translated by him in "*Early Church Classics*" for the S. P. C. K. (London, 1901). For an English translation of all the writings of Clement see Ante-Nicene Christian Library (New York).

SIMON, VACHEROT). Extensive bibliographies are given by CHEVALLIER in *Bio-Bibliographie*, s. v., and by RICHARDSON in his bibliographical appendix to the *Ante-Nicene Christian Library*. FRANCIS P. HAVEY.

Clement of Ireland, SAINT, also known as CLEMENS SCOTUS (not to be confounded with Claudius Clemens), b. in Ireland, towards the middle of the

eight century; d. perhaps in France, probably after 818. About the year 771 he set out for France. His biographer, an Irish monk of St. Gall, who wrote his Acts, dedicated to Charles the Fat (d. 888), says that St. Clement, with his companion Albinus, or Ailbe, arrived in Gaul, in 772, and announced himself as a venter of learning. So great was the fame of Clement and Ailbe that Charlemagne sent for them to come to his court, where they stayed for some months. Ailbe was then given the direction of a monastery near Pavia, but Clement was requested to remain in France as the master of a higher school of learning. These events may have taken place in the winter of the year 774, after Charlemagne had been in Italy. St. Clement was regent of the Paris school from 775 until his death. It was not until 782 that Alcuin became master of the royal school at Aachen, but even the fame of Alcuin in no wise diminished the acknowledged reputation of Clement. No serious writer of to-day thinks of repeating the legend to the effect that St. Clement was founder of the University of Paris, but, as there is a substratum of truth in most legends, the fact remains that this remarkable Irish scholar planted the mustard seed which developed into a great tree of learning at Paris. Many anecdotes are related of St. Clement's life, especially as regards his success as a teacher of youth. Among his pupils were Bruno, Modestus, and Candidus, who had been placed under his care in 803 by Ratgar, Abbot of Fulda. When Alcuin retired to Tours in 796, his post as rector of the School of the Palace was naturally given to St. Clement. In 803, as an old man, Alcuin wrote from his retirement to Charlemagne, querulously commenting on "the daily increasing influence of the Irish at the School of the Palace". Alcuin died 19 May, 804, and Charlemagne survived till 28 January, 814. St. Clement is probably identical with the person of this name who wrote the biography of Charlemagne, but the question has not been definitely settled. Colgan says that he was living in 818, and gives the date of Clement's death as 20 March and the place as Auxerre, where he was interred in the church of Saint-Amator.

W. H. GRATTAN-FLOOD.

Clenock (or CLYNOG), MAURICE, date of birth unknown, d. about 1580. He was b. in Wales and educated at Oxford, where he was admitted Bachelor of Canon Law in 1548. During Mary's reign he became almoner and secretary to Cardinal Pole, prebendary of York, rector of Orpington (Kent), and dean of Shoreham and Croydon, and chancellor of the prerogative court of Canterbury. In 1556 he was made rector of Corwen in the Diocese of St. Asaph, and on the death of the Bishop of Bangor in 1558 was nominated to the vacant see, but was never consecrated, owing to the change of religion under Elizabeth. Surrendering all his preferments, he accompanied Bishop Goldwell of St. Asaph to Rome, where they resided in the English hospital, of which Clenock was a *camerarius* in 1567. In 1578 he was made its warden. At the same time Gregory XIII ordered the hospital to be converted into a college until England should return to the Church. The warden was made the first rector of the college by the pope; but Cardinal Allen judged him unfit, though he described him as "an honest and friendly man and a great advancer of the students' and seminaries' cause" (Letter to Dr. Lewis, 12 May, 1579). Despite his personal good qualities he did not prove a competent ruler. He was accused of unduly favouring his fellow-countrymen at the expense of the English students, who numbered thirty-three as against seven Welshmen. Feeling ran so high that, as Allen wrote, "Mischief

and murder had like to have been committed *in ipso collegio*" (letter cited above). The students, having unsuccessfully appealed to the pope, left the college, and finally the pope, in April, 1579, appointed Father Agazzari, S. J., rector, leaving Dr. Clenock still warden of the hospital. He retired, however, in 1580 to Rouen, where he took ship for Spain, but was lost at sea. In contemporary documents he is frequently referred to as "Dr. Morrice".

EDWIN BURTON.

Cleophas, according to the Catholic English versions the name of two persons mentioned in the New Testament. In Greek, however, the names are different, one being Cleopas, abbreviated form of Cleopatros, and the other Clotas. The first one, Cleopas, was one of the two disciples to whom the risen Lord appeared at Emmaus (Luke, xxiv, 18). We have no reliable data concerning him; his name is entered in the martyrology on the 25th of September. (See *Acta Sanctorum*, Sept., VII, 5 sqq.) The second, Clotas, is mentioned in St. John, xix, 25, where a Mary is called *Μαρία ἡ τοῦ Κλωπά*, which is generally translated by "Mary the wife of Clotas". This name, Clotas, is thought by many to be the Greek transliteration of the Aramaic קלפא, Alphæus. This view is based on the identification of Mary, the mother of James etc. (Mark, xv, 40) with Mary, the wife of Clotas, and the consequent identity of Alphæus, father of James (Mark, iii, 18), with Clotas. Etymologically, however, the identification of the two names offers serious difficulties: (1) Although the letter *Heth* is occasionally rendered in Greek by *Kappa* at the end and in the middle of words, it is very seldom so in the beginning, where the aspirate is better protected; examples of this, however, are given by Levy (Sem. Fremdwörter in Griech.); but (2) even if this difficulty was met, *Clōpas* would suppose an Aramaic *Halophai*, not *Halpai*. (3) The Syriac versions have rendered the Greek *Clōpas* with a *Qōph*, not with a *Heth*, as they would have done naturally had they been conscious of the identity of Clotas and Halpai; Alphæus is rendered with a *Heth* (occasionally *Aleph*). For these reasons, others see in *Clōpas* a substitute for *Cleopas*, with the contraction of *eo* into *o*. In Greek, it is true, *eo* is not contracted into *o*, but a Semite, borrowing a name, did not necessarily follow the rules of Greek contraction. In fact, in Mishnic Hebrew the name Cleopatra is rendered by קלופטרה, *Clōpatra*, and hence the Greek *Cleopas* might be rendered by *Clōpas*. See also, Chabot, "Journ. Asiat.", X, 327 (1897). Even if, etymologically, the two names are different they may have been borne by one man, and the question of the identity of Alphæus and Clotas is still open. If the two persons are distinct, then we know nothing of Clotas beyond the fact recorded in St. John; if, on the contrary, they are identified, Clotas' personality is or may be closely connected with the history of the brethren of the Lord and of James the Less. (See BRETHREN OF THE LORD; JAMES THE LESS.)

Clerc, ALEXIS. See COMMUNE, MARTYRS OF THE PARIS.

Clerc, J.-M. See VIZAGAPATAM, DIOCESE OF.

Clerestory, a term formerly applied to any window or traceried opening in a church, e. g. in an aisle, tower, cloister, or screen, but now restricted to the windows in an aisled nave, or to the range of wall in which the high windows are set. Sometimes these windows are very small, being mere quatrefoils or spherical triangles. In large buildings, however, they are important features both of beauty and utility. The clerestory is especially used in churches where the division into nave and side aisles permits the introduction of light into the body of the church from above the aisle roofs. According to Fergusson's theory, the interior of Greek temples was lighted by a clerestory, similar internally to that found in all the great Egyptian temples, but externally requiring such a change of arrangement as was necessary to adapt it to a sloping instead of a flat roof. This seems to have been effected by counter-sinking into the roof, so as to make three ridges in those parts where the light was admitted, though the regular shape of the roof was retained between these openings. Thus, neither the ridge nor the continuity of the lines of the roof was interfered with. This theory is borne out by all the remains of Greek temples that now exist, and by all the descriptions that have been handed down from antiquity. Simpson, however, regards the theory as extremely improbable.

THOMAS H. POOLE.

Clergy. See CLERIC.

Cleric, a person who has been legitimately received into the ranks of the clergy. By clergy in the strict sense is meant the entire ecclesiastical hierarchy. Consequently a cleric is one who belongs in some sense to the hierarchy. For this it is necessary that he have received at least the tonsure (see TONSURE). The clergy by Divine right form an order or state which is essentially distinct from that of the laity. (Conc. Trid., Sess. XXIV, De sac. ord., can. i, 6.) Christ did not commit the preaching of the Gospel and the administration of the sacraments to the faithful in general, but to certain carefully defined persons, as the Apostles and seventy-two Disciples. They also received the power of governing the flocks; which power is represented by the Keys, a well-known Oriental symbol for authority. That the distinction between clergy and laity was recognized in New Testament times is plain from St. Paul's statement that the bishops have been placed by the Holy Ghost to rule the Church (Acts, xx, 28), for the right to rule implies a correlative obligation to obey. Presbyters are continually distinguished from the laity throughout the Pauline Epistles.

The word cleric (Lat. *clericus* from *clerus*) is derived from the Greek κληρος, a "lot". In the Septuagint, this word is used in the literal sense quite frequently, though not in its later technical sense. In the First Epistle of St. Peter (v, 3) it is applied to the entire body of the faithful. The use of the word in its present restricted meaning occurs, however, as early as the third century. It is found in Tertullian (De idol., c. viii), Origen (Hom. in Jer., xi, 3) and Clement of Alexandria (Quis dives salvetur, c. xlii) in this sense. It is not easy to determine exactly how the word came to have its present determinate meaning. The "Pontificale Romanum" refers to clerics as being those whose "lot" is the Lord Himself, and St. Jerome explicitly derives the name from that fact. These statements do not give us, however, the steps

by which κληρος, "lot" became "clergy" or "cleric". Probably the best suggested explanation is, that from lot or portion, it came to mean a particular lot or office assigned to some one, and finally the person himself possessing the lot or office.

EXTENSION OF MEANING.—While cleric in its strict sense means one who has received the ecclesiastical tonsure, yet in a general sense it is also employed in canon law for all to whom clerical privileges have been extended. Such are the members of religious orders: monks and nuns, and even lay brothers and novices. It is also applied to tertiaries of the mendicant orders. If they be men, however, they must live in community, but if they be women they may enjoy the privilege even when living at home. Hermits and virgins, or celibates whose vows are approved by the bishop, have likewise clerical immunities. Members of the military religious orders, such as formerly the Knights Templars, and at present the Teutonic Knights and Knights of Malta, rank as clerics. The meaning of the word has been so extended as to include even laics, men or women, who render service to a regular community, such as by begging, provided they wear a clerical dress and reside near the monastery or convent. The privileges enjoyed by thus obtaining the benefit of clergy were once great (see IMMUNITY), and were formerly recognized by secular governments. In modern times, however, these privileges in as far as they were guaranteed by the civil power have been almost entirely swept away in every country of the world. It is only when there is question of favours, or as canonists say, in a favourable sense, that cleric has this wide signification. When there is question of penalties, on the contrary, it becomes so restricted as to mean only the lower orders of the secular clergy. In England in medieval times the term *clerk* acquired in common parlance the significance of an educated man.

CLERICAL RELIGIOUS ORDERS.—Among the regular orders in the strict sense, namely those whose members have solemn vows, is a large class designated as clerks regular (*clerici regulares*) because living according to a rule (*regula*). In contradistinction to the monastic orders, these clerical orders were instituted for the purpose of exercising a ministry similar to that of the secular clerics, by promotion of the Divine worship and procuring the salvation of souls. Their main object is the spiritual and temporal service of their neighbour in educating youth, preaching, serving the sick, etc. Orders of clerks regular were first founded in the sixteenth century. To this class belong the Jesuits, Theatines, Barnabites, and others. Many religious congregations, which are not orders in the strict sense, such as the Passionists and Redemptorists follow a similar mode of life.

REGIONARY CLERICS, who are also called *clerici vagantes* and *acephali*, were those who were ordained without title to a special church. They were received into the sacred ministry by the bishops for the purpose of supplying the dearth of the clergy in the outlying districts of the dioceses where no benefices existed. Here they were to act as missionaries and in course of time, if possible, to gather together congregations who would build and endow a church. Many of these clerics became mere wanderers without settled occupation or abode, sometimes supporting themselves by filling temporary chaplaincies in the castles of noblemen. In course of time, numbers of these untitled clerics returned to the settled portions of their dioceses and acted as assistants to such beneficed clergymen as chose to accept their help. Owing to the abuses arising from the unsettled state of these vagrant clerics, the Council of Trent (Sess. XXIII, c. xvi, De ref.) forbade the ordaining in future of any candidate who was not attached to a definite church or pious institute.

OBLIGATIONS OF CLERICS.—(1) They must wear a costume suited to their state. While the common canon law does not determine in every detail what the dress of clerics should be, yet many and various prescriptions on the subject are found in the canons, the pontifical constitutions, and the decrees of councils. These ordain that the clerics are not to wear the dress of laymen. They must abstain from gaudy colours, unbecoming their state. The wearing of the soutane or cassock on all occasions, even in public, is prescribed for clerics living in Rome, and bishops may command the same in their dioceses. In non-Catholic countries, synods generally prescribe that for public use the dress of clerics should be such as to distinguish them from laymen; that is of black or of a sober colour, and that the so-called Roman collar be worn. In private, clergymen are commonly required to wear the soutane. (2) Clerics are forbidden to engage in trade and secular business. In the early ages of the Church, it was allowable to seek necessary sustenance by labour, and this is not forbidden now if the cleric does not receive proper support from ecclesiastical sources. What is specially prohibited is to engage in trade for the sake of gain. The buying and selling, however, which is necessary in the administration of the lands or the goods of a benefice do not fall under the prohibition. Neither is it forbidden to clerics nowadays to place their money out at interest and receive the increment; for this is equivalent, allowing for modern circumstances, to the economic management of the lands of ecclesiastical benefices. Gambling in stocks, however, remains an illicit form of trade for clergymen (Lehmkuhl, *Theol. Mor.*, II, n. 612.).

(3) There are stringent laws concerning the relations of clerics with persons of the other sex. They must conform to the canons in all that regards allowing females to dwell in their houses. Above all must they avoid associating with those whose moral character causes the least suspicion. (4) Unbecoming amusements are also forbidden to them, such as the frequenting of improper plays and spectacles, the visiting of taverns, indulgence in games of chance, carrying of arms, following the chase, etc. When in the above amusements, however, there is no necessary impropriety, lawful custom and synodal prescriptions may make a participation in them allowable. (5) Clerics are bound to obey their diocesan bishops in all matters determined by the canon law. Various Roman decisions have declared that by his ordinary authority, the bishop cannot oblige clerics to render to him any service not expressed in the canons. While the obligation of obedience is binding on all clerics, it is strengthened for priests by the solemn promise made at ordination, and for all holders of benefices by the canonical oath. The obligation to be subject to the bishop in lawful matters is not, however, a vow.

LOSS OF CLERICAL PRIVILEGES.—Although the sacramental character received in Sacred orders may not be obliterated, yet even the higher orders of clergy may be degraded from their dignity and reduced to what is technically called lay communion. The same holds, of course, likewise for the lower clergy. When, however, a cleric who has received only minor orders or even tonsure, after losing his privileges, has been restored to the clerical state, this restitution, even when solemn, is merely ceremonious and is not considered as a new conferring of tonsure or minor orders. Even minor clerics are therefore considered to have a stable connexion with the hierarchical order. See MINOR ORDERS; DEACON; SUB-DEACON; PRIEST; HIERARCHY; LAITY.

WILLIAM H. W. FANNING.

Clericato, GIOVANNI, canonist, b. 1633, at Padua; d. 1717. He was of English descent, and the name is variously written CLERICATUS, CHERICATO, CHERICATI, and CHERICATO, probably from CLARK, the original family name. The charity of a pious woman made it possible for him to satisfy his strong inclination for study; and, being raised to the priesthood, he came to be considered one of the ablest men of his time in matters of ecclesiastical jurisprudence. Cardinal Barbarigo, whose life he afterwards wrote, made him Vicar-General of the Diocese of Padua. He wrote many works on civil and canon law; his "Decisiones Sacramentales" was published in 1727, and in 1757 in three volumes, and merited the encomiums of Benedict XIV (notific. 32, n. 6). His name is held in honour in Italian ecclesiastical literature.

JOHN H. STAPLETON.

Clericis Laicos, the initial words of a Bull issued 25 Feb., 1296, by Boniface VIII in response to an earnest appeal of the English and French prelates for protection against the intolerable exactions of the civil power (see BONIFACE VIII). The decree was inserted among the papal decretals and is found in Lib. Sextus, III, tit. 23. After a preamble in which the pope complains that the laity are, and have always been, bitterly hostile to the clergy; that, although they possess no authority over ecclesiastical persons or property, they impose all sorts of heavy burdens on the clergy and seek to reduce them to servitude; that several prelates and other dignitaries of the Church, more fearful of giving offence to their earthly rulers than to the majesty of God, acquiesce in these abuses, without having obtained authority or permission from the Apostolic See; he, therefore, wishing to put an end to these iniquitous proceedings, with the consent of his cardinals and by Apostolic authority, decrees that all prelates or other ecclesiastical superiors who under whatsoever pretext or colour shall, without authority from the Holy See, pay to laymen any part of their income or of the revenue of the Church; also all emperors, kings, dukes, counts, etc. who shall exact or receive such payments incur *eo ipso* the sentence of excommunication from which, except in *articulo mortis*, no one can absolve them without special faculties from the pope; no privileges or dispensations to be of avail against the decree.

The two underlying principles of this Bull, viz. (1) that the clergy should enjoy equally with the laity the right of determining the need and the amount of their subsidies to the Crown, and (2) that the head of the Church ought to be consulted when there was question of diverting the revenues of the Church to secular purposes, were by no means strange or novel in that age of Magna Charta; and outside of France and England it was accepted without a murmur. But what excited the wrath of the two chief culprits, Philip the Fair and Edward I, was that from its fiery tone, from the express mention of sovereigns, and the grave *ipso facto* penalties attached, they felt that behind the decree there stood a new Hildebrand resolved to enforce it to the letter. The Bull has been criticized for the unconventional vehemence of its tone, for its exaggerated indictment of the hostile attitude of the laity of all ages towards the clergy, and for its failure to make clear the distinction between the revenues of the purely ecclesiastical benefices and the lay fees held by the clergy on feudal tenure. The unscrupulous advisers of Philip the Fair were quick to take advantage of the pope's hasty language and, by forcing him to make explanations, put him on the defensive and weakened his prestige.

For sources and literature, see BONIFACE VIII.

JAMES F. LOUGHLIN.

Clerk, JOHN, Bishop of Bath and Wells; date of birth unknown; d. 3 January, 1541. He was educated at Cambridge (B.A., 1499; M.A., 1502) and Bologna, where he became Doctor of Laws. When he returned to England he attached himself to Cardinal Wolsey, and much preferment followed. He became Rector of Hothfield, Kent, 1508; Master of the Maison Dieu at Dover, 1509; Rector of Portishead (Somerset) 1513; Ivychurch (Kent), West Tarring (Sussex), and Charlton, all in 1514; South Molton (Devonshire) and Archdeacon of Colchester, 1519; Dean of Windsor and judge in the Court of Star Chamber, 1519. He was also Dean of the King's Chapel. He was useful in diplomatic commissions both to Wolsey and the king. In 1521 he was appointed ambassador to the Papal Court, in which capacity he presented King Henry's book against Luther to the pope in full consistory. He acted as Wolsey's agent in Rome in the conclave on the death of Leo X. He returned to England to be appointed Master of the Rolls in October, 1522, which office he held till 9 October, 1523. When Wolsey resigned the See of Bath and Wells, in 1523, Clerk was appointed bishop in his stead. As bishop-elect he went on another political embassy to Rome, where he received episcopal consecration, 6 December, 1523. He remained in Rome for two years and once more unsuccessfully represented Wolsey's interests at the conclave in which Clement VII was elected pope. He left Rome in November, 1525, but was so useful as a diplomatic agent that he was never long in England, and his diocese was administered by his two suffragan bishops. When the question of the royal divorce was raised Clerk was appointed as one of the queen's counsellors, but Wolsey persuaded him to agree on her behalf that she should withdraw from proceedings at Rome. Afterwards he joined in pronouncing sentence of divorce, and is believed to have assisted Cranmer in works on the supremacy and the divorce. His last embassy was in 1540, to the Duke of Cleves, to explain the king's divorce of Anne of Cleves. On his return he was taken ill at Dunkirk, not without suspicion of poison, but he managed to reach England, though only to die. He lies buried at St. Botolph's, Aldgate, not at Dunkirk, as sometimes stated.

Clerk wrote "Oratio pro Henrico VIII apud Leonem pontif. Max. in exhibitione operis regii contra Lutherum in consistorio habitam" (London, 1541), translated into English by T. W. (Thomas Warde?), 1687.

Scriptoribus* (Paris, 1619), is erroneous.

EDWIN BURTON.

Clerke, AGNES MARY, astronomer, b. at Skibbereen, County Cork, Ireland, 10 February, 1842; d. in London, 20 January, 1907. At the very beginning of her study she showed a marked interest in astronomy, and before she was fifteen years old she had begun to write a history of that science. In 1861 the family moved to Dublin, and in 1863 to Queenstown. Several years later she went to Italy where she stayed until 1877, chiefly at Florence, studying at the public library and preparing for literary work. In 1877 she settled in London. Her first important article, "Copernicus in Italy", was published in the "Edinburgh Review" (October, 1877). She achieved a world-wide reputation in 1883, on the appearance of her exhaustive treatise, "A Popular History of Astronomy in the Nineteenth Century". This was at once recognized as an authoritative work. Miss Clerke was not a practical astronomer; in 1888, however, she spent three months at the Cape Observatory as the guest of the director, Sir David Gill, and his wife. There she became sufficiently familiar with spectroscopic work to be enabled to write about this new branch of the

science with increased clearness and confidence. In 1892 the Royal Institution awarded to her the Actonian Prize of one hundred guineas. As a member of the British Astronomical Association she attended its meetings regularly, as well as those of the Royal Astronomical Society. In 1903, with Lady Huggins, she was elected an honorary member of the Royal Astronomical Society, a rank previously held only by two other women, Caroline Herschel and Mary Somerville. Her work is remarkable in a literary as well as in a scientific way. She compiled facts with untiring diligence, sifted them carefully, discussed them with judgment, and suggested problems and lines of future research. All this is expressed in polished, eloquent, and beautiful language. With this scientific temperament she combined a noble religious nature that made her acknowledge "with supreme conviction" the insufficiency of science to know and predict the possible acts of the Divine Power. Her works, all published in London, include, "A Popular History of Astronomy in the Nineteenth Century" (1885, 4th revised ed., 1902); "The System of the Stars" (1890; 2nd ed., 1905); "The Herschels and Modern Astronomy" (1895); "The Concise Knowledge Astronomy"—in conjunction with J. E. Gore and A. Fowler (1898); "Problems in Astrophysics" (1903); "Modern Cosmogonies" (1906). To the "Edinburgh Review" she contributed fifty-five articles, mainly on subjects connected with astrophysics. The articles on astronomers in the "Dictionary of National Biography"; on "Laplace" and some on other astronomers and astronomical subjects in the "Encyclopædia Britannica"; and on "Astronomy" in THE CATHOLIC ENCYCLOPEDIA, were from her pen, as well as numerous contributions to "Knowledge", "The Observatory", the London "Tablet", and other periodicals.

ELLEN MARY, sister of preceding, journalist and novelist, b. at Skibbereen, County Cork, Ireland, 1840; d. in London, 2 March, 1906. A gifted and accomplished writer, she was for many years an editorial writer for the London "Tablet". Her knowledge of the intricacies of the religious and political problems of Continental Europe was remarkable. A seven years' stay in Italy made her intimately familiar not only with its language and literature, but also with every phase of its public life. She contributed a series of stories, perfect in Italian phrase, idiom, and local colour, to periodicals in Florence. Her pamphlets, "Jupiter and His System" and "The Planet Venus", were valuable additions to the literature of popular astronomy. In 1899 she published "Fable and Song in Italy", a collection of essays and studies and specimens of Italian poetry rendered into English in the original metres. A novel, "Flowers of Fire" (1902), was her last work.

The Tablet, files (London, March, 1906; January, 1907); *Obituary in Monthly Notices of the R. A. S.* (London, 1907); *MACHESON in Popular Astronomy* (London, March, 1907); *The Messenger Magazine* (New York, March, 1907).

WILLIAM FOX.

Clerks of St. Viator. See VIATOR, ST., CLERKS OF,

Clerks of the Common Life. See COMMON LIFE, BRETHREN OF THE.

Clerks Regular.—*Canonical Status.*—By clerks regular are meant those bodies of men in the Church who by the very nature of their institute unite the perfection of the religious state to the priestly office, i. e. who while being essentially clerics, devoted to the exercise of the ministry in preaching, the administration of the sacraments, the education of youth, and other spiritual and corporal works of mercy, are at the same time religious in the strictest sense of the word, professing solemn vows, and living a community life according to a rule solemnly approved of by the sovereign pontiff. In the "Corpus Juris Canonici" the term *clerks regular* is often used for *canons regular*, and

regular clerks are classed by authors as a branch or modern adaptation of the once world-famous family of regular canons (see CANONS AND CANONESSES REGULAR). This is because of the intimate connexion existing between the two; for while separated from the secular clergy by their vows and the observance of a community life and a rule, they form a distinct class in the religious state, the clerical, in opposition to the monastic, which includes monks, hermits, and friars. Clerks regular are distinguished from the purely monastic bodies, or monks, in four ways: They are primarily devoted to the sacred ministry; not so the monks, whose proper work is contemplation and the solemn celebration of the liturgy. They are obliged to cultivate the sacred sciences, which, if cultivated by the monks, are yet not imposed upon them by virtue of their state of life. Clerks regular as clerics must retain some appearance of clerical dress distinct from the habit and cowl of the monk. And lastly, because of their occupations, they are less given to the practice of austerity which is a distinct feature of the purely monastic life. They are distinguished from the friars in this, that though the latter are devoted to the sacred ministry and the cultivation of learning, they are not primarily priests. Finally, clerks regular differ from canons regular in that they do not possess cathedral or collegiate churches, devote themselves more completely to ministerial work in place of choir-service, and have fewer penitential observances of rule.

History.—The exact date at which clerks regular appeared in the Church cannot be absolutely determined. Regular clerks of some sort, i. e. priests devoted both to the exercise of the ministry and to the practice of the religious life are found in the earliest days of Christian antiquity. Many eminent theologians hold that the clerks regular were founded by Christ Himself. In this opinion the Apostles were the first regular clerks, being constituted by Christ ministers *par excellence* of His Church and called by Him personally to the practice of the counsels of the religious life (cf. Suarez). From the fact that St. Augustine in the fourth century established in his house a community of priests leading the religious life, for whom he drew up a rule, he has ordinarily been styled the founder of the regular clerks and canons, and upon his rule have been built the constitutions of the canons regular and an immense number of the religious communities of the Middle Ages, besides those of the clerks regular established in the sixteenth century. During the whole medieval period the clerks regular were represented by the regular canons who under the name of the Canons Regular or Black Canons of St. Augustine, the Premonstratensians or White Canons, Canons of St. Norbert, etc., shared with the monks the possession of those magnificent abbeys and monasteries all over Europe which, even though they are in ruins, compel the admiration of the beholder.

It was not until the sixteenth century that clerks regular in the modern and strictest sense of the word came into being. Just as the conditions obtaining in the thirteenth century brought about a change in the monastic ideal, so in the sixteenth the altered circumstances of the times called for a fresh development of the ever fecund religious spirit in the Church. This development, adapted to the needs of the times, was had in the various bodies of simple clerics, who, desirous of devoting themselves more perfectly to the exercise of their priestly ministry under the safeguards of the religious life, instituted the several bodies which, under the names of the various orders of regular clerics, constitute in themselves and in their imitators one of the most efficient instruments for good in the Church militant to-day. So successful and popular and well adapted to all modern needs were the clerks regular, that their mode of life was chosen as the pat-

tern for all the various communities of men, whether religious or secular, living under rule, in which the Church has in recent times been so prolific. The first order of clerks regular to be founded were the Theatines (q. v.) established at Rome in 1524; then followed the Clerks Regular of the Good Jesus, founded at Ravenna in 1526, and abolished by Innocent X in 1651; the Barnabites (q. v.) or Clerks Regular of St. Paul, Milan, 1530; the Somaschi (q. v.) or Clerks Regular of St. Majolus, Somasca, 1532; the Jesuits or the Society of Jesus (q. v.), Paris, 1534; the Regular Clerks of the Mother of God, Lucca, 1583; the Regular Clerks Ministering to the Sick, Rome, 1584; the Minor Clerks Regular, Naples, 1588; and the Piarists or Regular Clerks of the Mother of God of the Pious Schools, Rome, 1597. Since the close of the sixteenth century no new orders have been added to the number, though the name Clerks Regular has been assumed occasionally by communities that are technically only religious, or pious, congregations (see CONGREGATIONS, RELIGIOUS).

JOHN F. X. MURPHY.

Clerks Regular of Our Saviour, a religious congregation instituted in its present form in 1851, at Benoite-Vaux in the Diocese of Verdun, France. The constitutions and spirit of the congregation are those of the Canons Regular of Our Saviour, who were established as a reform among the various bodies of regular canons in Lorraine by St. Peter Fourier (q. v.), canon of Chamoussay in 1623, and confirmed by Urban VIII in 1628. The scope of the reformed order, as outlined in the "Summarium Constitutionum" of St. Peter, was the Christian education of youth and the exercise of the sacred ministry among the poor and neglected. The order flourished exceedingly throughout the Duchy of Lorraine and made its way into France and Savoy; but was completely destroyed by the French Revolution. In 1851 four zealous priests of the Diocese of Verdun, anxious to see revived the apostolic labours of the sons of Fourier, withdrew to the retired shrine of Our Lady of Benoite-Vaux, and there began a religious life according to the rule given to his canons by St. Peter Fourier. Three years later they received the approbation of the Holy See, which changed their name from Canons Regular, the title of the earlier organization, to Clerks Regular. During the next half century the congregation spread and it now numbers several houses, its special work being the education of youth. The members of the congregation are of three grades, priests, scholastics, and lay brothers. Though possessing the title "clerks regular" (q. v.) they are not such in the strict sense of the word, as their vows, though perpetual, are simple, according to the present practice of the Roman authorities of establishing no new institutes of solemn vows.

HEIMBUCHER, *Die Orden und Kong. der kath. Kirche* (Paderborn, 1907), II, 47 sq.; HÉLYOT, *Dict. des ordres religieux*, (Paris, 1859), ed. MIGNE, IV.

JOHN F. X. MURPHY.

Clerks Regular of St. Paul. See BARNABITES.

Clerks Regular of the Mother of God of Lucca, a congregation founded by the Blessed Giovanni Leonardi, son of middle-class parents, who was born in 1541 at Decimo, a small township in the Republic of Lucca, though at that time the chief place of a fief of the same name held by the bishops of Lucca from the republic. At seventeen years of age he was sent to Lucca to learn the apothecary's trade, but having from a tender age been most piously inclined,

he, after many difficulties, including the necessity of educating himself, embraced the sacerdotal state, and was ordained 22 December, 1572. His congregation may be said to have begun in 1574. Two or three young laymen, attracted by his sanctity and the sweetness of his character, had gathered round him to submit themselves to his spiritual guidance and help him in the work for the reform of manners and the saving of souls which he had begun even as a layman. Giovanni rented the beautiful little church of Santa Maria della Rosa, and in a quarter close by, something like community life was started. It was here, when it became evident that Giovanni's lay helpers were preparing for the priesthood and that something like a religious order was in process of formation, that a storm of persecution broke out against the devoted founder. The Fathers of the republic seem to have had a real fear that a native religious order, if spread over Italy, would cause the affairs of the little state to become too well known to its neighbours. The persecution, however, was so effective and lasting, that the Blessed Leonardi practically spent the rest of his life in banishment from Lucca, only being now and again admitted by special decree of the Senate, unwillingly extracted under papal pressure. In 1580 Giovanni acquired secretly the ancient church of Santa Maria Cortelandini (popularly known as Santa Maria Nera) which his sons hold to this day. In 1583 the congregation was canonically erected at the instigation of Pope Gregory XIII by Bishop Alessandro Guidicioni, of Lucca, and confirmed by the Brief of Clement VIII "Ex quo divina majestas", 13 October, 1595.

The congregation at this time only took simple vows of chastity, perseverance, and obedience, and was known as the "Congregation of Clerks Secular of the Blessed Virgin". In 1596 Clement VIII nominated the Blessed Giovanni commissary Apostolic for the reform of the monks of the Order of Monte Vergine, and in 1601 the cardinal protector appointed him to carry out a similar work among the Vallombrosans. In 1601 he obtained the church of S. Maria in Portico in Rome. In the same year Cardinal Baronius became protector of the congregation. Giovanni died in Rome 9 October, 1609, aged sixty-eight, and was buried in Santa Maria in Portico. The present church of the congregation in Rome, obtained in 1662, is Santa Maria in Campitelli (called also Santa Maria in Portico) interesting to Englishmen as the first titular church of the Cardinal of York. The body of the founder was removed to this church and lies there under the altar of St. John the Baptist. Giovanni Leonardi was declared Venerable in 1701, and beatified by Pius IX in 1861. Leo XIII, in 1893, caused his name to be inserted in the Roman Martyrology and ordered the clergy of Rome to say his Mass and Office, an honour accorded to no other Blessed in that city except the beatified popes. In 1614 Paul V confided to the congregation the care of the so-called Pious Schools. It is in his Brief "Inter Pastoralis" that the congregation is first called "of the Mother of God", having until then been known by its original name of "Clerks Secular of the Blessed Virgin". The care of these schools being considered outside the scope of the congregation, it was relieved of their charge by the same pontiff in 1617.

It was not until 1621 (3 November) that Gregory XV, carrying out what was always in the founder's mind, erected the congregation into a religious order proper by permitting its members to take solemn vows, and it henceforth became the Clerks Regular of the Mother of God. The Blessed Leonardi received many offers of churches during his life, but with a view of conciliating the governing body of the republic thought it better to refuse them. In all its history the order has never had more than fifteen churches, and never more than seven at one time. It

was introduced into Naples in 1632, Genoa 1669, and Milan 1709. The only churches of the order now existing are Santa Maria Cortelandini, Lucca; Santa Maria in Campitelli, Rome; Santa Maria in Portico di Chiaia, and Santa Brigida, Naples; the Madonna della Stella Migliano (1902); and the parish church of S. Carlo in Monte Carlo (1873), the only church of the order outside the borders of modern Italy. In the sacristy of Santa Maria Cortelandini is preserved a large portion of a hair-shirt of St. Thomas of Canterbury whose feast is celebrated there with considerable ceremony; in 1908 half of this relic was presented to the Benedictine Abbey of St. Thomas, Erdington, England. The former residence of the clerks, who kept a large boys' school until the suppression in 1867, is now the public library of Lucca. Two of the original companions of the holy founder, Cesare Franciotti and Giovanni Cioni, have been declared Venerable. The order justly enjoys great fame for its learning and its numerous scholars and writers. Suffice it to mention Giovanni Domenico Mansi, editor of the "Councils" and a hundred other works. The arms of the order are azure, Our Lady Assumed into Heaven; and its badge and seal the monogram of the Mother of God in Greek characters.

MONTGOMERY CARMICHAEL.

Clermont (CLERMONT-FERRAND), DIOCESE OF (CLAROMONTENSIS), comprises the entire department of Puy-de-Dôme and is a suffragan of Bourges. Although at first very extensive, in 1317 the diocese lost Haute-Auvergne through the creation of the Diocese of Saint-Flour and in 1822 the Bourbonnais, on account of the erection of the Diocese of Moulins. The first Bishop of Clermont was St. Austremonius (Stramonius). (See AUSTREMONIUS.) According to local tradition he was one of the seventy-two Disciples of Christ, by birth a Jew, who came with St. Peter from Palestine to Rome and subsequently became the Apostle of Auvergne, Berry, Nivernais, and Limousin. At Clermont he is said to have converted the senator Cassius and the pagan priest Victorinus, to have sent St. Sirenatus (Cerneuf) to Thiers, St. Marius to Salers, Sts. Nectarius and Antoninus into other parts of Auvergne, and to have been beheaded in 92. This tradition is based on a life of St. Austremonius written in the tenth century in the monastery of Mozat, where the body of the saint had rested from 761, and rewritten by the monks of Issoire, who retained the saint's head. St. Gregory of Tours, born in Auvergne in 544 and well versed in the history of that country, looks upon Austremonius as one of the seven envoys who, about 250, evangelized Gaul; he relates how the body of the saint was first interred at Issoire, being there the object of great veneration.

CATHEDRAL, CLERMONT-FERRAND

Clermont counted amongst its bishops a large number of saints, as St. Urbicus (c. 312); St. Leoguntius; St. Illidius (Allyre), who, about 385, cured the daughter of the Emperor Maximus at Trier; the saint's name was given to the petrifying springs of Clermont, and his life was written by Gregory of Tours; St. Nepotianus (d. 388); St. Artemius (d. about 394); St. Venrandus (Veau, d. about 423); St. Rusticus (424-46); St. Namatius (446-62), founder of the Clermont cathedral, where he deposited the relics of Sts. Vitalis and Agricola brought from Bologna; Sidonius Apollinaris (470-79), the celebrated Christian writer who brought to Clermont the priest St. Amabilis; St. Aprunculus (d. about 491); St. Euphrasius (491-515); St. Quintianus (d. about 527), whose life was written by Gregory of Tours; St. Gallus (527-51), of whom Gregory of Tours was the biographer and nephew; St. Avitus (second half of the sixth century), founder of Notre-

CHURCH OF NOTRE-DAME DU PORT,
CLERMONT-FERRAND (Eleventh
Century Romanesque)

Thomas Aquinas to complete his "Summa"; Etienne d'Albert (1340-42), later Pope Innocent VI (1352-62); Guillaume du Prat (1528-60), founder of the Clermont College at Paris and delegate of Francis I to the Council of Trent; and Massillon, the illustrious orator (1717-42). The Diocese of Clermont can likewise claim a number of monks whom the Church honours as saints, viz: St. Calevisus (Calais, 460-541), a pupil in the monastery of Menat near Riom, whence he retired to Maine, where he founded the Abbey of Anisole; St. Maztius (d. 527), founder at Royat near Clermont of a monastery which became later a Benedictine priory; St. Portianus (sixth century), founder of a monastery to which the city of Saint-Pourçain (Allier) owes its origin; St. Etienne de Muret (1046-1124), son of the Viscount of Thiers and founder of the Order of Grandmont in Limousin, and St. Peter the Venerable (1092-1156), of the Montboissier family of Auvergne, noted as a writer and Abbot of Cluny.

Several famous Jansenists were natives of Clermont: Blaise Pascal, author of the "Pensées" (1623-62); the Arnauld family, and Soanen (1647-1740), Bishop of Senez, famous for his stubborn opposition to the Bull "Unigenitus". On the other hand the city of Riom was the birthplace of Sirmond, the learned Jesuit (1559-1651), confessor to Louis XIII and editor of the ancient councils of Gaul. Other natives worthy of mention in church history were the Abbé Delille, poet (1738-1813), and Montlosier, the publicist (1755-1838), famous for his memoir against the Jesuits and to whom Bishop Ferou refused ecclesiastical burial. Pope Urban II came to Clermont in 1095 to preside at the organization of the First Crusade; Pope Paschal II visited the city in 1106, Callistus II in 1120,

Innocent II in 1130, Alexander III in 1164, and, in 1166, St. Thomas Becket. It was also at Clermont that, in 1262, in presence of St. Louis, the marriage of Philip the Bold and Isabella of Aragon was solemnized. The cathedral of Clermont, dating from the thirteenth and fourteenth centuries, is not of equal archaeological importance with the church of Notre-Dame du Port, which stands to-day as it was rebuilt in the eleventh century, and is one of the most beautiful of Romanesque churches in the Auvergne style. One of the capitals in Notre-Dame du Port, ascribed to the eleventh century, is among the most ancient sculptured representations of the Assumption of the Blessed Virgin. This cathedral is much frequented as a place of pilgrimage, as are also Notre Dame d'Orçival and Notre Dame de Vassivière at Besse. The "dry mass" (without Consecration or Communion) was celebrated in the Diocese of Clermont as late as the seventeenth century.

Before the Law of 1901 was carried into effect, there were in the diocese: Capuchins, Jesuits, Marists, Fathers of the African Missions, Fathers of the Holy Ghost, and Sulpicians. Several local congregations of women are engaged in teaching, among them being the religious of Notre-Dame de Clermont, founded in 1835, with mother-house at Chamalières; the Sisters of St. Joseph of the Good Shepherd, founded by Massillon in 1723, with mother-house at Clermont; the Sisters of the Heart of the Infant Jesus, mother-house at Lezoux; and the Sisters of Mercy, founded in 1806, with mother-house at Billom. The diocese has the following religious institutions: 2 maternity hospitals, 40 infant schools, 1 school for the blind, 4 schools for deaf mutes, 3 boys' orphanages, 16 girls' orphanages, 2 houses of refuge and of protection, 23 hospitals and hospices, 35 houses for nursing sisters, and 1 insane asylum. Statistics for the end of 1905 (the close of the period under the Concordat) show a population of 529,181, with 54 parishes, 447 succursal parishes (mission churches), and 175 curacies remunerated by the State.

GEORGES GOYAU.

Cletus, SAINT, POPE.—This name is only another form for Anacletus (q. v.), the second successor of St. Peter. It is true that the Liberian Catalogue, a fourth-century list of popes, so called because it ends with Pope Liberius (d. 366), contains both names, as if they were different persons. But this is an error, owing evidently to the existence of two forms of the same name, one an abbreviation of the other. In the aforesaid catalogue the papal succession is: Petrus, Linus, Clemens, Cletus, Anacletus. This catalogue, however, is the only authority previous to the sixth century (Liber Pontificalis) for distinguishing two popes under the names of Cletus and Anacletus. The "Carmen adv. Marcionem" is of the latter half of the fourth century, and its papal list probably depends on the Liberian Catalogue. The "Martyrologium Hieronymianum" (q. v.) mentions both "Aninclitus" and "Clitus" (23 and 31 December), but on each occasion these names are found in a list of popes; hence the days mentioned cannot be looked on as specially consecrated to these two persons. Apart from these lists, all other ancient papal lists, from the second to the fourth century, give as follows the immediate succession of St. Peter: Ἀνδρος, Ἀνέγκλητος, Κλήμης (Linus Anenclitus, Clemens), and this succession is certainly the right one. It is that found in St. Irenaeus and in the chronicles of the second and third centuries. Both

3. COLLEGE OF ST. IGNATIUS

4. ST. COLUMBA'S CHURCH, YOUNGSTOWN

5. ST. MARY'S-ON-THE-FLATS (FIRST CHURCH)

Africa and the Orient adhered faithfully to this list, which is also given in the very ancient Roman Canon of the Mass, except that in the latter Cletus is the form used, and the same occurs in St. Epiphanius, St. Jerome, Rufinus, and in many fifth- and sixth-century lists. This second successor of St. Peter governed the Roman Church from about 76 to about 88. The "Liber Pontificalis" says that his father was Emelianus and that Cletus was a Roman by birth, and belonged to the quarter known as the *Vicus Patrici*. It also tells us that he ordained twenty-five priests, and was buried in *Vaticano* near the body of St. Peter. There is historical evidence for only the last of these statements. The feast of St. Cletus falls, with that of St. Marcellinus, on 26 April; this date is already assigned to it in the first edition of the "Liber Pontificalis". (See CLEMENT I, SAINT, POPE.)

J. P. KIRSCH.

Cleveland, DIOCESE OF (CLEVELANDENSIS), established 23 April, 1847, comprises all that part of Ohio lying north of the southern limits of the Counties of Columbiana, Stark, Wayne, Ashland, Richland, Crawford, Wyandot, Hancock, Allen, and Van Wert, its territory covering thirty-six counties, an area of 15,032 square miles.

EARLY HISTORY.—The Jesuit Fathers Potier and Boncamp were the first missionaries to visit the territory now within the limits of Ohio. They came from Quebec in 1749 to evangelize the Huron Indians living along the Vermilion and Sandusky Rivers in Northern Ohio. Two years later they received the assistance of another Jesuit, Father de la Richardie, who had come from Detroit, Michigan, to the southern shore of Lake Erie. Shortly after his arrival he induced a part of the Huron tribe to settle near the present site of Sandusky, where he erected (1751) a chapel—the first place of Catholic worship within the present limits of Ohio. These Hurons assumed the name of Wyandots when they left the parent tribe. Although checked for a time by Father Potier, they took part in the Indian-French War. Soon they became implicated in the conspiracy of Pontiac, in consequence of which the Jesuits were unjustly forced in 1752 to leave the territory of Ohio, Father Potier being the last Jesuit missionary among the Western Hurons. The Indian missions, established and cared for by the Jesuits for nearly three years, had now to depend exclusively on the chance visits of the priests attached to the military posts in Canada and Southern Michigan. Despite the spiritual deprivation which this implied, the Hurons (Wyandots) kept the Faith for many years, although their descendants were ultimately lost to the Church through the successful efforts of Protestant missionaries. After the forced retirement of the Jesuits no systematic efforts were made to continue the missionary work begun by them until 1795, when the Rev. Edmund Burke, a secular priest from Quebec, came as chaplain of the military post at Fort Meigs, near the present site of Maumee. Father Burke remained at the post until February, 1797, ministering to the Catholic soldiers at the fort, and endeavouring, though with little success, to Christianize the Ottawa and Chippewa Indians in the neighbourhood.

In the meantime the See of Bardstown was erected (1810), embracing the entire State of Ohio, as well as Michigan and Kentucky. Bishop Flaget sent (1817) the Rev. Edward Fenwick, O. P. (later first Bishop of Cincinnati), from the Dominican monastery at Somerset, Ohio, to attend the few Catholic families who had settled in Columbiana and Stark Counties,

in the north-eastern part of Ohio. From that time forward he and other Dominican Fathers, especially the Revs. Nicholas D. Young and John A. Hill, continued to visit at regular intervals the Catholic families in that section of Ohio (notably in Columbiana, Stark, Mahoning, and Wayne Counties), then very sparsely settled. It is, therefore, from this period that Catholicity in Northern Ohio really dates its beginning. In the course of time the Dominican Fathers gradually gave up to the secular clergy their pastoral charges in the above-named counties until, in 1842, they withdrew altogether. St. John's, Canton, was their last mission. Meanwhile the central portion of Northern Ohio (Huron, Erie, Sandusky, and Seneca Counties) had received a considerable influx of Catholic immigrants, principally from Germany. Similar conditions were obtaining elsewhere in the State, and the need of more compact organization to minister to growing wants made Cincinnati an episcopal see in 1822, with the entire State for its jurisdiction. Little seems to have been done, however, for the northern part of the State, and but little could be done, as Catholics were so few, until the advent of its second bishop, John B. Purcell. He succeeded (13 Oct., 1833) the saintly Bishop Fenwick, who, while engaged in a confirmation tour, died at Wooster, Ohio (26 September, 1832) of cholera, then raging in Ohio. In 1834 Bishop Purcell commissioned the Redemptorist Fathers, who had just arrived in America, to take charge of the widely scattered German missions then existing in these counties, and to organize others where needed. The Rev. Francis X. Tschenhens, C. SS. R., was the first priest assigned to this task. Later on he was assisted by other members of his community, among them the Revs. Peter Czakert, Francis Haetscher, Joseph Prost, Simon Saenderl, Louis M. Alig, and John N. Neumann (later Bishop of Philadelphia). The Redemptorists remained in Northern Ohio until November, 1842. They were succeeded, January, 1844, by seven Sanguinist Fathers (the Revs. Francis S. Brunner, M. A. Meier, J. Wittmer, J. Van den Broek, P. A. Capeder, J. Ringele, and J. B. Jacomet), who came from Europe at that time at the solicitation of Bishop Purcell. They settled at St. Alphonsus' church, Peru, Huron County, whence they attended all the missions formerly under the care of the Redemptorists. They also accepted charge of the scattered missions in Lorain, Medina, and Wayne Counties, besides attending the Catholic Germans in Cleveland. Their advent was hailed with delight wherever they went, and their priestly labours were signally blessed. Under their vigilant care religion flourished, so that the healthy growth of Catholicity in Northern Ohio may justly, under God, be ascribed in large measure to their untiring zeal and self-sacrifice.

The secular clergy are no less deserving of mention, as they, too, laboured in this part of the Lord's vineyard, amid trials and difficulties, often side by side with their brethren of the religious orders, and more often alone in the widespread missions of Northern Ohio. They did yeoman service, blazing the way for those who succeeded them, and laying the foundations for many missions, which have long since developed into vigorous and prosperous congregations. The first of these secular clergy was the Rev. Ignatius J. Mullen, of Cincinnati. Between 1824 and 1834 he frequently attended the missions in Stark, Columbiana, Seneca, and Sandusky Counties. Other pioneer secular priests of prominence were: the Revs. Francis Marshall (1827), John M. Henni (later Bishop and Archbishop of Milwaukee), resident pastor of Canton (1831-34), Edmund Quinn, at Tiffin (1831-35), William J. Horstmann, at Glandorf (1835-43), James Conlon, at Dungannon (1834-53), Matthias Wuerz, at Canton (1835-45), John Dillon,

first resident pastor of Cleveland (1835-36), Basil Schorb, in charge of missions in Stark, Wayne, and Portage Counties (1837-43), Patrick O'Dwyer, second pastor of Cleveland (1836-38), where he built the first church in 1838, Michael McAleer, in Stark and Columbiana Counties (1838-40), Joseph McNamee, at Tiffin (1839-47), Projectus J. Machebeuf (later Bishop of Denver), at Tiffin and Sandusky (1839-51), Amadeus Rappe (later first Bishop of Cleveland), stationed at Maumee for a short time, and then, as first resident pastor, at Toledo (1840-47), Louis de Goesbriand (later Bishop of Burlington, Vermont), at Louisville, Toledo, and Cleveland (1840-53), Peter McLaughlin, resident pastor of Cleveland (1840-46), Maurice Howard, at Cleveland and later at Tiffin (1842-52), John J. Doherty, at Canton (1843-48), John H. Luhr, at Canton, and later at Cleveland (1844-58), John O. Bredeick, founder of Delphos, and its first pastor (1844-58), Cornelius Daley, first resident pastor of Akron, and later stationed at Doylestown (1844-47), Philip Foley, at Massillon and Wooster (1847-48). The Rev. Stephen Badin, proto-priest of the thirteen original United States, and the Rev. Edward T. Collins occasionally came from Cincinnati, between 1835 and 1837, to attend the missions in Northern Ohio, the former those of Canton, Fremont, and Tiffin, and the latter those of Dungannon, Toledo, and along the Maumee River. The first permanent church in Northern Ohio was erected near the present village of Dungannon, in 1820, under the direction of the Rev. Edward Fenwick, O. P., the "Apostle of Ohio", and later the first Bishop of Cincinnati. Until 1847 churches of brick or wood were built in the following places: Canton (St. John's, 1823), Chippewa (1828), Randolph, Canal Fulton (1831), Tiffin (St. Mary's; 1832), Glandorf, Navarre, New Riegel (1833), Peru (1834), Louisville, La Porte (1835), Shelby Settlement (1836), McCutchenville (1837), Thompson (1839), Cleveland, East Liverpool (1840), Toledo, Maumee, New Washington, Norwalk (1841), Sandusky (Holy Angels), Landeck, Liberty, Liverpool, Sheffield (St. Stephen's, 1842), Delphos, Massillon (St. Mary's), Akron (St. Vincent's), Fremont (St. Anne's), French Creek (1844), Canton (St. Peter's), Harrisburg, New Berlin, Tiffin (St. Joseph's), Providence (1845), Sherman (1846), Poplar Ridge (1847).

From 1822 until October, 1847, Northern Ohio was part of the Diocese of Cincinnati, of which the first bishop was Edward Fenwick (1822-32), and its second bishop, John B. Purcell, who succeeded in October, 1833. He petitioned the Holy See, in 1846, for a division of his jurisdiction, then comprising the entire State of Ohio. The petition was granted (23 April, 1847), by the appointment of the Rev. Louis Amadeus Rappe as the first Bishop of Cleveland, and the assignment to his jurisdiction of "all that part of Ohio lying north of 40 degrees and 41 minutes, N. L." As this division intersected several counties it was changed in January, 1849, to the present limits, as described at the beginning of this article.

BISHOPS OF CLEVELAND.—(1) **LOUIS AMADEUS RAPPE**, consecrated 10th October, 1847, was born 2 Feb., 1801, at Andreheim, France. He was ordained priest at Arras, France, 14 March, 1829. His cathedral church was St. Mary's on the "Flats", Cleveland, the first, and at that time the only, church in his episcopal city. In November, 1852, he completed the present cathedral, an imposing brick structure of Gothic architecture, still ranking with the many fine churches of the diocese. During his administration of the diocese, which ended in August, 1870, he convoked five diocesan synods (1848, 1852, 1854, 1857, 1868). He established the diocesan seminary (1848), St. John's College, Cleveland (1854), St. Louis' College, Louisville (1866); these two col-

leges, however, being closed a few years later, owing to lack of patronage. Under his direction the following educational and charitable institutions were also established: In Cleveland, the Ursuline Academy; St. Vincent's Orphanage, for boys; St. Mary's Orphanage, for girls (1851); St. Joseph's Orphanage, for girls (1862); Charity Hospital (1865); House of the Good Shepherd (1869); Home for the Aged Poor (1870).—In Toledo, Ursuline Academy (1854), St. Vincent's Orphanage (1855); in Tiffin, Ursuline Academy (1863), St. Francis' Asylum and Home for the Aged (1867). He founded the community of Sisters of Charity of St. Augustine (1851), whose work is the care of orphans, waifs, and the sick. In 1869 he introduced into the diocese the Franciscan and Jesuit Fathers, giving to the former the care of St. Joseph's church, Cleveland, and to the latter St. Mary's, Toledo. Wherever possible he insisted on the support of parish schools. He was a strong advocate of total abstinence, which he practised from the time he was a missionary priest in North-Western Ohio until his death. He never spared himself in the discharge of his manifold and exacting duties. By his affability and disinterestedness he gained the love of his people, as also the respect of his fellow-citizens regardless of creed. He resigned his see in August, 1870, and retired to the Diocese of Burlington, Vermont, where he did missionary work almost to the day of his death (8 September, 1877). Between the time of Bishop Rappe's resignation and the appointment of his successor, the Very Rev. Edward Hannin administered the affairs of the diocese.

(2) **RICHARD GILMOUR**, consecrated 14 April, 1872. In November of the same year he convoked the Sixth Diocesan Synod, in which many of the statutes by which the diocese is at present governed were promulgated. It also embodied considerable of the legislature of previous synods, notably that of 1868. This synod made provision for a diocesan fund for the support of the seminary, bishop, etc., and another for the support of sick and disabled priests, by annual assessments on the parishes of the diocese. Among other diocesan statutes published then were those urging anew the support of parochial schools, regulating the financial affairs of parishes, and the manner of electing parish councilmen and of conveying church property. Bishop Gilmour established "The Catholic Universe", its first issue appearing 4 July, 1874. In 1875 he organized "The Catholic Central Association", composed of representatives from all the parishes and church societies in Cleveland; its influence for the betterment of social and religious conditions and for the defence of Catholic interests was soon felt not only in Cleveland, but elsewhere as well, and continued during almost its entire existence of nearly eighteen years. It also proved a tower of strength to its organizer in his forced contention for the civic rights of Catholics, in the face of bitter opposition from bigotry and a hostile press. In 1875 the Catholic school property in Cleveland was placed on the tax duplicate in spite of the decision (1874) of the Supreme Court of Ohio, that such property was not taxable. A suit of restraint was entered by the bishop, and finally carried to the Supreme Court, which reaffirmed its former decision. The present episcopal residence was begun in 1874 and completed two years later. It serves also as the residence of the cathedral clergy.—In 1872 the Sisters of St. Joseph, and in 1874 the Sisters of Notre Dame, were welcomed to the diocese. Both communities have flourishing academies in connexion with their convents, besides supplying many parish schools with efficient teachers. The same also is the case with the Ursulines of Cleveland, Tiffin, Toledo, and Youngstown, and the Sisters of the Humility of Mary.—The following institutions were established between 1873 and 1891: St. Anne's Asylum and House of Maternity, Cleveland (1873);

Ursuline Convent, Youngstown (1874); St. Vincent's Hospital, Toledo (1876); St. Joseph's Franciscan College, Cleveland (1876-80); Convent of Poor Clares (1877); Ursuline Academy, Nottingham (1877); St. Alexis' Hospital, Cleveland (1884); St. Louis' Orphanage, Louisville (1884); Little Sisters of the Poor, Toledo (1885); St. Ignatius' College, Cleveland (1886); St. Joseph's Seminary, for young boys, Nottingham (1886). The diocesan seminary was remodelled and considerably enlarged in 1884-85. A diocesan chancery office was established (1877) for the transaction of the official business of the diocese. In 1878 the first attempt was made to gather historical data in connexion with every parish and institution in the diocese, and in a few years a great mass of matter, covering the history of Catholicity in Northern Ohio and the Diocese of Cleveland as far back as 1817, was collected and is now a part of the diocesan archives. In May, 1882, the Seventh Diocesan Synod was held, which resulted in the legislation at present in force. With the exception of about half a dozen of its 262 statutes, it is in perfect harmony with the decrees of the Third Plenary Council of Baltimore, held in November, 1884. Like his predecessor, Bishop Gilmour made it obligatory on every parish at all financially able to support a parochial school. In consequence, the Diocese of Cleveland has more parochial schools, in proportion to its number of churches and its population, than any other diocese in the United States, and many of its school buildings vie, in size, appointments, and beauty of architecture, with the public-school buildings. With very few exceptions the parish schools are in charge of teachers belonging to male and female religious communities. Bishop Gilmour had an eventful episcopate, lasting nineteen years. He left his strong, aggressive personality indelibly stamped upon the diocese he had ruled. During the interim between his death (13 April, 1891) and the appointment of his successor, the Right Rev. Monsignor F. M. Boff was administrator of the diocese.

(3) **IGNATIUS FREDERICK HORSTMANN**, chancellor of the Archdiocese of Philadelphia, was appointed to succeed Bishop Gilmour. Born in Philadelphia, 16 December, 1840, after graduating from the Central High School, he attended St. Joseph's College and then entered the diocesan seminary. In 1860 he was sent by Bishop Wood to the American College, Rome, where he was ordained priest, 10 June, 1865. In the following year he received the degree of Doctor of Divinity and returning to Philadelphia became a professor in St. Charles's Seminary where he remained eleven years and was then appointed pastor of St. Mary's church, Philadelphia. In 1885 he was made chancellor. His consecration as Bishop of Cleveland took place in Philadelphia 25 February, 1892. He died suddenly of heart disease on 13 May, 1908, while on an official visit to Canton, Ohio. He had proved himself a zealous pastor of souls, a wise and prudent ruler, a fearless defender of truth. Among the noteworthy accomplishments of his episcopate were the founding of Loyola High School, Cleveland (1902); St. John's College, Toledo (1898); and the establishment of the diocesan band of missionaries—the first in any diocese of the United States. He was foremost in encouraging every missionary movement, and his zeal for Christian education was one of the dominant purposes of his life. He served as a trustee of the Catholic University and in spite of many duties found time to contribute to the "American Catholic Review" and other periodicals and to edit the American edition of "The Catholic Doctrine as Defined by the Council of Trent" and "Potter's Catholic Bible".

A few months before he died he asked for an auxiliary bishop with jurisdiction over the growing foreign population, especially of the Slav races, in the diocese. The Rev. Joseph M. Kowalski, pastor of

St. Michael's church, Cleveland, was named 29 Nov., 1907, and consecrated 25 Feb., 1908, being the first auxiliary bishop of special jurisdiction appointed for the United States. He was born in Bonowia, 15 August, 1852, and emigrated to the United States when sixteen years of age. After making his studies at St. Francis's Seminary, Milwaukee, he was ordained priest 8 October, 1875. He was for some time editor of "Hlas" (Voice), a Bohemian Catholic weekly paper, and compiled a series of textbooks for Bohemian Catholic schools.

RECENT TIMES.—In 1894 the "St. Vincent's Union", composed of the laity who contribute towards the support of St. Vincent's Orphanage, Cleveland, was organized; and it has proved of great financial assistance to that institution. In 1893 Bishop Horstmann opened the Calvary Cemetery, which covers nearly 250 acres, near the southern limits of Cleveland. About fifty acres of the cemetery's whole area are improved. In 1892 the Cleveland Apostolate was established, an association of secular priests, having for its object the giving of lectures and missions to non-Catholics. Besides making many converts this association has removed much prejudice and brought about a kindlier feeling towards the Church and its members. The Golden Jubilee of the diocese was celebrated 13 October, 1897. It was a memorable event, observed with great religious pomp in Cleveland, Toledo, and elsewhere. At the bishop's solicitation the Jesuit Fathers of Toledo opened (September, 1898) St. John's College. In the same city a home for fallen women was established (1906) by the Sisters of the Good Shepherd. A fine school building was erected (1906) in connexion with St. Vincent's Asylum, Cleveland, in which the boys have every facility for a thorough education. The diocese is in a prosperous condition, spiritually and financially, and healthy growth is apparent in every direction.

CAUSES OF GROWTH.—The growth of the diocesan population down to 1860 was due chiefly to emigration from Ireland and Germany. Since 1870 it has been receiving other large accessions, but from quite another source. The Slav race, manifold in its divisions, has been pouring in, more notably since 1895. The early immigrants were drawn hither by the market for their labour which the opening of a new country offered. The Irish found employment on public works, such as the construction of canals and railroads; the Germans turned more to agriculture. The various branches of the Slav race are engaged in foundries, mills, and factories, and many are also employed as longshoremen and at common labour. The same holds also for the Italians, of whom there is a large percentage. Nearly all the recent immigration has settled in cities like Cleveland, Toledo, Youngstown, Lorain, and Ashtabula, where employment is had in abundance and at a fair wage.

STATISTICS.—In December, 1907, the clergy numbered 388, of whom 315 were diocesan priests and 73 regulars (Sanguinists, Franciscans, and Jesuits). There were 21 Brothers of Mary and 5 Christian Brothers, teaching in 6 parochial schools. The Sisters (Sanguinists, Ursulines, Sisters of Charity of St. Augustine, Sisters of Notre Dame, Franciscans, Sisters of St. Joseph, Ladies of the Sacred Heart of Mary, Sisters of the Humility of Mary, Grey Nuns, Sisters of the Good Shepherd, Poor Clares, Little Sisters of the Poor, Dominicans, Sisters of St. Agnes, Sisters of Charity, Sisters of Loretto, Felician Sisters, Sisters of St. Benedict, Sisters-Servants of the Immaculate Heart of Mary) number 1141, of whom 684 teach in 138 parochial schools. The parishes with resident pastors number 241; mission churches, 60; parochial schools, 186; attendance, 43,544; 1 diocesan seminary, with 96 students; diocesan students in colleges and other seminaries,

45; colleges and academies for boys, 4; attendance, 515 pupils; academies for girls, 11; attendance, 2113 pupils; 9 orphanages and one infant asylum, total number of inmates, 1251; hospitals, 9; homes for the aged, 3; Houses of Good Shepherd, 2.—The Catholic population is about 330,000, and is composed of 13 nationalities, exclusive of native Americans, viz. Irish, German, Slovak, Polish, Bohemian, Magyar, Slovenian, Italian, Lithuanian, Croatian, Rumanian, Ruthenian, Syrian.

GEORGE F. HOUCK.

Clichtove, JOSSE (JODOCUS CLICHTOVÆUS), a theologian, b. 1472 at Nieuport (Flanders); d. 1543 at Chartres (France). He began his studies at Louvain and went to Paris for his philosophical and theological studies. After receiving the doctorate in theology (1506) he was appointed professor at the Sorbonne. In 1515 he was asked to direct the studies of Louis Guillard, the Bishop-elect of Tournai, and four years later accompanied him to this latter place. After a short stay there, he returned to Paris, and in 1527 to Chartres, whither Guillard had been transferred. He took an active part in the Council of Sens, convoked at Paris by Cardinal Duprat, and he gathered in a volume the various arguments brought forward against the Protestants. A champion of reform in philosophical and theological studies during the earlier part of his life, he devoted himself later almost exclusively to combating the doctrines of Luther. His works are numerous and belong to almost every department of theology and philosophy. He began with commentaries on many Aristotelean treatises: logic, natural philosophy, ethics, arithmetic, and geometry. He also wrote studies on several books of Holy Scripture, edited and commented the writings of some of the Fathers and Doctors of the Church. Among his original works must be mentioned "De verâ nobilitate opusculum" (Paris, 1512); "Elucidatorium ecclesiasticum" (Paris, 1516); "De vitâ et moribus sacerdotum" (Paris, 1519), and several other works of instruction and edification; "Antilutherus" (Paris, 1524); "Propugnaculum ecclesiæ adversus Lutheranos" (Paris, 1526); "De Sacramento Eucharistiæ contra Ecolampadium" (Paris, 1526); "Compendium veritatum ad fidem pertinentium contra erroneas Lutheranorum assertiones ex dictis et actis in concilio provinciali Senonensi apud Parisios celebrato" (Paris, 1529); "Sermones" (Paris, 1534); "Convulsio calumniarum Ulrichi Veleni quibus S. Petrum nunquam Romæ fuisse cavillatur" (Paris, 1535).

C. A. DUBRAY.

Clifford, WILLIAM (alias MANSELL), divine, d. 30 April, 1670; he was the son of Henry Clifford, by his wife Elizabeth Thimelby, who as a widow joined the English Augustinian nuns at Louvain, and died, aged about seventy-seven, 3 September, 1642. Through humility Clifford never asserted his right to the Barony of Cumberland. After education and ordination at Douai, he came on the English mission. As vice-president, he helped the English College at Lisbon through difficult times, and became superior of Tournay College (Paris), assigned by Cardinal Richelieu to the English clergy. He evaded being made bishop in 1660, declined in

1670 the presidency of Douai, and closed his life in the Hôpital des Incurables in Paris. Clifford's works are: "Christian Rules proposed to a virtuous Soule" (Paris, 1615), dedicated to Mrs. Ursula Clifford; "The Spiritual Combat", translated by R. R. (Paris, 1656), dedicated to Abbot Montague; "Little Manual of the Poore Man's Dayly Devotion" (2nd edition, Paris, 1670), often reprinted; "Observations upon Kings' Reigns since the Conquest" (MS.); "Collections concerning Chief Points of Controversy" (MS.)

PATRICK RYAN.

Clifton, DIOCESE OF (CLIFTONIENSIS), England, consisting of Gloucestershire, Somersetshire, and Wiltshire. It was founded by Pius IX when he restored the English hierarchy in 1850. Previously to that the diocese formed part of the Western District, one of the four vicariates established by Innocent XI in 1688, and including Wales and the six south-western counties of England. In 1840 Wales became a separate vicariate, and thenceforth the district consisted of the English counties only. As the vicars Apostolic resided chiefly at Bath in Somerset, when the district was divided into the two dioceses of Clifton and Plymouth, it was fitting that the last Vicar Apostolic of the Western District, Dr. Joseph William Hendren, O.S.F. (1791–1866), consecrated in 1848, should become the first Bishop of Clifton. Thus the diocese is, in a special sense, the representative of the old vicariate. In this capacity the Bishop of Clifton retains possession of the archives of the Western District, one of the most important sources of information for the history of the Church in England from 1780 to 1850. The papers earlier in date perished during the Gordon Riots in 1780. Besides these valuable archives there is at Bishop's House an interesting series of portraits of the vicars Apostolic of the Western District and of the bishops of Clifton.

A year after the foundation of the new diocese Dr. Hendren was translated to the See of Nottingham and was succeeded by Dr. Thomas Burgess (1791–1854). On 28 June, 1852, a cathedral chapter, consisting of a provost and ten canons, was erected. On the death of Bishop Burgess, 27 Nov., 1854, there was a long vacancy, and the administration of the diocese was given provisionally to Archbishop Errington, coadjutor to Cardinal Wiseman. This arrangement lasted until Feb., 1857, when the Hon. and Rev. William Joseph Hugh Clifford (1823–1893), son of the seventh Lord Clifford, was appointed bishop, being consecrated by Pope Pius IX in person. His long pontificate lasted for thirty-six years, ending with his death, 14 Aug., 1893. His successor was Dr. William Robert Brownlow (1836–1901), famous as an archæologist, and whose well-known work on the catacombs, written conjointly with Dr. James Spencer Northcote, is a classical work of reference. Dr. Brownlow died 9 Nov., 1901, and was succeeded by the Rt. Rev. George Ambrose Burton, consecrated 1 May, 1902. The diocese, which is under the patronage of "Our Lady Conceived without Sin" and Sts. Peter and Paul, is divided into six rural deaneries. There are 57 public churches and chapels, besides 24 private chapels belonging to communities. The clergy number about 50 secular priests and about 80 regulars, the latter including the Benedictines of the famous abbey and school at Downside. The Dominicans, Franciscans, Carmelites, Cistercians, and Jesuits are also represented in the diocese. The College of Sts. Peter and Paul, Prior Park, founded by Benedictines and afterwards conducted

by secular priests, is now in the hands of the Fathers of the Society of the Holy Ghost.

EDWIN BURTON.

Climacus, JOHN, SAINT. See JOHN CLIMACUS, SAINT.

Climent, José, Spanish bishop, b. at Castellón de la Plana (Valencia), 1706; d. there 25 Nov., 1781. Distinguished for his charities, educational efforts, eloquence, and exemplary life, he studied and afterwards professed theology at the University of Valencia, laboured for several years as parish priest, and was consecrated Bishop of Barcelona in 1766; he resigned his see in 1775. His episcopal activity was directed to the founding of hospitals, the establishing of free schools, and the diffusion of knowledge among the people by means of low-priced publications. He translated into Spanish several works, among them Fleury's "*Mœurs des Israélites et des Chrétiens*". His pastoral instructions contributed largely to his fame. That of 1769, on the renewal of ecclesiastical studies, caused him to be denounced to the court of Charles III for having eulogized the Church of Utrecht; but a commission composed of archbishops, bishops, and heads of religious orders, appointed to examine his case, returned a decision favourable to the prelate. The sway he held over his people was shown by his success in quelling a dangerous uprising in Barcelona against military conscription; but this only served still further to render him obnoxious to a suspicious court. He refused, on conscientious grounds, a promotion to the wealthy See of Malaga, and withdrew to his native place. His life was published in Barcelona in 1785.

Clitherow, MARGARET, VENERABLE, Martyr, called the "Pearl of York", b. about 1556; d. 25 March, 1586. She was a daughter of Thomas Middleton, Sheriff of York (1564-5), a wax-chandler; married John Clitherow, a wealthy butcher and a chamberlain of the city, in St. Martin's church, Coney St., 8 July, 1571, and lived in the Shambles, a street still unaltered. Converted to the Faith about three years later, she became most fervent, continually risking her life by harbouring and maintaining priests, was frequently imprisoned, sometimes for two years at a time, yet never daunted, and was a model of all virtues. Though her husband belonged to the Established Church, he had a brother a priest, and Margaret provided two chambers, one adjoining her house and a second in another part of the city, where she kept priests hidden and had Mass continually celebrated through the thick of the persecution. Some of her priests were martyred, and Margaret who desired the same grace above all things, used to make secret pilgrimages by night to York Tyburn to pray beneath the gibbet for this intention. Finally arrested on 10 March, 1586, she was committed to the castle. On 14 March, she was arraigned before Judges Clinch and Rhodes and several members of the Council of the North at the York assizes. Her indictment was that she had harboured priests, heard Mass, and the like; but she refused to plead, since the only witnesses against her would be her own little children and servants, whom she could not bear to involve in the guilt of her death. She was therefore condemned to the *peine forte et dure*, i. e. to be pressed to death. "God be thanked, I am not worthy of so good a death as this", she said. Although she was probably with child, this horrible sentence was carried out on Lady Day, 1586 (Good Friday according to New Style). She had endured an agony of fear the previous night,

but was now calm, joyous, and smiling. She walked barefooted to the tolbooth on Ousebridge, for she had sent her hose and shoes to her daughter Anne, in token that she should follow in her steps. She had been tormented by the ministers and even now was urged to confess her crimes. "No, no, Mr. Sheriff, I die for the love of my Lord Jesu", she answered. She was laid on the ground, a sharp stone beneath her back, her hands stretched out in the form of a cross and bound to two posts. Then a door was placed upon her, which was weighted down till she was crushed to death. Her last words during an agony of fifteen minutes, were "Jesu! Jesu! Jesu! Have mercy on me!" Her right hand is preserved at St. Mary's Convent, York, but the resting-place of her sacred body is not known. Her sons Henry and William became priests, and her daughter Anne a nun at St. Ursula's, Louvain. Her life, written by her confessor, John Mush, exists in two versions. The earlier has been edited by Father John Morris, S. J., in his "*Troubles of our Catholic Forefathers*", third series (London, 1877). The later MS., now at York Convent, was published by W. Nicholson, of Thelwall Hall, Cheshire (London, Derby, 1849), with portrait: "Life and Death of Margaret Clitherow the martyr of York". It also contains the "History of Mrs. Margaret Ward and Mrs. Anne Line, martyrs".

BEDE CAMM.

Clogher, DIOCESE OF (CLOGHERENSIS), a suffragan of Armagh, Ireland, which comprises the County Monaghan, almost the whole of Fermanagh, the southern portion of Tyrone, and parts of Donegal, Louth, and Cavan. It takes its name from Clogher, the seat of

RUINS OF ST. MARY'S ABBEY, DEVENISH ISLAND.

the Prince of Oriel, with whose territory the old Diocese of Clogher was, practically speaking, coextensive. The see was founded by St. Patrick, who appointed one of his household, St. Macarten, as first bishop. There does not seem to be any evidence that St. Patrick governed Clogher as a distinct diocese before taking up his residence at Armagh, as is stated by Jocelyn. There is great difficulty in tracing the succession of bishops in Clogher, as indeed in every Irish diocese from the sixth to the eleventh century, on account of the confusion of the bishops with the abbots of the monastic establishments; the difficulty is increased in Clogher in view of the diversity existing between the lists as given in the Irish Annals, and the "*Register of Clogher*", compiled by Patrick Culin, Bishop of Clogher (1519-34), and Roderick Cassidy, archdeacon of the diocese. The "*Register of Clogher*" is of very little historical value.

In 1241 Henry III ordered that Clogher should be united to Armagh, on account of the poverty of both

dioceses, but this was not carried out, though under Bishop David O'Brogan large portions of Tyrone were cut off from Clogher and given to Ardstraw (now united with Derry), while the greater part of the present County Louth, including Dundalk, Drogheda, and Ardee, was taken over by Armagh. In 1535 Bishop Odo, or Hugh O'Cervallan, was appointed to the See of Clogher by Paul III, and on the submission of his patron Con O'Neill to Henry VIII, this prelate seems to have accepted the new teaching, and was superseded by Raymond MacMahon, 1546. From his time there are two lines of bishops in Clogher, the Catholic and the Protestant. The apostate Miler Magrath was appointed Protestant bishop by Queen Elizabeth in 1570, but on his promotion to Cashel, resigned Clogher in the same year. Heber or Emer MacMahon (1643-50) took a prominent part in the war of the Irish Confederates, and on the death of Owen Roe O'Neill, was chosen general of the Confederate forces. He was defeated at Scariffholis near Letterkenny, taken prisoner by Coote, and beheaded at Enniskillen. Owing to the persecutions of the Irish Catholics, Clogher was governed by vicars during the periods 1612-43, 1650-71, 1687-1707, 1713-27. The chapter of Clogher was allowed to lapse, but towards the end of the eighteenth century it was re-established by papal Brief.

A very important provincial synod was held at Clones in 1670 by Oliver Plunkett, Archbishop of Armagh (see Moran, *Life of Plunkett*). The most remarkable shrines of the diocese are at St. Patrick's, Lough Derg, near Pettigo, still frequented by thousands of pilgrims from all parts of the world (see ST. PATRICK'S PURGATORY); Devenish Island in Lough Erne (see McKenna, *Devenish, its History and Antiquities*, Dublin, 1897); Innismacsaint, also in Lough Erne, where the "Annals of Ulster" were composed; Lisgoole, Clones, and Clogher. The most celebrated works of ancient ecclesiastical art connected with the diocese are the Domnach Airigid, a shrine enclosing a copy of the Gospels, said to have been given by St. Patrick to St. Macarten, and the Cross of Clogher, both of them now in the National Museum in Dublin. The Catholic population of the diocese is 101,162, distributed in forty parishes and ministered to by about 100 priests.

JAMES MACCAFFREY.

Cloister, the English equivalent of the Latin word *clausura* (from *claudere*, "to shut up"). This word occurs in Roman law in the sense of rampart, barrier [cf. Code of Justinian, I. 2 sec. 4; De officiis Præf. Præt. Africæ (1, 27); I. 4 De officiis mag. officiorum (I, 31)]. In the "Concordia Regularum" of St. Benedict of Aniane, c. xli, sec. 11, we find it in the sense of "case", or "cupboard" (Migne, P. L., CIII, 1057). In modern ecclesiastical usage, *clausura* signifies, materially, an enclosed space for religious retirement; formally, it stands for the legal restrictions opposed to the free egress of those who are cloistered or enclosed, and to the free entry, or free introduction, of outsiders within the limits of the material *clausura*.

I. SYNOPSIS OF EXISTING LEGISLATION.—The actual legislation distinguishes between religious orders and institutes with simple vows; institutes of men and those of women.

(1) *Religious Orders.*—(a) *Male.*—Material *clausura*.—According to the present common law, every convent or monastery of regulars must, on its completion, be enclosed. A convent is defined as a building which serves as a fixed dwelling-place where religious live according to their rule. According to the common opinion of jurists (Piat, "Praelationes juris Regularis", I, 344, n. 4; Wernz, "Jus Decretalium", 658, n. 479) the houses where only two or three relig-

ious dwell permanently, and observe their rule as they can, are subject to this law; it is not necessary that the religious be in a number which secures them the privilege of exemption from the bishop's jurisdiction. The Congregation of Propaganda seems to have made this opinion its own, in decreeing that, in missionary countries, the law of cloister applies to the religious houses which belong to the mission, and which serve as a fixed dwelling for even two or three regular missionaries of the Latin Rite (Collectanea Propagandæ Fidei, Replies of 26 Aug., 1780, and of 5 March, 1787, n. 410 and 412, 1st edit., n. 545 and 587, 2d ed.). On the other hand, the law of cloister does not apply to houses which are simply hired by religious, and which cannot therefore be looked upon as fixed and defini-

SMALL CLOISTER, CERTOSA OF PAVIA—GIOVANNI ANTONIO AMADEO

tive homes, nor to the villa-houses to which the religious go for recreation on fixed days or for a few weeks every year.

Strictly speaking, the whole enclosed space—house and garden—ought to be enclosed. Custom, however, allows the erection, at the entrance to the convent, of reception rooms to which women may be admitted. These reception rooms should be isolated from the interior of the convent, and the religious should not have free access to them. The church, choir, and even the sacristy, when it is strictly contiguous to the church, are neutral territory; here women may enter, and the religious are free to go thither without special permission. It may be asked whether a strictly continuous material barrier is a necessary part of the *clausura*. Lehmkühl (in Kirchenlex., s. v. *Clausura*) is of the opinion that a door which can be locked should separate the cloistered from the other parts of a house of religious. Passerini, however, thinks (De hominum statibus, III, 461, n. 376) that any intelligible sign suffices, provided it sufficiently indicates the beginning of the cloistered part. And even in the Roman law, the *clausuræ* were sometimes fictitious. Finally, it may be added that it is for the provincial superior to fix the limits of the cloister and the point at which it begins, in conformity with the usages of his order and with the local needs; of course his power is limited by the dispositions of the law.

Formal Clausura.—Obstacle to the Free Egress of the Religious.—The cloistered religious may not go outside their material cloister without permission; still, the religious man who transgresses this prohibition does not incur any ecclesiastical censure. In two cases, however, he would commit a grave sin: if his absence were prolonged (i. e. exceeding two or three days); and if he should go out by night. Going out at night without permission is usually a reserved case. But what constitutes going out by night? The pres-

CLOISTERS

CERTOSA DI S. MARTINO, NAPLES

ST. JOHN LATERAN, ROME

ent writer is of the opinion that the common estimation (which may vary in different countries) defines it. It consists in leaving the cloister without a good and serious motive, at a late hour, when people would be surprised to meet a religious outside his monastery. Canonical legislation carefully provides that religious, when not employed in the functions of the sacred ministry, shall reside in monasteries. The Council of Trent had already forbidden them to leave the monastery without permission under pretext of meeting their superiors. If they are sent to follow a university course, they must reside in a religious house. The bishop can and must punish the violators of this law of residence (Sess. XXIV, De Reg. et Mon., c. iv). Certain decrees of reform, primarily intended for Italy alone, but probably extended by usage, specially forbid religious to go to Rome without permission of the superior general.

Obstacle to the Entrance of Outsiders.—Women are strictly forbidden to enter the encloistered portions of a house of male religious. In his "Apostolica Sedis" (1869), sec. 2, n. 7, Pius IX renewed the sentence of excommunication against violators of this law. This excommunication is absolutely reserved to the Holy See; it affects the women who enter as well as the superior or religious who admits them. The penalty always supposes, of course, a serious sin on the offender's part, but the moralists are very severe in their appreciation of cases. The fact of having just fully crossed the boundary suffices, according to them, for the commission of a serious sin and incurs the penalty. Such severity is comprehensible when a continuous material barrier separates the cloistered and non-cloistered parts of the monastery; still, the present writer is rather inclined to exonerate that person from a grievous sin who should just step over the boundary and retire immediately. Where there is no such barrier, somewhat more latitude may be allowed. The law makes exceptions for queens and women of like rank, as, for example, the wife of the president of a republic; such persons may also be accompanied by a suitable retinue. Exception is also sometimes made for notable benefactresses, who must, however, previously obtain a pontifical indult. It should be noted that young girls under twelve do not incur this excommunication, but the religious who should admit them would incur the penalty. It is not certain that young girls under seven come under the law; hence the religious who should admit them would not commit a grave fault or incur the excommunication.

(b) *Female*.—Material Clausura.—Those parts of the convent to which the nuns have access are all within the cloister, the choir not excepted. Here the law recognizes no neutral territory. If the convent church be public, the nuns cannot go into those parts accessible to the people. Further, the building should be so constructed that neither the sisters can look outside their enclosure, nor their neighbours see into the court-yards or gardens at the disposal of the sisters. Before establishing a women's convent with cloister, it is the desire of the Holy See—if it be not a condition of validity—that the *beneficium Apostolicum* should be obtained; this is a certain obligation for countries, like the United States, which are subject to the Constitution of Leo XIII "Romanos Pontifices", 8 May, 1881. (See also the Letter of 7 Dec., 1901, of the Congregation of Propaganda.)

Formal Clausura.—Obstacle to Egress.—Under no pretext may the sisters go outside their cloister without a legitimate cause approved of by the bishop. Such is the legislation of the Council of Trent (Sess. XXV, De Reg. et Mon., c. v.). St. Pius V, restricting still more this law, recognized only three legitimate causes: fire, leprosy, and contagious malady. Without keeping rigorously to this enumeration, we may say that an analogous necessity is always required in order that the bishop may accord the per-

mission. The nuns who transgress this law incur an excommunication reserved absolutely to the Holy See ("Apost. Sedis", sec. 2, n. 6).

Obstacle to the Free Entrance of Outsiders.—The law is much more severe for female than for male houses; in fact, even women are rigorously excluded from the cloistered parts. The penalty for those who enter and for those who admit or introduce them is the same—an excommunication absolutely reserved to the Holy See ("Apost. Sed.", sec. 2, n. 6). The penalty affects all those, and only those, who have reached the age of reason. Hence, in spite of the general terms of the law, it seems probable that the sister who should introduce a child under seven would not incur the ecclesiastical censure. This regime, however, admits of exceptions; corporal or spiritual needs demand the physician's or the confessor's presence, the garden must be cultivated, the building kept in repair. Hence general permissions are given to doctors, confessors, workmen, and others. The confessor of the nuns has this permission in virtue of his office, so also the bishop who must make the canonical visitation, and the regular superior. If the convent be under the jurisdiction of regulars, outsiders who need to enter the cloister probably require only one permission, that of the regular superior, except where custom requires also the permission of the bishop or of his delegate (St. Alph., "Theol. mor.", VII, 224). Benedict XIV, Lehmkühl, and Piat, basing their view on the jurisprudence of the Congregation of the Council, hold that the bishop's permission is always required. This permission, whether coming from the bishop or from the regular superior, should be in writing, according to the wording of the law; but an oral permission is sufficient to avoid the censure (St. Alph., "Theol. mor.", VII, 223). We may follow the opinion of St. Alphonsus (loc. cit.), who maintains that when one has an evident reason for entering within the cloister, he avoids both the censure and the sin, even though he have only an oral permission. It should be observed that girl-boarders are subject to this legislation. Hence the solemnly professed nuns who wish to occupy themselves with the education of the young must be provided with a pontifical indult.

However, cloistered nuns are not absolutely forbidden all intercourse with the outside world. They may of course receive letters; they may also receive visitors in the convent parlour, provided that they remain behind the grating, or grille, erected there. For such visits a reasonable cause and a permission from the bishop is usually needed. This permission, however, is not required in the case of those who, by virtue of their office, are obliged to have relations with a convent, viz. the ecclesiastical superior, the confessor (for spiritual affairs), the canonical visitor, etc. Except in Advent and Lent, relatives and children are admitted once a week. The conditions for a visit by a male religious are very severe; according to some authors he can only receive permission if he is a blood relation of the first or second degree, and then only four times a year. Further, although an irregular visit on the part of a lay person or secular priest does not constitute a grave fault, any visit without leave is a mortal sin for the religious. Such is the severity of the prohibition contained in the decree of the Congregation of the Council, dated 7 June, 1669. However, the conditions commonly required for a mortal sin must be present. For that reason some eminent theologians do not think there is a mortal sin if the conversation does not last for a quarter of an hour (C. d'Annibale, *Summula theol.*, III, n. 228). It should be noted, at the same time, that certain usages have mitigated the rigour of the laws here mentioned. In Spain, for instance, the permission of the diocesan authority is never asked for making such visits. And of course the law itself affects

only convents where the inmates pronounce solemn vows.

(2) *Institutes with Simple Vows Only.*—Generally speaking, in a convent or monastery where there are no solemn vows, there is no cloister protected by the excommunications of the "Apostolicæ Sedis"; further, women cannot make solemn vows except in a convent which has the clausura. Sometimes, however, this papal clausura is granted to convents of women who make only simple vows. Except in this case the institutes of simple vows are not subject to the laws above-described. As a matter of fact, the only female convents in the United States with either solemn vows or the papal clausura are those of the Visitation Nuns at Georgetown, Mobile, St. Louis, and Baltimore. (See Bizzarri, "Collectanea; Causa Americana", 1st edit., X, page 778, and the decree, page 791.) The fifth convent mentioned in the decree, Kaskaskia, no longer exists. The same is true of Belgium and France, with the exception of the districts of Nice and Savoy. In these countries, therefore, the nuns forming part of the old religious orders have only the cloister imposed by their rules or by such vows as that of perpetual enclosure taken by the religious of St. Clare. It is worth noting that this vow, although it forbids the inmates to leave the cloister, does not forbid them to receive people from outside. They are not, then, acting contrary to their vow when they admit secular persons to the inside of their convents. But in countries where the absence of solemn vows exempts convents of women from the papal enclosure, the bishop, whom the Council of Trent (Sess. XXV, De Reg. et Mon., c. v.) constitutes the guardian of nuns' cloister, can censure and punish with ecclesiastical penalties infractions of cloister, and can thus establish an episcopal clausura (cf. Reply, "In Parisiensi", 1 Aug., 1839). In the institutes of simple vows, there is nearly always a partial cloister which reserves exclusively to the religious certain parts of their convents. This partial cloister in the nuns' convents has been committed to the special vigilance of the bishops by the Constitution, "Conditæ", 8 Dec., 1900, second part, and, if we may judge by the present action of the Congregation of Bishops and Regulars, the clausura in this form tends to become obligatory on all such institutes. (See "Normæ" of the Congreg. of Bishops and Regulars, 28 June, 1901.)

II. REASONS FOR THIS LEGISLATION.—This legislation has for its principal object to safeguard the virtue of chastity. The religious consecrates his person to God, but he is not on that account impeccable in the matter of chastity; indeed, his very profession, if he does not live up to his ideal, exposes him to the danger of becoming a scandal and a source of the gravest harm to religion. To this principal reason inculcated in the Constitution "Periculoso" of Boniface VIII may be added others; for instance, the calm and recollection necessary for the religious life. The Church has therefore acted wisely in forestalling such dangers and protecting those who aim at leading a perfect life; and for this the external rigour is certainly not excessive. Moreover, this external rigour (as, e. g., the grille) varies much according to local needs and circumstances; and it seems that the recent institutes succeed admirably with their partial cloister, which is not protected by the severe penalties of the Church. The more perfect form, however, is undoubtedly better adapted to the mystic life.

III. SOURCES OF THE EXISTING LEGISLATION.—(1) *Religious Orders.*—(a) *Male.*—There is no pontifical constitution of universal application which prohibits the egress of the religious. The only written law that might be invoked is the decree of Clement VIII, "Nullus Omnino", 25 June, 1599; and it would be difficult to prove that this Constitution is binding outside of Italy. Hence, this element of cloister results

partly from usage, partly from special laws. A constitution of universal bearing was projected at the Vatican Council ("De Clausurâ", c. ii, "Collectio Lacensis", VII, 681). The interdict against the admission of women rests nowadays on the Constitution of Benedict XIV, "Regularis Disciplinæ", 3 Jan., 1742, and on that of Pius IX, "Apostolicæ Sedis", sec. 2, n. 7, 12 Oct., 1869, which renews the censures against offenders.

(b) *Female.*—Here the Apostolical Constitutions abound. We cite some of the more recent which sanction at the same time the two elements of cloister: "Salutare", 3 Jan., 1742, and "Per binas alias", 24 Jan., 1747, of Benedict XIV; add also, for the censures, the "Apostolicæ Sedis", sec. 2, n. 6, of Pius IX.

(2) *Institutes with Simple Vows Only.*—For these institutes there is no other law of universal application

CLOISTER, SANTA MARIA NOVELLA, FLORENCE

besides the Constitution, "Conditæ a Christo", which indeed rather supposes than imposes a certain clausura.

IV. HISTORICAL DEVELOPMENT OF LEGISLATION.—From the very first, the founders of monasteries and the masters of the spiritual life sought to guard against the dangers which commerce with the world and intercourse with the other sex offered to those devoted to the life of perfection. So we find from the earliest times, both in the counsels and the rules of the initiators of the religious life, wise maxims of practical prudence. In the Synod of Alexandria (362) we find at the head of the minor ordinances a rule forbidding monks and religious celibates (*continentes*) to meet women, to speak to them, and, if it can be avoided, to see them (Revillout, "Le Concile de Nicée", II, 475, 476). Still, cloister, as we understand it to-day, did not exist for the first Eastern monks. Their rules concerning monastic hospitality prove this; otherwise, how could St. Macrina have received the visits of which her brother, St. Gregory of Nyssa, speaks ("Vita S. Macrinæ", in P. G., XLVI, 975)? St. Basil's rules, in recommending discretion in the relations between monks and nuns, prove indirectly the non-existence of a cloister properly so called ("Regulæ fusiùs tractatæ", Q. and R., XXX, P. G., XXXI, 997; "Regulæ brevius tractatæ", 106-11, P. G., XXXI, 1155-58). What seems stranger still in our eyes, in the East there existed double monasteries where, in contiguous houses, if not actually under the same roof, religious men and women observed the same rule; sometimes also pious women (*anagoras*) shared their homes with monks. As regards Africa, in St. Augustine's day the visits of clerics or of monks to the "virgins and widows" were made only with permission, and in the company of irreproachable Christians (Cone. Carth. III, can. xxv, Hardouin, I, 963); but the

cloister proper was unknown, so much so that the nuns themselves used to go out, though always accompanied (Aug., Epist., ccci, P. L., XXXIII, 963).

In Europe, St. Cæsarius of Arles (536) forbade women to enter men's monasteries, and even prevented them from visiting the interior part of a nun's convent (*Regula ad monachos*, xi; *Ad virgines*, xxiv, P. L., LXVII, 1100, 1114); so also St. Aurelius, who further forbade nuns to go out except with a companion (*Regula ad monachos*, xv; *Ad virgines*, xii, P. L., LXVIII, 390, 401). The Rule of St. Benedict says nothing about the cloister, and even the Rule of St. Francis only forbids monks to enter convents of nuns. It is worth noting that other religious so far surpassed in severity the authorizations of current law as to place their churches under cloister (Carthusians; see "Guignon Consuetudines", c. xxi, P. L., CLIII, 681, 682), or to prohibit the introduction of foods which the monks were forbidden to use (Camaldolese). St. Gregory (P. L., LXXVII, 717) in his letter (594) to the Abbot Valentine (letter xlii or xl, bk. IV) complained that the said abbot used to admit women into his monastery frequently, and used to allow his monks to act as godfathers at baptisms, thus associating with the women who acted as godmothers. This last permission appeared to him more reprehensible than the former. In the middle of the fifth century (450-56) an Irish council presided over by St. Patrick forbade (can. ix) the religious and consecrated virgins to lodge in the same inn, ride in the same carriage, or frequently meet together (Hard., I, 1791). About the same time, the Fourth Œcumenical Council (451) subjected to the bishop's jurisdiction the monks who lived outside their monastery. In 517 the Council of Epao (a locality which has not been identified hitherto. See Hefele, "Conciliengeschichte", II, 681; Löning, "Geschichte des deutschen Kirchenrechts", I, 569, n. 2, identifies it with Albon, between Valence and Vienne; the "Mon. Germ. Hist.": Conc., I, 17, refer to Löning) prescribed measures (can. xxxviii) prohibiting any but women of known integrity or priests on duty from entering the monasteries of virgins (*puel-larum*—Hard., II, 1051). In the Constitution ("Novella") 133 of Justinian I, περί μονάχων, 16 or 18 March, 539, we meet with a prescription which resembles much more closely our cloister. In the third chapter the emperor forbids women to enter men's monasteries even for a burial service, and vice versa. In the Council of Saragossa (691) the Fathers assembled protested against the facility with which lay persons were admitted into monasteries (Hard., III, 1780). Next come the Council of Freising (about 800), which forbids either laymen or clerics to enter nuns' convents (can. xxi in the collection reproduced in the "Mon. Germ. Hist.: Capitularia Regum Francorum", I, 28), and the Council of Mainz (813), which forbids (can. xii) monks to go out without the abbot's leave, and which seems (can. xiii) to forbid absolutely all egress for nuns, even for the abbesses, except with the advice and permission of the bishop (Hard., IV, 1011, 1012). In the acts of the synods of 829 presented to Louis le Débonnaire, we find a measure to prevent monks from conversing with nuns without the bishop's permission ["Mon. Germ. Hist.: Capitularia", II, 42, n. 19 (53)]. The Second General Council of the Lateran (1139) forbade nuns to dwell in private houses (can. xxvi) and expressed the wish that they should not sing in the same choir with the canons or monks (Hard., VII, 1222). The Third Council of the Lateran (1179) required a cause of clear necessity to justify clerics in visiting convents of nuns. We may add here the decree of Innocent III (1198) inserted in the *Decretalia* (I, 31, 7), which gives to the bishop the right to supplement the negligence of prelates who should not compel wandering monks to return to their convents.

Thus far we have surveyed the beginnings of the

present legislation. In 1298 Boniface VIII promulgated his celebrated Constitution "Periculoso" (De Statu Regularium, in VI°, III, 16), in which he imposed the cloister on all nuns. According to this law, all egress is forbidden to them; only persons of irreprouchable life are admitted to see the sisters, and that only when there is a reasonable excuse previously approved of by the competent authorities. The bishops (in the convents which are subject to them, as well as in those which depend immediately on the Holy See) and the regular prelates (in other convents) are charged to watch over the execution of these dispositions. The Council of Trent (Sess. XXV, De Reg. et Mon., c. v), confirming these measures, confided to the bishops all responsibility for the cloister of nuns; it further directed that no nun might go out without a written permit from the bishop, and that outsiders, under pain of excommunication, might not enter without a written permit from the bishop or the regular superior, which permit might not be given except in case of necessity. St. Pius V, in his "Circa Pastoralis" (29 May, 1566), urged the execution of Boniface's law, and imposed the cloister even on the third orders. Shortly after, the same pontiff, in his "Decori" (1 Feb., 1570), defined the cases and the manner in which a professed nun might go outside of her cloister. In this connexion may also be mentioned the "Ubi Gratia" of Gregory XIII (13 June, 1575), explained by the Brief "Dubius" (23 Dec., 1581). The decree of 11 May, 1669, and the declaration of 26 Nov., 1679 of the Congregation of the Council, forbid religious men to see nuns, even at the grating, except within the limits referred to above.

This legislation is still further confirmed by the Constitutions of Benedict XIV, "Cum sacramum", 1 June, 1741, "Salutare" of 3 Jan., 1742, concerning the entrance of outsiders; "Per binas alias", 24 Jan., 1747, on the same subject; and the Letter "Gravissimo", 31 Oct., 1749, to the ordinaries of the pontifical territory on access of externs to the grilles, or gratings, through which they might communicate with cloistered religious; finally, by the Constitution "Apostolicæ Sedis", 12 Oct., 1869, which passed sentence of excommunication on all offenders, and abrogated all usages contrary to the Constitution of Pius V on the egress of cloistered nuns (cf. reply of Holy Office, 22 Dec., 1880).

The Apostolical constitutions about the cloister of regulars, and notably the exclusion of women, are all posterior to the Council of Trent. As regards the entrance of women, we have to quote: "Regularium", 24 Oct., 1566, and "Decet", 16 July, 1570, both of St. Pius V; "Ubi Gratia", 13 June, 1575, of Gregory XIII; "Nullus", § 18, of Clement VIII, 25 June, 1599; "Regularis Disciplinæ", 3 Jan., 1742, of Benedict XIV; lastly, the "Apostolicæ Sedis" of Pius IX (1869), for the censures. Concerning the egress of religious, the reader may refer to the following constitutions: "Ad Romanum spectat", §§ 20 and 21, 21 Oct., 1588, of Sixtus V; "Decretum illud", 10 March, 1601, of Clement VIII (on the question of journeys to Rome); also the decree "Nullus omnino", 25 June, 1599, of Clement VIII (for Italy).

V. LEGISLATION IN THE EASTERN CHURCH.—In our historical survey we have already cited the Greek sources of legislation prior to the seventh century. In 693 the Trullan Council, so called from the hall of the palace at Constantinople where it was held, is more precise than those which preceded it. The forty-sixth canon (Hard., III, 1679) forbade monks and nuns to go out, except during the day, for a necessary cause, and with the previous authorization of their superior; the forty-seventh canon forbade men to sleep in a convent of women, and vice versa. The Second Council of Nicæa (787), which Photius cites in his "Nomocanon" (P. G., CIV, 1091), in its eighteenth canon forbids women to dwell in men's

monasteries (Hard., IV, 497, 498), and in the twentieth it condemns double monasteries, occupied by both monks and nuns (Hard., IV, 499, 500). Neither Balsamon nor Aristenes, in their commentaries on the canons of the councils (P. G., CXXXVII), nor Blastaris (1332), in his alphabetical list of the canons (P. G., CXLV, under the titles, "Hermits", "Nuns", col. 45-48, 49-50), nor the Maronite council of 1736, has any more recent general law to cite. This Maronite council cites two other Maronite synods of 1578 and 1596 (Coll. Lac., II, 36). In an article like the present it would be impossible to follow the evolution of the Eastern legislation and the Eastern usages in this matter, owing to the multitude of rites and of communities into which the Orientals tend to split up.

We may cite two Catholic Maronite synods of Mt. Lebanon, held in 1736 and 1818. The former of these (De monasteriis et monachis, IV, c.ii) recalls the old canons, forbids double monasteries, imposes on the monks a cloister similar to that of the Western regulars, penalizing women offenders with sentence of excommunication, reserved to the patriarch. In the third chapter, devoted to sisterhoods, the Fathers recognize that the strict cloister is not of obligation in their Church. They allow the nuns to go out for the needs of their convent, but they desire that the nuns shall never go out alone. The execution of these decrees was very slow, and met with much difficulty; and the synod of 1818 had to be convened in order to finally separate the convents of men from those of women (cf. Coll. Lac., II, 365-368, 374, 382, 490, 491, 496, 576).

The provincial synod of the Ruthenians of the United Greek Rite (1720) introduced what is practically the Roman clausura excommunication protecting their cloister is reserved to the pope (Coll. Lac., II, 55, 58). In the patriarchal council of the Greek Melchite United Church (1812), we find nothing but a simple prohibition to the monks to go on journeys without written permission from their superior, and to pass the night outside of their monastery, except when assisting the dying (Coll. Lac., II, 586). In the Coptic Catholic and the Syrian Catholic Churches there are at present no religious whatever. It may be affirmed, as a matter of fact, that the cloister is often relaxed among Eastern monks, especially the schismatics; the exclusion of women, however, is very rigorous in the twenty convents of Mt. Athos and among the Egyptian monks. There we find even more than the ancient rigour of the Studites for no female animal of any kind is allowed to exist on the promontory (see St. Theodore the Studite, "Epistula Nicolao discipulo, et testamentum", § 5, in P. G., XCIX, 941, 1820). The Basilian nuns of the Russian Church also observe a strict cloister.

For CLOISTER in the architectural sense, see under ABBEY.

For the historical sources see HARDOUN, *Acta Conciliorum* (Paris, 1714-15); BORETTUS and KRAUSE, *Capitularia Regum Francorum* (Hanover, 1883 and 1897); REVILOUT, *Le Concile de Nicée d'après les textes coptes et les diverses collections canoniques. Dissertation critique* (2 vols., Paris, 1876-98); MGNÉ, *Patrologia cursus completus* (Paris, 1844-1862); *Collectio Legensis: Acta et Decreta S. Conciliorum Recentiorum* (7 vols., Freiburg im Br., 1870-90); HEFELE, *Concilien Geschichte* (Freiburg im Br., 1873-1890); VERMEERSCH, *De Religiosis Institutis et Personis: Supplementa et Monumenta* (Bruges, 1904).

For the legislation, almost all the canonists and moralists might be cited. We will however limit ourselves to some of those who have more formally treated the matter.—For the ancient legislation in particular, BONACINA, *Tractatus de Clausura et de penis cum violentibus impositis*, in *Opera omnia* (Lyons, 1654); I. PELLIZARIUS, *Manuale Regularium* (2 vols., Lyons, 1605); MONTANI (ed.), *Tractatus de Monialibus* (Editio correctior, Rome, 1761); LIGUORI, *Theologia moralis*, I, 7, n. 221-243.—For authorities in modern legislation see PIAT, *Prælectiones juris regularis* (Tournai, 1898); WERNZ, *Jus Decretalium* (Rome, 1901), III, n. 658; HOLLWECK, *Die kirchlichen Strafgesetze* (Mainz, 1899); HEIMBUCHER, *Die Orden und Congregationen der katholischen Kirche* (Paderborn, 1907); VERMEERSCH, *De Religiosis Institutis et Personis*, I, 2nd ed. (Bruges, 1906).—See also DOLHAGARAT, *La loi de la clôture dans les couvents d'hommes* in *Rev. des sciences ecclési.* (1897),

ARTHUR VERMEERSCH.

Clonard, SCHOOL OF.—Clonard (Irish, *Cluain Eraird*, or *Cluain Iraird*, Erard's Meadow) was situated on the beautiful river Boyne, just beside the boundary line of the northern and southern halves of Ireland. The founder of this school, the most famous of the sixth century, was St. Finnian, an abbot and great wonder-worker. He was born at Myshall, County Carlow, about 470. At an early age he was placed under the care of St. Fortchern, by whose direction, it is said, he proceeded to Wales to perfect himself in holiness and sacred knowledge under the great saints of that country. After a long sojourn there, of thirty years according to the Salamanca MS., he returned to his native land and went about from place to place, preaching, teaching, and founding churches, till he was at last led by an angel to Cluain Eraird, which he was told would be the place of his resurrection. Here he built a little cell and a church of clay and wattle, which after some time gave way to a substantial stone structure, and entered on a life of study, mortification, and prayer. The fame of his learning and sanctity was soon noised abroad, and scholars of all ages flocked from every side to his monastic retreat—young laymen and clerics, abbots and bishops even, and those illustrious saints who were afterwards known as the "Twelve Apostles of Erin". In the Office of St. Finnian it is stated that there were no fewer than 3000 pupils getting instruction at one time in the school in the green fields of Clonard under the broad canopy of heaven. The master excelled in exposition of the Sacred Scriptures, and to this fact must be mainly attributed the extraordinary popularity which his lectures enjoyed. The exact date of the saint's death is uncertain, but it was probably 552, and his burial-place is in his own church of Clonard. For centuries after his death the school continued to be renowned as a seat of Scriptural learning, but it suffered at the hands of the Danes, especially in the eleventh century, and two wretched Irishmen, O'Rorke of Breifney and Dermot McMurrough, helped to complete the unholy work which the Northmen had begun. With the transference by the Norman Bishop de Rochfort, in 1206, of the See of Meath from Clonard to Trim, the glory of the former place departed forever. Irish Life in *Book of Lismore*: HEALY, *Ireland's Ancient Schools and Scholars* (Dublin, 1890).

JOHN HEALY.

Clonfert, DIOCESE OF (CLONFERTENSIS, in Irish *Cluain-jearta Brenainn*), a suffragan see of the metropolitan province of Tuam, was founded in 557 by St. Brendan the Navigator, in a sheltered *cluain* or meadow near the Shannon shore, at the eastern extremity of the County Galway. The diocese was nearly coextensive with the tribe-land of the Hy Many or O'Kelly country. It still contains twenty-four parishes in the south-east of the County Galway, including one small parish east of the Shannon, which formed a part of the ancient Hy Many territory. The renown of Brendan as a saint and traveller by land and sea attracted from the very beginning many monks and students to his monastery of Clonfert, so that it became a very famous school of sanctity and learning, numbering at one time, it is said, no less than three thousand students. Brendan was not a bishop himself, but he had as coadjutor, his nephew Moineinn, who, after his death, became an abbot-bishop and head of the monastic school. At a later period a still more celebrated man, Cummin Fada, or Cummin the Tall, presided over the School and Diocese of Clonfert. He took a leading part in the famous Paschal controversy and wrote a very learned

CONG ABBEY, COUNTY GALWAY, IRELAND

work on the subject, known as his "Paschal Epistle", which fortunately still survives (P. L., LXXXVIII) and furnishes conclusive evidence of the varied learning cultivated in the school of Clonfert.

Clonfert being on the highway of the Shannon suffered greatly from the ravages of the Danes, and also of some Irish chieftains who imitated their bad example; yet the school and monastery lived on through those stormy times, and we have a fuller list of bishops and abbots of Clonfert than we have of any other see, at least in the West of Ireland. It was richly endowed with large estates of fertile land, and hence we find that the Bishop of Clonfert, according to a scale fixed in 1392, paid to the papal treasury on his appointment three hundred florins in gold, the Archbishop of Tuam being taxed only at two hundred florins. At the general suppression of religious houses by Henry VIII, the Abbot O'Gormacan, with the help of Clanrickarde, contrived to hold the abbey lands of Clonfert until his death in spite of royal decrees. Roland de Burgo became bishop in 1534, and

being an uncle of the Earl of Clanrickarde was able to keep his lands and his see for more than forty years under Henry, Edward VI, Mary, and Elizabeth. He was always a Catholic prelate, although it is probable that he took the Oath of Supremacy in order to get the temporalities from Henry VIII. Queen Elizabeth wrote to Sir H. Sydney suggesting the founding of a national university at Clonfert,

ANCIENT MARKET CROSS, CONG

on account of its central position on the highway of the lordly river, to be endowed with the abbey lands. But the project was never carried out.

The old cathedral of Clonfert still exists, and is one of the few ancient churches still used for religious worship, for it was seized by the Protestants in the reign of Elizabeth and has continued since in their hands. There is, however, practically no Protestant congregation. The church was small, being only fifty-four by twenty-seven feet in the clear, but its two characteristic features, the west doorway and east windows, are very beautiful examples of the Irish Romanesque. Brash, an expert authority, has described the doorway with great minuteness, and declares that in point of design and execution it is not excelled by any similar work that he has seen in these islands. Of the east altar-window he says, "the design is exceedingly chaste and beautiful, the mouldings simple and effective, and the workmanship superior to anything I have seen either of ancient or modern times." He attributes the building of this beautiful Romanesque church to Peter O'Mordha, a Cistercian monk, first Abbot of Boyle and afterwards Bishop of Clonfert. He belonged to a family of the highest artistic genius, to whom we also owe the noble arches of the old cathedral of Tuam, and the beautiful monastery of Cong.

In 1266, as we learn from the annals of Lough Cé, a certain John was sent over from Rome as Bishop-elect of the See of Clonfert. He must have received

the sanction of the Crown, and could not be inducted to his see without the help of Walter de Burgo, Earl of Ulster. Hence we are told he was consecrated at the English town of Athenry as Bishop of Clonfert. This was on the Sunday before Christmas, 1266. He was also appointed papal nuncio, and we find (*apud Theiner*) a letter from Pope John XXI (1276) authorizing him to collect the crusaders' tax for the recovery of the Holy Land. This John, one of the few Italian prelates ever appointed to an Irish see, was a great benefactor to his cathedral church, and he is believed to have erected the statues and other carvings which decorate the western end of his cathedral. This can hardly be true, so far as the Romanesque doorway is concerned, for the Romanesque had then gone out for at least half a century as a feature in Irish architecture, and given place to the pointed style. It is said that he governed Clonfert for no less than 30 years, and was then transferred by the pope to the Archbishopric of Benevento in Italy, about 1296. It is doubtless true that John, with his artistic Italian tastes, finding in his diocese a cathedral of the best type of the Irish Romanesque, probably a hundred years old, did much to renovate and decorate with statuary the beautiful building. This no doubt would explain the ancient tradition that connects his name with the glories of the old cathedral. It is interesting to note in conclusion that Concors, an Abbot of Clonfert, was one of the three plenipotentiaries who were sent by Roderick O'Connor, the last King of Ireland, to conclude the Treaty of Windsor, in the year 1175, by which Roderick renounced forever the sceptre and Kingdom of Ireland. The city of St. Brendan is now a vast solitude. The episcopal palace is falling into ruins; the beautiful church is there, but there is no resident clergyman, and only two houses—that of the sexton and the police barrack.

JOHN HEALY.

Clonmacnoise, ABBEY AND SCHOOL OF, situated on the Shannon, about half way between Athlone and Banagher, King's County, Ireland, and the most remarkable of the ancient schools of Erin. Its founder was St. Ciaran, surnamed Mac an Tsair, or "Son of the Carpenter", and thus distinguished from his namesake, the patron saint of Ossory. He chose this rather uninviting region because he thought it a more suitable dwelling-place for disciples of the Cross than the luxuriant plains not far away. Ciaran was born at Fuerty, County Roscommon, in 512, and in his early years was committed to the care of a deacon named Justus, who had baptized him, and from whose hands he passed to the school of St. Finnian at Clonard. Here he met all those saintly youths who with himself were afterwards known as the "Twelve Apostles of Erin", and he quickly won their esteem. When Finnian had to absent himself from the monastery, it was to the youthful Ciaran that he deputed his authority to teach and "give out the prayers"; and when Ciaran announced his intended departure, Finnian would fain resign to him his *cathair*, or chair, and keep him in Clonard. But Ciaran felt himself unripe for such responsibility, and he knew, moreover, he had work to do elsewhere.

After leaving Clonard, Ciaran, like most of the contemporary Irish saints, went to Aran to commune with holy Enda. One night the two saints beheld the same vision, "of a great fruitful tree, beside a stream, in the middle of Ireland, and it protected the island of Ireland, and its fruit went forth over the sea that surrounded the island, and the birds of the world came to carry off somewhat of its fruit". And when Ciaran spoke of the vision to Enda, the latter said to him: "The great tree which thou beholdest is thou thyself, for thou art great in the eyes of God and men,

and all Ireland will be full of thy honour. This island will be protected under the shadow of thy favour, and multitudes will be satisfied with the grace of thy fasting and prayer. Go then, with God's word, to a bank of a stream, and there found a church." Ciaran obeyed. On reaching the mainland he first paid a visit to St. Senan of Scatter and then proceeded towards the "middle of Ireland", founding on his way two monasteries, in one of which, on Inis Ainghin, he spent over three years. Going farther south he came to a lonely waste by the Shannon, and seeking out a beautiful grassy ridge, called Ard Tiprait, or the "Height of the Spring," he said to his companions: "Here then we will stay, for many souls will go to heaven hence, and there will be a visit from God and from men forever on this place". Thus, on 23 January, 544, Ciaran laid the foundation of his monastic school of Clonmacnoise, and on 9 May following he witnessed its completion. Diarmait, son of Cerball, afterwards High King of Ireland, aided and encouraged the saint in every way, promising him large grants of

CLONMACNOISE ABBEY

land as an endowment. Ciaran's government of his monastery was of short duration; he was seized by a plague which had already decimated the saints of Ireland, and died 9 September, 544.

It is remarkable that a young saint dying before he was thirty-three, should have been the founder of a school whose fame was to endure for centuries. But Ciaran was a man of prayer and fasting and labour, trained in all the science and discipline of the saints, humble and full of faith, and so was a worthy instrument in the hands of Providence for the carrying out of a high design. St. Cummian of Clonfert calls him one of the *Patres Priores* of the Irish Church, and Alcuin, the most illustrious *alumnus* of Clonmacnoise, proclaims him the *Gloria Gentis Scotorum*. His festival is kept on 9 September, and his shrine is visited by many pilgrims.

Ciaran left but little mark upon the literary annals of the famous school he founded. But in the character which he gave it of a seminary for a whole nation, and not for a particular tribe or district, is to be found the secret of its success. The masters were chosen simply for their learning and zeal; the abbots were elected almost in rotation from the different provinces; and the pupils thronged thither from all parts of Ireland, as well as from the remote quarters of France and England. From the beginning it enjoyed the confidence of the Irish bishops and the favour of kings and princes who were happy to be buried in its shadow. In its sacred clay sleep Diarmait the High King, and his rival Guaire, King of Connaught; Turrough O'Connor, and his hapless son, Roderick, the last King of Ireland, and many other royal benefactors, who believed that the prayers of Ciaran would bring to heaven all those who were buried there.

But Clonmacnoise was not without its vicissitudes. Towards the close of the seventh century a plague carried off a large number of its students and professors; and in the eighth century the monastery was burned three times, probably by accident, for the buildings were mainly of wood. During the ninth and tenth centuries it was harassed not only by the Danes, but also, and perhaps mainly, by some of the Irish chieftains. One of these, Felim MacCriffon, sacked the monastery three times, on the last occasion slaughtering the monks, we are told, like sheep. Even the monks themselves were infected by the bellicose spirit of the times, which manifested itself not merely in defensive, but sometimes even in offensive warfare. These were evil days for Clonmacnoise, but with the blessing of Ciaran, and under the "shadow of his favour", it rose superior to its trials, and all the while was the Alma Mater of saints and sages.

Under date 794, is recorded the death of Colgu the Wise, poet, theologian, and historian, who is said to have been the teacher of Alcuin at Clonmacnoise (see COELCHU). Another *alumnus* of vast erudition, whose gravestone may still be seen there, was Suibhne, son of Maclume, who died in 891. He is described as the "wisest and greatest Doctor of the Scots", and the annals of Ulster call him a "most excellent scribe". Tighernach, the most accurate and most ancient prose chronicler of the northern nations, belongs to Clonmacnoise, and probably also Dicuil (q. v.), the world-famed geographer. In this school were composed the "*Chronicon Scotorum*", a valuable chronicle of Irish affairs from the earliest times to 1135, and the "*Leabhar na h-Uidhre*", which, excepting the "*Book of Armagh*", is the oldest Irish historical transcript now in existence. In the twelfth century Clonmacnoise was a great school of Celtic art, architecture, sculpture, and metal work. To this period and to this school we owe the stone crosses of Tuam and Cong, the processional cross of Cong, and perhaps the Tara Brooch and the Chalice of Ardagh. The ruined towers and crosses and temples are still to be seen; but there is no trace of the little church of Ciaran which was the nucleus of Clonmacnoise.

Chronicon Scotorum, ed HENNESSY (London, 1866); *Lives of Irish Saints from Book of Lismore*, ed. STOKES (Oxford, 1890); HEALY, *Ireland's Ancient Schools and Scholars* (Dublin, 1890).

JOHN HEALY.

Clonmacnoise, DIOCESE OF. See ARDAGH.

Clotilda (Fr. CLOTILDE; Ger. CHLOTHILDE), SAINT, Queen of the Franks, b. probably at Lyons, c. 474; d. at Tours, 3 June, 545. Her feast is celebrated 3 June. Clotilda was the wife of Clovis I, and the daughter of Chilperic, King of the Burgundians of Lyons, and his wife Caretena. After the death of King Gundovic (Gundioch), the Kingdom of Burgundy had been divided among his four sons, Chilperic reigning at Lyons, Gondebad at Vienne, and Godegisil at Geneva; Gondemar's capital is not mentioned. Chilperic and probably Godegisil were Catholics, while Gondebad professed Arianism. Clotilda was given a religious training by her mother Caretena, who, according to Sidonius Apollinaris and Fortunatus of Poitiers, was a remarkable woman. After the death of Chilperic, Caretena seems to have made her home with Godegisil at Geneva, where her other daughter, Sedeleuba, or Chrona, founded the church of Saint-Victor, and took the religious habit. It was soon after the death of Chilperic that Clovis asked and obtained the hand of Clotilda.

From the sixth century on, the marriage of Clovis and Clotilda was made the theme of epic narratives, in which the original facts were materially altered and the various versions found their way into the works of different Frankish chroniclers, e. g. Gregory of Tours, Fredegarius, and the "*Liber Historiæ*". These narratives have the character common to all

nuptial poems of the rude epic poetry found among many of the Germanic peoples. Here it will suffice to summarize the legends and add a brief statement of the historical facts. Further information will be found in special works on the subject. The popular poems substituted for King Godegisil, uncle and protector of Clotilda, his brother Gondebad, who was represented as the persecutor of the young princess. Gondebad is supposed to have slain Chilperic, thrown his wife into a well, with a stone tied around her neck, and exiled her two daughters. Clovis, on hearing of the beauty of Clotilda, sent his friend Aurelian, disguised as a beggar, to visit her secretly, and give her a gold ring from his master; he then asked Gondebad for the hand of the young princess. Gondebad, fearing the powerful King of the Franks, dared not refuse, and Clotilda accompanied Aurelian and his escort on their return journey. They hastened to reach Frankish territory, as Clotilda feared that Aredius, the faithful counsellor of Gondebad, on his return from Constantinople, whither he had been sent on a mission, would influence his master to retract his promise. Her fears were justified. Shortly after the departure of the princess, Aredius returned and caused Gondebad to repent his consent to the marriage. Troops were dispatched to bring Clotilda back, but it was too late, as she was safe on Frankish soil. The details of this recital are purely legendary. It is historically established that Chilperic's death was lamented by Gondebad, and that Caretena lived until 506; she died "full of days", says her epitaph, having had the joy of seeing her children brought up in the Catholic religion. Aurelian and Aredius are historical personages, though little is known of them but their names, and the rôle attributed to them in the legend is highly improbable.

Clotilda, as wife of Clovis, soon acquired a great ascendancy over him, of which she availed herself to exhort him to embrace the Catholic Faith. For a long time her efforts were fruitless, though the king permitted the baptism of Ingomir, their first son. The child died in his infancy, which seemed to give Clovis an argument against the God of Clotilda, but notwithstanding this, the young queen again obtained the consent of her husband to the baptism of their second son, Clodomir. Thus the future of Catholicism was already assured in the Frankish Kingdom. Clovis himself was soon afterwards converted under highly dramatic circumstances, and was baptized at Reims by St. Remigius, in 496 (see CLOVIS). Thus Clotilda accomplished the mission assigned her by Providence; she was made the instrument in the conversion of a great people, who were to be for centuries the leaders of Catholic civilization. Clotilda bore Clovis five children: four sons, Ingomir, who died in infancy, and Kings Clodomir, Childebert, and Clotaire, and one daughter, named Clotilda after her mother. Little more is known of Queen Clotilda during the lifetime of her husband, but it may be conjectured that she interceded with him, at the time of his intervention in the quarrel between the Burgundian kings, to win him to the cause of Godegisil as against Gondebad. The moderation displayed by Clovis in this struggle, in which, though victor, he did not seek to turn the victory to his own advantage, as well as the alliance which he afterwards concluded with Gondebad, were doubtless due to the influence of Clotilda, who must have viewed the fratricidal struggle with horror.

Clovis died at Paris in 511, and Clotilda had him interred on what was then Mons Lucotetius, in the church of the Apostles (later Sainte-Geneviève), which they had built together to serve as a mausoleum, and which Clotilda was left to complete. The widowhood of this noble woman was saddened by cruel trials. Her son Clodomir, son-in-law of Gondebad, made war against his cousin Sigismund, who had succeeded Gondebad on the throne of Burgundy, captured him,

and put him to death with his wife and children at Coulmiers, near Orléans. According to the popular epic of the Franks, he was incited to this war by Clotilda, who thought to avenge upon Sigismund the murder of her parents; but, as has already been seen, Clotilda had nothing to avenge, and, on the contrary, it was probably she who arranged the alliance between Clovis and Gondebad. Here the legend is at variance with the truth, cruelly defaming the memory of Clotilda, who had the sorrow of seeing Clodomir perish in his unholy war on the Burgundians; he was vanquished and slain in the battle of Vésuruntia (Vézérone), in 524, by Godomar, brother of Sigismund. Clotilda took under her care his three sons of tender age, Theodoald, Gunther, and Clodoald. Childebert and Clotaire, however, who had divided between them the inheritance of their elder brother, did not wish the children to live, to whom later on they would have to render an account. By means of a ruse they withdrew the children from the watchful care of their mother and slew the two eldest; the third escaped and entered a cloister, to which he gave his name (Saint-Cloud, near Paris).

The grief of Clotilda was so great that Paris became insupportable to her, and she withdrew to Tours, where close to the tomb of St. Martin, to whom she had great devotion, she spent the remainder of her life in prayer and good works. But there were trials still in store for her. Her daughter Clotilda, wife of Amalaric, the Visigothic king, being cruelly maltreated by her husband, appealed for help to her brother Childebert. He went to her rescue and defeated Amalaric in a battle, in which the latter was killed; Clotilda, however, died on the journey home, exhausted by the hardships she had endured. Finally, as though to crown the long martyrdom of Clotilda, her two sole surviving sons, Childebert and Clotaire, began to quarrel, and engaged in serious warfare. Clotaire, closely pursued by Childebert, who had been joined by Theodebert, son of Thierry I, took refuge in the forest of Brotonne, in Normandy, where he feared that he and his army would be exterminated by the superior forces of his adversaries. Then, says Gregory of Tours, Clotilda threw herself on her knees before the tomb of St. Martin, and besought him with tears during the whole night not to permit another fratricide to afflict the family of Clovis. Suddenly a frightful tempest arose and dispersed the two armies which were about to engage in a hand-to-hand struggle; thus, says the chronicler, did the saint answer the prayers of the afflicted mother. This was the last of Clotilda's trials. Rich in virtues and good works, after a widowhood of thirty-four years, during which she lived more as a religious than as a queen, she died and was buried in Paris, in the church of the Apostles, beside her husband and children.

The life of Saint Clotilda, the principal episodes of which, both legendary and historic, are found scattered throughout the chronicle of St. Gregory of Tours, was written in the tenth century, by an anonymous author, who gathered his facts principally from this source. At an early period she was venerated by the Church as a saint, and while popular contemporary poetry disfigures her noble personality by making her a type of a savage fury, Clotilda has now entered into the possession of a pure and untarnished fame, which no legend will be able to obscure.

GODEFROID KURTH.

Clouet, the family name of several generations of painters.

I. JEAN (JEAN THE YOUNGER), b. at Tours, France, 1485; d., probably at Paris, between 1541 and 1545.

He was the son and pupil of Jean the Elder, a Flemish painter who went to Paris from Brussels in 1460 and afterwards settled at Tours. Francis I made the son court painter at Paris, and, in 1518, a valet de chambre, a post of distinction. The court called him familiarly "Janet", a name which became generic, comprising his father, his son François, and their numerous imitators. Ronsard sang:

Peins moy, Janet, peins moy je t'en supplie.

His numerous portraits of royalty and nobility are all in the antique, or Gothic, style, like that of the Van Eycks. His outlines are sharp and precise, all the lines are clear, and he gives great attention to details. Clouet painted his sitters with fidelity and avoided theatrical (Italian) effects, hence the result is a portrait, simple, reticent, and naive. Much of his work was until recently attributed to Holbein. In 1524 he painted the celebrated portrait of Francis I in full armour on horseback, and in 1528 another, a life-size bust (now at Versailles), long ascribed to Mabuse. Some authorities claim that of his many pictures only one is authentic: the portrait of Francis I in the Louvre. "Other notable works of Clouet's are "Eleanor of Spain" (wife of Francis I) in Hampton Court, and "Margaret of Valois" in Liverpool.

II. FRANÇOIS, called FRANÇOIS JANET and MAÎTRE JEHANNET, b. probably at Tours, between 1500 and 1520; d. at Paris, between 1570 and 1580. He was the son and pupil of Jean the Younger and was naturalized in 1541. At the age of thirty-five he succeeded his father as court painter to Francis I, to whom he was also appointed a valet de chambre. François was also court painter to Charles IX, at the close of whose reign all traces of him disappear. Clouet's work in oil, while Flemish in its scrupulous attention to details, is, however, distinctively French, and he carried to its highest the fame of "the Janets". He was the last of the French *primitifs*. His pictures are painted solidly, in pale, delicate tones, and without chiaroscuro. Clouet's portraits are true, accurate, and devoid of sentimentality; they show forth the moral and intellectual qualities of each sitter; and they "have the charm of *intime* painting" (Blanc). Two portraits of great brilliancy and distinction are the "Francis II as a Child" (1547) now at Antwerp, and "Henry II" (1553) in the Louvre; but Berlin possesses what are, perhaps, his masterpieces: "Francis II" and the "Duc d'Anjou" (Henry III). Clouet's office required him to depict every great court function, and as late as 1709 such a group of pictures was in existence. He made many sketches in black and red chalk, showing perfect draughtsmanship and splendid modelling. Castle Howard contains eighty-eight such drawings, all in the manner of Holbein. Clouet also painted miniatures; that of greatest historical interest is "Mary Queen of Scots" (Windsor Castle), which has never been out of royal possession since catalogued, in the time of Charles, as "by Jennet a French limner". It is probably the only authentic picture of the unhappy Mary. Clouet's work was highly valued during his lifetime, and he was a power at the courts of Francis I, Henry II, Francis II, and Charles IX. The brilliant men and women about these monarchs felt that "the Janets" had elevated art and France. To-day their pictures are so highly prized that many forgeries are made of them. Besides those mentioned, other great canvases by François are "Elizabeth of Austria", "Charles IX", both in the Louvre, and four portraits in Stafford House (London). Collections of his drawings are in the Louvre, British Museum, and Albertina Museum (Vienna).

LEIGH HUNT.

Cloutier, F.-X. See THREE RIVERS, DIOCESE OF.

Clovesho, COUNCILS OF.—Clovesho, or Clofeshoch, is notable as the place at which were held several councils of the Anglo-Saxon Church. The locality itself has never been successfully identified. It is supposed to have been in Mercia, and probably near London (Bede, ed. Plummer, II, 214). Lingard, in his appendix to the "Antiquities of the Anglo-Saxon Church", takes it to be Abingdon, and Kemble (Saxons in England, II, 191) to be Tewkesbury, and others have thought it might be Cliff-at-Hoo, in Kent, but Haddan and Stubbs (Councils, III, 121, n.) consider all these conjectures to be based upon unreliable evidence. Whatever uncertainty exists in determining the place which was known as Clovesho, there is no doubt as to the fact of the councils or to the authenticity of their Acts. When Archbishop Theodore held the Council of Hertford in 673, in which he declared to the assembled bishops that he had been "appointed by the Apostolic See to be Bishop of the Church of Canterbury", a canon was passed to the effect that in future yearly synods should be held every August "in the place which is called Clofeshoch". (Bede, H. E., IV, ch. v.) Notwithstanding this provision, it was not until seventy years later that the first Council of Clovesho of which we have an authentic record was assembled. It is true that in the Canterbury Cartulary there is a charter which says that the Privilege of King Wihtrud to the churches was "confirmed and ratified in a synod held in the month of July in a place called Clovesho" in the year 716; but the authenticity of this document, though intrinsically probable, is held by Haddan and Stubbs to be dependent upon that of the Privilege of Wihtrud. The councils of Clovesho of which we have authentic evidence are those of the years 742, 747, 794, 798, 803, 824, and 825.

(1) The Council of Clovesho in 742 was presided over by Ethelbald, King of Mercia, and Cuthbert, Archbishop of Canterbury. According to the record of its proceedings (given in Kemble's "Codex Diplomaticus Ævi Saxonici", 87), the council "diligently enquired into the needs of religion, the Creed as delivered by the ancient teaching of the Fathers, and carefully examined how things were ordered at the first beginning of the Church here in England, and where the honour of the monasteries according to the rules of justice was maintained". The privilege of King Wihtrud assuring the liberty of the Church was solemnly confirmed. Beyond this, no mention is made of particular provisions.

(2) The Second Council of Clovesho, in 747, was one of the most important in the history of the Anglo-Saxon Church. Its acts were happily copied by Spelman (Councils, I, 240) from an ancient Cottonian MS. now lost. They are printed in Wilkins, I, 94; in Mansi, XII, 395; and in Haddan and Stubbs, III, 360. They state that the council was composed of "bishops and dignitaries of less degree from the various provinces of Britain", and that it was presided over by Cuthbert, Archbishop of Canterbury. According to the MS. preserved by William of Malmesbury, "King Ethelbald and his princes and chiefs were present". It was thus substantially representative of the Anglo-Saxon Church. The Acts relate that "first of all, the Metropolitan, as president, brought forth in their midst two letters of the Apostolic Lord, Pope Zachary, venerated throughout the whole world, and with great care these were plainly read, and also openly translated into our own language, according as he himself by his Apostolic authority had commanded". The papal letters are described as containing a fervent admonition to amendment of life, addressed to the English people of every rank and condition, and requiring that those who contemned these warnings and remained obsti-

nate in their malice should be punished by sentence of excommunication. The council then drew up thirty-one canons dealing mostly with matters of ecclesiastical discipline and liturgy.

The thirteenth and fifteenth canons are noteworthy as showing the close union of the Anglo-Saxon Church with the Holy See. The thirteenth canon is: "That all the most sacred Festivals of Our Lord made Man, in all things pertaining to the same, viz.: in the Office of Baptism, the celebration of Masses, in the method of chanting, shall be celebrated in one and the same way, namely, according to the sample which we have received in writing from the Roman Church. And also, throughout the course of the whole year, the festivals of the Saints are to be kept on one and the same day, with their proper psalmody and chant, according to the Martyrology of the same Roman Church." The fifteenth canon adds that in the seven hours of the daily and nightly Office the clergy "must not dare to sing or read anything not sanctioned by the general use, but only that which comes down by authority of Holy Scripture, and which the usage of the Roman Church allows". The sixteenth canon in like manner requires that the litanies and rogations are to be observed by the clergy and people with great reverence "according to the rite of the Roman Church". The feasts of St. Gregory and of St. Augustine, "who was sent to the English people by our said Pope and father St. Gregory", were to be solemnly celebrated. The clergy and monks were to live so as to be always prepared to receive worthily the most holy Body and Blood of the Lord, and the laity were to be exhorted to the practice of frequent Communion (Canons xxii, xxiii). Persons who did not know Latin were to join in the psalmody by intention, and were to be taught to say, in the Saxon tongue, prayers for the living or for the repose of the souls of the dead (Can. xxvii). Neither clergy nor monks were in future to be allowed to live in the houses of the people (Can. xxix), nor were they to adopt or imitate the dress which is worn by the laity (Can. xxviii).

(3) The record of the Council of Clovesho in 794 consists merely in a charter by which Offa, King of Mercia, made a grant of land for pious purposes. The charter states that it has been drawn up "in the general synodal Council in the most celebrated place called Clofeshoas". At or about the time when the papal legates presided at the Council of Chelsea in 787, Offa had obtained from Pope Adrian I that Lichfield should be created an archbishopric and that the Mercian sees should be subjected to its jurisdiction and withdrawn from that of Canterbury. Consequently at this Council of Clovesho in 794, Higbert of Lichfield, to whom the pope had sent the pall, signs as an archbishop.

(4) A council was held at Clovesho in 798 by Archbishop Ethelheard with Kenulph, King of Mercia, at which the bishops and abbots and chief men of the province were present. Its proceedings are related in a document by Archbishop Ethelheard (Lambeth MS. 1212, p. 312; Haddan and Stubbs, III, 512). He states that his first care was to examine diligently "in what way the Catholic Faith was held and how the Christian religion was practised amongst them". To this inquiry, "they all replied with one voice: 'Be it known to your Paternity, that even as it was formerly delivered to us by the Holy Roman and Apostolic See, by the mission of the most Blessed Pope Gregory, so do we believe, and what we believe, we in all sincerity do our best to put into practice.'" The rest of the time of the council was devoted to questions of church property, and an agreement of exchange of certain lands between the archbishop and the Abbess Cynedriha.

(5) The Council of Clovesho in 803 is one of the most remarkable of the series, as its Acts contain the declaration of the restitution of the Mercian sees to the

province of Canterbury by the authority of Pope Leo III. In 798 King Kenulph of Mercia addressed to the pope a long letter, written as he says "with great affection and humility", representing the disadvantages of the new archbishopric which had been erected at Lichfield some sixteen years previously by Pope Adrian, at the prayer of King Offa. King Kenulph in this letter (Haddan and Stubbs, III, 521) submits the whole case to the pope, asking his blessing and saying: "I love you as one who is my father, and I embrace you with the whole strength of my obedience", and promising to abide in all things by his decision. "I judge it fitting to bend humbly the ear of our obedience to your holy commands, and to fulfil with all our strength whatever may seem to your Holiness that we ought to do." Ethelheard, Archbishop of Canterbury, went himself to Rome, and pleaded for the restitution of the sees. In 802 Pope Leo III granted the petition of the king and the archbishop, and issued to the latter a Bull in which by the authority of Blessed Peter he restored to him the full jurisdiction enjoyed by his predecessors. The pope communicated this judgment in a letter to King Kenulph (Haddan and Stubbs, III, 538). This decision was duly proclaimed in the Council of Clovesho held in the following year. Archbishop Ethelheard declared to the synod that "by the co-operation of God and of the Apostolic Lord, the Pope Leo", he and his fellow-bishops unanimously ratified the rights of the See of Canterbury, and that an archbishopric should never more be founded at Lichfield, and that the grant of the pallium made by Pope Adrian, should, "with the consent and permission of the Apostolic Lord Pope Adrian, be considered as null, having been obtained surreptitiously and by evil suggestion". Higbert, the Archbishop of Lichfield, submitted to the papal judgment, and retired into a monastery, and the Mercian sees returned to the jurisdiction of Canterbury.

(6-7) In 824 and again in 825 synods were held at Clovesho, "Beornwulf, King of Mercia, presiding and the Venerable Archbishop Wulfred ruling and controlling the Synod", according to the record of the first, and "Wulfred the Archbishop presiding, and also Beornwulf, King of Mercia", according to the second. The first assembly was occupied in deciding a suit concerning an inheritance, and the second in terminating a dispute between the archbishop and the Abbess Cwenthrytha (Haddan and Stubbs, III, 593, 596).

It is evident from the records that the councils held at Clovesho and those generally of the Anglo-Saxon period were mixed assemblies at which not only the bishops and abbots, but the kings of Mercia and the chief men of the kingdom were present. They had thus the character not only of a church synod but of the *Witenagemot* or assembly fairly representative of the Church and realm. The affairs of the Church were decided by the bishops presided over by the archbishop, while the king, presiding over his chiefs, gave to their decisions the co-operation and acceptance of the State. Both parties signed the decrees, but there is no evidence of any ingerence of the lay power in the spiritual legislation or judgments of the Church. While it must be remembered that at this period the country was not yet united into one kingdom, the councils of Clovesho, as far as we may judge from their signatures, represented the primatial See of Canterbury and the whole English Church south of the Humber.

J. MOYES.

Clovio, **GIORGIO** (known as **GIULIO**), a famous Italian miniaturist, called by Vasari "the unique"

and "little Michelangelo", b. at Grizani, on the coast of Croatia, in 1498; d. at Rome, 1578. His family appear to have come from Macedonia, and his original name was perhaps Glović. Coming to Italy at the age of eighteen, he soon won renown, and became a protégé of Cardinal Grimani, for whom he engraved medals and seals. One of his first pictures was a Madonna after an engraving by Albert Dürer. In 1524 Clovio was at Buda, at the court of King Louis II, for whom he painted the "Judgment of Paris" and "Lucretia". In 1526 he returned to Rome, and a year later, falling into the hands of the Constable Bourbon's banditti, he made a vow to enter religion if he could escape from them. He accordingly took orders at Mantua, and illustrated several manuscripts for his convent, adopting in religion the name Giulio, perhaps in memory of Giulio Romano, who had been one of his early advisers. Thanks to the intervention of Cardinal Grimani, he was soon released from his vows, and spent several years in the service of this prelate, for whom he executed some of his most beautiful works—a Latin missal, 1537 (in Lord Hertford's collection), and a Petrarch (in the Trivulzio Library at Milan). He was at Venice in 1538, but in 1540 was summoned to Rome by Pope Paul III. Cosimo II then lured him to Tuscany, and princes disputed over his achievements. Philip II ordered from Clovio a life of his father, Charles V, in twelve scenes, and John III of Portugal paid him 2000 ducats for a psalter, but a prayer book which he made for Cardinal Farnese, and which Vasari calls a "divine work", was considered Clovio's masterpiece. The binding was made after a design by Cellini. Clovio died in Rome at the age of eighty; his tomb is to be seen in the church of San Pietro in Vincoli, and his works are preserved in all the libraries of Europe, especially that of the Vatican.

This famous artist, although one of the most highly esteemed in his own line, was nevertheless among those who helped to injure it. By introducing into it the ideas and monumental style of the Renaissance and replacing rich costumes, delicate arabesques, and Gothic foliage by the nude, by antique ornaments, trophies, medallions, festoons, etc., Clovio contributed largely to the decadence of the charming art of miniature-painting, and his example of extreme elaboration was imitated throughout Europe at a time when printing had not yet supplanted manuscripts for éditions de luxe. However sumptuous his work, it lacked the quality which distinguished that done by the French illuminators at an earlier period for Charles V and the Duc de Berry.

LOUIS GILLET.

Clovis (CHLODWIG, or CHLODOWECH), son of Childeric, King of the Salic Franks, b. in the year 466; d. at Paris, 27 November, 511. He succeeded his father as King of the Franks of Tournai in 481. His kingdom was probably one of the States that sprang from the division of Clodion's monarchy, like those of Cambrai, Tongres, and Cologne. Although a pagan, Childeric had kept up friendly relations with the bishops of Gaul, and when Clovis ascended the throne he received a most cordial letter of congratulation from St. Remigius, Archbishop of Reims. The young king early began his course of conquest by attacking Syagrius, son of Ægidius the Roman Count. Having established himself at Soissons, he acquired sovereign authority over so great a part of Northern Gaul as to be known to his contemporaries as the King of Soissons. Syagrius, being defeated, fled for protection to Alaric II, King of the Visigoths, but the latter, alarmed by a summons from Clovis, delivered Syagrius to his conqueror, who had him decapitated in

486. Clovis then remained master of the dominions of Syagrius and took up his residence at Soissons. It would seem as if the episode of the celebrated vase of Soissons were an incident of the campaign against Syagrius, and it proves that, although a pagan, Clovis continued his father's policy by remaining on amicable terms with the Gaulish episcopate. The vase, taken by the Frankish soldiers while plundering a church, formed part of the booty that was to be divided among the army. It was claimed by the bishop (St. Remigius?), and the king sought to have it awarded to himself in order to return it intact to the bishop, but a dissatisfied soldier split the vase with his battle-axe, saying to the king: "You will get only the share allotted you by fate." Clovis did not openly resent the insult, but the following year, when reviewing his army, he came upon this same soldier and, reproving him for the defective condition of his arms, he split his skull with an axe, saying: "It was thus that you treated the Soissons vase." This incident has often been cited to show that, although in time of war a king has unlimited authority over his army, after the war his power is restricted, and that in the division of booty the rights of the soldiers must be respected.

After the defeat of Syagrius, Clovis extended his dominion as far as the Loire. It was owing to the assistance given him by the Gaulish episcopate that he gained possession of the country. The bishops, it is quite certain, mapped out the regime that afterwards prevailed. Unlike that adopted in other barbarian kingdoms founded upon the ruins of the Roman Empire, this regime established absolute equality between the Gallo-Roman natives and their Germanic conquerors, all sharing the same privileges. Procopius, a Byzantine writer, has given us an idea of this agreement, but we know it best by its results. There was no distribution of Gaulish territory by the victors; established in the Belgian provinces, they had lands there to which they returned after each campaign. All the free men in the kingdom of Clovis, whether they were of Roman or of Germanic origin, called themselves Franks, and we must guard against the old mistake of looking upon the Franks after Clovis as no more than Germanic barbarians.

Master of half of Gaul, Clovis returned to Belgium and conquered the two Salic kingdoms of Cambrai and Tongres (?), where his cousins Ragnacaire and Chararic reigned. These events have been made known to us only through the poetic tradition of the Franks, which has singularly distorted them. According to this tradition Clovis called upon Chararic to assist him in his war against Syagrius, but Chararic's attitude throughout the battle was most suspicious, as he refrained from taking sides until he saw which of the rivals was to be victorious. Clovis longed to have revenge. Through a ruse he obtained possession of Chararic and his son and threw them into prison; he then had their heads shaved, and both were ordained, the father to the priesthood and the son to the diaconate. When Chararic bemoaned and wept over this humiliation his son exclaimed: "The leaves of a green tree have been cut, but they will quickly bud forth again; may he who has done this perish as quickly!" This remark was reported to Clovis, and he had both father and son beheaded.

Tradition goes on to say that Ragnacaire, King of Cambrai, was a man of such loose morals that he hardly respected his own kindred, and Farron, his favourite, was equally licentious. So great was the king's infatuation for this man that, if given a present, he would accept it for himself and his Farron. This filled his subjects with indignation and Clovis, to win them over to his side before taking the field, distributed among them money, bracelets, and baldrics, all in gilded copper in fraudulent imitation of genuine gold. On different occasions Ragnacaire sent out

spies to ascertain the strength of Clovis's army, and upon returning they said: "It is a great reinforcement for you and your Farron." Meanwhile, Clovis advanced and the battle began. Being defeated, Ragnacaire sought refuge in flight, but was overtaken, made prisoner, and brought to Clovis, his hands bound behind him. "Why", said his conqueror, "have you permitted our blood to be humiliated by allowing yourself to be put in chains? It were better that you should die." And, so saying, Clovis dealt him his death-blow. Then, turning to Richaire, Ragnacaire's brother, who had been taken prisoner with the king, he said: "Had you but helped your brother, they would not have bound him", and he slew Richaire also. After these deaths the traitors discovered that they had been given counterfeit gold and complained of it to Clovis, but he only laughed at them. Rignomir, one of Ragnacaire's brothers, was put to death at Le Mans by order of Clovis, who took possession of the kingdom and the treasure of his victims.

Such is the legend of Clovis; it abounds in all kinds of improbabilities, which cannot be considered as true history. The only facts that can be accepted are that Clovis made war upon Kings Ragnacaire and Chararic, put them to death, and seized their territories. Moreover, the author of this article is of the opinion that these events occurred shortly after the conquest of the territory of Syagrius, and not after the war against the Visigoths, as has been maintained by Gregory of Tours, whose only authority is an oral tradition, and whose chronology in this matter is decidedly misleading. Besides, Gregory of Tours has not given us the name of Chararic's kingdom; it was long believed to have been established at Théroutanne, but it is more probable that Tongres was its capital city, since it was here that the Franks settled on gaining a foothold in Belgium.

In 492 or 493 Clovis, who was master of Gaul from the Loire to the frontiers of the Rhenish Kingdom of Cologne, married Clotilda, the niece of Gondebad, King of the Burgundians. The popular epic of the Franks has transformed the story of this marriage into a veritable nuptial poem, the analysis of which will be found in the article on Clotilda. Clotilda, who was a Catholic, and very pious, won the consent of Clovis to the baptism of their son, and then urged that he himself embrace the Catholic Faith. He deliberated for a long time. Finally, during a battle against the Alemanni—which without apparent reason has been called the Battle of Tolbiac (Zülrich)—seeing his troops on the point of yielding, he invoked the aid of Clotilda's God, and promised to become a Christian if only victory should be granted him. He conquered and, true to his word, was baptized at Reims by St. Remigius, bishop of that city, his sister Albofledis and three thousand of his warriors at the same time embracing Christianity. Gregory of Tours, in his ecclesiastical history of the Franks, has described this event, which took place amid great pomp at Christmas, 496. "Bow thy head, O Sicambrian", said St. Remigius to the royal convert. "Adore what thou hast burned and burn what thou hast adored." According to a ninth-century legend found in the life of St. Remigius, written by the celebrated Hincmar, himself Archbishop of Reims, the chrism for the baptismal ceremony was missing and was brought from heaven in a vase (*ampulla*) borne by a dove. This is what is known as the Sainte Ampoule of Reims, preserved in the treasury of the cathedral of that city, and used for the coronation of the kings of France from Philip Augustus down to Charles X.

The conversion of Clovis to the religion of the majority of his subjects soon brought about the union of the Gallo-Romans with their barbarian conquerors. While in all the other Germanic kingdoms founded on the ruins of the Roman Empire the difference of religion between the Catholic natives and

Arian conquerors was a very active cause of destruction, in the Frankish Kingdom, on the contrary, the fundamental identity of religious beliefs and the equality of political rights made national and patriotic sentiment universal, and produced the most perfect harmony between the two races. The Frankish Kingdom was thenceforth the representative and defender of Catholic interests throughout the West, while to his conversion Clovis owed an exceptionally brilliant position. Those historians who do not understand the problems of religious psychology have concluded that Clovis embraced Christianity solely from political motives, but nothing is more erroneous. On the contrary, everything goes to prove that his conversion was sincere, and the opposite cannot be maintained without refusing credence to the most trustworthy evidence.

In the year 500 Clovis was called upon to mediate in a quarrel between his wife's two uncles, Kings Gondebad of Vienne and Godegisil of Geneva. He took sides with the latter, whom he helped to defeat Gondebad at Dijon, and then, deeming it prudent to interfere no further in this fratricidal struggle, he returned home, leaving Godegisil an auxiliary corps of five thousand Franks. After Clovis's departure Gondebad reconquered Vienne, his capital, in which Godegisil had established himself. This reconquest was effected by a stratagem seconded by treachery, and Godegisil himself perished on the same occasion. The popular poetry of the Franks has singularly misrepresented this intervention of Clovis, pretending that, at the instigation of his wife Clotilda, he sought to avenge her grievances against her uncle Gondebad (see *CLOTILDA*), and that the latter king, besieged in Avignon by Clovis, got rid of his opponent through the agency of Aredius, a faithful follower. But in these poems there are so many fictions as to render the history in them indistinguishable.

An expedition, otherwise important and profitable, was undertaken by Clovis in the year 506 against Alaric II, King of the Visigoths of Aquitaine. He was awaited as their deliverer by the Catholics of that kingdom, who were being cruelly persecuted by Arian fanatics, and was encouraged in his enterprise by the Emperor Anastasius, who wished to crush this ally of Theodoric, King of the Ostrogoths. Despite the diplomatic efforts made by the latter to prevent the war, Clovis crossed the Loire and proceeded to Vouillé, near Poitiers, where he defeated and slew Alaric, whose demoralized troops fled in disorder. The Franks took possession of the Visigoth Kingdom as far as the Pyrenees and the Rhone, but the part situated on the left bank of this river was stoutly defended by the armies of Theodoric, and thus the Franks were prevented from seizing Arles and Provence. Notwithstanding this last failure, Clovis, by his conquest of Aquitaine, added to the Frankish crown the fairest of its jewels. So greatly did the Emperor Anastasius rejoice over the success attained by Clovis that, to testify his satisfaction, he sent the Frankish conqueror the insignia of the consular dignity, an honour always highly appreciated by the barbarians.

The annexation of the Rhenish Kingdom of Cologne crowned the acquisition of Gaul by Clovis. But the history of this conquest, also, has been disfigured by a legend that Clovis instigated Chlodéric, son of Sigebert of Cologne, to assassinate his father, then, after the perpetration of this foul deed, caused Chlodéric himself to be assassinated, and finally offered himself to the Rhenish Franks as king, protesting his innocence of the crimes that had been committed. The only historical element in this old story, preserved by Gregory of Tours, is that the two kings of Cologne met with violent deaths, and that Clovis, their relative, succeeded them partly by right of birth, partly by popular choice. The criminal means by which he

is said to have reached this throne are pure creations of the barbarian imagination.

Master now of a vast kingdom, Clovis displayed the same talent in governing that he had displayed in conquering it. From Paris, which he had finally made his capital, he administered the various provinces through the agency of counts (*comites*) established in each city and selected by him from the aristocracy of both races, conformably to the principle of absolute equality between Romans and barbarians, a principle which dominated his entire policy. He caused the Salic Law (*Lex Salica*) to be reduced to written form, revised and adapted to the new social conditions under which his fellow barbarians were subsequently to live. Acknowledging the Church as the foremost civilizing force, he protected it in every way possible, especially by providing for the National Council of Orléans (511), at which the bishops of Gaul settled many questions pertaining to the relations between Church and State. Hagiographic legends attribute to Clovis the founding of a great many churches and monasteries throughout France, and although the accuracy of this claim cannot be positively established, it is nevertheless certain that the influence of the council in this matter must have been considerable. However, history has preserved the memory of one foundation which was undoubtedly due to Clovis: the church of the Apostles, later of Sainte-Geneviève, on what was then Mons Lucotetius, to the south of Paris. The king destined it as a mausoleum for himself and his queen Clotilda, and before it was completed his mortal remains were there interred. Clovis died at the age of forty-five. His sarcophagus remained in the crypt of Sainte-Geneviève until the time of the French Revolution, when it was broken open by the revolutionists, and his ashes scattered to the winds, the sanctuary of the beautiful church being destroyed at the same time.

The history of this monarch has been so hopelessly distorted by popular poetry and so grossly disfigured by the vagaries of the barbarian imagination as to make the portrayal of his character wellnigh impossible. However, from authentic accounts of him it may be concluded that his private life was not without virtues. As a statesman he succeeded in accomplishing what neither the genius of Theodoric the Great nor that of any contemporary barbarian king could achieve; upon the ruins of the Roman Empire he built up a powerful system, the influence of which dominated European civilization during many centuries, and from which sprang France, Germany, Belgium, Holland, and Switzerland, without taking into account that northern Spain and northern Italy were also, for a time, under the civilizing regime of the Frankish Empire.

Clovis left four sons. Theodoric, the eldest, was the issue of a union prior to that contracted with Clotilda, who was, however, the mother of the three others, Clodomir, Chilbert, and Clotaire. They divided their father's kingdom among themselves, following the barbarian principle that sought promotion of personal rather than national interests, and looked upon royalty as the personal prerogative of the sons of kings. After the death of Clovis his daughter Clotilda, named after her mother, married Amalric, King of the Visigoths. She died young, being cruelly abused by this Arian prince, who seemed eager to wreak vengeance on the daughter of Clovis for the tragic death of Alaric II.

Cloyne (Gael. *Chuain-uania*, Cave-meadow), DIOCESE OF (CLONENSIS, or CLOYNENSIS), comprises the northern half of County Cork. It has 140 priests, 47 parishes, 16 convents, 8 Brothers' schools, 235 primary schools, and, for higher education, St. Colman's College and Loreto Convent (Fermoy), besides high schools at Queenstown and elsewhere. St. Colman's Cathedral, Queenstown, begun in 1869 under Bishop Keane, continued under Bishop McCarthy, in 1908 near completion, is one of the most beautiful of modern Gothic cathedrals. The medieval diocesan cathedral, used by Protestants since the sixteenth century, still stands at Cloyne. St. Colman Mac-Lenin (560-601), diverted from his profession of poet-historian by Sts. Ita and Brendan, became (560) first

CATHEDRAL, CLOYNE

Bishop of Cloyne, where he got a royal grant of land. Some religious poems, notably a metrical life of St. Senan, are attributed to him.

Fergal, Abbot-Bishop of Cloyne, was massacred in 888 by the Danes. There are seven recorded devastations of Cloyne from 822 to 1137. The ecclesiastical records were destroyed, so that few prelates' names before 1137 are known; we have nearly all of them since that year. In 1152 (Synod of Kells) Cloyne was made one of Cashel's twelve suffragan sees. From 1265 to 1429 the bishops of Cloyne were mostly Englishmen. Effingham (1284-1320) probably built Cloyne cathedral. Swafham (1363-1376), who wrote "Contra Wicklevistas" and "Conciones", commenced the "Rotulus Pipæ Clonensis", the rent-roll of the see. Robbery of church property by nobles impoverished the Sees of Cloyne and Cork, which were united in 1429, by papal authority, under Bishop Purcell. Blessed Thaddeus MacCarthy was bishop from 1490 to 1492. The last Catholic bishop who enjoyed the temporalities was Benet (1523-1536). Tirry, appointed in 1536 by Henry VIII, and Tirry's successor, Skiddy, are ignored in the Consistorial Acts. Macnamara succeeded Benet; O'Heyne succeeded in 1540; Landes in 1568; Tanner in 1574; MacCreaghe in 1580; Tirry in 1622; Barry in 1647; Creagh in 1676; Sleyne in 1693; MacCarthy in 1712; MacCarthy (Thaddeus) in 1727. The bishops of penal times were ruthlessly persecuted, and some suffered cruel imprisonment or died in exile. John O'Brien, author of an Irish dictionary, poems, and tracts, was Bishop of Cloyne and Ross (1748-1769). He died in exile at Lyons. His successors were Matthew MacKenna, appointed in 1769; William Coppinger in 1791; Michael Collins in 1830; Bartholomew Crotty in 1833; David Walsh in 1847. Since the separation of Ross (1849) the bishops of Cloyne have been: Timothy Murphy, appointed 1849; William Keane, 1857; John MacCarthy, 1874; Robert Browne, 1894.

Over a century ago, when persecution relaxed somewhat, the diocese, despoiled of all its ancient churches, schools, and religious houses, had to be fully equipped anew. About 100 plain churches were erected between 1800 and 1850. Recently a fourth of these have been replaced, especially in towns, and the new structures are admirably designed and finished. Between 1800 and 1907, notwithstanding great difficulties and loss by emigration, besides 103 parish churches, all the existing schools, colleges, religious and charitable institutions were built, and all are now doing useful and excellent work.

JOHN O'RIORDAN.

head of an order consisting of some 314 monasteries. These were spread over France, Italy, the Empire, Lorraine, England, Scotland, and Poland. According to the "*Bibliotheca Cluniacensis*" (Paris, 1614) 825 houses owed allegiance to the Abbot of Cluny in the fifteenth century. Some writers have given the number as 2000, but there is little doubt that this is an exaggeration. It may perhaps include all those many other monasteries which, though not joining the congregation, adopted either wholly or in part the Cluny constitutions, such as Fleury, Hirschau, Farfa, and many others that were subject to their influence.

During the first 250 years of its existence Cluny was governed by a series of remarkable abbots, men who have left their mark upon the history of Western Europe and who were prominently concerned with

ABBEY OF CLUNY AS IT WAS BEFORE DESTRUCTION
(From "*Histoire Monumentale de la France*" by Anthyme Saint-Paul)

Cluny, CONGREGATION OF (CLUNI, CLUGNI, or CLUGNY), the earliest reform, which became practically a distinct order, within the Benedictine family. It originated at Cluny, a town in Saône-et-Loire, fifteen miles north-west of Mâcon, where in 910 William the Pious, Duke of Aquitaine, founded an abbey and endowed it with his entire domain. Over it he placed St. Berno, then Abbot of Gigny, under whose guidance a somewhat new and stricter form of Benedictine life was inaugurated. The reforms introduced at Cluny were in some measure traceable to the influence of St. Benedict of Aniane, who had put forward his new ideas at the first great meeting of the abbots of the order held at Aachen (Aix-la-Chapelle) in 817, and their development at Cluny resulted in many departures from precedent, chief among which was a highly centralized form of government entirely foreign to Benedictine tradition. The reform quickly spread beyond the limits of the Abbey of Cluny, partly by the founding of new houses and partly by the incorporation of those already existing, and as all these remained dependent upon the mother-house, the Congregation of Cluny came into being almost automatically. Under St. Berno's successors it attained a very widespread influence, and by the twelfth century Cluny was at the

all the great political questions of their day. Among these were Sts. Odo, Mayeul, Odilo, and Hugh, and Peter the Venerable. Under the last named, the ninth abbot, who ruled from 1122 to 1156, Cluny reached the zenith of its influence and prosperity, at which time it was second only to Rome as the chief centre of the Christian world. It became a home of learning and a training school for popes, four of whom, Gregory VII (Hildebrand), Urban II, Paschal II, and Urban V, were called from its cloisters to rule the Universal Church. In England the Cluniac houses numbered thirty-five at the time of the dissolution. There were three in Scotland. The earliest foundation was that of the priory of St. Pancras at Lewes (1077), the prior of which usually held the position of vicar-general of the Abbot of Cluny for England and Scotland. Other important English houses were at Castleacre, Montacute, Northampton, and Bermondsey.

After the twelfth century the power of Cluny declined somewhat, and in the sixteenth it suffered much through the civil and religious wars of France and their consequences. The introduction also of commendatory abbots, the first of whom was appointed in 1528, was to some extent responsible for its decline. Amongst the greatest of its titular pre-

ates were Cardinals Richelieu and Mazarin, who tried to restore it to some of its former greatness, though their efforts did not meet with much success. Claude de Vert, Prior of Saint-Pierre, Abbeville (d. 1708), was another would-be reformer of the congregation, inspired no doubt by the example of the Maurists.

The abbey-church of Cluny was on a scale commensurate with the greatness of the congregation, and was regarded as one of the wonders of the Middle Ages. It was no less than 555 feet in length, and was the largest church in Christendom until the erection of St. Peter's at Rome. It consisted of five naves, a narthex, or ante-church, and several towers. Commenced by St. Hugh, the sixth abbot, in 1089, it was finished and consecrated by Pope Innocent II in 1131-32, the narthex being added in 1220. Together with the conventual buildings it covered an area of twenty-five acres. At the suppression in 1790 it was bought by the town and almost entirely destroyed. At the present day only one tower and part of a transept remain, whilst a road traverses the site of the nave. The community of the abbey, which had numbered three hundred in the thirteenth century, dwindled down to one hundred in the seventeenth, and when it was suppressed, in common with all the other religious houses in France, its monks numbered only forty.

The spirit and organization of the congregation was a distinct departure from Benedictine tradition, though its monks continued all along to be recognized as members of the Benedictine family. Previous to its inception every monastery had been independent and autonomous, though the observance of the same rule in all constituted a bond of union; but when Cluny began to throw out offshoots and to draw other houses under its influence, each such house, instead of forming a separate family, was retained in absolute dependence upon the central abbey. The superiors of such houses, which were usually priors, were subject to the Abbot of Cluny and were his nominees, not the elect of their own communities, as is the normal Benedictine custom. Every profession, even in the most distant monastery of the congregation, required his sanction, and every monk had to pass some years at Cluny itself. Such a system cut at the root of the old family ideal and resulted in a kind of feudal-hierarchy consisting of one great central monastery and a number of dependencies spread over many lands. The Abbot of Cluny or his representative made annual visitations of the dependent houses, and he had for his assistant in the government of so vast an organization a coadjutor with the title of Grand-Prior of Cluny. The abbot's monarchical status was somewhat curtailed after the twelfth century by the holding of general chapters, but it is evident that he possessed a very real power over the whole congregation, so long as he held in his own hands the appointment of all the dependent priors. (For the sources of information as to the rule, government, and conventual observance of the congregation, see bibliography at end of this article.) With regard to the Divine Office, the monks of Cluny conformed to the then prevailing custom, introduced into the monasteries of France by St. Benedict of Aniane, of adding numerous extra devotional exercises, in the shape of psalms (*psalms familiares, speciales, prostrati, and pro tribulatione*) and votive offices (Our Lady, The Dead, All Saints, etc.) to the daily canonical hours prescribed by the Benedictine Rule.

The library of Cluny was for many centuries one of the richest and most important in France and the storehouse of a vast number of most valuable MSS. When the abbey was sacked by the Huguenots, in 1562, many of these priceless treasures perished and others were dispersed. Of those that were left at Cluny, some were burned by the revolutionary mob

at the time of the suppression in 1790, and others stored away in the Cluny town hall. These latter, as well as others that had passed into private hands, have been gradually recovered by the French Government and are now in the Bibliothèque Nationale at Paris. There are also in the British Museum, London, about sixty charters which formerly belonged to Cluny. The "Hôtel de Cluny" in Paris, dating from 1334, was formerly the town house of the abbots. In 1833 it was made into a public museum, but apart from the name thus derived, it possesses practically nothing connected with the abbey.

For the rule, constitutions, etc., see BERNARD OF CLUNY, *Ordo Cluniacensis* in HERRGOTT, *Vetus Disciplina Monastica* (Paris, 1794); and UDALRIC OF CLUNY, *Consuetudines Cluniacenses* in P. L., CXLIX (Paris, 1882). For the history of the Congregation, etc., DUCKET, *Charters and Records of Cluni* (Lewes, 1890); MAITLAND, *Dark Ages* (London, 1845); MABILLON, *Annales O. S. S., 1892-94).

G. CYPRIAN ALSTON.

Clynn (or CLYN), JOHN, Irish Franciscan and analyst, b. about 1300; d., probably, in 1349. His place of birth is unknown, and the date given is only conjecture; but, as he was appointed guardian of the Franciscan convent at Carrick in 1336, it is concluded that he was then at least 30 years of age. He was afterwards in the Franciscan convent at Kilkenny, and there he probably died. He is credited by Ware, in "Writers of Ireland", with having written a work on the kings of England and another on the superiors of his own order; but these works have not been published, and his celebrity rests on his "Annals of Ireland", from the birth of Christ to the year 1349. Beginning with the earliest period, and written in Latin, the entries are at first meagre and uninteresting; but from 1315 Clynn deals with what he himself saw, and, though such things as the building of a choir and the consecration of an altar would interest only his own order and time, other entries throw much light on the general history of the country. Being Anglo-Irish, he speaks harshly of the native chiefs; but neither does he hesitate to condemn the Anglo-Irish lords, their impatience of restraint, their contempt for the Government at Dublin, their oppression of the poor. His account of the plague in 1348-9 is vivid. Surrounded by dead and dying, he laid down his pen, wondering if any of the sons of Adam would be spared, and the scribe who copied the work adds that at this date it seems the author died. His "Annals" were edited by Richard Butler for the Irish Archaeological Society (December, 1849).

Cobo, BERNABÉ, b. at Lopera in Spain, 1582; d. at Lima, Peru, 9 October, 1657. He went to America in 1596, visiting the Antilles and Venezuela and landing at Lima in 1599. Entering the Society of Jesus, 14 October, 1601, he was sent by his superiors in 1615 to the mission of Juli, where, and at Potosí, Cochabamba, Oruro, and La Paz, he laboured until 1618. He was rector of the college of Arequipa from 1618 until 1621, afterwards at Pisco, and finally at Callao in the same capacity, as late as 1630. He was then sent to Mexico, and remained there until 1650, when he returned to Peru. Such in brief was the life of a man whom the past centuries have treated with unparalleled, and certainly most ungrateful, neglect.

Father Cobo was beyond all doubt the ablest and most thorough student of nature and man in Spanish America during the seventeenth century. Yet, the first, and almost only, acknowledgment of his worth dates from the fourth year of the nineteenth century. The distinguished Spanish botanist Cavanilles not only paid a handsome tribute of respect to the memory of Father Cobo in an address delivered at the Royal Botanical Gardens of Madrid, in 1804, but he gave the name of *Cobaea* to a genus of plants belonging to the Bignoniaceæ of Mexico, *Cobaea scandens* being its most striking representative.

Cobo's long residence in both Americas (sixty-one years), his position as priest and, several times, as missionary, and the consequently close relations in which he stood to the Indians, as well as to Creoles and half-breeds, gave him unusual opportunities for obtaining reliable information, and he made the fullest use of these. We have from his pen, two works, one of which (and the most important) is, unfortunately, incomplete. It is also stated that he wrote a work on botany in ten volumes, which, it seems, is lost, or at least its whereabouts is unknown to-day. Of his main work, to which biographers give the title of "Historia general de las Indias", and which he finished in 1653, only the first half is known and has appeared in print (in four volumes, at Seville, 1890 and years succeeding). The remainder, in which he treats, or claims to have treated, of every geographical and political subdivision in detail, has either never been finished or is lost. His other book appeared in print in 1882, and forms part of the "History of the New World" mentioned, but he made a separate manuscript of it in 1639, and so it came to be published as "Historia de la fundación de Lima", a few years before the publication of the principal manuscript. The "History of the New World" places Cobo, as a chronicler and didactic writer, on a plane higher than that occupied by his contemporaries not to speak of his predecessors. It is not a dry and dreary catalogue of events; man appears in it on a stage, and that stage is a conscientious picture of the nature in which man has moved and moves. The value of this work for several branches of science (not only for history) is much greater than is believed. The book, only recently published, is very little known and appreciated. The "History of the New World" may, in American literature, be compared with one work only, the "General and Natural History of the Indies", by Oviedo. But Oviedo wrote a full century earlier than Cobo, hence the resemblance is limited to the fact that both authors seek to include all Spanish America—its natural features as well as its inhabitants. The same may be said of Gomara and Acosta. Cobo enjoyed superior advantages and made good use of them. A century more of knowledge and experience was at his command. Hence we find in his book a wealth of information which no other author of his time imparts or can impart. And that knowledge is systematized and in a measure co-ordinated. On the animals and plants of the new continent, neither Nieremberg, nor Hernández, nor Monardes can compare in wealth of information with Cobo. In regard to man, his pre-Columbian past and vestiges, Cobo is, for the South American west coast, a source of primary importance. We are astonished at his many and close observations on customs and manners. His descriptions of some of the principal ruins in South America are usually very correct. In a word it is evident from these two works of Cobo that he was an investigator of great perspicacity and, for his time, a scientist of unusual merit.

TORRES SALDAMANDO, *Antiguos Jesuitas del Perú* (Lima, 1882); CAVANILLES, *Discurso sobre algunos botánicos españoles del siglo XVII* in the *Anales de historia natural* (Madrid, 1804).

AD. F. BANDELIER.

Coccaleo, VIATORA, a Capuchin friar, so called from his birthplace, Coccaglio in Lombardy, date of birth unknown; d. 1793. For a time he was lector in theology and wrote several works that gave him a place among the noteworthy theologians in a period of theological decline. These are: "Tentamina theologico-scholastica" (Bergamo, 1768-74); "Tentaminum theologicorum in moralibus Synopsis" (Venice, 1791); "Instituta moralia" (Milan, 1760). His defence of papal supremacy, "Italus ad Justinum Febronium" (Lucca, 1768; Trent, 1774), is one of the principal apologies against Febronius. Besides writing several works against Jansenism, he took part in the discussion concerning the devotion to the Sacred Heart and the sanctification of Holy Days, made famous by the Synod of Pistoja (1786), and published: "Riflessioni sopra l'origine e il fine della divozione del S. Cuore di Gesù" (Naples, 1780); "Riposta sul dubbio, se la sola Messa basti a santificare le feste" (Bologna, 1781). To these may be added his studies on the text and meaning of the poem of Prosper of Aquitaine, "Contra Ingratos" (2 vols., Brescia, 1756 and 1763) and his work on the philosophic spirit of Prosper's epigrams (Brescia, 1760).

JOHN M. LENHART.

Cochabamba, DIOCESE OF (COCHABAMBENSIS).—The city from which this diocese takes its name is the capital of the department of Cochabamba, Bolivia. Founded in 1563 it was called originally Oropesa. It is situated on the Rio de la Rocha and is the second largest city and one of the most important commercial centres of the republic. According to the census of 1902, the population is over 40,000, of whom practically all are Catholics.

The Diocese of Cochabamba was erected by a Bull of Pius IX, 25 June, 1847, and is a suffragan of Charcas (La Plata). It was the fourth diocese established in Bolivia, the Archdiocese of Charcas (La Plata) and the Dioceses of La Paz and Santa Cruz having been created early in the seventeenth century. It comprises the department of Cochabamba and part of the adjoining department of Beni. The population, mostly Catholic, in 1902 was over 330,000. Besides a number of schools and charitable institutions the diocese has 55 parishes, 80 churches and chapels, and 160 priests.

Konversations-Lex. (St. Louis, Missouri, 1903), s. v.; *Gerarchia Catholica* (Rome, 1908).

Cochem, MARTIN OF, a celebrated German theologian, preacher and ascetic writer, b. at Cochem, a small town on the Moselle, in 1630; d. in the convent at Waghäusel, 10 September, 1712. He came of a family devotedly attached to the Faith, and while still young entered the novitiate of the Capuchins, where he distinguished himself by his fervour and his fidelity to the religious rule. After his elevation to the priesthood, he was assigned to a professorship of theology, a position which for several years he filled most creditably. However, it was in another sphere that he was to exercise his zeal and acquire fame. Of the evils which befell Europe in consequence of the Thirty Years War, the plague was by no means the least, and when, in 1666, it made its appearance in the Rhenish country, such were its ravages that it became necessary to close the novitiates and houses of study. Just at this crisis, Father Martin was left without any special charge and, in company with his fellow monks, he devoted himself to the bodily and spiritual comfort of the afflicted. What most distressed him was the religious ignorance to which a large number of the faithful had fallen victims on account of being deprived of their pastors. To combat this sad condition, he resolved to compose little popular treatises on the truths and duties of religion, and in 1666 he published

at Cologne a résumé of Christian doctrine that was very well received. It was a revelation to his superiors, who strongly encouraged the author to continue in this course.

Thenceforth Father Martin made a specialty of popular preaching and religious writing and, in the Archdioceses of Trier and Ingelheim, which he traversed thoroughly, multitudes pressed about him, and numerous conversions followed. The zealous priest continued these active ministrations up to the time of his death, and even when he had passed his eightieth year he still went daily to the chapel of his convent, where, with the aid of an ear-trumpet, he heard the confessions of the sinners who flocked to him. The intervals between missions he devoted to his numerous writings, the most voluminous of which is an ecclesiastical history in 2 vols. fol., composed for apologetic purposes and provoked by the attacks made upon the Church by Protestantism. However, the author brought it down only to the year 1100. Father Martin's other works embrace a great variety of subjects: the life of Christ, legends of the saints, edifying narratives, the setting forth of certain points in Christian asceticism, forms of prayer, methods to be followed for the worthy reception of the sacraments, etc. These widely different themes have as points of similarity a pleasing, graceful style, great erudition, and a truly seraphic eloquence. They bespeak for their author sincere piety and deep religious sentiment, coupled with an intimate knowledge of the popular heart and the special needs of the time. But the best known of all the learned Capuchin's works is unquestionably "Die heilige Messe", upon which, according to his own statement, he spent three entire years, perusing Holy Writ, the councils, Fathers and Doctors of the Church, and the lives of the saints, in order to condense into a small volume a properly abridged account of the Holy Sacrifice. As soon as it appeared this book proved a delight to the Catholics of Germany, nor has it yet lost any of its popularity, and, since its translation into several languages, it may be said to have acquired universal renown.

It demanded a great expenditure of energy on the part of the worthy religious to bring these undertakings to a successful issue. Even when in his convent he spent most of the day in directing souls and following the observances prescribed by the Capuchin Rule, hence it was time set aside for sleep that he was wont to give to his literary labours. Sometimes after the Office of Matins he would obtain permission of the superior to go to Frankfort to confer with his publisher and, this accomplished, he would return on foot to his convent at Königstein, catechizing little children, hearing confessions, and visiting the sick along the way. While still in the midst of his labours he was attacked by an illness to which he soon succumbed, at the age of eighty-two. The works published during Father Martin's lifetime are: "Die Kirchenhistorie nach der Methode des Baronius und Raynaldus bis 1100" (Dillingen, 1693); "Die christliche Lehre"; "Heilige Geschichten und Exempel"; "Wohlriechender Myrrhengarten" (Cologne, 1693); "Büchlein über den Ablass" (Dillingen, 1693); "Exorcismen und für Kranke" (Frankfort, 1695); "Goldener Himmelschlüssel" (Frankfort, 1695); "Gebetbuch für Soldaten" (Augsburg, 1698); "Anmuthungen während der heiligen Messe" (Augsburg, 1697); "Die Legenden der Heiligen" (Augsburg, 1705); "Leben Christi" (Frankfort, 1689; Augsburg, 1708); "Gebete unter der heiligen Messe" (Augsburg, 1698); "Kern der heiligen Messe" (Cologne, 1699); "Liliengarten" (Cologne, 1699); "Gebetbuch für heilige Zeiten" (Augsburg, 1704); "Die heilige Messe für die Weltleute" (Cologne, 1704); "Traktat über die göttlichen Vortrefflichkeiten" (Mainz, 1707); "Geistlicher Baumgarten" (Mainz und Heidelberg, 1709); "Neue mystische Goldgruben" (Cologne, 1709); "Exempebuch" (Augs-

burg, 1712). This list does not include all the author's writings. In 1896 there appeared a small work never before published, "Das Gebet des Herzens", which at the end of its third year went into a seventh edition.

F. CANDIDE.

Cochin, DIOCESE OF (COCHINENSIS), on the Malabar coast, India. The diocese was erected and constituted a suffragan of the Diocese of Goa, of which it had previously formed a part, by the Bull "Pro excellenti præminentiâ" of Paul IV, 4 Feb., 1558 (cf. *Bullarium Patronatus Portugallie Regum*, I, 193). It was later reorganized according to the Concordat of 23 June, 1886, between Leo XIII and King Luiz I of Portugal, and the Constitution "Humanæ Salutis Auctor" of the same pope, 1 Sept., 1886. It is suffragan to the patriarchal See of Goa (cf. Julio Biker, *Colecção de Tractados*, XIV, 112-437). The diocese consists of two strips of territory along the sea-coast, the first about fifty miles long, by eight in its broadest part, the second thirty miles in length. There are two important towns, Cochin and Alleppi (Alapalli), in which the higher educational and charitable institutions of the diocese are situated.

I. HISTORY.—The chief religions professed in Malabar at the arrival of the Portuguese were: Hinduism, Christianity (the Christians of St. Thomas or Nestorians), Islam, and Judaism, the last represented by a large colony of Jews. From these the Catholic community was recruited, mostly from the Nestorians and the Hindus. Islam also contributed a fair share, especially when Portugal was supreme on this coast; among the Jews conversions were rare. To Portugal belongs the glory of having begun regular Catholic missionary work in India, and Cochin has the honour of being the cradle of Catholicism in India. The first missionaries to India were eight Franciscan friars, who set sail from Lisbon on the fleet of Pedro Alvarez Cabral (q. v.), 9 March, 1500: Father Henrique de Coimbra, Superior; Fathers Gaspar, Francisco da Cruz, Simão de Guimaraens, Luiz do Salvador, Masseu, Pedro Netto, and Brother João da Vitoria. Three of them were slain at Calicut in the massacre of 16 Nov., 1500. The survivors arrived at Cochin on or about the 26th of that month, and settled there (except the superior, who went back with the fleet to obtain more help for the mission), thus laying the foundation of the Diocese of Cochin (Hist. Seraf. Chron. da Ordem de S. Francisco na Provincia de Portugal, III, 489, 494, 495). They were followed by large contingents of zealous missionaries, who worked from the city of Cochin as a centre. The harvest of souls was rich, the Christians multiplied along the coast and in the interior, and in course of time a bishop was assigned to them.

The Nestorian Christians in the vicinity of Cochin naturally attracted the attention of the missionaries, and Fathers Simão de Guimaraens and Luiz do Salvador were soon occupied in refuting their errors and reforming their discipline and customs (Hist. Seraf., III, 497). These two missionaries were the pioneers of the Faith among the Nestorian Christians. Members of the same order continued this missionary work till the middle of the sixteenth century, when these missions were handed over to the Jesuits, who continued the good work with such earnestness and zeal that most of the Nestorian Christians were converted before 1600. The chief public record of their conversion is to be found in the proceedings of the Synod of Diamper (or Udiampurur), held in June, 1599, by Aleixo de Menezes, Archbishop of Goa, Metropolitan and Primate of the East ("Bull. Patron. Port. reg.", a collection of papal and royal documents pertaining to the Portuguese missions in India, App.

tom. I, 147 sqq.; see also "Subsidium ad Bull. Patr. Port.", Alleppi, 1903). In December, 1502, the Nestorian or Syrian Christians (they used the Syrian language in their liturgy) presented to Vasco da Gama, who had arrived at Cochin, the sceptre of their former kings, and applied to him for assistance against their Mohammedan neighbours. Gama formally accepted the sceptre in the name of the King of Portugal. The Syrian bishop of those Christians promised obedience to the pope through the Franciscan missionaries, and two Nestorian priests accompanied Gama to Lisbon *en route* for Rome. Thus began the protectorate of the Portuguese over the Syrian Christians, a protectorate which lasted for 160 years (cf. João de Barras, "Asia", Dec. I, bk. V, ch. viii; also "Historia Serafica"). Till 1542 the Franciscans were the only regular missionaries in India, though they had the co-operation of some secular priests, as Father Pedro Gonsalves, Vicar of Santa Cruz church in the city of Cochin, and Father Miguel Vaz, a zealous preacher of the Faith, as well as of some isolated members of other religious communities, who had come out as chaplains to the fleets ("Commentarios do Grande Afonso d'Albuquerque", 3d ed., 1774, I, ch. v, 19-20, and "Ethiopia Oriental", II, bk. II, ch. i).

Among the pioneer priests of Cochin mention should be made of the Franciscans João d'Elvas and Pedro d'Amarante, who till 1507 preached the Gospel at Vypeen, Palliport, Cranganore, and other important places; Father Manuel de S. Mathias, with his eleven companions, who laboured for the conversion of the pagans at Porrocad, Quilon, Trivellam, and elsewhere; Father Vincent de Lagos, who in 1540 established the college of Cranganore to train the Nestorian Christians in the purity of Catholic Faith, a college highly praised by St. Francis Xavier, and the first built in India. In 1542 it had eighty students (Amado, Hist. da Igreja em Portugal e colonias, Vol. VII, Pt. II, 117-21).

After St. Francis Xavier's arrival in India, 6 May, 1542, the Society of Jesus quickly spread over India, and the members were always most successful in the missions under their charge. St. Francis often visited Cochin, where the citizens gave him the church of Madre de Deus, and asked him to establish in the city a residence of the Society. It was accordingly founded by Father Balthazar Gago, S. J., in 1550. In the same year Father Nicolao Lancelot, S. J., built the residence and college of Quilon, and Afonso Cipriano, S. J., the residence of Mylapore; soon after the residence and college of Punicail were established, and the residence of Manar. In 1560 the King of Portugal built for the Society of Jesus the college of Cochin, and in 1562 a novitiate of the Society was established there. In 1601 the Jesuit Province of Malabar was founded, and Cochin was made the residence of the provincial. Among the early Jesuits must be mentioned in addition to St. Francis Xavier, foremost of missionaries, Fathers Mansilha, Criminal, B. Nunes, H. Henriques, F. Peres, F. Rodrigues; Brothers Adam Francisco, N. Nunes. Later, the Dominicans, Augustinians, and other orders followed the Society of Jesus to India. The Dominicans built their monastery and college at Cochin in 1553; some years later their example was followed by the Augustinians, and still later by the Capuchins. Cochin thus became the stronghold of the Faith, and it was the missionaries of Cochin who carried the Gospel throughout all Southern India and Ceylon, everywhere establishing missions, and building churches, charitable and educational institutions, all of which were endowed by the kings of Portugal.

Apart from the heroic zeal of the priests, the most powerful element in the propagation of the Faith was the protection the Portuguese Government always accorded to the converts. It provided them with good situations, employing them in civil offices, freed

them from the molestations of their masters, elevated them in the social scale, exempted them from the operation of Hindu law, appointed for them a judicial tribunal composed of Catholics, which in rural districts was presided over by the local priest. It induced the rajahs to treat the converts kindly, and obliged them to allow their converted subjects all the civil rights, e. g. of inheritance, which their Hindu relatives enjoyed. ("Collecção de Tractados", treaties made with the rajahs of Asia and East Africa, *passim* in the first thirteen vols.; also "Arquivo Portuguez Oriental", Nova Goa, 1861, Fasc. III, parts I and II *passim*; "Oriente Conquistado", Bombay reprint, 1881, I, II; P. Jarrie, S. J., "Thesaurus Rerum Indicarum", Cologne, 1615, I, III, on the Malabar Missions of the Society.)

The above-mentioned Bull of Paul IV, by which the diocese was constituted, raised the collegiate church of the Holy Cross (Santa Cruz), the parish church of Cochin, to the dignity of cathedral of the diocese, and established therein a chapter consisting of five dignitaries and twelve canons. At the same time the pope gave the patronage of the new diocese and see to the kings of Portugal (Bull. Patr. Port. Reg., I, 194).

Until 1506 Hindu law, which was rigorously observed, forbade the use of lime and stone in other constructions than temples. Hence the early Portuguese, to avoid displeasing the rajah, built their houses of wood. Finally the viceroy, Francisco de Almeida, induced the Rajah of Cochin to permit him the use of lime and stone, and on 3 May, 1506, the first stone for the fortress and city was laid by the viceroy with great pomp. It was the feast of the Finding of the Holy Cross, which thus became the patronal feast of the city, and gave to the parish church its title. The church of the Holy Cross (Santa Cruz) was begun in, or rather before, 1506, for in 1505 we find Portuguese soldiers contributing towards the construction of the church of Cochin 1000 xerafins (about \$150, a large sum four hundred years ago), the result of an auction of the rich booty of a naval combat (Gaspar Correa, "Lendas da India", I, 522; II, 182). Some years later this church was raised to collegiate rank, endowed by the king, and provided with a vicar and six beneficed ecclesiastics. It was a magnificent building, the mother church of the ancient Diocese of Cochin, which the Malabar, Coromandel and Fishery Coasts, and Ceylon once obeyed, and under whose teaching and discipline they flourished. There are now not less than eleven bishoprics in the territory of the original Diocese of Cochin. The first Bishop of Cochin was the Dominican, Father Jorge Themudo, an illustrious missionary on this coast. The Brief "Pastoralis officii cura nos admonet" of Gregory XIII, 13 Dec., 1572, permitted the Bishop of Cochin, on occasion of the vacancy of the See of Goa, to take possession of that see and administer it till the Holy See provided for the vacancy. This is why many bishops of Cochin were appointed archbishops of Goa.

In 1577 Brother João Gonsalves, S. J., engraved at Cochin, for the first time, the Malealam type, from which was printed the first Malealam book, "Outlines of Christian Doctrine", written in Portuguese by St. Francis Xavier for the use of children. In 1578 Fr. João de Faria, S. J., engraved at Punicail the Tamil type, with which the "Flos Sanctorum" was printed in Tamil for the Fishery Coast (Paulinus a S. Bartholomæo, "India Orient. Christiana", Rome, 1794, 179 sqq.; "Oriente Conquistado", Vol. I, Pt. I, Cong. I, Div. I, § 23).

Cochin was taken, 6 Jan., 1663, by the Dutch, after a siege of six months. The city was reduced in size; the clergy were expelled; the monasteries and colleges, bishop's palace and 2 hospitals, 13 churches and chapels, were razed to the ground. The church of St. Francis of Assisi, belonging to the Franciscan

monastery, was spared by the conquerors and converted to their own religious use. When the English expelled the Dutch, 20 Oct., 1795, they kept this church for the same purpose; it stands to-day a witness to the events of the past four centuries, and is considered the oldest existing church in India. The magnificent cathedral was turned by the Dutch into a warehouse for merchandise. In 1806 it was blown up by the English.

From 1663 until the diocese was reorganized in 1886, the bishops of Cochin resided at Quilon. In 1896 work was begun on the Cathedral of the Holy Cross of Cochin by Bishop Ferreira, amid great sacrifices. In April, 1897, when almost complete, the building collapsed, entailing a heavy loss. Bishop Ferreira died at Goa, 4 May, the same year. Bishop Oliveira Xavier took charge of the diocese in March, 1898, removed the debris of the fallen building and successfully carried the work to completion. The cathedral was opened for Divine worship, 9 Aug., 1903. Brother Moscheni, the famous Italian painter of India, belonging to the Jesuit mission of Mangalore, was secured to decorate the church, but had hardly finished the sanctuary when he died, 14 Nov., 1905. The cathedral was consecrated 19 Nov., 1905, by Bishop Pereira of Damaun, Archbishop *ad honorem* of Cranganore.

II. RELIGIOUS CONDITIONS.—The Church of Cochin has suffered some rigorous persecutions. The most severe was that of 1780, commenced by Nagam Pillay, Dewan of Travancore, in which 20,000 converts fled to the mountains, to escape his cruelties, and many died as martyrs. Father João Falcao, S. J., was the only priest left to console the sufferers. There were other less severe persecutions in 1787, 1809, and 1829 (Paulinus a S. Bartholomæo, "India Orient. Christiana", 165 sqq.; also "Church History of Travancore", Madras, 1903, Introduction, 55). In a general way there has always been a kind of mild persecution or animosity on the part of Hindu Governments and authorities against Christians. The growth of the Catholic Church is at present affected especially by the "Law of Disability" in force in the Native States of Malabar, by which a convert becomes a stranger to his family, and forfeits all rights of inheritance. The government schools, in which the young are reared in religious indifferentism, form also a remarkable hindrance to conversions, especially among the higher classes.

III. STATISTICS.—In all, twenty Bishops of Cochin have actually taken possession of the see ("Mitras Lusitanas no Oriente", I, III; "Annuario da Arch. de Goa", 1907). The total population of the diocese is 398,000; Catholics, 97,259. The number of conversions averages 300 a year. The diocese contains 30 parishes, 9 missions, 77 churches and chapels, 62 secular priests (58 natives of India), 4 Jesuits; 8 Anglo-vernacular parochial schools, with an attendance of 480 boys and 128 girls, 77 vernacular parochial schools, with an attendance of 6592. The Sisters of the Canossian Congregation number 15 in two convents. The following educational and charitable institutions are at Cochin: Santa Cruz High School for boys, under the Jesuit Fathers, and St. Mary's High School for girls under the Canossian Sisters, both of which prepare students for the Indian universities; they have an average daily attendance respectively of 335 and 153; at Alleppi the Jesuit Fathers conduct the Leo XIII High School for boys, with an average daily attendance of 380; an orphanage with 16 orphans; a catechumenate with 5 catechumens; a printing office; an industrial school. They also have charge of the preparatory seminary of the diocese, in which 20 students are now enrolled. For philosophy and theology students are sent either to the patriarchal seminary at Rachol, Goa, or to the papal seminary at Kandy, Ceylon; at the former there are now 6, at the latter 5, students from Cochin. The Canossian

Sisters at Alleppi conduct the following institutions for girls: St. Joseph's Intermediate School, attendance 160; a normal training school, attendance 7; a technical school, attendance 29; an orphanage with 56 orphans; a catechumenate, attendance 21, and a dispensary for the benefit of the poor. The religious associations of the diocese are as follows: confraternities, 64; congregations of the Third Order of St. Francis, 3; Association of the Holy Family, 1; Conferences of St. Vincent de Paul, 2; Society for the relief of the Souls in Purgatory, 2; Sodality of the Children of Mary, 6; Misericordia Confraternity, 1; The Apostleship of Prayer is established in all the parish churches, and the Association of Christian Doctrine in all churches and chapels of the diocese. (See GOA; PORTUGAL; INDIA.)

Besides documents mentioned above see also *Madras Cath. Directory* (1908); MÜLLERBAUER, *Kathol. Miss. in Ostindien* (Freiburg, 1852); DE SILVA, *The Cath. Ch. in India* (Bombay, 1885); WERNER, *Orb. Terrarum* (Freiburg, 1890).

J. MONTEIRO D'AGUIAR.

Cochin, JACQUES-DENIS, preacher and philanthropist, b. in Paris, 1 January, 1726; d. there 3 June, 1783. His father, Claude-Denis Cochin (d. 1786), was a famous botanist. Jacques-Denis followed a course of theological studies in the Sorbonne and was graduated with the degree of Doctor. In 1755 he was ordained priest. The next year he was given charge of the parish of Saint-Jacques-du-Haut-Pas. There he spent his whole life working for the material as well as the spiritual betterment of his people. He won great fame for the unction and strength of his preaching. His published works include: Four books of Sunday sermons (Paris, 1786-1808); "Exhortations on the Feasts, Fasts and Ceremonies of the Church" (Paris, 1778); "Retreat Exercises" (Paris, 1778); "Spiritual Writings", a posthumous work published by his brother (Paris, 1784). Cochin is noted especially for his philanthropy. The needs of his own parish suggested the foundation of a hospital. The idea, conceived in 1780, resulted in the completion of a building of which the Sisters of Charity took charge. The inscription on the building, *Pauper clamavit et Dominus exaudivit eum*, is an index of Cochin's intentions. He devoted his whole fortune to the work. The hospital was inaugurated with thirty-eight beds; to-day the number is nearly four hundred. It was originally called Hôpital Saint-Jacques. In 1801 the General Council of the Paris hospitals gave it the name of its charitable founder, which it still preserves.

J. B. DELAUNAY.

Cochin, PIERRE-SUZANNE-AUGUSTIN, b. in Paris, 12 Dec., 1823; d. at Versailles, 13 March, 1872. He took an early interest in economical and political questions and contributed articles to the "Annales de Charité" and "Le Correspondant". In 1850 he was elected vice-mayor, and in 1853 mayor of the tenth district of Paris. His publications won for him membership in the Académie des sciences morales et politiques (1864). He was at that time prominent among the "Liberal Catholics", an ardent friend of Montalembert and Lacordaire, and was supported by his party for the office of deputy of Paris. He received 6000 votes, but his democratic opponent won by an overwhelming majority. Among his many religious, pedagogical, and sociological works we may name: "Essai sur la vie, les méthodes d'instruction et d'éducation, et les établissements de Pestalozzi" (Paris, 1848); "Lettre sur l'état du paupérisme en Angleterre" (Paris, 1854); "Progrès de la science et de l'industrie au point de vue chrétien" (Paris, 1854); "Abolition de l'esclavage" (Paris, 1861), crowned by the French Academy; "Quelques mots sur la vie de Jésus de Renan" (1863); "Condition des ouvriers français" (1862); "Espérances chrétiennes" (posthumous publication).

J. B. DELAUNAY.

Cochin China. See FRENCH INDO-CHINA.

Cochläus, JOHANN (properly DOBENECK), sur-named COCHLÆUS (from *cochlea*, a snail shell) after his birthplace Wendelstein, near Schwabach, humanist and Catholic controversialist, b. 1479; d. 11 Jan., 1552, in Breslau. His early education he received at the house of his uncle, Hirspeck. About 1500 he began his humanistic studies under Grienniger at Nuremberg. From 1504 he pursued his studies at Cologne and there relations sprang up between Cochläus and the champions of humanism. In 1510 he obtained the rectorate in the Latin school of St. Lawrence in Nuremberg, where the "Quadrivium Grammatices" (1511 and repeatedly afterwards) and the "Tetrachordum Musices" appeared. At Nuremberg he became an intimate friend of Pirkheimer. With the latter's three nephews he went to Bologna to continue his humanistic and legal studies. His main object, however, was to pursue a course of theology, in which he obtained his doctorate in 1517, and then by the advice of Pirkheimer went to Rome. There, under the influence of the Oratorio del Divino Amore, Cochläus turned his attention to the cultivation of a religious life. Ordained at Rome, he went to Frankfurt, and after some hesitation, arising no doubt from consideration for his friends, he entered the arena as the opponent of the Lutheran movement. His first works were "De Utroque Sacerdotio" (1520) and several smaller writings published in rapid succession. In 1521 he met the nuncio Aleander at Worms and worked untiringly to bring about the reconciliation of Luther. During the following years he wrote tracts against Luther's principal theses on the doctrine of justification, on the freedom of the will, and on the teaching of the Church (especially the important work, "De Gratia Sacramentorum", 1522; "De Baptismo parvulorum", 1523; "A Commentary on 154 Articles"; etc.). Luther, to the vexation of Cochläus wrote in answer only a single work, "Adversus Armatum Virum Cocleum".

After a short sojourn at Rome Cochläus accompanied Compeggio to the negotiations at Nuremberg and Ratisbon. The Lutheran movement and the Peasants' War drove him to Cologne in 1525. From there he wrote against the rebellion and Luther, its real author. In 1526 he received a canonry at Mayence and accompanied Cardinal Albrecht of Brandenburg to the Diet of Speyer. After Emser's death Cochläus took his place as secretary to Duke George of Saxony, whom he defended against an attack of Luther based on the false charge of an alliance between the Catholic princes at Breslau (cf. The Affair of Otto v. Pack). Conjointly with Duke George he laboured strenuously in 1530 to refute the Augsburg Confession, and later directed against Melancthon, its author, his bitter "Philippica". Because of a pamphlet against Henry VIII of England he was transferred in 1535 to a canonry in Meissen. After the duke's death, owing to the advance of the Reformation, his further stay in Saxony became quite impossible. For the time being he found a refuge as canon first at Breslau and later at Eichstätt. With indomitable ardour he published pamphlet after pamphlet against Luther and Melancthon, against Zwingli, Butzer, Bullinger Cordatus, Osslander, etc. Almost all of these publications, however, were written in haste and bad temper, without the necessary revision and theological thoroughness, consequently they produced no effect on the masses. His greatest work against Luther is his strictly historical "Commentaria de Actis et Scriptis M. Luther" (extending to his death), an armoury of Catholic polemics for all succeeding time. Forced to resign his benefice at Eichstätt in 1548, Cochläus remained for a short time in Mayence to edit a work of Abbot Conrad Braun. In 1549, however, he returned to Breslau where he died shortly after. Naturally of a quiet and studious dis-

position he was drawn into the arena of polemics by the religious schism. There he developed a productivity and zeal unparalleled by any other Catholic theologian of his time. He did not, however, possess the other requisites for success in the same degree. Among his two hundred and two publications (catalogued in Spahn, p. 341 sq.) are to be found, besides tracts bearing on the topics of the day, also editions of ecclesiastical writers and historical publications. Among these latter the work "Historiæ Hussitarum XII Libri" (1549) is of great value even to-day because of the authorities used therein.

DE WELDIGE-KREMER, *De Joannis Cochläi Vitæ et Scriptis* (Münster, 1865); OTTO, *Johannes Cochläus* (Breslau, 1874); GESS, *Johannes Cochläus* (Berlin, 1898); SCHLECHT, *IV Cochläusbriefe in Histor. Jahrbuch XX* (1899), 768 sq.

JOSEPH SAUER.

Co-consecrators are the bishops who assist the presiding bishop in the act of consecrating a new bishop. It is a very strict rule of the Church that there should be two such assistant bishops, or three bishops in all—though an exception is made for missionary countries where it is practically impossible to bring so many bishops together, the Holy See there allowing two priests to act as assistants to the consecrator. The part assigned by the Roman Pontifical in its present form to the assistant bishops is, after helping to place the book of the Gospels on the shoulders of the elect, to join the consecrator in laying hands on his head, and in saying over him the words *Accipe Spiritum Sanctum*. But it is the consecrator alone who, with extended hands, says the Eucharistic prayer, which constitutes the "essential form" of the rite. In the Oriental rites, Uniat and schismatic, no words of any kind are assigned to the assistant bishops; this was also the case with the ancient Western rites, the words *Accipe Spiritum Sanctum* being a late medieval addition.

HISTORY OF THE USAGE.—In the earliest times the ideal was to assemble as many bishops as possible for the election and consecration of a new bishop, and it became the rule that the comprovincials at least should participate under the presidency of the metropolitan or primate. But this was found impracticable in a matter of such frequency; so in the Council of Nicæa we find it enacted that "a bishop ought to be chosen by all the bishops of his province, but if that is impossible because of some urgent necessity, or because of the length of the journey, let three bishops at least assemble and proceed to the consecration, having the written permission of the absent" (can. iv). There was, indeed, one exception, which is referred to in the letter of Pope Siricius to the African bishops (386), "That a single bishop, unless he be the Bishop of Rome, must not ordain a bishop". This exception has long since been discontinued, but it bears witness to the reason for which the intervention of several bishops was ordinarily required, a reason expressly stated by St. Isidore (about 601) in his "De Eccles. Off." (Bk. II, ch. v, no. 11 in P. L., LXXXIII, 785): "[The custom] that a bishop should not be ordained by one bishop, but by all the comprovincial bishops, is known to have been instituted on account of heresies, and in order that the tyrannical authority of one person should not attempt anything contrary to the faith of the Church." Such a consideration was not applicable to the case of the Bishop of Rome. In these provisions of the earlier councils the conditions of the time were presupposed. Gradually other conditions supervened, and the right of appointing to the episcopate was reserved to the metropolitans in the case of simple bishops, and to the Holy See in the case of metropolitans, and finally in all cases to the Holy See. But the practice of requiring at least three bishops for the consecration ceremony, though no longer needed for its ancient purpose, has always been retained as befitting the solemnity of the occasion.

THE MODE OF THEIR CO-OPERATION.—The question has been raised, Do the co-consecrators equally with the consecrator impart the sacramental gift to the candidate? That they do has been contended on the ground of a well-known passage in Martène's "De Antiquis Ecclesiæ Ritibus" (II, viii, art. 10), in which he says that "beyond the possibility of a doubt they are not witnesses only but co-operators." But Martène's reference to Ferrandus's "Breviatum Canonum" (P. L., LXVII, 948), and through Ferrandus to the decree of Nicæa and the words of St. Isidore already quoted, shows that his meaning is that they are not mere witnesses to the fact that the consecration has taken place, but, by taking part in it, make themselves responsible for its taking place. Moreover, though Gasparri (De Sacra Ordinatione, II, 265) thinks otherwise, it is not easy to see how the assistant bishops can be said to comply with the essentials of a sacramental administration. They certainly do not in the use of the Oriental rites, nor did they in the use of the ancient Western rite, for they pronounced no words which partook of the nature of an essential form. And, though in the modern rite they say the words *Accipe Spiritum Sanctum*, which approximate to the requirements of such a form, it is not conceivable that the Church by receiving these words into her rite wished to transfer the office of essential form from the still-persisting Eucharistic Preface, which had held it previously and was perfectly definite, to new words which by themselves are altogether indefinite.

SYDNEY F. SMITH.

Cocussus (COCUSUS, CUCUSSUS, CUCUSUS), a titular see of Armenia. It was a Roman station on the road from Cilicia to Cæsarea, and belonged first to Cappadocia and later to Armenia Secunda. St. Paul the Confessor, Patriarch of Constantinople, was exiled thither by Constantius and put to death by the Arians in 350 (Socrates, Hist. eccl., II, xxvi). It was also the place of exile to which St. John Chrysostom was banished by Arcadius; his journey, often interrupted by fever, lasted seventeen days (Sozomen, Hist. eccl., VIII, xxii). The great doctor was received most kindly by the bishop and a certain Dioscurus. He lived three years at Cocussus (404-407), and wrote thence many letters to the deaconess Olympias and his friends. The Greek panegyric of St. Gregory the Illuminator, Apostle of Armenia, attributed to St. John Chrysostom (Migne, P. G., LXIII, 943), is not authentic; an Armenian text, edited by Alishan (Venice, 1877), may be genuine. Cocussus appears in the "Synecdemus" of Hierocles and in the "Notitiæ episcopatum", as late as the twelfth century, as a suffragan of Melitene. The name of St. John Chrysostom's host is unknown. Bishop Domnus was represented at Chalcedon in 451. Longinus subscribed the letter of the bishops of Armenia Secunda to Emperor Leo in 458. John subscribed at Constantinople in 553 for his metropolitan. Another John was present at the Trullan Council in 692 (Lequien, I, 452). The army of the first crusaders passed by Cocussus. In the thirteenth and fourteenth centuries there were Armenian bishops of Cocussus. It is to-day a village called Guksun by the Turks, Kokision by the Armenians, in the caza of Hadjin, vilayet of Adana. The site is most picturesque, but the climate is very severe during winter, owing to the altitude, 4000 feet above the level of the sea.

S. PÉTRIDES.

Code of Justinian. See LAW.

Codex, the name given to a manuscript in leaf form, distinguishing it from a roll. The codex seems to have come into use about the beginning of the fourth century; the material ordinarily employed in it was parchment, but discovery has shown that papyrus was sometimes used in the making of codices, though really too brittle to be a satisfactory material. The great MSS. of the Bible are in codex form and generally of parchment; hence the name, *Codex Vaticanus* etc. For convenience' sake, we group here the four great codices of the Greek Bible, Vaticanus, Sinaiticus, Alexandrinus, and Ephræmi, together with the Greek Codex Beza, so remarkable for its textual peculiarities; also, Codex Amiatinus, the greatest MS. of the Vulgate. For other codices, see MANUSCRIPTS OF THE BIBLE, or the particular designation, as ARMAGH, BOOK OF; KELLS, BOOK OF; etc.

Codex Alexandrinus, a most valuable Greek manuscript of the Old and New Testaments, so named because it was brought to Europe from Alexandria and had been the property of the patriarch of that see. For the sake of brevity, Walton, in his polyglot Bible, indicated it by the letter A and thus set the fashion of designating Biblical manuscripts by such symbols. Codex A was the first of the great uncials to become known to the learned world. When Cyril Lucar, Patriarch of Alexandria, was transferred in 1621 to the Patriarchate of Constantinople, he is believed to have brought the codex with him. Later he sent it as a present to King James I of England; James died before the gift was presented, and Charles I, in 1627, accepted it in his stead. It is now the chief glory of the British Museum in its MS. department and is on exhibition there.

Codex A contains the Bible of the Catholic Canon, including therefore the deuterocanonical books and portions of books belonging to the Old Testament. Moreover, it joins to the canonical books of Machabees, the apocryphal III and IV Machabees, of very late origin. To the New Testament are added the Epistle of St. Clement of Rome and the homily which passed under the title of II Epistle of Clement—the only copies then known to be extant. These are included in the list of N.-T. books which is prefixed and seem to have been regarded by the scribe as part of the New Testament. The same list shows that the Psalms of Solomon, now missing, were originally contained in the volume, but the space which separates this book from the others on the list indicates that it was not ranked among New-Testament books. An "Epistle to Marcellinus" ascribed to St. Athanasius is inserted as a preface to the Psalter, together with Eusebius's summary of the Psalms; Ps. cli and certain selected canticles of the O. T. are affixed, and liturgical uses of the psalms indicated. Not all the books are complete. In the O. T. there is to be noted particularly the lacuna of thirty psalms, from I, 20, to lxxx, 11; moreover, of Gen., xiv, 14-17; xv, 1-5, 16-19; xvi, 6-9; III (I) K., xii, 20-xiv, 9. The New Testament has lost the first twenty-five leaves of the Gospel of St. Matthew, as far as chapter xxv, 6, likewise the two leaves running from John, vi, 50, to viii, 52 (which, however, as the amount of space shows, omitted the formerly much disputed passage about the adulterous woman), and three leaves containing II Cor., iv, 13-xii, 6. One leaf is missing from I Clem., and probably two at the end of II Clem. Codex A supports the Sixtine Vulgate in regard to the conclusion of St. Mark and John, v, 4, but, like all Greek MSS. before the fourteenth century, omits the text of the three heavenly witnesses, I John, v, 7. The order of the O.-T. books is peculiar (see Swete, "Introd. to O. T. in Greek"). In the N. T. the order is Gospels, Acts, Catholic Epistles, Pauline Epistles,

Apocalypse, with Hebrews placed before the Pastoral Epistles. Originally one large volume, the codex is now bound in four volumes, bearing on their covers the arms of Charles I. Three volumes contain the Old Testament, and the remaining volume the New Testament with Clement. The leaves, of thin vellum, 12½ inches high by 10 inches broad, number at present 773, but were originally 822, according to the ordinary reckoning. Each page has two columns of 49 to 51 lines.

The codex is the first to contain the major chapters with their titles, the Ammonian Sections and the Eusebian Canons complete (Scrivener). A new paragraph is indicated by a large capital and frequently by spacing, not by beginning a new line; the enlarged capital is placed in the margin of the next line, though, curiously, it may not correspond to the beginning of the paragraph or even of a word. The manuscript is written in uncial characters in a hand "at once firm, elegant, simple"; the greater part of Volume III is ascribed by Gregory to a different hand from that of the others; two hands are discerned in the N. T. by Woide, three by Sir E. Maunde Thompson and Kenyon—experts differ on these points. The handwriting is generally judged to belong to the beginning or middle of the fifth century or possibly to the late fourth. An Arabic note states that it was written by Thecla the martyr; and Cyril Lucar the Patriarch adds in his note that tradition says she was a noble Egyptian woman and wrote the codex shortly after the Nicene Council. But nothing is known of such a martyr at that date, and the value of this testimony is weakened by the presence of the Eusebian Canons (d. 340) and destroyed by the insertion of the letter of Athanasius (d. 373). On the other hand, the absence of the Euthalian divisions is regarded by Scrivener as proof that it can hardly be later than 450. This is not decisive, and Gregory would bring it down even to the second half of the fifth century. The character of the letters and the history of the manuscript point to Egypt as its place of origin.

The text of Codex A is considered one of the most valuable witnesses to the Septuagint. It is found, however, to bear a great affinity to the text embodied in Origen's Hexapla and to have been corrected in numberless passages according to the Hebrew. The text of the Septuagint codices is in too chaotic a condition, and criticism of it too little advanced, to permit of a sure judgment on the textual value of the great manuscripts. The text of the New Testament here is of a mixed character. In the Gospels, we have the best example of the so-called Syrian type of text, the ancestor of the traditional and less pure form found in the *textus receptus*. The Syrian text, however, is rejected by the great majority of scholars in favour of the "neutral" type, best represented in the Codex

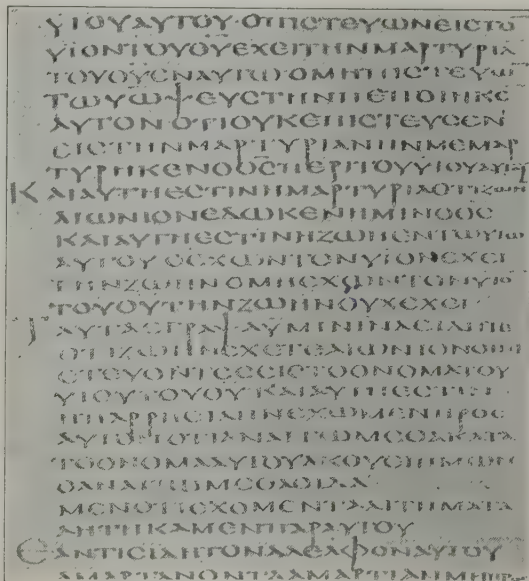

Vaticanus. In the Acts and Catholic Epistles, and still more in St. Paul's Epistles and the Apocalypse, Codex A approaches nearer, or belongs, to the neutral type. This admixture of textual types is explained on the theory that A or its prototype was not copied from a single MS., but from several MSS. of varying value and diverse origin. Copyist's errors in this codex are rather frequent.

Codex Alexandrinus played an important part in developing the textual criticism of the Bible, particularly of the New Testament. Grabe edited the Old Testament at Oxford in 1707–20, and this edition was reproduced at Zurich 1730–32, and at Leipzig, 1750–51, and again at Oxford, by Field, in 1859; Woide published the New Testament in 1786, which B. H. Cowper reproduced in 1860. The readings of

Codex A were noted in Walton's Polyglot, 1657, and in every important collation since made. Baber published an edition of the Old Testament in facsimile type in 1816–28; but all previous editions were superseded by the magnificent photographic facsimile of both Old and New Testaments produced by the care of Sir E. Maunde Thompson (the N. T. in 1879, the O. T. in 1881–83), with an introduction in which the editor gives the best obtainable description of the codex (London, 1879–80).

Codex Amiatinus, the most celebrated manuscript of the Latin Vulgate Bible, remarkable as the best witness to the true text of St. Jerome and as a fine specimen of mediæval calligraphy, now kept at Florence in the Bibliotheca Laurentiana. The symbol for it is written *am* or *A* (Wordsworth). It is preserved in an immense tome, measuring in height and breadth 19½ inches by 13½ inches, and in thickness 7 inches—so impressive, as Hort says, as to fill the beholder with a feeling akin to awe. Some consider it, with White, as perhaps "the finest book in the world"; still there are several manuscripts which are as beautifully written and have besides, like the Book of Kells or Book of Lindisfarne, those exquisite ornaments of which Amiatinus is devoid. It contains 1029 leaves of strong, smooth vellum, fresh-looking to-day, despite their great antiquity, arranged in quires of four sheets, or quaternions. It is written in uncial characters, large, clear, regular, and beautiful, two columns to a page, and 43 or 44 lines to a column. A little space is often left between words, but the writing is in general continuous. The text is

divided into sections, which in the Gospels correspond closely to the Ammonian Sections. There are no marks of punctuation, but the skilled reader was guided into the sense by stichometric, or verse-like, arrangement into cola and commata, which correspond roughly to the principal and dependent clauses of a sentence. This manner of writing the scribe is believed to have modelled upon the great Bible of Cassiodorus (q. v.), but it goes back perhaps even to St. Jerome; it may be shown best by an example:—

QUA IN POTESTATE ERAT
 SERMO IPSIUS
 ET IN SYNAGOGA ERAT HOMO HABENS
 DEMONIUM INMUNDUM
 ET EXCLAMAVIT VOCE MAGNA
 DICENS
 SINE QUID NOBIS ET TIBI IHU
 NAZARENE VENISTI PERDERE NOS
 SCIO TE QUI SIS SCS DI
 ET INCREPAVIT ILLI IHS DICENS

It will be noticed that the section "ET IN" and the cola begin at about the same perpendicular line, the commata begin further in under the third or second letter, and so likewise does the continuation of a colon or comma which runs beyond a single line (see facsimile page). This arrangement, besides aiding the intelligence of the text, gave a spacious, varied, and rather artistic appearance to the page. The initial letter of a section was often written in ink of a different colour, and so also was the first line of a book. Beyond that there was no attempt at decorating the text.

The codex (or pandect) is usually said to contain the whole Bible; but it should be noted that the Book of Baruch is missing, though the Epistle of Jeremias, usually incorporated with it, is here appended to the Book of Jeremias. Besides the text of the Scriptural books, it contains St. Jerome's "Prologus Galeatus" and his prefaces to individual books; the *capitula*, or summaries of contents; and, in the first quaternion, certain materials which have been much discussed and have proved of the greatest service in tracing the history of the codex, among them dedicatory verses, a list of the books contained in the codex, a picture of the Tabernacle (formerly thought to be Solomon's Temple), a division of the Biblical books according to Jerome, another according to Hilary and Epiphanius, and a third according to Augustine. Part of Solomon's prayer (III K., viii, 22-30) in an Old Latin text is reproduced at the end of Ecclesiasticus. A Greek inscription at the beginning of Leviticus, recording that "the Lord Servandus prepared" this codex or part of it, has entered largely into the discussion of its origin.

The recovery of the history of Codex Amiatinus, which has important bearings upon the history of the Vulgate itself and of the text of the Bible, was due to the labours of many scholars and the insight of one man of genius, de Rossi. At the beginning of the pandect, as we have mentioned, there are certain dedicatory verses; they record the gift (of the codex) to the venerable convent of St. Saviour by a certain Peter who was abbot from the extreme territory of the Lombards. The Latin text is as follows:—

CENOBIVM AD EXIMII MERITO
 VENERABILE SALVATORIS
 QUEM CAPUT ECCLESIE
 DEDICAT ALTA FIDES
 PETRUS LANGOBARDORVM
 EXTREMIS DE FINIB. ABBAS
 DEVOTI AFFECTVS
 PIGNORA MITTO MEI

St. Saviour's is the name of the monastery on Monte Amiata (whence *Amiatinus*) near Siena; here this codex was kept from the ninth century till the

year 1786, when it was brought to Florence after the suppression of the monastery. Naturally, the codex was supposed to be a gift to this house, but nothing was known of the donor. Bandini, the librarian of the Laurentiana, into whose hands the codex came, noticed that the names of neither the donor nor of the recipient belonged to the original dedication. They were written in a different hand over parts of the original inscription, as betrayed by evident signs of erasure. The letters italicized above were by the second hand, while the initial letter c of the first line and the e in the fifth were original. Bandini noticed, also, that *cenobium* replaced a shorter word and that the last five letters of *salvatoris* were written on parchment that had not been erased, and so that the ten letters of this word replaced five of the original word. The metre also was entirely at fault. The clue for reconstructing the original lines he found in the expression *caput ecclesie*, which he judged referred to St. Peter. And as in the Middle Ages a favourite title for the Apostolic See was *culmen apostolicum*, he reconstructed the line in this fashion:—

CULMEN AD EXIMII MERITO VENERABILE PETRI

This conjecture produced a correct hexameter verse, retained the original initial c, supplied a word of proper length at the beginning and another at the end, and afforded a sense fitting in perfectly with the probabilities of the case. In the fifth line, instead of *Petrus Langobardorum*, Bandini suggested *Servandus Latii*, because of the inscription about Servandus mentioned above. This Servandus was believed to be the friend of St. Benedict, to whom he made a visit at Monte Cassino in 541; he was abbot of a monastery near the extremity of Latium.

These conjectures were accepted by the learned world; Tischendorf, for instance, writing seventy-five years later, said Bandini had so well proved his case that no doubt remained. Accordingly, it was settled that the Codex Amiatinus dated from the middle of the sixth century, was the oldest manuscript of the Vulgate, and was written in Southern Italy. A few protests were raised, however; that, for instance, of Paul de Lagarde. He had edited St. Jerome's translation of the Hebrew Psalter, using freely for that purpose a codex of the ninth century; Amiatinus he judged, with a not unnatural partiality, to be "in all probability" from the hand of the scribe of his ninth-century Psalter, written "at Reichenau on the Lake of Constance". But, to quote Corssen, it was G. B. de Rossi, "that great Roman scholar, whose never-failing perspicacity and learning discovered at once the birthplace of our famous manuscript" (Academy, 7 April, 1888).

De Rossi followed Bandini in his reconstruction of the first verse, but he thought it unlikely that an abbot, presenting a book to the pope at Rome, should speak of "the extreme limits of Latium", really but a short distance from Rome. Anziani, the librarian of the Laurentiana, pointed out to him that the space erased to make room for *Petrus Langobardorum* was greater than called for by the conjecture of Bandini. De Rossi was at the time engaged on an inquiry into the ancient history of the Vatican Library, and, recalling a passage of Bede, he divined that the lost name was *Ceolfridus*. The erasures, which were irregular, seeming to follow the letters very closely, corresponded perfectly to this conjecture. He proposed then the verse:—

CEOLFRIDUS BRITONUM EXTREMIS DE FINIB. ABBAS

The phrase exactly suited an abbot from the end of the world, as England was then regarded and styled; and the story of Ceolfrid made de Rossi's conjecture acceptable at once, especially to English scholars. Ceolfrid was the disciple of Benedict Biscop (q. v.), who founded the monasteries of Wearmouth and Jar-

CODEx AMIATINUS

SECTION OF A COLUMN. LUKE, IV, 32-37

VIII CENTURY. MS. IN THE BIBLIOTHECA LAURENTIANA, FLORENCE

row in Northumberland towards the end of the seventh century. England, in those days, was the most devoted daughter of the Roman See, and Abbot Benedict was enthusiastic in his devotion. His monasteries were dependent directly on Rome. Five times during his life he journeyed to Rome, usually bringing back with him a library of books presented by the pope. Ceolfrid, who had accompanied him on one of these visits, became his successor in 686 and inherited his taste for books; Bede mentions three pandects of St. Jerome's translation which he had made, one of which he determined in his old age, in 716, to bring to the church of St. Peter at Rome. He died on the way, but his gift was carried to the Holy Father, then Gregory II. This codex de Rossi identified with Amiatinus.

This conjecture was hailed by all as a genuine discovery of great importance. Berger, however, objected to *Britonum*, suggesting *Anglorum*. Hort soon placed the matter beyond the possibility of doubt. In an anonymous life of Ceolfrid, the chief source of Bede's information, which, though twice published, had been overlooked by all, Hort found the story about Ceolfrid journeying to Rome and carrying the pandect inscribed with the verses:—

CORPUS AD EXIMII MERITO VENERABILE PETRI
DEDICAT ECCLESIAE QUEM CAPUT ALTA FIDES

CEOLFRIIDUS, ANGLORUM EXTIMIS DE FINIBUS ABBAS

—etc. Despite the variations, there could be no doubt of their identity with the dedicatory verses of Amiatinus; *Corpus* was of course the original, not *Culmen*, and *Anglorum*, not *Britonum*; the other differences were perhaps due to a lapse of memory, or this version may represent the original draft of the dedication. De Rossi's chief point was proved right. It established the fact that Amiatinus originated in Northumberland about the beginning of the eighth century, having been made, as Bede states, at Ceolfrid's order. It does not follow, however, that the scribe was an Englishman; the writing and certain peculiarities of orthography have led some to believe him an Italian. We know that these two monasteries had brought over a Roman musician to train the monks in the Roman chant, and they may also, for a similar purpose, have procured from Italy a skilled calligrapher. The hand-writing of Amiatinus bears a strong resemblance to some fragments of St. Luke in a Durham MS., to N.-T. fragments bound up with the Utrecht Psalter, and to the Stonyhurst St. John; these facts, together with Bede's statement that Ceolfrid had three pandects written, indicate that "there was a large and flourishing school of calligraphy at Wearmouth or Jarrow in the seventh and eighth centuries, of which till lately we had no knowledge at all" (White). This conclusion is confirmed by peculiarities in the text and in certain of the summaries.

The contents of the first quaternion of Amiatinus coincide so remarkably with descriptions of the celebrated Codex Grandior of Cassiodorus that it has been supposed the leaves were transferred from it bodily; the conjecture has been rendered more credible by the fact that this codex was actually seen in England by Bede, perhaps before Amiatinus was carried to Rome. Moreover, the contents of our codex do not correspond exactly to the list prefixed which purports to give the contents. These reasons, however, would only prove that the Codex Grandior served as the model, which seems indubitable; while, on the other hand, weighty reasons have been urged against the other attractive hypothesis (see White and de Rossi).

Despite the lowering of its date by a century and a half, Amiatinus holds the first place for purity of text among the manuscripts of the Vulgate. Its excellence is best explained on the ground that its prototype was an ancient Italian manuscript, perhaps one of those brought from Rome by Benedict Biscop, per-

haps one brought by Adrian, abbot of a monastery near Naples, when in 668 he accompanied Benedict and Theodore to England. It is remarkable that Amiatinus and the other Northumbrian codices are nearest in text to Italian MSS., especially to Southern Italian, and to MSS. betraying Italian descent. The group to which it belongs bears the closest relationship to the best-esteemed Greek MSS. extant, s. B. (Cf. MANUSCRIPTS OF THE BIBLE; CRITICISM, BIBLICAL, sub-title *Textual*.) In the Old Testament, the text is not of equal purity throughout; Berger, e. g., notes the inferiority of Wisdom and Ecclesiasticus, and Tischendorf of Machabees. The Psalter does not present the Vulgate text, but St. Jerome's translation from the Hebrew (cf. PSALTER; VULGATE). The excellence of the Amiatine text is not a new discovery: it was well known to the Sixtine revisers of the Vulgate, who used it constantly and preferred it, as a rule, to any other. To this is largely due the comparative purity of the official Vulgate text and its freedom from so many of the corruptions found in the received Greek text, which rests, as is well known, on some of the latest and most imperfect Greek MSS.

WHITE, *The Codex Amiatinus and Its Birthplace in Studia Biblica* (Oxford, 1890), II; WORDSWORTH AND WHITE, *Novum Testamentum Latine* (Oxford, 1898); DE ROSSI, *La Bibbia Offerta da Ceolfrido* (Rome, 1887, containing a photographic facsimile of the dedicatory verses); BERGER, *Histoire de la Vulgate* (Paris, 1893); BATIFFOL in VIGOUROUX, *Dict. de la Bible* (Paris, 1892), s. v. *Amiatinus*, with facsimile of part of a page of St. Luke. A series of letters to the Academy, 1886-89, by WORDSWORTH, HORT, CORSESS, SANDAY, HAMANN, BROWNE, etc., constitute the most exhaustive discussion. The text of the N. T. was published by TISCHENDORF (1850, 1854) and by TREGELLES (1857); O. T. not yet published, but collated in HEYSE and TISCHENDORF, *Biblia Latina* (Leipzig, 1873). The Palaeographical Society has published two facsimile pages.

JOHN F. FENLON.

Codex Bezae (CODEX CANTABRIGIENSIS), one of the five most important Greek New Testament MSS., and the most interesting of all on account of its peculiar readings; scholars designate it by the letter D (see CRITICISM, BIBLICAL, sub-title *Textual*). It receives its name from Theodore Beza, the friend and successor of Calvin, and from the University of Cambridge, which obtained it as a gift from Beza in 1581 and still possesses it. The text is bilingual, Greek and Latin. The manuscript, written in uncial characters, forms a quarto volume, of excellent vellum, 10 x 8 inches, with one column to a page, the Greek being on the left page (considered the place of honour), the parallel Latin facing it on the right page. It has been reproduced in an excellent photographic facsimile, published (1899) by the University of Cambridge.

The codex contains only the Four Gospels, in the order once common in the West, Matthew, John, Luke, Mark, then a few verses (11-15), in Latin only, of the Third Epistle of St. John, and the Acts. There are missing, however, from the MS. of the original scribe, in the Greek, Matt., i, 1-20; [iii, 7-16]; vi, 20-ix, 2; xxvii, 2-12; John i, 16-iii, 26; [xviii, 14-xx, 13]; [Mk. xvi, 15-20]; Acts, viii, 29-x, 14; xxi, 2-10, 16-18; xxii, 10-20; xxii, 29-xxviii, 31; in the Latin, Matt., i, 1-11; [ii, 21-iii, 7]; vi, 8-viii, 27; xxvi, 65-xxvii, 1; John, i, 1-iii, 16; [xviii, 2-xx, 1]; [Mk., xvi, 6-20]; Acts, viii, 20-x, 4; xx, 31-xxi, 2, 7-10; xxii, 2-10; xxiii, 20-xxviii, 31. The passages in brackets have been supplied by a tenth-century hand. It will be noticed that St. Luke's Gospel alone, of the books contained, is preserved complete. The condition of the book shows a gap between the Gospels and Acts; and the fragment of III John indicates that, as in other ancient MSS., the Catholic Epistles were placed there. The fact that the Epistle of Jude does not immediately precede Acts is regarded as pointing to its omission from the codex; it may, however, have been placed elsewhere. We cannot tell whether the MS. contained more of the New Testament, and there is no indication that it was, like the other great uncial

MSS., ever joined to the text of the Old Testament. Besides the hand of the original scribe, there are corrections in several different hands, some probably contemporary with the original, later liturgical annotations and the *sortes sanctorum*, or formulae for telling fortunes; all these are important for tracing the history of the MS.

Beza wrote in the letter accompanying his gift that the MS. was obtained from the monastery of St. Irenæus in Lyons, during the war in 1562. Lyons was sacked by the Huguenots in that year and this MS. was probably part of the loot. The reformer said it had lain in the monastery for long ages, neglected and covered with dust; but his statement is rejected by most modern scholars. It is claimed, in fact, that this codex is the one which was used at the Council of Trent in 1546 by William Dupré (English writers persist in calling this Frenchman à Prato), Bishop of Clermont in Auvergne, to confirm a Latin reading of John, xxi, *si eum volo manere*, which is found only in the Greek of this codex. Moreover, it is usually identified with Codex β , whose peculiar readings were collated in 1546 for Stephens' edition of the Greek Testament by friends of his in Italy. Beza himself, after having first denominated his codex *Lugdunensis*, later called it *Claromontanus*, as if it came not from Lyons, but from Clermont (near Beauvais, not Clermont of Auvergne). All this, throwing Beza's original statement into doubt, indicates that the MS. was in Italy in the middle of the sixteenth century, and has some bearing upon the locality of the production.

It has commonly been held that the MS. originated in Southern France about the beginning of the sixth century. No one places it at a later date, chiefly on the evidence of the handwriting. France was chosen, partly because the MS. was found there, partly because churches in Lyons and the South were of Greek foundation and for a long time continued the use of Greek in the Liturgy, while Latin was the vernacular—for some such community, at any rate, this bilingual codex was produced—and partly because the text of D bears a remarkable resemblance to the text quoted by St. Irenæus, even, says Nestle, in the matter of clerical mistakes, so that it is possibly derived from his very copy. During the past five years, however, the opinion of the best English textual critics has been veering to Southern Italy as the original home of D. It is pointed out that the MS. was used by a church practising the Greek Rite, as the liturgical annotations concern the Greek text alone; that these annotations date from the ninth to the eleventh century, exactly the period of the Greek Rite in Southern Italy, while it had died out elsewhere in Latin Christendom, and show that the Byzantine Mass-lections were in use, which cannot have been the case in Southern France. The corrections, too, which concern the Greek text and but rarely the Latin, the spelling, and the calendar all point to Southern Italy. These arguments, however, touch only the home of the MS., not its birthplace, and MSS. have travelled from one end of Europe to the other. Ravenna and Sardinia, where Greek and Latin influences also met, have likewise been suggested. It can only be said that the certainty with which till recently it was ascribed to Southern France has been shaken, and the probabilities now favour Southern Italy.

Following Scrivener, scholars universally dated it from the beginning of the sixth century, but there is a tendency now to place it a hundred years earlier. Scrivener himself admitted that the handwriting was not inconsistent with this early date, and only assigned it a later date by reason of the Latinity of the annotations. But the corrupt Latin is not itself incompatible with an earlier date, while the freedom with which the Latin N. T. text is handled indicates a time when the Old Latin version was still current.

It probably belongs to the fifth century. Nothing necessitates a later date.

The type of text found in D is very ancient, yet it has survived in this one Greek MS. alone, though it is found also in the Old Latin, the Old Syriac, and the Old Armenian versions. It is the so-called Western Text, or one type of the Western Text. All the Fathers before the end of the third century used a similar text and it can be traced back to sub-Apostolic times. Its value is discussed elsewhere. D departs more widely than any other Greek codex from the ordinary text, compared with which as a standard, it is characterized by numerous additions, paraphrastic renderings, inversions, and some omissions. (For collation of text, see Scrivener, *Beza Codex*, pp. xlix–lxiii; Nestle, *Novi Test. Græci Supplementum*, Gebhardt and Tischendorf ed., Leipzig, 1896.) One interpolation is worth noting here. After Luke, vi, 5, we read: "On the same day seeing some one working on the Sabbath, He said to him: 'O man, if you know what you do, blessed are you; but if you do not know, you are cursed and a transgressor of the law'." The most important omission, probably, is the second mention of the cup in Luke's account of the Last Supper.

The Latin text is not the Vulgate, nor yet the Old Latin, which it resembles more closely. It seems to be an independent translation of the Greek that faces it, though the fact that it contains two thousand variations from its accompanying Greek text have led some to doubt this. Of this number, however, only seven hundred and sixteen are said to be real variant readings, and some of these are derived from the Vulgate. If the translation be independent, both the Vulgate and Old Latin have influenced it greatly; as time went on, the influence of the Vulgate grew and probably extended even to modifications of the Greek text. Chase, however, traces many of the variants to an original Syriac influence. The text, which was in so great honour in the Early Church, possesses a fascination for certain scholars, who occasionally prefer its readings; but none professes to have really solved the mystery of its origin.

JOHN F. FENLON.

Codex Canonum. See CANONS, COLLECTION OF ANCIENT.

Codex Ephræmi Rescriptus (symbol C), last in the group of the four great uncial MSS. of the Greek Bible, received its name from the treatises of St. Ephræm the Syrian (translated into Greek) which were written over the original text. This took place in the twelfth century, the ink of the Scriptural text having become partially effaced through fading or rubbing. Several Biblical codices are palimpsests (see MANUSCRIPTS OF THE BIBLE), of which Codex Ephræmi is the most important. After the fall of Constantinople it was brought to Florence; thence it was carried to Paris by Catherine de' Medici, and has passed into the possession of the National Library.

Through Pierre Alix, Montfaucon, and Boivin, attention was called to the underlying text, and some of its readings given to the world. The first complete collation of the N. T. was made by Wetstein (1716). Tischendorf published the N. T. in 1843 and the

O. T. in 1845. The torn condition of many leaves, the faded state of the ink, and the covering of the original writing by the later made the decipherment an extremely difficult task; some portions are hopelessly illegible. Tischendorf, then a young man, won his reputation through this achievement. His results, however, have not been checked by other scholars, and so cannot yet be accepted without caution.

The codex, of good vellum, measures 12½ inches by 9 inches; there is but one column to a page, C being the earliest example of this kind. The writing is a little larger than that of A, A, and B; the first hand inserted no breathings or accents, and only an occasional apostrophe. The period is marked by a single point. Large capitals are frequent, as in A. The margin of the Gospels contains the Ammonian Sections, but not the numbers of the Eusebian Canons, which were probably written in vermillion and have

another. "Sometimes", says Kenyon, "it agrees with the neutral group of manuscripts, sometimes with the Western, not unfrequently with the Alexandrian and perhaps oftenest with the Syrian". From certain displacements in the Apocalypse, Hort infers that the book was copied from a codex of small leaves. Such an exemplar would not be used in church services and would have no guarantee of a good text. Possibly the rest of the MS. was copied from similar codices.

CODEx SINAITICUS, HEBREWS, XII, 27-XIII, 2, AND XIII, 7-9, IV CENTURY.
MS. IN IMPERIAL LIBRARY, ST. PETERSBURG

faded away. The Euthalian chapters are missing; the subscriptions are brief. From these indications and the character of the writing, Codex C is placed in the first half of the fifth century, along with A. Tischendorf distinguished two scribes (contemporaries), one for O. T., the other for N. T., and two correctors, one (C¹) of the sixth, the other (C²) of the ninth century; he conjectured that Egypt was the place of origin. With the exception of Tischendorf no modern has really studied the MS.

Originally the whole Bible seems to have been contained in it. At present, of the O. T. only some of the Hagiographa survive, in an imperfect state, namely nearly all of Ecclesiastes, about half of Ecclesiasticus and Wisdom, with fragments of Proverbs and Canticles—in all 64 leaves. About two-thirds of the N. T. (145 leaves) remain, including portions of all the books except II Thess., and II John; no book is complete. The text of C is said to be very good in Wisdom, very bad in Ecclesiasticus, two books for which its testimony is important. The N. T. text is very mixed; the scribe seems to have had before him MSS. of different types and to have followed now one now

and value; found on Mount Sinai, in St. Catherine's Monastery, by Constantine Tischendorf. He was visiting there in 1844, under the patronage of Frederick Augustus, King of Saxony, when he discovered in a rubbish basket forty-three leaves of the Septuagint, containing portions of I Par. (Chron.), Jer., Neh., and Esther; he was permitted to take them. He also saw the books of Isaiah and I and IV Mach., belonging to the same codex as the fragments, but could not obtain possession of them; warning the monks of their value, he left for Europe and two years later published the leaves he had brought with him under the name of Codex Friderico-Augustanus, after his patron. They are preserved at Leipzig. On a second visit, in 1853, he found only two short fragments of Genesis (which he printed on his return) and could learn nothing of the rest of the codex. In 1859 he made a third visit, this time under the patronage of the Czar, Alexander II. This visit seemed likewise fruitless when, on the eve of his departure, in a chance conversation with the steward, he learned of the existence of a manuscript there; when it was shown to him, he saw the very manuscript he had sought con-

taining, beyond all his dreams, a great part of the Old Testament and the entire New Testament, besides the Epistle of Barnabas, and part of the "Shepherd" of Hermas, of which two works no copies in the original Greek were known to exist. Thinking it "a crime to sleep", Tischendorf spent the night copying Barnabas; he had to leave in the morning, after failing to persuade the monks to let him have the manuscript. At Cairo he stopped at a monastery belonging to the same monks (they were of the Orthodox Greek Church) and succeeded in having the manuscript sent to him there for transcription; and finally, in obtaining it from the monks as a present to the Czar, Tischendorf's patron and the protector of their Church. Years later, in 1869, the Czar rewarded the two monasteries with gifts of money (7000 and 2000 roubles each) and decorations. The manuscript is treasured in the Imperial Library at St. Petersburg. Tischendorf published an account of it in 1860; and, under the auspices of the czar, printed it in facsimile in 1862. Twenty-one lithographic plates made from photographs were included in this edition, which was issued in four volumes. The following year he published a critical edition of the New Testament. Finally, in 1867, he published additional fragments of Genesis and Numbers, which had been used to bind other volumes at St. Catherine's and had been discovered by the Archimandrite Porfirius. On four different occasions, then, portions of the original manuscript have been discovered; they have never been published together in a single edition.

The Codex Sinaiticus, which originally must have contained the whole Old Testament, has suffered severely from mutilation, especially in the historical books from Genesis to Esdras (inclusive); the rest of the O. T. fared much better. The fragments and books extant are: several verses from Gen., xxiii and xxiv, and from Num., v, vi, vii; I Par., ix, 27-xix, 17; Esdras, ix, 9 to end; Nehemias, Esther, Tobias, Judith, Joel, Abdias, Jonas, Nahum, Habacuc, Sophonias, Aggeus, Zacharias, Malachias, Isaias, Jeremias, Lamentations, i, 1-ii, 20; I Mach., IV Mach. (apocryphal, while the canonical II Mach. and the apocryphal III Mach. were never contained in this codex). A curious occurrence is that Esdras, ix, 9, follows I Par., xix, 17 without any break; the note of a corrector shows that seven leaves of I Par. were copied into the Book of Esdras, probably by a mistake in the binding of the MS. from which \aleph was copied. Our Esdras is called in this codex, as in many others, Esdras B. This may indicate that it followed Esdras A, as the book called by Jerome III Esdras (see *ESDRAS*) is named in ancient codices; the proof is by no means sure, however, as IV Mach. is here designated Mach. D, as was usual, although the second and third books of Mach. were absent from the MS. The New Testament is complete, likewise the Epistle of Barnabas; six leaves following Barnabas are lost, which probably also contained uncanonical literature: the "Shepherd" of Hermas is incomplete, and we cannot tell whether other works followed. In all, there are 346½ leaves. The order of the N. T. is to be noted, St. Paul's Epistles preceding Acts; Hebrews following II Thess. The manuscript is on good parchment; the pages measure about 15 inches by 13½ inches; there are four columns to a page, except in the poetical books, which are written stichometrically in two columns of greater width; there are 48 lines to a column, but 47 in the Catholic Epistles. The four narrow columns give the page the appearance of an ancient roll; it is not impossible, as Kenyon says, that it was in fact copied from a papyrus roll. It is written in uncial characters, well formed, without accents or breathings, and with no punctuation except (at times) the apostrophe and the single point for a period. Tischendorf judged that there were four hands engaged in the writing of the manuscript; in this he has been generally followed. He

has been less happy in obtaining acceptance of his conjecture that one of these scribes also wrote the New Testament of the Vatican Codex. He recognized seven correctors of the text, one of them contemporaneous with the writing of the MS. The Ammonian Sections and the Eusebian Canons are indicated in the margin, probably by a contemporary hand; they seem to have been unknown to the scribe, however, who followed another division. The clerical errors are relatively not numerous, in Gregory's judgment.

In age this manuscript ranks alongside the Codex Vaticanus. Its antiquity is shown by the writing, by the four columns to a page (an indication, probably, of the transition from the roll to the codex form of MS.), by the absence of the large initial letters and of ornaments, by the rarity of punctuation, by the short titles of the books, the presence of divisions of the text antedating Eusebius, the addition of Barnabas and Hermas, etc. Such indications have induced experts to place it in the fourth century, along with B and some time before A and C; this conclusion is not seriously questioned, though the possibility of an early fifth-century date is conceded. Its origin has been assigned to Rome, Southern Italy, Egypt, and Cæsarea, but cannot be determined (Kenyon, *Handbook to the Textual Criticism of the N. T.*, London, 1901, p. 56 sqq.). It seems to have been at one time at Cæsarea; one of the correctors (probably of seventh century) adds this note at the end of Esdras: "This codex was compared with a very ancient exemplar which had been corrected by the hand of the holy martyr Pamphilus [d. 309]; which exemplar contained at the end the subscription in his own hand: 'Taken and corrected according to the Hexapla of Origen: Antonius compared it: I, Pamphilus, corrected it.'" Pamphilus was, with Eusebius, the founder of the library at Cæsarea. Some are even inclined to regard \aleph as one of the fifty MSS. which Constantine bade Eusebius of Cæsarea to have prepared in 331 for the churches of Constantinople; but there is no sign of its having been at Constantinople. Nothing is known of its later history till its discovery by Tischendorf. The text of \aleph bears a very close resemblance to that of B, though it cannot be descended from the same immediate ancestor. In general, B is placed first in point of purity by contemporary scholars and \aleph next. This is especially true, for the N. T., of the Gospels. The differences are more frequent in the O. T. where \aleph and A often agree.

The editions of TISCHENDORF (see above); SWETE, *Introduction to the Old Testament in Greek* (Cambridge, 1900); see also works on N.-T. criticism mentioned under CODEx ALEXANDRINUS.

JOHN F. FENLON.

Codex Vaticanus (Codex B), a Greek manuscript, the most important of all the manuscripts of Holy Scripture. It is so called because it belongs to the Vatican Library (*Codex Vaticanus*, 1209).

This codex is a quarto volume written in uncial letters of the fourth century, on folios of fine parchment bound in quaterns. Each page is divided into three columns of forty lines each, with from sixteen to eighteen letters to a line, except in the poetical books, where, owing to the stichometric division of the lines, there are but two columns to a page. There are no capital letters, but at times the first letter of a section extends over the margin. Several hands worked at the manuscript; the first writer inserted neither pauses nor accents, and made use but rarely of a simple punctuation. Unfortunately, the codex is mutilated; at a later date the missing folios were replaced by others. Thus, the first twenty original folios are missing; a part of folio 178, and ten folios after fol. 348; also the final quaterns, whose number it is impossible to establish. There are extant in all 759 original folios.

The Old Testament (Septuagint Version, except Daniel, which is taken from the Version of Theodotion) takes up 617 folios. On account of the aforementioned lacunae, the Old Testament text lacks the following passages: Gen., i-xlvi, 28; II Kings, ii, 5-7, 10-13; Pss. cv, 27-cxxvii, 6. The order of the books of the Old Testament is as follows: Genesis to Second Paralipomenon, First and Second Esdras, Psalms, Proverbs, Ecclesiastes, Canticle of Canticles, Job, Wisdom, Ecclesiasticus, Esther, Judith, Tobias, the Minor Prophets from Osee to Malachy, Isaiah, Jeremias, Baruch, Lamentations and Epistle of Jeremias, Ezechiel, Daniel; the Vatican Codex does not contain the Prayer of Manasses or the Books of Machabees. The New Testament begins at fol. 618. Owing to the loss of the final quinquies, a portion of the Pauline Epistles is missing: Heb., ix, 14-xiii, 25, the Pastoral Letters, Epistle to Philemon; also the

discovered by him, is rightly considered to be the oldest extant copy of the Bible. Like the Codex Sinaiticus it represents what Westcott and Hort call a "neutral text", i. e. a text that antedates the modifications found in all later manuscripts, not only the modifications found in the less ancient Antiochene recensions, but also those met with in the Eastern and Alexandrine recensions. It may be said that the Vatican Codex, written in the first half of the fourth century, represents the text of one of those recensions of the Bible which were current in the third century, and that it belongs to the family of manuscripts made use of by Origen in the composition of his Hexapla.

The original home of the Vatican Codex is uncertain. Hort thinks it was written at Rome; Rendel Harris, Armitage Robinson, and others attribute it to Asia Minor. A more common opinion maintains that it was written in Egypt. Armitage Robinson believes

CODEx VATICANUS, III Esdras (Apocryphal), I, 46-49 AND I, 52-54, IV CENTURY. MS. IN VATICAN LIBRARY

Apocalypse. It is possible that there may also be some extra-canonical writings missing, like the Epistle of Clement. The order of the New Testament books is as follows: Gospels, Acts of the Apostles, Catholic Epistles, St. Paul to the Romans, Corinthians (I-II), Galatians, Ephesians, Philipians, Thessalonians (I-II), Hebrews.

In the Vatican Codex we find neither the Ammonian Sections nor the Eusebian Canons (q. v.). It is, however, divided into sections, after a manner that is common to it with the Codex Zacynthius (Cod. Z), an eighth-century Scriptural manuscript of St. Luke. The Acts of the Apostles exhibit a special division into thirty-six chapters. The Catholic Epistles bear traces of a double division, in the first and earlier of which some believe that the Second Epistle of Peter was wanting. The division of the Pauline Epistles is quite peculiar: they are treated as one book, and numbered continuously. It is clear from this enumeration that in the copy of the Scriptures reproduced by the Vatican Codex the Epistle to the Hebrews was placed between the Epistle to the Galatians and the Epistle to the Ephesians.

The Vatican Codex, in spite of the views of Tischendorf, who held for the priority of the Codex Sinaiticus,

that both the Vaticanus and the Sinaiticus were originally together in some ancient library. His opinion is based on the fact that in the margins of both manuscripts is found the same special system of chapters for the Acts of the Apostles, taken from the division of Euthalius, and found in two other important codices (Amiatinus and Fuldensis) of the Latin Vulgate. Tischendorf believed that three hands had worked at the transcription of the Vatican Codex. He identified (?) the first hand (B¹), or transcriber, of the Old Testament with the transcriber of a part of the Old Testament and some folios of the New Testament in the Codex Sinaiticus. This primitive text was revised, shortly after its original transcription, with the aid of a new manuscript, by a corrector (B²)—For the Old Testament B² is quoted by Swete as B^a). Six centuries after (according to some), a third hand (B³, B^b) retraced the faded letters, leaving but very little of the original untouched. According to Fabiani, however, this retracing was done early in the fifteenth century by the monk Clemens (*qui saeculo XV ineunte floruisse videtur*). In modern times (fifteenth-sixteenth century) the missing folios were added to the codex, in order, as Tregelles conjectures, to prepare it for use in the Vatican Library. Old catalogues show

that it was there in the fifteenth century. The addition to the New Testament was listed by Scrivener as Cod. 263 (in Gregory, 293) for the Epistle to the Hebrews, and Cod. 91, for the Apocalypse. Napoleon I had the codex brought to Paris (where Hug was enabled to study it), but it was afterwards returned to the Holy See, with some other remnants of Roman booty, and replaced in the Vatican Library. There are various collations, editions, and studies of the Vatican Codex. The collations are: (1) that of Bartolucci (Giulio di S. Anastasia), formerly librarian of the Vatican; it was done in 1669 and is preserved in MS.—Gr. Suppl. 53 of the Bibliothèque Nationale—at Paris (quoted under the *sigla*: B1c); (2) that of Birch (Bch) published at Copenhagen in 1798 for the Acts of the Apostles and the Epistles, in 1800 for the Apocalypse, in 1801 for the Gospels; (3) that executed for Bentley (Btl) by the Abbate Mico about 1720 on the margin of a copy of the Greek New Testament which was published at Strasburg, 1524, by Cephaleus; this copy is among Bentley's books in the library of Trinity College, Cambridge—the collation itself was published in Ford's appendix to Woide's edition of the Codex Alexandrinus in 1799; (4) a list of the alterations executed by the original copyist or by his correctors, edited at the request of Bentley by the Abbate Rulotta with the aid of the Abbate de Stosch (Rlt); this list was supposed to have perished, but it is extant among the Bentley papers in the library of Trinity College, Cambridge, under the *sigla*: B. 17.20; (5) in 1860 Alford, and in 1862 Cure, examined a select number of the readings of the Vatican Codex, and published the results of their labours in the first volume of Alford's Greek Testament. Many other scholars have made special collations for their own purposes, e. g. Tregelles, Tischendorf, Alford, etc. Among the works written on the Vatican Codex we may indicate: Bourgon, "Letters from Rome" (London, 1861). In the second volume of the Catalogue of Vatican Greek MSS., executed according to the modern scientific method for the cataloguing of the Vatican Library, there is a description of the Codex Vaticanus.

As to the editions of this codex, the Roman edition of the Septuagint (1587) was based on the Vaticanus. Similarly, the Cambridge edition of Swete follows it regularly and makes use of the Sinaiticus and the Alexandrinus only for the portions that are lacking in the Vaticanus. The first Roman edition appeared in 1858, under the names of Mai and Vercellone, and, under the same names, a second Roman edition in 1859. Both editions were severely criticized by Tischendorf in the edition he brought out at Leipzig in 1867, "Novum Testamentum Vaticanum, post A. Maii aliorumque imperfectos labores ex ipso codice editum", with an appendix (1869). The third Roman edition (Verc.) appeared under the names of Vercellone (died 1869) and Cozza-Luzi (died 1905) in 1868–81; it was accompanied by a photographic reproduction of the text: "Bibliorum SS. Græcorum Cod. Vat. 1209, Cod. B, denuo phototypice expressus, jussu et curâ presidum Bibliothecæ Vaticanæ" (Milan, 1904–6). This edition contains a masterly anonymous introduction (by Giovanni Mercati), in which the writer corrects many inexact statements made by previous writers. Until recently the privilege of consulting this ancient manuscript quite freely and fully was not granted to all who sought it. The material condition of the Vatican Codex is better, generally speaking, than that of its contemporaries; it is foreseen, however, that within a century it will have fallen to pieces unless an efficacious remedy, which is being earnestly sought for, shall be discovered.

U. BENIGNI.

Codrington, THOMAS (d. 1691?), Catholic divine, chiefly known for his attempt to introduce into England the "Institute of Secular Priests Living in Community", founded in Bavaria by Bartholomäus Holzhauser. He was educated and ordained priest at Douai, where he taught humanities for a time. Later on he lived with Cardinal Howard at Rome, acting as his chaplain and secretary. He returned to England in July, 1684, and on the accession of James II in the following year, he was appointed one of the royal chaplains and preachers in ordinary. While he was in Rome he had joined the institute above mentioned, in which Cardinal Howard took a great personal interest, and his return to England seemed to the superior, Father Hofer, a favourable opportunity for extending the institute. Accordingly Mr. Codrington and his companion, Mr. John Morgan, were appointed procurators to introduce the institute into England. The object of the society, the constitutions of which had been approved by Innocent XI in 1680, was to encourage community-life among the secular clergy. This was to be attained by priests residing together, and doing their work from a common centre, all being subject to the bishop. In this work he received much assistance from Cardinal Howard, who addressed letters both to the secular clergy and to the dean of the chapter, exhorting all English priests to join the institute. Even before leaving Rome he had been active in propagating the institute, and had, with his colleagues, endeavoured not only to introduce it into all the English colleges abroad, but even to make it obligatory on the superiors by a decree. Some progress was in fact made, but before much could be effected the Revolution took place, and in 1688 James II fled from England. Mr. Codrington followed his patron abroad to Saint-Germain, where he continued to act as chaplain until his death, which took place about 1691. For some years strenuous efforts were made to spread the institute in England, and in 1697 special constitutions, designed to meet the peculiar circumstances of English priests, were published with a preface, which shows that several of the leading missionaries had joined it. The chapter, however, were unrelenting, on the ground that it was unsuitable in England and would lead to dissensions among the clergy, and ultimately Bishop Giffard suppressed it. Mr. Codrington published a sermon preached before the king and queen, 28 Nov., 1686, and another preached before the queen-dowager, 6 Feb., 1687. The former of these was republished in the 1741 reprint entitled "Catholic Sermons".

EDWIN BURTON.

Co-education.—The term is now generally reserved to the practice of educating the sexes together; but even in this sense it has a variety of meanings. (a) Mere juxtaposition; this implies the use of the same buildings and equipment under the same teaching staff for the education of both sexes, but does not oblige the sexes to follow the same methods or to live under the same regimen. (b) Co-ordinate education; the students are taught by the same methods and the same teachers and are governed by the same general administration; but each sex has its own classes and, in the case of a university, its separate college. (c) Identical education; both sexes are taught "the same things, at the same time, in the same place, by the

same faculty, with the same methods and under the same regimen. This admits age and proficiency, but not sex, as a factor in classification" (Clarke, op. cit. below, p. 121). It is in this third and narrowest sense that co-education has been the subject of widespread discussion for some time past. In the United States especially the practice has grown rapidly during the last fifty years, while in European countries it has developed more slowly.

EXTENT.—Elementary Schools.—At present co-education is practically universal in the elementary grades of the public schools of the United States. It also prevails to a large extent in the elementary grades of private and denominational schools, including those which are under Catholic direction, notably the parochial schools.—**Secondary Schools.**—According to the Commissioner's Report for 1905-6, there were in the United States 40 public high schools for boys only, with 22,044 students, and 29 schools for girls only, with 23,203 students; while the co-educational high schools numbered 7,962 having on their rolls 283,264 boys and 394,181 girls; the difference indicated by these last figures is noteworthy. During the same year there were under private direction 304 high schools for boys only, with 22,619 students; 500 high schools for girls only, with 27,081 students; while the private co-educational schools numbered 725 with an attendance of 26,487 boys and 25,568 girls. From these statistics it appears that even in private high schools the number of boys is larger where co-education prevails than it is in schools exclusively for boys; and that the number of girls in co-educational schools is not very far below the number in schools exclusively for girls.—**Higher and Technical Educational Institutions.**—Of 622 universities, colleges, and technological schools reporting to the United States Bureau of Education for the year ended June, 1906, there were for men only, 158; for women only, 129; for both men and women, 335. Comparison with earlier statistics shows a decided advance in co-education. In 1889-90 the women in co-educational colleges numbered 8075, in schools of technology, 707, and in colleges for women only, 1979; the men in all colleges numbered 44,926. In 1905-6 there were 31,443 women in co-educational colleges and 6653 in colleges for women only; the number of men students was 97,738.

The tendency in Europe, generally speaking, is to admit women to university courses of study, but under restrictions which vary considerably from one country to another. In Germany, women, for the most part, attend the university as "hearers", not as matriculated students. The custom in England is that women should reside in colleges of their own while receiving the benefit of university education. There is also considerable variety in the regulations concerning the granting of degrees to women. Replies to an inquiry issued by the English Department of Education in 1897, with later revision (United States Commissioner's Report for 1904, chap. xx), showed that of 112 universities on the Continent, in Great Britain, and in the British colonies, 86 made no distinction between men and women students, 6 admitted women by courtesy to lectures and examinations, 20 permitted them to attend some lectures only; of these 20 universities, 14 were German and 6 Austrian. The proportion of women students to the total enrollment in the universities of Central Europe is shown in the following table:—

Austria	Total No. of Students, 22,749; Women, 1,323
France	33,618; " 1,922
Germany	51,535; " 1,938
Switzerland	9,483; " 2,594

In England, provision for the higher education of women began with the founding of Queen's College, London (1848) and Bedford College (1849). In 1878 the University of London admitted women to examinations and degrees. The Honour degree examina-

tions of Cambridge were opened to women (students of Girton and Newnham colleges) in 1881; some of the Oxford examinations were opened to women (students of Somerville College and Lady Margaret Hall) in 1884; the Scottish universities admitted women in 1892; the University of Durham in 1895; the University of Wales from its foundation in 1893. In Ireland, both the Royal University and Trinity College, Dublin, receive women students. It should, however, be noted that the number of women following university courses in England is still comparatively small. In 1905-6, the colleges mentioned above in connexion with Oxford had in residence 136 students, and those at Cambridge, 316. On the other hand, the movement is stronger in some of the recently founded universities. Thus the institutions for women affiliated with the London University (Bedford, Halloway, Westfield, and Royal Free Hospital) in 1905-6 numbered 628 students. It may therefore be said that co-education in Europe, though it has made a beginning, is by no means so prominent a feature of the schools as it is in the United States. Its growth and effects are for this reason best studied in American institutions; and in these the historical facts are the more important inasmuch as they are said to furnish ample justification of the policy.

CAUSES.—The explanation of these facts is to be sought in a variety of conditions, some of which are naturally connected with the general development of the country while others may be called artificial, in the sense that they are the application of theories or policies rather than direct responses to needs, or final solutions of problems. Thus it is significant that co-education has found its stronghold in the Northern, Central, and Western States of the Union which profited most by the Congressional land grants of 1787 and 1862 and by similar grants on the part of the several States. It was easy to argue, on the basis of democratic principles, that institutions supported by public funds should offer the same advantages to all citizens. From the founding of Oberlin College, Ohio (1833), which was the first institution of its class to introduce co-education (1837), the policy spread at such a rate that by 1880 more than half the colleges, and by 1900 nearly three-fourths, had adopted it. In the more conservative East segregation was the general practice until the last quarter of the nineteenth century. But the precedent established by Boston University (1869) and by Cornell (1872) was soon followed by many other Eastern institutions.

A still more powerful factor has been the public high school, which since 1850 has held an important place in the educational system. Some schools of this class, notably those in the West, were co-educational from the start; others were opened at first for boys only, but eventually they admitted girls on the same terms; this was the case in the larger cities of the East. In 1891, only 15 out of 628 leading cities of the country had separate high schools, in 1901 the number had fallen to 12. The growth of these schools coincided with the movement in favour of higher education for women. The leaders of this movement insisted on the right of women to have equal advantages with men in the line of education; they quite overlooked or disregarded the fact that equality in this case does not mean identity. But any defect in their reasoning on the subject was more than compensated for by their enthusiasm and perseverance. Their efforts, however, were in accordance with the demands made by industrial changes. The introduction of labour-saving machinery which gradually brought about the factory organization of industry, took from woman, one by one, her traditional employments in the home and compelled her to seek new occupations in fields hitherto occupied exclusively by man: hence the very natural demand for equal educational opportunities, not merely to secure the more

complete development of woman's faculties, but also as a necessary means to equip her for her new position. The demand of course grew more imperative as the professions were opened to women. Once it was admitted that a woman might, for instance, take up the practice of medicine, it was quite obvious as a matter of public policy that she should receive the training given to every physician. How fully her claims have been recognized will appear from statistics given above of the growth of universities, colleges, and schools of technology since 1889.

The rapid spread of co-education aroused intense interest not only among educators but also in the mind of the public at large. The subject was discussed from every point of view, moral, medical, and economic, no less than educational. Special inquiries were sent out by school committees, State boards, and the United States Bureau of Education, with a view to obtaining statistics and expressions of opinion. Replies to these inquiries served as a basis for numerous reports, such as that of the Boston School Committee (Document 19, 1890) and that of the Commissioner of Education based on the inquiry of 1891. (See Commissioner's Report for 1900-1901, chap. xxviii.) The outcome of the discussion may be summarized as follows: (1) the tendency towards co-education as a universal policy was freely admitted by all parties; (2) considerable divergence of opinion was manifested as to the wisdom of co-education, particularly in secondary schools; (3) in many cases the issue was obscured by treating co-education as though it were synonymous with the higher education of women.

In order to set this phase of the question in a somewhat clearer light, it should be noted first of all that the reasons advanced in favour of the higher education of women, valid as they certainly are, do not of themselves require that this education shall be identical with that given to men. Passing over for the present the question whether both sexes should study the same subjects by identical methods for the same length of time, or even supposing that this question should be answered in the affirmative, one is not thereby compelled to admit that co-education is the only acceptable policy. The efficient work of those colleges which are exclusively for women tells strongly in favour of separate education. On the other hand, it should be remarked that the unification of the schools into a system does not necessarily imply co-education all the way through. While endorsing the practice in the elementary school for certain reasons and in the university for other reasons, one may consistently refuse to approve its introduction in the secondary school. A third consideration turns on the moral factor. This is, and always has been, of paramount importance in Catholic education. Whatever advantages of an intellectual sort may be claimed for the co-educational school, these must, from the Catholic point of view, be waived if they cannot be obtained without danger to morality. This view of course is shared by many non-Catholic parents and teachers, some of whom have made it the basis of their criticism of co-education. Doubtless, too, it would have counted for more in the discussion if the whole problem of moral education had received the attention bestowed in late years on everything pertaining to purely intellectual culture. Where that problem is overlooked or lightly dismissed, some of the most serious objections to co-education naturally lose their force, while too much weight is attached to some of the reasons on the opposite side.

PRACTICE AND ATTITUDE OF CATHOLIC SCHOOLS.—As noted above co-education prevails in most of the Catholic elementary schools. That women should also share in the advantages of higher education is quite in keeping with Catholic policy. An instance of this is the authorization granted by Rome for women

to follow, under requisite conditions, courses at the English universities (Decision of Propaganda, 13 July, 1907). Another is furnished by such institutions as the Anna-Stift, a university school for Catholic teaching sisters founded at the University of Münster in 1899 to meet the wishes of the German bishops. Instruction is given by university professors not in the halls of the university but in the institute itself, an arrangement that is equivalent to what has been mentioned above as co-ordinate education. (See Engelkemper in *Cath. Univ. Bulletin*, May, 1908.) But in secondary schools, the Catholic policy is decidedly opposed to co-education. The high schools, academies, and colleges for boys are altogether separate from those for girls. Boys are taught by male teachers, girls by women, usually religious. Nothing in fact so strongly emphasizes the Catholic attitude in this matter as the work of various orders of men established to teach boys, and of no less various orders of women to teach girls. This is the century-old practice of the Church, and it is observed in all countries. Catholics, moreover, have followed with interest the discussions concerning co-education; and though in many other respects they have adopted in their own work the methods approved by experience in non-Catholic schools, they have not been convinced by the arguments advanced in favour of the co-educational plan.

From the viewpoint of economy co-education might seem the wiser plan; but as a matter of fact, by increasing the number of pupils in each class it throws a heavier burden on the teacher and it makes difficult if not impossible that individual instruction, the need of which is now so generally recognized. A saving that impairs the efficiency of the school is hardly desirable. The advantage also that is claimed on the score of improved discipline, is more apparent than real. While the boys probably part with some of their roughness it is by no means certain that the delicacy of feeling and the refinement of manner that are expected in girls, gain much by the association. Moreover, if there is a demand for better discipline, the right way to meet it is to train teachers more thoroughly in the art of school management. A skilful teacher will easily control a class either of boys or of girls by arousing and maintaining their interest in what is really the work of the school. On the other hand, it can do no harm to young people, especially boys, to cultivate betimes a spirit of obedience to law for its own sake, and not merely teach them to behave themselves out of deference for the opposite sex. There is no doubt a decided benefit to be gotten from social intercourse, provided this is accompanied by the proper conditions. The place for it is in the home, under the supervision of parents, who will see to it that their children have the right kind of associates, and will not leave them to the chance companionships which the mixed school affords. It has often been held that the co-educational system extends to the school the "good effects that flow from the mutual influence of mingling the sexes in the family circle"; but this contention evidently overlooks the profound difference between the home situation which associates children by natural ties of kindred, and the situation in school where these ties do not exist. And it further forgets, apparently, that the home influence itself has latterly been weakened in many ways and by various causes; how far co-education has contributed to this result is of course another question. At any rate, it avails nothing to argue that because boys and girls live together in the same family, it is more natural that they should be educated in the same classes. When appeal is taken to the "natural" order of things, the decision is plainly in favour of separate schools.

On physiological grounds, identical education presents serious difficulties. As no arrangement has

been devised, and as none can be devised, to make the conditions of study exactly the same for both sexes, co-education really means that girls are subjected to a regimen intended and conducted for boys. To the physical strain which is thus imposed on them, girls as a rule are not equal; in particular they are apt to suffer from that very rivalry which is often cited as a desirable feature of the mixed school. If education is to take as its first principle conformity to nature, it must certainly make allowance for differences of organism and function. This need becomes the more imperative in proportion as the dependence of mind upon organic processes is more fully realized and turned to practical account in educational work. It then appears beyond question that from a psychological standpoint woman should have a different training from that which men receive. There is no question here as to the superiority or inferiority of either sex, nor will it profit to say that "soul has no gender". The fact is that each sex has its own mental constitution and its special capacities. To develop these is the work of education; but this does not mean that unlike natures shall be moulded into a superficial resemblance to each other. Even if it were desirable to have the finished product exactly the same in both sexes, it does not follow that this result is to be obtained by subjecting men and women to the same discipline. Educationists are agreed that the need of the developing mind is the first thing to be consulted in framing methods and in organizing the work of the school. They rightly condemn not only a system which treats the boy as though he were a man, but also any feature of method that fails to secure adaptation, even in detail, of the teaching to the present condition of the pupil's mind. Yet many of them, strangely enough, insist that the same training shall be given to boys and girls in the secondary schools, that is at a period which is chiefly characterized by the manifestation of profound mental differences between one sex and the other. The attempt now so generally made to obviate the physiological and psychological difficulties of co-education by adapting the work of the school to the capacities and requirements of girls, can evidently have but one result, and that not a desirable one, so far as boys are concerned.

It must further be pointed out on vocational grounds that, since woman's work in the world is necessarily different from man's, there should be a corresponding difference in the preparation. Here again it is singular that while the whole trend of our schools is towards specialization in view of the needs of after-life, no such consideration should be had for diversity of calling based on diversity of sex. The student is encouraged to take up as early as possible the special lines of work that fit him for his chosen career in business, in literary work, or in any of the professions; yet for the essential duties of life, widely different as these are, men and women receive an identical education. However great be the share which woman is to take in "the public expression of the ideal energies, for morality and religion, for education and social reforms, and their embodiment, not in the home, but in the public consciousness"—it still remains true that her success as a supporter of these ideal endeavours is closely bound up with the right discharge of those duties which are at once the lot and the privilege of her sex. Any influence that tends to make those duties less sacred to her or less attractive, is a menace to her individual perfection and may lead to far-reaching calamity. The lowering of sex tension, which is the strongest argument brought forward to support co-education from the view-point of morality, turns out on closer inspection to be a fatal objection; it proves too much. The "indifference" which it is said to produce has its consequences beyond the limit of school-life, and these if left to work out their own results would be, as they undoubtedly are in many instances,

antagonistic to the essential interests of family and home, and eventually of the national life as well.

The element of religious instruction, essential to Catholic schools, has a peculiar significance in the present problem. It not only gives free scope to ideal and æsthetic tendencies, but it also provides effectual safeguards against the dangers to which adolescence is exposed. As President Hall has said, "every glow of æsthetic appreciation for a great work of art, every thrill aroused by an act of sublime heroism, every pulse of religious aspiration weakens by just so much the potential energy of passion because it has found its kinetic equivalent in a higher form of expression" (Pedagogical Seminary, March, 1908). The "prophylactic value" of religious training is, from the Catholic point of view, far greater than that of the conditions which co-education involves and on which it depends for the development of character and morals. But this value of course can be got only by teaching religion with the same thoroughness and the same perfection of method that characterizes the teaching of other subjects, and in such a way as to make the duties which religion imposes on both the sexes not merely pleasing items of knowledge, but also vital elements in habit and action. (See EDUCATION; SCHOOLS.)

THOMAS E. SHIELDS.

Coeffeteau, NICOLAS, preacher and controversialist, b. 1574, at Château-du-Loir, province of Maine, France; d. Paris, 21 April, 1623. He entered the Dominican convent of Sens, 1588, and after his profession, 1590, was sent to St-Jacques, the house of studies at Paris. There in 1595 he began to teach philosophy. On 4 May, 1600, he received the doctorate and was appointed regent of studies, which position he filled until 1606 and again from 1609 to the spring of 1612. He also served two terms as prior and was vicar-general of the French congregation from 1606 to 1609. At this time Coeffeteau had already acquired distinction by his preaching at Blois, Chartres, Angers, and in Paris. Queen Margaret of Valois had made him her almoner in 1602, and in 1608 he received the appointment of preacher in ordinary to King Henry IV. In June, 1617, he was proposed by Louis XIII and confirmed by Pope Paul V as titular Bishop of Dardania and Administrator of the Diocese of Metz. By his vigilance and zealous preaching he checked the spread of Calvinistic errors, renewed and re-established Divine services, and restored ecclesiastical discipline, especially in the great abbey of Metz and in the monasteries of the diocese. After four years he was transferred, 22 Aug., 1621, to the Diocese of Marseilles; but ill-health kept him from his see. He secured François de Loménie as his coadjutor, but he himself remained at Paris until his death. He was buried in St. Thomas's chapel of the convent of St-Jacques. Coeffeteau's writings are chiefly polemical. Five treatises on the Eucharist were occasioned by a controversy with Pierre du Moulin, Calvinist minister of Charenton. Another series on ecclesiastical and pontifical authority was prompted by the action of the French Protestants in relation to political and religious disturbances in England. At the request of Gregory XV, Coeffeteau wrote a refutation of the "De Republicâ Christianâ" by the apostate Archbishop of Spalato, Marc' Antonio de Dominis. In all these writings, at a time in which partisanship was wont to be violent, Coeffeteau maintained an equable temper and a praiseworthy spirit of moderation,

always handling his subjects objectively and dispassionately. His erudition was extraordinary and he was possessed of a rare and penetrating critical judgment. On the question of papal power and authority, Coeffeteau's position is described as that of a modified Gallicanism. He held that the infallibility of the pope or of an oecumenical council was restricted to matters of faith and did not bear upon questions of fact or of persons. A council, he held, was not superior to a pope except in the case of schism, when it could depose the doubtful incumbent to elect one whose right and authority would be beyond question. In this Coeffeteau differed from the Sorbonne, which asserted the council's superiority in all cases. Besides being called the father of French eloquence, Coeffeteau was a recognized master of the French language. He was the first to use it as a means of theological expression, and the purity of his diction, especially in his historical writings and translations, is admitted and commended by many excellent authorities.

JOHN R. VOLZ.

Coelchu, also COLGA, COLCU (Lat. *Colcus*), a distinguished Abbot of the School of Clonmacnoise in Ireland, who flourished during the latter half of the eighth century. He had been a student of this school, and had devoted himself especially to the study of St. Paul, whom he looked upon as his special patron. Coelchu was remarkable for his learning, and was surnamed the Scribe, and also the Wise. Colgan (*Acta Sanctorum Hiberniæ*) mentions one tract from the pen of Coelchu which was then extant, and which was entirely of a devotional character. He is generally assumed to be the person with whom Alcuin apparently had some correspondence. A letter of Alcuin's to him has been published by Ussher (*Sylloge*, Ep. xviii) and republished by Colgan. It is headed "Albini Magistri ad Colcum lectorem in Scotia. Benedicto magistro et pio patri Colu Alcuinus humilis levita salutem". There can hardly be any doubt that the Colcu spoken of was the Abbot of Clonmacnoise, and that the writer of the letter was Alcuin, not Albin the companion of Clement, though there is no reason for concluding from the style of the address that Alcuin had ever been a student of Coelchu's at Clonmacnoise. In this letter Alcuin gives Coelchu an account of the state of religion on the Continent, mentions Joseph, one of Coelchu's pupils then in France, speaks of disputes between King Charles and Offa of Mercia, on account of which he himself was likely to be sent as negotiator into England. This clearly proves that the letter was written shortly before 790. He sends Coelchu presents of money from King Charles and from himself for the monastery of Clonmacnoise and for other monks in Ireland, and asks their prayers for himself and the king. There is another reference to Coelchu in Alcuin's letter to Joseph, mentioned already in the letter to Coelchu. Though Coelchu was spoken of as the Scribe or Doctor of all the Irish, none of his writings have come down to us.

JAMES MACCAFFREY.

Coelde, THEODORE (THEODORE OF MÜNSTER; THEODORE OF OSNABRÜCK; DERICK, DEDERICK, or DIETERICH, CÖLDE), Friar Minor and missionary, b. at Münster, in 1435; d. at Louvain, 11 December, 1515. He was a different person from the Dominican, Theodore of Münster, and from the Augustinian, Theodore of Osnabrück; and was called Theodore von Münster (Theodoricus a Monasterio) from the place of his

birth; and Theodore von Osnabrück from his father's native town. Coelde made his first studies at Cologne, and entered the Order of the Hermits of St. Augustine at an early age. In 1454 he was received into the Franciscan Order in the Netherlands. When the plague broke out at Brussels in 1489, Coelde went about administering the last sacraments to the dying; and when the sacristan accompanying him fell a victim to the plague, Coelde attached the lantern to his girdle, and, with the pyx in one hand and the bell in the other, continued his ministrations. Before the end of the plague, more than thirty-two thousand had received the last rites of the Church from the heroic friar. In 1470 Coelde composed a brief, popular treatise on the truths of the Catholic Faith, entitled "Kerstenspiegel" or "Christenspiegel" (The Christian's Mirror), which is considered to be the first German catechism. It went through thirty-two editions in Low German and two in High German, and came to be used throughout Germany and the Netherlands as the principal work of popular instruction in religious matters. At the request of his friend and admirer, Archbishop Hermann, he wrote a series of meditations on the sufferings of Christ, which appeared probably about the same time as the "Christenspiegel". In 1618 the remains of Coelde were exhumed, and, after the suppression of the Franciscan convent at Louvain, were transferred to Saint-Trond, where they now repose behind the high altar.

STEPHEN M. DONOVAN.

Coello, ALONZO SÁNCHEZ. See SÁNCHEZ-COELLO, ALONZO.

Coemgen (or KEVIN), SAINT, Abbot of Glendalough, Ireland, b. about 498, the date being very obscure; d. 3 June, 618; son of Coemlog and Coemell. His name signifies fair-begotten. He was baptized by St. Cronan and educated by St. Petroc, a Briton. From his twelfth year he studied under monks, and eventually embraced the monastic state. Subsequently he founded the famous monastery of Glendalough (the Valley of the Two Lakes), the parent of several other monastic foundations. After visiting Sts. Columba, Congall, and Cannich at Unseach (Usny Hill) in Westmeath, he proceeded to Clonmacnoise, where St. Cieran had died three days before, in 544. Having firmly established his community, he retired into solitude for four years, and only returned to Glendalough at the earnest entreaty of his monks. He belonged to the second order of Irish saints and probably was never a bishop. So numerous were his followers that Glendalough became a veritable city in the desert. His festival is kept throughout Ireland. Glendalough became an episcopal see, but is now incorporated with Dublin. St. Kevin's house and St. Kevin's bed of rock are still to be seen; and the Seven Churches of Glendalough have for centuries been visited by pilgrims.

COLUMBA EDMONDS.

Coenred (or CENRED, also COENRÆD, COINRED, KENRED, and CHRENRED), King of Mercia (reigned 704-709); date of birth and death unknown. He was the son of King Wulfhere and his Queen Eormengild. When Wulfhere died, in 675, Coenred was probably too young to succeed, and his uncle Æthelred ascended the throne. The A. S. Chronicle speaks of Coenred becoming King of the Southumbrians (a name very rarely used) in 702, and succeeding to the throne of Mercia in 704, when Æthelred retired to the cloister. Southumbria probably designates the north-

ern portion of Mercia, which Æthelred recovered from Northumbria. It is inferred that the people of this region rebelled against Æthelred and chose Coenred for their king, and later induced Æthelred to resign the whole of Mercia in favour of Coenred in 704. A reaction against the Southumbrians took place in 709, when Coenred abdicated in favour of Coelred, the son of Æthelred. Coenred then accompanied Offa, King of the East Saxons, to Rome, where he received the monastic habit from Pope Constantine. He was present at a council of the Mercian clergy in 705, and his name appears on several charters granting lands to Waldhere, Bishop of London, to Cuthswith, Abbess of Worcester, and also to the Abbey of Evesham. It does not appear that he was ever married. A great lover of peace, and of a pious disposition, he was more suited for the cloister than the throne. St. Bede tells us that he befriended St. Wilfrid when in exile, and relates in detail his efforts to convert to a better life one of his chief nobles, who finally died in despair.

G. E. HIND.

Cœur d'Alène Indians, a small tribe of Salishan stock formerly ranging along the lake and river of the same name in Northern Idaho, U. S. A., and now residing upon a reservation established in 1873 within the same boundaries. The name by which they are commonly known, signifying "awl heart", is said, although doubtfully, to have been originally a nickname given by the French traders to a chief of the tribe noted for his stinginess. They call themselves Skitswish. When first noticed by the American explorers, Lewis and Clark, in 1805, the Cœur d'Alène were a wandering, poverty-stricken people, dwelling in mat-covered communal houses on the border of the lake, and subsisting chiefly upon fish and wild roots. In disposition they were peaceful, brave and honest, and at a later period, having acquired through the French and Iroquois employees of the Hudson Bay Company an idea of the Catholic religion, many of them, as well as the Flatheads, Nez Percés, and others, voluntarily adopted a system of Christian prayers and church forms. In 1841 the Jesuit, Nicholas Point, a companion of De Smet, established the Sacred Heart (now De Smet) mission among them, with such wonderful success that within ten years the entire tribe had become Christian, civilized, and comfortably self-supporting.

In his official report to the Indian Office in 1854, Governor Stevens of Washington says: "It is indeed extraordinary what the good fathers have done at the Cœur d'Alène mission. They have a splendid church nearly finished by the labours of the fathers, laymen, and Indians; a large barn; a horse mill for flour; a small range of buildings for the accommodation of the priests and laymen; a store room; a milk or dairy room; a cook room, and good arrangements for their pigs and cattle. They are putting up a new range of quarters, and the Indians have some twelve comfortable log cabins. The church was designed by the superior of the mission, Père Avilé, a man of skill as an architect, and undoubtedly, judging from his well-thumbed books, of various accomplishments. Père Gazzoli showed me several designs for the altar, all of them characterized by good taste and harmony of proportion. The church, as a specimen of architecture, would do credit to anyone, and has been faithfully sketched by our artist, Mr. Stanley. The massive timbers supporting the altar were from larch trees five feet in diameter, and were raised to their place by the Indians, simply with the aid of a pulley and rope. They have a large cultivated field of some 200 acres, and a prairie of from 2000 to 3000 acres.

They own a hundred pigs, eight yoke of oxen, twenty cows, and a liberal proportion of horses, mules, and young animals. The Indians have learned to plough, sow, till the soil generally, milk cows, and do all the duties incident to a farm. They are some of them expert wood cutters, and I saw some thirty or forty Indians at work getting in the harvest." All this in thirteen years in the heart of the wilderness, two thousand miles from the frontier town of St. Louis!

The mission still continues to mould the tribal life, and official reports show that the same high standard is maintained, each year showing an advance in prosperity and general intelligence. The tribe is increasing, and numbered 492 souls in 1906.

JAMES MOONEY.

Coffin (alias HATTON), EDWARD, English Jesuit and missionary, b. at Exeter, 1570; d. 17 April, 1626, at Saint-Omer's College. After studies at Reims and Ingolstadt, he was ordained at the English College, Rome, and sent to England. In 1598 he entered the Society. On his way to the novitiate in Flanders, he was seized by the Dutch, near Antwerp, and taken to England, where he was imprisoned for five years. Banished from England in 1603, he acted for twenty years as confessor at the English College, Rome. He volunteered for England again, but died on the journey. He wrote the preface to Father Persons's "Discussion of Mr. Barlowe's Answer" (Saint-Omer, 1612); Refutation of Hall, Dean of Worcester's "Discourse for the Marriage of Ecclesiastical Persons" (1619); "Art of Dying Well", from the Latin of Bellarmine (1621); "True Relation of Sickness and Death of Cardinal Bellarmine", by C. E. of the Society of Jesus (1622), tr. into Latin, "De Morte", etc. (Saint-Omer, 1623, 8vo.); "Marci Antonii de Dominis Palinode" (Saint-Omer, 1623), tr. by Dr. Fletcher in 1827 as "My Motives for Renouncing the Protestant Religion"; "De Martyrio PP. Roberts, Wilson et Napper" (Stonyhurst MSS., Anglia, III, n. 103).

PATRICK RYAN.

Coffin, ROBERT ASTON, ecclesiastical writer and bishop, b. at Brighton, England, 19 July, 1819; d. at Teignmouth, Devonshire, 6 April, 1885. He received his secondary education at Harrow and in 1837 went to Christ Church, Oxford, where he took his B.A. degree with honours in 1840. He then prepared himself for the ministry and, having received Anglican orders from the Bishop of Oxford, he was appointed in 1843 vicar of St. Mary Magdalen, Oxford. While at Oxford he had become a follower of Dr. Newman, and like so many others who had joined the Oxford or Tractarian Movement he left the Anglican Church and was received into the Catholic Church at Prior Park on the feast of St. Francis Xavier, 3 Dec., 1845, two months after the reception of Dr. Newman. Having spent a year as tutor in the family of Mr. Ambrose de Lisle, he followed Newman to Rome to prepare himself for the priesthood, and was ordained 31 Oct., 1847, by the cardinal vicar. In the meantime Dr. Newman had been authorized by Pius IX to found the Oratory of St. Philip Neri in England. When, in June, 1848, the Oratory was established, Father Coffin with other convert priests joined it, and he was appointed superior of St. Wilfrid's, Cotton Hall. The next year he followed a strong attraction he had felt

since his conversion for the Congregation of the Most Holy Redeemer, left the Oratory, and entered the Redemptorist novitiate at Saint-Trond, in Belgium. Having made his profession on 2 February, 1852, he returned to England and began his long and fruitful career as a zealous Redemptorist missionary. From 1855 to 1865 he was rector of St. Mary's, Clapham, and from the latter year till 1882 he held the office of provincial of the English Redemptorists. These offices, however, did not prevent him from zealously labouring with pen and tongue, for, from 1852 to 1872, he was almost constantly engaged in giving missions and clergy retreats throughout England, Ireland, and Scotland, and in publishing many ascetical books.

After the death of Dr. Danell, the second Bishop of Southwark, Father Coffin was chosen as his successor, and was consecrated in Rome by Cardinal Howard, in the church of S. Alfonso, 11 June, 1882, taking possession of his see on 27 July. After an illness of several months, borne with great fortitude, Bishop Coffin died at Teignmouth, in the house of the Redemptorists which he himself had founded when provincial. "Although his name was at no time conspicuously before the world, his influence had been widely and deeply felt, and few ecclesiastics in England were held in greater esteem or affection. By the publication of many of the works of St. Alphonsus, by his labours as a preacher and missionary in his younger days, by his numerous retreats, especially to the clergy, and still more by his government of the Province of the Congregation of the Most Holy Redeemer in England, Scotland, and Ireland during nearly twenty years, he performed a quiet, solid and enduring work which will be felt for many generations" ("The Tablet", London). Among his publications are the following English translations of the Italian works of St. Alphonsus: "The Glories of Mary" (London, 1852, 1868); "The Mysteries of the Faith: The Incarnation" (London, 1854); "The Christian Virtues" (London, 1854); "The Mysteries of the Faith: The Eucharist" (London, 1855); "Visits to the Most Holy Sacrament" (London, 1855); "The Eternal Truths" (London, 1857); "A Devotion in Honour of St. Joseph" (London, 1860); "The Mysteries of the Faith: The Redemption" (London, 1861); "Hymns and Verses on Spiritual Subjects" (London, 1863). He also published a translation of "The Oratory of the Faithful Soul" by Blossius (London, 1848), and several pastoral letters.

GULLOW, *Bibl. Dict. of Eng. Cath.*, s. v.; *The Tablet* (London, 11 April, 1885). B. GULDNER.

Cogitosus, an Irishman, an author, and a monk of Kildare; the date and place of his birth and of his death are unknown; it is uncertain even in what century he lived. In the one work which he wrote, his life of St. Brigid, he asks a prayer *pro me nepote culpabili*, from which both Ware and Ussher conclude that he was a nephew of St. Brigid, and, accordingly, he is put down by them among the writers of the sixth century. But the word *nepos* may also be applied to one who, like the prodigal, had lived riotously, and it may be, that Cogitosus, recalling some former lapses from virtue, so uses the word of himself. At all events, his editor, Vossius, is quite satisfied that Cogitosus was no nephew of St. Brigid, because in two genealogical menologies which Vossius had, in which were enumerated the names of fourteen holy men of that saint's family, the name of Cogitosus is not to be found. Nor did the latter live in the sixth century, because he speaks of a long succession of bishops and abbesses at Kildare, showing that he writes of a period long after the time of St. Brigid, who died in 525, and of St. Conleth, who died a few years earlier. Besides this, the description of the church of Kildare belongs to a much later time; and the author calls St. Conleth

an archbishop, a term not usual in the Western Church until the opening of the ninth century. On the other hand, he describes Kildare before it was plundered by the Danes, in 835, and before St. Brigid's remains were removed to Down. The probability therefore is that he lived and wrote the life of St. Brigid about the beginning of the ninth century. His work is a panegyric rather than a biography. He gives so few details of the saint's life that he omits the date and place of her birth and the date of her death; nor does he make mention of any of her contemporaries, if we except St. Conleth, the first Bishop of Kildare, and Macaille from whom she received the veil. He gives the names of her parents, but is careful to conceal the fact that she was illegitimate, and that her mother was a slave. On the other hand, he dwells with evident satisfaction on her piety, her humility, her charity, her zeal for religion, the esteem in which she was held by all. And he narrates at length the many miracles she wrought, and tells of the numbers who came as pilgrims to Kildare, attracted by her fame. In his anxiety to exalt her he says she had as abbess authority over all the abbesses of Ireland, although as a matter of fact she could govern only those who followed her rule; and his statement that she appointed the Bishop of Kildare could not, of course, mean that she conferred any jurisdiction. Cogitosus writes in fairly good Latin, much better indeed than might be expected in that age, and his description of the church of Kildare with its interior decorations is specially interesting for the history of early Irish art and architecture.

Cogolludo, DIEGO LÓPEZ DE, one of the chief historians of Yucatan. His work, the "Historia de Yucatan", which appeared at Madrid in 1688, and was reprinted in 1842 and 1867, is an important work, full of information personally gathered at a time when older sources, written and oral, that have now partly disappeared, were accessible. Cogolludo consulted and used the writings of Bishop Diego de Landa to a considerable extent, but many of his statements must be taken with cautious criticism. He was a native of Alcalá de Henares in Spain, and took the habit of St. Francis at the convent of San Diego, 31 March, 1629. He emigrated to Yucatan, where he became successively lector in theology, guardian, and finally provincial of his order.

Cohen, HERMANN, a Discalced Carmelite (Augustin-Marie of the Blessed Sacrament, generally known as FATHER HERMANN), b. at Hamburg, Germany, 10 November, 1820; d. at Spandau, 20 January, 1871. The son of a Jewish merchant, he devoted himself to music, which he studied under Liszt at Paris, where he joined a brilliant but frivolous circle, to the detriment of his morals. One day, in May, 1847, while leading the choir at Benediction in the church of Sainte-Valérie, he felt himself touched by Divine grace, and, after a short sojourn at Ems, resolved to become a Christian. Baptized 28 August, he instituted with De la Bouillerie the pious practice of the nocturnal adoration; he entered the Carmelite novitiate at Broussay, made his profession 7 October, 1850, and was ordained priest 19 April of the following year. His fiery eloquence and the stir caused by his

conversion made him a favourite preacher, notwithstanding insufficient studies. He was instrumental in the foundation of convents at Bagnères-de-Bigorre (1853), Lyons (1857), the "Desert" of Tarasteix near Lourdes (1857), and in London (1862), where he had been known during his artistic career. After some years spent in England he went on a preaching tour through Germany and France and ultimately retired to Tarasteix. At the outbreak of the Franco-German War he fled to Switzerland, and later on took charge of the lazaretto at Spandau, where he contracted small-pox. He was buried in St. Hedwig's church, Berlin. Among his works are "Le Catholicisme en Angleterre", a speech delivered at Mechlin, also in English (Paris, 1864); "Gloire à Marie" (1849); "Amour à Jésus" (1851); "Fleurs du Carmel"; "Couronnement de la Madonne"; "Thabor" (1870), five collections of sacred songs with accompaniment, pious but somewhat shallow; this also holds good of his mass (1856).

B. ZIMMERMAN.

Coimbatore (KOIMBATUR), DIOCESE OF (COIMBATURENSIS).—The city of Coimbatore is the capital of the district of Coimbatore in Madras, British India, situated on the River Noyel. Its population in 1901 was 53,080; of these 3,000 are Catholics. The diocese embraces the Collectorate of Coimbatore (except the Taluk of the Collegial), the Nilgiris with the south-eastern Wynaad, the Taluks of Palghat, Collancondoo, Tamalpuram, and part of Wallavanad, the Chittur Taluks, and the Nelliampathy Hills in the Cochin territory. In 1846 Coimbatore was separated from the Vicariate Apostolic of Pondicherry, and in 1850 was made a vicariate Apostolic. On 1 Sept., 1886, it was constituted a diocese, and the Right Rev. Joseph Louis Bardon, Bishop of Telmessus, who had been vicar Apostolic, was chosen as its first bishop.

The total population of the diocese is 2,500,000, of whom 37,080 are Catholics. There are 41 European and 13 native priests. In the ecclesiastical seminary are 14 students. The diocese has 2 religious communities of men and 3 of women. There are for boys a second-grade college, a middle school, and a high school; and for girls eighteen convent schools. There are also 67 elementary schools, with 4239 pupils. There are 2 hospitals, 4 orphanages, and an industrial school.

LEO A. KELLY.

Coimbra, DIOCESE OF (CONIMBRICENSIS), in Portugal, suffragan of Braga, in the province of Beira. The cathedral city has 13,369 inhabitants. The first known bishop was Lucentius, who assisted (563) at the First Council of Braga, the metropolitan See of Coimbra, until the latter was attached to the ecclesiastical province of Mérida (650-62). Titular bishops of Coimbra continued the succession under the Arab conquest, one of whom witnessed the consecration of the church of Santiago de Compostela in 876. The see was re-established in 1088, after the reconquest of the city by the Christians (1064). The first bishop of the new series was Martin. Among the more famous bishops have been Pedro (1300), chancellor of King Diniz, and Manoel de Menezes (1573-78), rector of the university, who fell with Dom Sebastian on the field of Kasser-el-Kebir. The old cathedral of Coimbra, built in the first half of the twelfth century, partly at the expense of Bishop Miguel and his chapter, is a remarkable monument of Romanesque architecture; the new cathedral, a Renaissance building dating from 1580, is of little interest. The episcopal palace was also built in the

sixteenth century. The principal monastery of the diocese is that of Santa Cruz, founded in 1131 by Alfonso VII, and for some time the most important in the kingdom by reason of its wealth and privileges. Its prior was authorized by Anastasius IV and Celestine III to wear the episcopal insignia. In 1904 the diocese had a population of 875,853, divided among 308 parishes.

FLÓREZ, *España Sagrada* (Madrid, 1759), XIV, 71-96; BORGES DE FIGUEIREDO, *Coimbra antiga e moderna* (Lisbon, 1886).

UNIVERSITY OF COIMBRA.—The earliest certain information concerning a university in Portugal dates from 1288, when the Abbot of Alcobaza, several priors of convents, and parish priests made known to Nicholas IV that they had obtained from King Diniz the foundation of a "Studium Generale" at Lisbon, and had arranged among themselves to defray the salaries of the doctors and masters from the revenues of their monasteries and churches; they besought the pope to confirm this agreement and to protect the work they were undertaking "for the service of God and the glory of their country". In a Bull of 9 August, 1290, addressed to the "University of the masters and students of Lisbon", the pope acceded to their request and expressed his satisfaction with the creation of this new seat of studies. This Bull "sanctions taxation of lodgings in the Paris and Bologna fashion, grants dispensation from residence to masters and students and authorizes the Bishop of Lisbon (or, *sede vacante*, the Vicar-capitular) to confer the *jus ubique docendi* on all faculties except Theology." Frequent quarrels between the students and the citizens led the King of Portugal to request the pope to transfer the new school to Coimbra, a more tranquil place, and to grant at the same time to the new foundation all the "privileges" of the former one. The transfer took place 15 February, 1308, on which date King Diniz issued the charter of foundation, quite similar to that of Alfonso the Wise for the University of Salamanca in Castile. The sciences then taught at Coimbra were canon and civil law, medicine, dialectic, and grammar. Theology was taught in the convents of the Dominicans and the Franciscans. For reasons unknown to us, the university was again moved to Lisbon in 1339, by order of Alfonso IV. In 1354 it returned to Coimbra, only to be again transferred to Lisbon in 1377. From this time until its final transfer to Coimbra in 1537, the university enjoyed greater prosperity. At the beginning of the fifteenth century theology appears regularly as one of the sciences taught there.

During the reign of John III (1521-57) important reforms were carried out, and the university reached the acme of its career. The faculties hitherto widely scattered in different edifices were brought together under one roof in the "Palacio del Rey", and new and illustrious professors were invited from Castile; for the faculty of theology, Alfonso de Prado and Antonio de Fonseca, the latter a doctor of Paris; for the faculty of law, the famous canonist Martín de Aspilcueta (Doctor Navarrus), Manuel de Costa, and Antonio Suarez, all three from Salamanca; and for medicine, Francisco Franco and Rodrigo Reinoso. The classical languages and literatures were taught in the Colegio de las Artes, as a preparation for the graver studies of the university; this college was at first quite independent of the latter, but was eventually incorporated with it and confided to the Jesuits. One of its first professors was the Scotch Latinist, George Buchanan, later a follower of John Knox and a reviler of Mary Stuart. The colleges of São Pedro and São Paulo were founded for graduates (doctors) who purposed to devote themselves to teaching; other colleges were founded for the students of various religious orders in which they might follow the com-

mon life while pursuing their studies at the university. New reforms were inaugurated in 1770, when (23 December) King José I, on the initiative of the Marquis de Pombal, appointed a commission to consider the reorganization of the university. The commission advised the creation of two new faculties, mathematics and natural philosophy, leaving intact the older faculties of theology, canon law, civil law, and medicine. New professors were brought from Italy, Michele Franzini for mathematics, and Domenico Vandelli for natural history. The former Jesuit college, confiscated at the time of the expulsion of the Society from Portugal, was turned over to the faculty of medicine for its clinics and laboratories. The

deeply religious, but his religion was tinged with the evils of the day, Gallicanism and Jansenism. It was Colbert who suggested to Louis XIV the convening of the famous Assembly of the Clergy in 1682 which formulated the four propositions of Gallicanism. In the conflicts which arose between the court of France and Rome Colbert used his influence against Rome. Protestants looked to him as to their protector. The Jansenist De Boursse was his evil genius as well as his informant on religious questions. Influenced by De Boursse, he failed to see the real danger of Jansenism, and by treating it with levity, gave it encouragement. The Colbert family gave to the Church a number of nuns and ecclesiastics. Charles

UNIVERSITY OF COIMBRA

laboratories for physics, chemistry, and natural history were also located there; finally a botanical garden was added. At the end of the eighteenth century metallurgy was taught by José Bonifácio de Andrade, and hydraulics by Manoel Pedro de Mello, both scholars of repute. In 1907 the University of Coimbra had five faculties, theology, law, medicine, mathematics, and philosophy. Its professors numbered (1905-06) 68, and its students 2916. The library now contains about 100,000 volumes. (See CONIMBRICENSES.)

Cola di Rienzi. See RIENZI.

Colbert, JEAN-BAPTISTE, Marquis de Seignelay, statesman, b. at Reims, France, 1619; d. at Paris, 1683. Noticed by Mazarin and recommended by him to Louis XIV he became at the latter's death, controller of finances. Through the control of finances he organized nearly every public service in France. Of him, Mme. de Sévigné said: "M. de Colbert thinks of finances only and never of religion." This should not, however, be taken too literally. Colbert was

Gérin says: "His sisters controlled the great abbeys of Sainte-Marie de Chaillot, of Sainte-Claire de Reims and of the LeLys near Melun. One of his brothers (Nicolas, 1627-1676) Bishop of Luçon and afterwards of Auxerre, having died, he caused to be appointed in his place his cousin André (1647-1702) who was a member of the assembly of 1682, with another of his cousins, Colbert de St. Pouange, Bishop of Montauban." This passage omits the following three best known kinsmen of the great Colbert.

II.—JACQUES-NICOLAS COLBERT (1655-1707), Archbishop of Rouen. Fisquet (*La France pontificale*, Rouen, p. 253) describes him as a worthy and learned prelate giving his principal care to the training of his clerics. C. Gérin (*loc. cit.*, p. 188), however, reproaches him for being worldly, a spendthrift, and, in spite of his pompous declarations of orthodoxy, no less sympathetic to Jansenism than his cousin, the Bishop of Montepellier.

III.—CHARLES JOACHIM COLBERT (1667-1738), Bishop of Montepellier, and a militant Jansenist. He first appeared to submit to the Bull "Vineam Domini" of Innocent XI, 1705, but when Clement XI issued the Bull "Unigenitus", 1713, he openly sided with the appellants Soanen of Senez, de la Broue of Mirepoix, and Langle of Boulogne. The works published under his name (Montepellier, 1740) are prob-

ably, at least in part, from the pen of his advisers, Gaultier and Croz, who are moreover charged with the perversion of their master. In 1702, one of his priests, the Oratorian Pouget, published, at his request, the "Catéchisme de Montpellier" a remarkable book but tinctured with Jansenism and condemned by the Holy See, 1712 and 1721.

IV.—MICHEL COLBERT (1633–1702), an ascetic writer and superior of the Premonstrants. His election was somewhat irregular and had to be validated by papal rescript. He is the author of "Lettres d'un Abbé à ses religieux" and "Lettre de Consolation".

PIQUET, *La France pontificale* (Paris, s. d.) under the various dioceses referred to above; GILPIN, *Recherches sur l'Assemblée du clergé de 1682* (Paris, 1869); BUSSETON, *Vie des Quatre évêques engagés dans la cause de Port-Royal* (Cologne, 1756); CLÉMENT, *Histoire de Colbert* (Paris, 1875); RAPIN, *Mémoires* (Paris, 1865); JAL, *Dict. critique* (Paris, 1867); GAUCHE in *Rev. Hist. Ecl.* (Louvain, 1903), III, 983; WAKEMAN, *Europe* (New York, 1905), 202.

J. F. SOLLIER.

Cole, HENRY, confessor of the Faith, b. at Godshill, Isle of Wight, about 1500; d. in the Fleet Prison, February, 1579 or 1580. He was educated at Winchester and New College, Oxford, admitted a perpetual fellow there (1523), received the degree of B.C.L. (1525), and then went to Italy for seven years, residing chiefly at Padua. During his career he was successively prebendary of Yatminster (1539), rector of Chelmsford, Essex, prebendary of Holborn, Sweting (1541), and Wenlakesburn (1542), warden of New College (1542–51), and rector of Newton Longueville in Buckinghamshire. Created a D.C.L. at Oxford (1540), he resigned his fellowship the same year. At first he conformed to the Protestant religion, but afterwards saw his error, returned to the Catholic Faith about 1547, and eventually resigned all his preferments. In Mary's reign he became Archdeacon of Ely, a canon of Westminster (1554), vicar-general of Cardinal Pole (1557), and a judge of the archiepiscopal Court of Audience. He was one of the commissioners who restored Tunstall and Bonner to their bishoprics, a disputant against Cranmer, Ridley, and Latimer at Oxford (1554), a delegate for the visitation of Oxford (1556), and Visitor of All Souls College in 1558, in which year he received the rectory of Wrotham, and was sent to Ireland with a commission for the suppression of heresy there. Cardinal Pole appointed Cole one of his executors. During Elizabeth's reign he remained true to the Catholic Faith and took part in the discussions begun at Westminster in 1559. Then began his sufferings: first, he was fined 500 marks (\$1600), then deprived of all his preferments, committed to the Tower (20 May, 1560), and finally removed to the Fleet (10 June), where he remained for nearly twenty years, until his death. He wrote: letters to Dr. Starkey and Sir Richard Morysin from Padua, 1530, and Paris, 1537; "Disputation with Cranmer, Ridley and Latimer at Oxford", in Fox's "Acts and Monuments"; "Sum and effect of his sermon at Oxford when Archbishop Cranmer was burnt", in Fox's "Acts and Monuments"; "Answer to the first proposition of the Protestants at the disputation before the Lords at Westminster, 1559", in Burnet's "Hist. Reform. Records"; "Copie of a Sermon at Paule's Crosse 1560" (London, 1560); "Letters to John, Bishop of Sarum" (London, 1560); "Answers to certain parcels of the Letters of the Bishop of Sarum", in Jewel's works.

G. E. HIND.

Coleman, EDWARD, controversialist politician, and secretary of the Duchess of York, date of birth unknown; executed at Tyburn, 3 December, 1678. He was

the son of a Suffolk clergyman and, after a distinguished career at Cambridge, became a Catholic and was employed by the Duchess of York. As her secretary he became acquainted with continental statesmen from whom he sought pecuniary help when in difficulties. In 1675 he offered his services in favour of Catholicism to Père La Chaise, the confessor of Louis XIV; again in 1676 he was in communication with Father Saint-Germain, offering his assistance to prevent a rupture between England and France. These attempts to procure money failed, but he succeeded later in obtaining £3500 from three successive French ambassadors whom he supplied with daily information regarding the proceedings of Parliament. He became a suspected character, and on the discovery of the Titus Oates Plot, conceived in 1678 for the ruin of the Duke of York whose Catholicity was suspected, Coleman was named as one of the conspirators. Conscious of his innocence he took no steps to protect himself, allowed his papers to be seized, and gave himself up for examination. He was tried 28 Nov., 1678, being accused of corresponding with foreign powers for the subversion of the Protestant religion, and of consenting to a resolution to murder the king. His defence was that he had only endeavoured to procure liberty of conscience for Catholics constitutionally through Parliament, and had sought money abroad to further this object. He denied absolutely any complicity with the plot against the king's life. His foreign correspondence of 1675 and 1676, when examined, proved him to be an intriguer, but contained nothing that could connect him in any way with designs on the king's life. However, in spite of the flagrantly false testimony of Oates and Bedloe, he was found guilty, drawn to Tyburn, and there executed. He was a good linguist, writer, and controversialist. His controversy with Drs. Stillingfleet and Burnet resulted in the conversion of Lady Tyrwhit to the Catholic religion. His writings were: "Reasons for Dissolving Parliament"; "Two Letters to M. La Chaise, the French King's Confessor" (London, 1678, reprinted in Cobbett's "Parliamentary History"); "The Tryal of Edward Coleman" etc. (London, 1678); "Legacies; a Poem", etc. (London, 1679).

G. E. HIND.

Coleridge, HENRY JAMES, writer and preacher, b. 20 September, 1822, in Devonshire, England; d. at Roehampton, 13 April, 1893. He was the son of Sir John Taylor Coleridge, a Judge of the King's Bench, and brother of John Duke, Lord Coleridge, Chief Justice of England. His grandfather, Captain James Coleridge, was brother to Samuel Taylor Coleridge, the poet and philosopher. He was sent to Eton at the age of thirteen, and thence to Oxford, having obtained a scholarship at Trinity College. His university career was distinguished; in 1844 he took the highest honours in the classical schools, and was elected to a fellowship at Oriel, then the blue ribbon of the university. In 1848 he received Anglican orders. The Tractarian movement being then at its height, Coleridge, with many of his tutors and friends, joined its ranks and was an ardent disciple of Newman till his conversion. He was one of those who started "The Guardian" newspaper as the organ of the High Church party, being for a time its Oxford sub-editor. Gradually various incidents, the secession of Newman, Dr. Hampden's appointment as Regius Professor of Theology, the condemnation and suspension of Dr. Pusey, the condemnation and deprivation of W. G. Ward, and the decision in the celebrated Gorham case, seriously shook his confidence in the Church of England. In consequence Dr. Hawkins, Provost of Oriel, declined to admit him as a college tutor, and he therefore accepted a curacy at Alphington, a parish recently

separated from that of Ottery St. Mary, the home of his family, where his father had built for him a house and school. Here, with most congenial work, he was in close connexion with those to whom he was already bound by a singular affection. His doubts as to his religious position continued, however, to grow, and early in 1852 he determined that he could no longer remain in the Anglican Communion.

On Quinquagesima Sunday (February 22) he bade farewell to Alphington, and in April, after a retreat at Clapham under the Redemptorist Fathers, he was received into the Catholic Church. Determined to be a priest, he proceeded in the following September to Rome and entered the Accademia dei Nobili, where he had for companions several of his old Oxford friends, and others, including the future Cardinals Manning and Vaughan. He was ordained in 1856 and six months later took the degree of D.D. In the summer of 1857 he returned to England, and on the 7th of September entered the Jesuit novitiate, which was then at Beaumont Lodge, Old Windsor, his novice master being Father Thomas Tracy Clarke, for whom to the end of his life he entertained the highest admiration and esteem. In 1859 he was sent to the Theological College of St. Beuno's, North Wales, as professor of Scripture, and remained there until, in 1865, he was called to London to become the first Jesuit editor of "The Month", a magazine started under other management in the previous year. Then commenced a course of indefatigable literary labour by which he is best known. Besides the editorship of "The Month", to which, after the death of Father William Maher, in 1877, he added that of "The Messenger", and for which he was one of the most prolific writers, Father Coleridge projected and carried on the well known Quarterly Series to which he himself largely contributed, both with his great work "The Public Life of Our Lord" and others, such as "The Life and Letters of St. Francis Xavier" and "The Life and Letters of St. Teresa". Worthy of mention also is his Harmony of the Gospels, "Vita Vitæ Nostræ", a favourite book for meditation, published also in an English version. Studies based on the New Testament were his work of predilection, a taste which seems to have been acquired, at least in part, from his old Oxford tutor, Isaac Williams. For a time he was also superior of his religious brethren in Farm Street, London. In 1881 failing health obliged him to resign "The Month" to another Oxonian, Father Richard F. Clarke, but he continued to labour on "The Life of Our Lord", which he earnestly desired to finish. In 1890 a paralytic seizure compelled him to withdraw to the novitiate at Roehampton, where, with indomitable spirit, he succeeded in completing his *magnum opus* before passing away.

The chief sources for his life are articles in *The Month*, June, 1893, by his friend JAMES PATTERSON, Bishop of Emmaus, and FATHER RICHARD F. CLARKE, S. J.

JOHN GERARD.

Colet, JOHN, Dean of St. Paul's Cathedral and founder of St. Paul's School, London; b. in London, 1467; d. there 18 Sept., 1519. He was the eldest son of Sir Henry Colet, twice Lord Mayor of London. Having finished his schooling in London, he was sent to Oxford, but no particulars of his life there have been preserved, not even the name of his college. While at Oxford he determined to become a priest and even before ordination obtained through family influence much preferment, including the livings of St. Mary Dennington, Suffolk, St. Dunstan, Stepney, and benefices in the counties of Huntingdon, Northampton, York, and Norfolk. In 1493 he began a tour through France and Italy, studying as he went and acquiring that love of the new learning which marked his after-life. Returning to England in 1496, he prepared for ordination, and

became deacon on 17 Dec., 1497, and priest on 25 March, 1497-8. He lectured at Oxford on St. Paul's Epistles, introducing a new treatment by abandoning the purely textual commentary then usual, in favour of a study of the personality of St. Paul and of the text as a whole. In 1498 he met Erasmus at Oxford, with whom he immediately became intimate, arousing in him especially a distrust of the later schoolmen. Colet's lectures on the New Testament continued for five years, until in 1504 he was made Dean of St. Paul's, proceeding D.D. before he left Oxford. In London he became the intimate friend and spiritual adviser of Sir Thomas More. At the death of his father in 1505 he inherited a fortune, which he devoted to public purposes. His administration of the cathedral was vigorous, and in 1509 he began the foundation of the great school with which his name will ever

IOANNES COLETVS
Cum colles Thomas occulte COLLET E. J. J. J.
Te doctos inter posthuma fama refert

B

be associated. The cost of the buildings and endowments is estimated at forty thousand pounds in present value. The object was to provide a sound Christian education. Greek was to be at least of equal importance with Latin. William Lilly was the first head master, but Colet exercised a close personal supervision over the school, even composing some of the textbooks. In 1512 he was accused of advanced views and was in difficulties with his bishop, but on the trial Archbishop Warham dismissed the charges as frivolous. It may well be that Colet, irritated by obvious abuses and not seeing how far the reaction would go, used language on certain points which in the light of after-events is regrettable, but there can be no doubt as to his own orthodoxy and devotion. In 1518 he completed the revised statutes of his school. At his death the following year he was buried in St. Paul's Cathedral. His school remained on its original site until 1884, when it was removed to Hammersmith.

Colet's works are: "Convocation Sermon of 1512"; "A righte fruitful admonition concerning the order of a good Christian man's life" (1534); "Ioannis Coleti Theologi olim Decani Divi Pauli Aeditio" (1527, and often reprinted), the original of almost

all Latin Grammars of the sixteenth and seventeenth centuries; "Opus de Sacramentis Ecclesie" (1867), which with the following treatises, long preserved in MS., was finally edited by the Rev. J. H. Lupton, sur-master of the school; two treatises on the "Hierarchies" of Dionysius (1869); "An Exposition of St. Paul's Epistle to the Romans" (1873); "An Exposition of St. Paul's first Epistle to the Corinthians" (1874); "Letters to Radulphus" on the Mosaic account of the Creation, and some minor works (1876); "Statutes of St. Paul's School" (often reprinted). Pitts (de Ang. Scriptoribus, Paris, 1619) gives several additional works by Colet, none of which are extant. Many of his letters are in the works of Erasmus.

The account of Colet by ERASMUS in *Epistolæ* (Leyden), III, cccxxv, tr. LUPTON (London, 1883), was the foundation of most of his biographies published before the end of the seventeenth century. Since then there have been several lives published, none by a Catholic writer.—KNIGHT, *Life of John Colet* (London, 1724; republished Oxford, 1823; written with strong Protestant bias); SEEBOM, *Oxford Reformers: Colet, Erasmus and More* (London, 1867); LUPTON, *Life of John Colet* (London, 1887). For a bibliography see LUPTON, *Introduction to Colet's Letters to Radulphus*; GARDINER, *Register of St. Paul's School* (London, 1884); LEE in *Dict. Nat. Biog.* (London, 1887), XI, 321-328, with account of various Colet MSS. still existing.

EDWIN BURTON.

Coleti (COLETTI), NICOLA, priest and historian, b. at Venice, 1680; d. in the same city, 1765. He studied at Padua, where he received the degree of Doctor. He was sent to the church of San Moisè at Venice, and there devoted himself to historical and antiquarian research. His first work of importance was a new edition of Ughelli's "Italia Sacra" published in ten volumes from 1717 to 1722. Besides correcting many errors, Coleti continued Ughelli's history to the beginning of the eighteenth century. Coleti then undertook the compilation of his large work entitled "Collectio Conciliorum". Up to this time there had been two standard histories of the councils, that of Labbe and Cossart (Paris, 1671-72), and that of Hardouin (Paris, 1715). Baluze had begun a similar work, but only the first volume had appeared. Coleti's collection was based on that of Labbe, though he availed himself of the labours of Baluze and Hardouin. The work was published by his brother Sebastiano at Venice from 1728 to 1733 in twenty-three volumes. The last two were called "Apparatus primus" and "Apparatus secundus", containing the indexes, for which the collection was especially valuable. Other works of Coleti's were "Series episcoporum Cremonensium aucta" (Milan, 1749); "Monumenta ecclesie Venetæ S. Moisis" (1758)—this is valuable to the historian for the ancient documents it makes known. Coleti also annotated a manuscript of Maffei now preserved in the Biblioteca Vallicellana at Rome and bearing the title: "Supplementum Acaianum monumenta nunquam edita continens, quæ marchio Scipio Maffei a vetustissimis Veronesis capituli codicibus eruit atque illustravit, editum Venetiis apud Sebastianum Coleti anno 1728". In addition to the above, two posthumous dissertations, said to have been published by his brothers, have been attributed to Coleti, but the only mention of them is found in an old catalogue.

LEO A. KELLY.

Colette (diminutive of NICOLETTA, COLETTA), SAINT, founder of the Colettine Poor Clares (Clarisses), b. 13 Jan., 1381, at Corbie in Picardy, France; d. at Ghent, 6 March, 1447. Her father, Robert Boellet, was the carpenter of the famous Benedictine Abbey of Corbie; her mother's name was Mar-

guerite Moyon. Colette joined successively the Bequines, the Benedictines, and the Urbanist Poor Clares. Later she lived for a while as a recluse. Having resolved to reform the Poor Clares, she turned to the antipope, Benedict XIII (Pedro de Luna), then recognized by France as the rightful pope. Benedict allowed her to enter the order of Poor Clares and empowered her by several Bulls, dated 1406, 1407, 1408, and 1412 to found new convents and complete the reform of the order. With the approval of the Countess of Geneva and the Franciscan Henri de la Beaume, her confessor and spiritual guide, Colette began her work at Beaume, in the Diocese of Geneva. She remained there but a short time and soon opened at Besançon her first convent in an almost abandoned house of Urbanist Poor Clares. Thence her reform spread to Auxonne (1410), to Poligny, to Ghent (1412), to Heidelberg (1444), to Amiens, etc. To the seventeen convents founded during her lifetime must be added another begun by her at Pont-à-Mousson in Lorraine. She also inaugurated a reform among the Franciscan friars (the Coletani), not to be confounded with the Observants. These Coletani remained obedient to the authority of the provincial of the Franciscan convents, and never attained much importance even in France. In 1448 they had only thirteen convents, and together with other small branches of the Franciscan Order were suppressed in 1517 by Leo X. In addition to the strict rules of the Poor Clares, the Colettines follow their special constitutions sanctioned in 1434 by the General of the Franciscans, William of Casale, approved in 1448 by Nicholas V, in 1458 by Pius II, and in 1482 by Sixtus IV.

St. Colette was beatified 23 January, 1740, and canonized 24 May, 1807. She was not only a woman of sincere piety, but also intelligent and energetic, and exercised a remarkable moral power over all her associates. She was very austere and mortified in her life, for which God rewarded her by supernatural favours and the gift of miracles. For the convents reformed by her she prescribed extreme poverty, to go barefooted, and the observance of perpetual fast and abstinence. The Colettine Sisters are found to-day, outside of France, in Belgium, Germany, Spain, England, and the United States.

St. Clare, St. Colette, and the Poor Clares (Dublin, 1864); *Analecta Bolland* (1904), VII, 1004, 1013-16. For the contemporary accounts of her life see *Acta SS.*, I, 539-89.

MICHAEL BIHL.

Colgan, JOHN, hagiographer and historian, b. in County Donegal, Ireland, about the beginning of the seventeenth century; d. probably in 1657. Having joined the Franciscan Order he was sent to study in the Irish Franciscan College of St. Anthony of Padua at Louvain. Here he is said to have acted as professor of theology for some time, but he soon forsook the professorial chair in order to devote himself to the Irish studies for which that college is justly famous. Father Hugh Ward (d. 1635) had projected a complete history of the Irish saints, and for this purpose had sent some of his brethren, notably Michael O'Clery, to Ireland to collect materials. Ward died before he could make any progress in his work, but the materials that had been gathered remained. Colgan, being a competent master of the Irish language, had thus ready at hand a collection of manuscripts unequalled in the department of Irish hagiology. He undertook a great work, to be published in six volumes, dealing with the whole range of Irish ecclesiastical history and antiquities. In 1645 he published at Louvain the third volume of this series (*Acta Sanctorum Hiberniæ*, etc.), containing the

lives of the Irish saints whose feasts occur in the calendar for the months of January, February, and March. The lives of the saints whose feasts occur in the succeeding months were to have been published in the last three volumes of the series. Wadding, in his "Annales Minorum", informs us that the volume dealing with the saints for April, May, and June was in the press at Colgan's death; this seems incorrect, since, if the work had been so far advanced, it would have been published by some one of the many competent colleagues who assisted Colgan.

The second volume of the series, entitled "Trias Thaumaturga", etc., appeared at Louvain in 1647. It deals with the three great national saints of Ireland, Patrick, Brigid, and Columbcille. In it are contained seven of the ancient lives of St. Patrick, five of St. Columba, and six of St. Brigid. For a long time the "Trias Thaumaturga" was nearly the only source of information on St. Patrick, and even since the Whitley Stokes edition of the "Vita Tripartita" (Rolls Series), Colgan's work cannot be dispensed with. It should be noted that Colgan gives a Latin version of the "Vita Tripartita" which represents a different text from that edited by Stokes; Colgan's manuscript seems to have entirely disappeared. Besides the "Lives" in the "Trias Thaumaturga", there are also contained in this volume many valuable "Appendices", dealing with the ecclesiastical antiquities of Ireland, and critical and topographical notes, which, though not always correct, are of invaluable assistance to the student. In 1655 he published at Antwerp a life of Duns Scotus, in which he undertook to prove that this great Franciscan doctor was born in Ireland, and not in Scotland, as was then frequently asserted. In the "Bibliotheca Franciscana" Colgan is said to have died in 1647, but this is evidently a mistake, as a note in his work on Duns Scotus proves clearly that he was alive in 1655.

Colgan's work on Irish hagiology is of undoubted value. Though unfortunately of very weak constitution, he was a man of great ability and industry, and with a sound critical sense. His knowledge of the Irish language enabled him to turn to good account the vast collection of manuscripts (now unfortunately for the greater part lost) which had been collected at the instigation of Ward, while his acquaintance with the traditions existing among the native Irish of his time, about the various names of persons and places, gave him an advantage over writers of the present day. It must be remembered, however, that Colgan, though a fluent Irish speaker, had not, and from the nature of things could not have, a knowledge of the grammatical forms of Old and Middle Irish. Hence his judgments about the dating of the manuscripts and about the meaning of certain difficult expressions ought not to be put forward as irreversible. In other words, Colgan should be judged by the criteria of his time; from this point of view his work on the ecclesiastical history of Ireland is unequalled. But his opinions are not decisive evidences of truth at the present day, especially when pitted against the views of the most skilled students of Old and Middle Irish grammar and texts. His principal works are: "Acta Sanctorum veteris et majoris Scotiæ seu Hiberniæ, Sanctorum Insulæ, partim ex variis per Europam MS. Codicibus excerpta, partim ex antiquis monumentis et probatis Auctoribus eruta et congesta; omnia Notis et Appendicibus illustrata. Tomus primus qui de Sacris Hiberniæ Antiquitatibus est tertius, Januarii, Februarii et Martii complectens" (Louvain, 1645); "Triadis Thaumaturgæ, seu Divorum Patricii Columbæ et Brigidæ, trium Veteris et Majoris Scotiæ, seu Hiberniæ, Sanctorum Insulæ, communium Patronorum Acta. Tomus Secundus Sacrarum ejusdem Insulæ Antiquitatum" (Louvain, 1647); "Tractatus de Vitâ, Patriâ, Scriptis Johannis Scoti, Doctoris Subtilis" (Antwerp, 1655).

Besides these he left in manuscript "De Apostolatu Hibernorum inter exteras Gentes cum Indice Alphabetico de exteris sanctis" (852 pages); "De Sanctis in Angliâ, Britannîa Aremoricâ, in reliquâ Galliâ, in Belgio" (1068 pages); "De Sanctis in Lotharingiâ et Burgundiâ, in Germaniâ ad senestram et dexteram Rheni, in Italiâ" (920 pages). Some of these invaluable manuscripts, though eagerly sought for, have not yet been traced (see Gilbert, National MSS. of Ireland, London, 1884; or Doherty, op. cit. below, 81-82).

JAMES MACCAFFREY.

Colgan, JOSEPH. See MADRAS, ARCHDIOCESE OF.

Colima, DIOCESE OF (COLIMIENSIS).—The city of Colima, the capital of the State of the same name in Mexico, is situated on the Colima River, at an altitude of 1400 feet, and was founded in the year 1522 by Gonzalo de Sandoval. Its population in 1900 was 20,698. The Diocese of Colima was erected by Leo XIII, 11 December, 1881, by the Constitution "Si principum". Before its erection as a diocese, Colima formed part of the Archdiocese of Guadalajara (Guadalajara), of which it is now a suffragan. It includes all the State of Colima and the southern part of the State of Jalisco. The population in 1901 numbered 72,500, many of whom are Indians.

Gerarchia Catt. (Rome, 1908); *Konversations-Lex.* (St. Louis, Missouri, 1903), s. v.

Colin, FRÉDÉRIC-LOUIS, Superior of the Sulpicians in Canada, b. at Bourges, France, in 1835; d. at Montreal, 27 November, 1902. After pursuing a course of scientific studies he entered the Seminary of Saint-Sulpice at Paris where he was ordained priest in 1859. Transferred to Canada in 1862 he at first took up parochial work; later he became successively professor of theology and director of the higher seminary at Montreal. From 1881 until his death he was superior of the priests of Saint-Sulpice in Canada. Colin distinguished himself both as an orator and as a man of action. Many of his sermons have been printed; among them are one to the papal zouaves returning from Rome (1871), and a funeral oration on Mgr. Bourget (1885). For twenty years Father Colin was the promoter in Montreal of higher education for the clergy and laity. For the clergy he founded the Canadian College at Rome (1885), intended to enable young Canadian priests to pursue a higher course of ecclesiastical studies by attending the Roman universities; besides this he established the seminary of philosophy at Montreal (1892).

For the benefit of laymen Colin established, despite many obstacles, the Laval University. Aided by Ferdinand Brunetière, on whom he exercised a salutary influence, he advocated the erection of a chair of French literature to be occupied by a lecturer from France, and he himself defrayed the costs. In this way he quickened interest in the French language and literature among the intelligent classes of Canada and introduced the custom of calling on French and Belgian specialists for the higher scientific and commercial instruction of young French-Canadians. To Father Colin is also due the practice of inviting a preacher from abroad to deliver the Lenten sermons at Notre-Dame of Montreal. His wise advice was also much sought for by the ecclesiastical and civil authorities.

A. FOURNET.

Colin, JEAN-CLAUDE-MARIE, a French priest, founder of the Marists, b. at Saint-Bonnet-le-Troncy, now in the Diocese of Lyons, 7 Aug., 1790; d. at Notre-Dame-de-la-Neylière (Rhône) 28 Feb., 1875. After his preliminary studies at St-Jodard, Alix, and Verrières, he entered the Grand-Séminaire de Saint-Irénée, at Lyons, and was ordained priest in 1816. The idea of a religious society dedicated to the Blessed Virgin originated with a group of seminarians at Saint-Irénée. Although the most retiring and modest of the group, Colin became the real founder. While serving as assistant pastor at Cerdon, then in the Diocese of Lyons, he drew up provisional rules which met the warm approval of such men as Bigex, Bishop of Pignerol, Bonald, Bishop of Puy, Fraysinoux, minister of ecclesiastical affairs, etc. The town of Cerdon having passed to the newly reorganized Diocese of Belley, Colin obtained from his bishop, Mgr. Devie, permission to take a few companions and preach missions in the neglected parts of the diocese. Their number increased, and in spite of the opposition of the bishop, who wished to make the society a diocesan congregation, Colin obtained (1836) from Gregory XVI the canonical approbation of the Society of Mary as an order with simple vows. In the same year Father Colin was chosen superior general.

During the eighteen years of his administration (1836-1854) Colin showed great activity, organizing the different branches of his society, founding in France missionary houses and colleges, and above all sending to the various missions of Oceania, which had been entrusted to the Marists, as many as seventy-four priests and forty-three brothers, several of whom gave up their lives in the attempt to convert the natives. In 1854 he resigned the office of superior general and retired to Notre-Dame-de-la-Neylière, where he spent the last twenty years of his life revising and completing the constitutions of the Society, impressing on them the spirit of the Blessed Virgin, a spirit of humility, self-denial, and unwavering loyalty to the Holy See, of which he was himself a perfect model. Two years before his death he had the joy of seeing the Constitutions of the Society of Mary definitively approved by the Holy See, 28 Feb., 1873. The cause of the beatification of Father Colin is now (1908) before the Congregation of Rites.

J. F. SOLLIER.

Coliseum, THE, known as the Flavian Amphitheatre, commenced A. D. 72 by Vespasian, the first of the Flavian emperors, dedicated by Titus A. D. 80. The great structure rises in four stories, each story exhibiting a different order of architecture; the first Doric, the second Ionic, the third Corinthian, the fourth Composite. The material is the famous travertine. The site was originally a marshy hollow, bounded by the Cælian, the Oppian, the Velian, and the Palatine Hills, which Nero had transformed into the fish-pond of his Golden House. Its form is that of an ellipse, 790 feet in circumference, its length 620, its width 525, and its height 157 feet. The arena, in which took place the gladiatorial combats (*ludi gladiatorii*) and fights with the wild beasts, for which the Coliseum was erected, was of wood, covered with sand. Surrounding the arena was a low wall, surmounted by a railing high enough to protect the audience from danger of invasion by the furious, non-human contestants. As an additional security against this peril, guards patrolled the passageway between this wall and the *podium*, or marble terrace, on which were the seats of the senators, the members of the sacred colleges, and other privileged spectators. From the southern side of the podium projected the *suggestum*, or imperial gallery, for the accommodation of the emperor and his attendants. Next to these

sat the Vestals. Back of the podium twenty tiers of seats were reserved for the three divisions of the equestrian order; the upper tiers of seats were occupied by the ordinary citizens. Last of all was a Corinthian colonnade in which the lower orders were accommodated with standing room only. The Coliseum, according to the "Chronographia" of 354, could contain 87,000 spectators. Professor Huelsen (quoted by Lanciani), however, has calculated that it will seat not more than 45,000 people. From the external cornice projected a circle of pine masts, from which awnings could readily be suspended over parts of the audience for the moment exposed to the sun's rays; the imperial gallery was covered with a special canopy. The arena was never shaded. Nothing is known of the architect of the Coliseum, although an inscription, afterwards shown to be a forgery, attributed its design to a Christian.

THE COLISEUM IN THE MIDDLE AGES.—Although seriously damaged by two earthquakes in the fifth century, it is generally held that the Coliseum was practically intact in the eighth century when Bede wrote the well-known lines:

Quandiu stabit coliseus, stabit et Roma;

Quando cadit coliseus, cadet et Roma;

Quando cadet Roma, cadet et mundus.

(While stands the Coliseum, Rome shall stand; when falls the Coliseum, Rome shall fall; when Rome falls, the world shall fall.) Lanciani attributes the collapse of the western portion of the shell to the earthquake of September, 1349, mentioned by Petrarch. Towards the end of the eleventh century it came into the hands of the Frangipani family, with whose palace it was connected by a series of constructions. During the temporary eclipse of the nobility in the fourteenth century, while the popes resided in Avignon, it became the property of the municipality of Rome (1312). The last shows seen in the Coliseum were given in the early part of the sixth century, one by Eutaricus Cilica, son-in-law of Theodoric, in 519, and a second in 523 by Anicius Maximus. The story of a bull-fight in 1332, in which eighteen youths of the Roman nobility are said to have lost their lives, is apocryphal (Delehaye, *L'Amphithéâtre Flavien*, 5). In 1386 the municipality presented a third of the Coliseum to the "Compagnia del Salvatore ad sancta sanctorum" to be used as a hospital, which transaction is commemorated by a marble bas-relief bust of Our Saviour, between two candles, and the arms of the municipality, above the sixty-third and sixty-fifth arches. During the next four centuries the enormous mass of stone which had formed the western part of the structure served as a quarry for the Romans. Besides other buildings, four churches were erected in the vicinity from this material. One document attests that a single contractor in nine months of the year 1452 carried off 2522 cartloads of travertine from the Coliseum. This contractor was not the first, however, to utilize the great monument of ancient Rome as a quarry; a Brief of Eugenius IV (1431-47), cited by Lanciani, threatens dire penalties against those who would dare remove from the Coliseum even the smallest stone (*vel minimum dicti colisei lapidem*). The story of Cardinal Farnese who obtained permission from his uncle, Paul III (1534-49), to take from the Coliseum as much stone as he could remove in twelve hours is well known; his eminence had 4000 men ready to take advantage of the privilege on the day appointed. But a new tradition, which gradually took hold of the public mind during the seventeenth century, put an end to this vandalism, and effectually aided in preserving the most important existing monument of imperial Rome.

THE COLISEUM AND THE MARTYRS.—Pope St. Pius V (1566-72) is said to have recommended persons desirous of obtaining relics to procure some sand from the arena of the Coliseum, which, the pope de-

clared, was impregnated with the blood of martyrs. The opinion of the saintly pontiff, however, does not seem to have been shared by his contemporaries. The practical Sixtus V (1585-90) was only prevented by death from converting the Coliseum into a manufactory of woollen goods. In 1671 Cardinal Altieri regarded so little the Coliseum as a place consecrated by the blood of Christian martyrs that he authorized its use for bull-fights. Nevertheless from the middle of the seventeenth century the conviction attributed to St. Pius V gradually came to be shared by the Romans. A writer named Martinelli, in a work published in 1653, put the Coliseum at the head of a list of places sacred to the martyrs. Cardinal Carpegna (d. 1679) was accustomed to stop his carriage when passing by the Coliseum and make a commemoration of the martyrs. But it was the act of Cardinal Altieri, referred to above, which indirectly effected a general change of public opinion in this regard. A pious personage, Carlo Tomassi by name, aroused by what he regarded as desecration, published a pamphlet calling attention to the sanctity of the Coliseum and protesting against the intended profanation authorized by Altieri. The pamphlet was so completely successful that four years later, the jubilee year of 1675, the exterior arcades were closed by order of Clement X; from this time the Coliseum became a sanctuary. At the instance of St. Leonard of Port Maurice, Benedict XIV (1740-58) erected Stations of the Cross in the Coliseum, which remained until February, 1874, when they were removed by order of Commendatore Rosa. St. Benedict Joseph Labre (d. 1783) passed a life of austere devotion, living on alms, within the walls of the Coliseum. "Pius VII in 1805, Leo XII in 1825, Gregory XVI in 1845, and Pius IX in 1852, contributed liberally to save the amphitheatre from further degradation, by supporting the fallen portions with great buttresses" (Lanciani). Thus at a moment when the Coliseum stood in grave danger of demolition it was saved by the pious belief which placed it in the category of monuments dearest to Christians, the monuments of the early martyrs. Yet, after an exhaustive examination of the documents in the case, the learned Bollandist, Father Delehaye, S. J., arrives at the conclusion that there are no historical grounds for so regarding it (op. cit.). In the Middle Ages, for example, when the sanctuaries of the martyrs were looked upon with so great veneration, the Coliseum was completely neglected; its name never occurs in the itineraries, or guide-books, compiled for the use of pilgrims to the Eternal City. The "Mirabilia Romæ", the first manuscripts of which date from the twelfth century, cites among the places mentioned in the "Passions" of the martyrs the *Circus Flaminius ad pontem Judæorum*, but in this sense makes no allusion to the Coliseum. We have seen how for more than a century it served as a stronghold of the Frangipani family; such a desecration would have been impossible had it been popularly regarded as a shrine consecrated by the blood, not merely of innumerable martyrs, but even of one hero of the Faith. The intervention of Eugenius IV was based altogether on patriotism; as an Italian the pope could not look on passively while a great memorial of Rome's past was being destroyed. "Nam demoliri urbis monumenta nihil aliud est quam ipsius urbis et totius orbis excellentiam diminuerè."

Thus in the Middle Ages no tradition existed in Rome which associated the martyrs in any way with the Coliseum; it was only in the seventeenth century, and in the manner indicated, that it came to be regarded with veneration as a scene of early Christian heroism. Indeed, little attention was paid by the Christians of the first age to the actual place of a martyr's sufferings; the sand stained with his blood was, when possible, gathered up and treasured as a precious relic, but that was all. The devotion of the

Christian body centred wholly around the place where the martyr was interred. Father Delehaye calls attention to the fact that although we know from trustworthy historical sources of the execution of Christians in the garden of Nero, yet popular tradition preserved no recollection of an event so memorable (op. cit., 37). The Acts of Roman Martyrs, it is true, contain indications as to the places where various martyrs suffered: in *amphitheatro*, in *Tellure*, etc. But these Acts are often merely pious legends of the fifth, sixth, and following centuries built up by unknown writers on a few reliable historical facts. The decree formerly attributed to Pope Gelasius (492-96) bears witness to the slight consideration in which this class of literature was held in the Roman Church; to read it in the churches was forbidden, and it was attributed to unknown writers, wholly unqualified for their self-imposed task (secundum antiquam consuetudinem, singulæ cautelâ, in sanctâ Romanâ ecclesiâ non leguntur, quia et eorum qui conscribere nomina penitus ignoratur, et ab infidelibus et idiotis superflua aut minus apta quam rei ordo fuerit esse putantur.—Thiel, Epist. Rom. Pont., I, 458). The evidence, therefore, which we possess in the Roman Acts in favour of certain martyrs suffering in the Coliseum is, for these reasons among others, regarded by Father Delehaye as inconclusive. He does not deny that there may have been martyrs who suffered in the Coliseum, but we know nothing on the subject one way or the other. (Je ne veux pas nier qu'il y ait eu des martyrs de l'amphithéâtre Flavien; mais nous ne savons pas non plus s'il y en a eu, et en tout cas leurs noms nous sont inconnus.—Op. cit., 37.) It is, of course, probable enough that some of the Christians condemned *ad bestias* suffered in the Coliseum, but there is just as much reason to suppose that they met their death in one of the other places dedicated to the cruel amusements of imperial Rome; for instance, in the Circus Flaminius, the Gaium, the Circus of Hadrian, the *Amphitheatrum Castrense*, and the Stadium of Domitian. Even as regards St. Ignatius of Antioch, the evidence that he was martyred in the Coliseum is far from decisive; the terms employed by St. John Chrysostom and Evagrius in reference to this matter convey no precise meaning (Delehaye, op. cit., 43). The same is true of the term used by Theodoret in reference to the death of St. Telemachus, who sacrificed his life to put an end to the bloody spectacles which, as late as the early fifth century, took place in Rome. There is no reason to doubt the fact of the heroic death of St. Telemachus, but there is, on the other hand, no clear proof that its scene was the Coliseum. Theodoret, the only writer who records the incident, says that it happened *eis tò στάδιον* (in the stadium), a different place from the Coliseum.

MAURICE M. HASSETT.

Collado, DIEGO, missionary, b. in the latter part of the sixteenth century at Miajadas, in the province of Estremadura, Spain. He entered the Dominican Order at Salamanca about 1600, and in 1619 went to Japan, where the Christians were suffering persecution. After the martyrdom of Luis Flóres, a fellow-Dominican, in 1622, Collado repaired to Rome, and later to Spain, in the interests of the Oriental missions. He obtained important concessions, though not without incurring some animosity. Bearing Apostolic and royal letters, he returned to the Orient in 1635. The following year he endeavoured to establish in the Philippines an independent convent devoted solely to the Chinese and Japanese missions, but, owing to the opposition of the Spanish civil authorities, his effort

THE COLISEUM, ROME

was unsuccessful. Recalled to Spain, he was shipwrecked, in 1638, on his way to Manila. He could have saved himself, but he remained with the unfortunates among his fellow-voyagers, hearing their confessions and preparing them for death. The following are his more important writings: "Ars grammatica japonicæ lingue" (Rome, 1631, 1632); "Dictionarium sive thesauri linguae japonicæ compendium" (Rome, 1632); "Modus confitendi et examinandi penitentem japonensem formulâ suâmet linguâ japonicâ" (Rome, 1631, 1632); "Formulæ protestandæ fidei" (Rome); "Historia eclesiastica de los sucesos de la cristianidad del Japon desde el año de MDCII, que entró en él la orden de predicadores hasta el de MDCXXI por el P. Hiacintho Orfanel, añadida hasta el fin del año MDCXXII por el Padre Fray Diego Collado" (Madrid, 1632, 1633); "Dictionarium linguæ sinensis cum explicatione latinâ et hispanicâ character sinensi et latino" (Rome, 1632).

Collationes Patrum. See **CASSIAN, JOHN.**

Collect, the name now used only for the short prayers before the Epistle in the Mass, which occur again at Lauds, Terce, Sext, None, and Vespers. The word *collecta* corresponds to the Greek *συναξίς*. It is a noun, a late form for *collectio* (so *missa* for *missio*, *oblata* for *oblatus*, *ascensa*, in the Galasian Sacramentary, for *ascensio*, etc.). The original meaning seems to have been this: it was used for the service held at a certain church on the days when there was a station somewhere else. The people gathered together and became a "collection" at this first church; after certain prayers had been said they went in procession to the station-church. Just before they started the celebrant said a prayer, the *oratio ad collectam* (*ad collectionem populi*); the name would then be the same as *oratio super populum*, a title that still remains in our Missal, in Lent for instance after the Post-Communion. This prayer, the collect, would be repeated at the beginning of the Mass at the station itself (Bona, *Rer. liturg.*, II, 5). Later writers find other meanings for the name. Innocent III says that in this prayer the priest collects together the prayers of all the people (De Sac. altaris myst., II, 27; see also Benedict XIV, De SS. Missæ sacr., II, 5). The Secret and Post-Communion are also collects, formed on the same model as the one before the Epistle. Now the name is only used for the first of the three. Originally there was only one collect (and one Secret and Post-Communion) for each Mass. The older sacramentaries never provide more than one. Amalarius of Metz (d. 847) says (De officiis eccl., in P. L., CV, 985 sqq.) that in his time some priests began to say more than one collect, but that at Rome only one was used. Micrologus [De eccl. observ., probably by Bernold of Constance (d. 1100), in P. L., CLI, 973 sqq.] defends the old custom and says that "one Prayer should be said, as one Epistle and one Gospel". However, the number of collects was multiplied till gradually our present rule was evolved.

The way in which our collects are now said at Mass is the fragment of a more elaborate rite. Of this longer rite we still have a vestige on Good Friday. The celebrant, after greeting the people (*Dominus vobiscum*), invited them to pray for some intention: *Oremus, dilectissimi nobis*, etc. The deacon said: *Flectamus genua*, and all knelt for a time in silent prayer. The subdeacon then told them to stand up again (*Levate*), and all standing, the celebrant closed the private prayers with the short form that is the collect. Of this rite—except on Good Friday—the shortening of the Mass, which has affected all its parts, has only left the greeting *Oremus* and the collect itself.

Here, as always, it is in Holy Week that we find the older form. It should be noted, then, that the *Oremus* did not refer immediately to the collect, but rather to the silent prayer that went before it. This also explains the shortness of the older collects. They are not the prayer itself, but its conclusion. One short sentence summed up the petitions of the people. It is only since the original meaning of the collect has been forgotten that it has become itself a long petition with various references and clauses (compare the collects for the Sundays after Pentecost with those for the modern feasts). On all feast-days the collect naturally contains a reference to the event whose memory we celebrate. Its preparation is the kissing of the altar and the *Dominus vobiscum*. Before inviting the people to make this prayer the celebrant greets them, and, before turning his back to the altar in order to do so, he salutes it in the usual way by kissing it. The form *Dominus vobiscum* is the common greeting in the West. It occurs in the Gallican, Milanese, and Mozarabic Liturgies under the form: *Dominus sit semper vobiscum*. Germanus of Paris notes it as the priest's (not bishop's) greeting (P. L., LXXVII, 89). It is taken from the Bible. When Booz came from Bethlehem he said, "The Lord be with you", to the reapers (Ruth, ii, 4), and St. Gabriel used the same form to Our Lady at the Annunciation (Luke, i, 28; cf. II Thess., iii, 16). A bishop here says, *Pax vobis*, unless the Mass has no Gloria, in which case his greeting is the same as that of the priest (Ritus celebr., V, 1). This distinction is as old as the tenth century (Ordo Rom., XIV, 79, notes it). The Pax is a joyful and solemn greeting to be left out on days of penance. Its connexion with the Gloria, that has just gone before (*et in terra pax hominibus*), is obvious. The greeting of peace (*εἰρήνη πᾶσι*) is the common one in the Eastern liturgies. In either case the answer is: *Et cum spiritu tuo*. This is a Hebraism that occurs constantly in both the Old and the New Testament. "Thy spirit" simply means "thee" (cf. e. g. Dan., iii, 86; Gal., vi, 18; Phil., iv, 23; Philem., 25). *Nefesh* (Heb.), *Nafs* (Ar.), with a pronominal suffix, in all Semitic languages means simply the person in question. The Eastern liturgies have the same answer, *καὶ μετὰ τοῦ πνεύματός σου* (and with thy spirit), as in the Apostolic Constitutions (Brightman, Eastern Lit. 3, 13), or *καὶ τῷ πνεύματί σου* (ibid., 49, 137, etc.).

At the *Dominus vobiscum* the celebrant, facing the people, extends and then again joins his hands. It is here a gesture of greeting. With folded hands he turns back to the altar and goes to the Missal at the Epistle side. Here, again extending and joining the hands and bowing towards the cross, he sings or says *Oremus*, and then, with uplifted hands (not above the shoulder, Ritus Celebr., V, 1), goes on at once with the collect or collects. The present rule about the collects is this: on doubles only one collect is said (that of the feast), unless any other feast be commemorated, or the pope or bishop order an *oratio imperata*. The *imperata* is, moreover, omitted on doubles of the first class, Palm Sunday, Maundy Thursday, the eves of Christmas, Easter, and Whitsunday, in Requiems, and solemn votive Masses. On doubles of the second class it is left out in high and sung Masses, and may be said at the others or not, at the celebrant's discretion. For a very grave cause an *imperata* may be ordered to be said always, even on these occasions. It always comes last (De Herdt, I, 72). The collect of the Blessed Sacrament, to be said when it is exposed, and that for the pope or bishop on the anniversary of their election, coronation, or consecration, are particular cases of *imperata*. The rules for commemoration of feasts, octaves, ember days, and ferias of Advent and Lent are given in the rubrics of the Missal (Rubr. Gen., VII; cf. De Herdt, I, 70-71). On semi-doubles, Sundays, and days within an octave, three collects must be said; but on Passion Sunday, on Sundays

within an octave and throughout the octaves of Easter and Whitsunday there are only two (Rubr. Gen., IX; De Herdt, I, 75, where the rules for these collects will be found). But in these cases the number may be greater, if there are commemorations. On simples, ferias, and in Requiem and (not solemn) votive Masses, the celebrant may also add collects, as he chooses, provided the total number be an uneven one and do not exceed seven (Rubr. Gen., IX, 12; De Herdt, I, 83).

The rule about the uneven numbers, on which the S. Congr. Rit. has insisted several times (2 December, 1684; 2 September, 1741; 30 June, 1896), is a curious one. The limit of seven prevents the Mass from being too long. In any case the collect of the day always comes first. It has *Oremus* before it and the long conclusion (*Per Dominum*, etc.). The second collect has a second *Oremus*, and all that follow are joined together without intermediate ending nor *Oremus* till the last, which again has the long conclusion. This separates the collect of the day from the others and gives it a special dignity, as a remnant of the old principle that it alone should be said. The conclusions of the collects vary according to their form and references (Rubr. Gen., IX, 17). The people (choir or server) answer *Amen*. During the conclusions the celebrant folds his hands and bows towards the cross at the words *Dominum nostrum Jesum Christum*. It should be noted that the great majority of the collects are addressed to God the Father (so all the old ones; the common form is to begin: *Deus, qui*); a few later ones (as on Corpus Christi, for example) are addressed to God the Son, none to the Holy Ghost. At low Mass collects are said aloud so that they can be heard by the people, at high (or sung) Mass they are sung to the festive tone on doubles, semi-doubles, and Sundays. On simples, ferias, and in Masses for the dead, they have the simple ferial tone (entirely on one note, *ja*). The rules of the tones, with examples, are in the "Cærimoniale Episcoporum", I, xxvii. At high Mass the deacon and subdeacon stand in a straight line behind the celebrant (the deacon on the top step, the subdeacon *in plano*) with joined hands. At the collects, in high Mass, the people should stand. This is the old position for public prayer; originally the subdeacon explicitly told them to do so (*Levate*). The custom of standing during the collects, long neglected, is now being happily revived. At low Mass they kneel all the time except during the Gospel (Rubr. Gen., XVII, 2).

ADRIAN FORTESCUE.

Collectarium (sometimes COLLECTARIUS, COLLECTANEUM, ORATIONALE, CAPITULARE), the book which contains the Collects. In the *Proprium de Tempore* of the Roman Missal the title *Statio*, with the name of some saint or mystery, is frequently prefixed to the Introit of the Mass. It signifies that in early times, probably down to the fourteenth century, the clergy and people celebrated on those days the Divine mysteries in the churches dedicated in honour of that saint or mystery. Before going in procession to the *statio* they assembled in some nearby church to receive the pontiff, who recited a prayer which was called the Collect. This name was given to the prayer either because it was recited for the assembled people, or because it contained the sum and substance of all favours asked by the pontiff for himself and the people, or because in an abridged form it represented the spirit and fruit of the feast or mystery. In course of time it was used to signify the prayers, proper, votive, or prescribed by the ecclesiastical superiors (*imperate*), recited before the Epistle, as well as the

Secrets and the Post-Communions. Later it was applied to the prayers said at Divine Office or any liturgical service.

Collections.—The offerings of the faithful in their special relation to the Holy Sacrifice of the Mass will claim fuller and more general treatment under OFFERTORY and MASS STIPEND. We will confine ourselves here to the particular development which took the form of a contribution in money, corresponding particularly to what is conveyed by the French word *quête*. Of collections for general church purposes we find mention already in the days of St. Paul, for we read in I Cor., xvi, 1-2: "Now concerning the collections that are made for the saints, as I have given order to the churches of Galatia, so do ye also. On the first day of the week let every one of you put apart with himself, laying up what it shall well please him; that when I come, the collections be not then to be made." This seems to imply that on every Sunday (the first day of the week) contributions were made, probably when the faithful assembled for "the breaking of bread" (Acts, xx, 7), and that then contributions were put by, if not required for some immediate and local need, e.g. the relief of the poor, in order that St. Paul might assign them for the use of other more destitute churches at a distance (cf. II Cor., viii and ix). How far such offerings were allocated to the support of the clergy and how far to the poor there is nothing to tell us, but it is plain that as a matter of principle the claims both of the clergy and of the poor were recognized from the very first. (For the clergy see I Cor., ix, 8-11; II Thess., iii, 8; I Tim., v, 17-18; and for the poor see Acts, iv, 34-35, vi, 1, xi, 29-30; I Tim., v, 16, etc.) Again there can be no doubt that from an early date such alms were administered according to some organized system. The very institution of deacons and deaconesses proves this, and we can appeal to the existence in certain places, for example at Jerusalem, of a roll (*breve ecclesiasticum*, see the recently recovered "Life of St. Melania", § 35) bearing the names of those in receipt of relief. Gregory of Tours gives the name of *matricularii* (De Mirac. B. Martin., iii, 22) to those who were entered on this roll. Speaking generally, the allocation of all offerings was recognized as belonging to the bishop (i.e. in the period before the modern system of parishes and parish priests had evolved itself with any clearness), and the rule was formally enunciated in the West that all offerings were to be divided by the bishop into four parts: the first for the clergy, the second for the poor, the third for the fabric and up-keep of the churches, and the last part for the bishop himself, that he might the better exercise the hospitality which was expected of him. This arrangement seems to date back at least to the time of Pope Simplicius (475), and a hundred years later it is stated by Pope Gregory the Great in the following form when he was consulted by St. Augustine about the English Church which he had just founded: "It is the custom of the Apostolic See to deliver to ordained bishops precepts that of every oblation which is made there ought to be four portions, one, to wit, for the bishop and his household, on account of hospitality and entertainment, another for the clergy, a third for the poor, a fourth for the repairing of churches" (Bede, Hist. Eccles., I, xxvii).

At a later date we find some modification of this rule, for in the Capitularies of Louis the Pious a third of the offerings are assigned to the clergy and two-thirds to the poor in more prosperous districts, while a half is to be given to each in poorer ones. During all this earlier period offerings in money do not seem to

have been connected with the Sacrifice of the Mass, but they were either put into an alms-box permanently set up in the church or they were given in collections made on certain specified occasions. With regard to the former Tertullian already speaks (Apol., xxxix, Migne, P. L., I, 470) of "some sort of chest" which stood in the church and to which the faithful contributed without compulsion. It seems to have been commonly called *gazophylacium* or *corbona* (Cyprian, "De op. et elemos.": Jerome, Ep. xxvii, 14). The collections on the other hand probably took place on days of which notice was given beforehand. Apart from a mention in the "Apology" of Justin Martyr (I, lxvii), from which we should suppose that a collection was made every Sunday, our principal source of information is the series of six sermons "De Collectis", delivered by St. Leo the Great in different years of his pontificate (Migne, P. L., LIV, 158-168). All these, according to the brothers Ballerini, probably have reference to a collection annually made on 6 July, on which day in pagan times certain games were held in honour of Apollo, at which a collection took place. The Church seems to have continued the custom and converted it into an occasion of almsgiving for pious purposes upon the octave day of the feast of Sts. Peter and Paul. It may be noted that both Tertullian (De Jejun., xiii, Migne, P. L., II, 972) and St. Leo seem to regard such contributions of money as a form of mortification, and consequently sanctification, closely connected with fasting. That similar collections were everywhere common in the Early Church and that considerable pressure was sometimes brought to bear to extort contributions we learn from a letter of St. Gregory the Great (Migne, P. L., LXXVII, 1060).

As already noted, these methods of gathering alms seem to have had nothing directly to do with the liturgy. The offerings which were invariably made by the faithful both in the Eastern and the Western Church during the Holy Sacrifice were long confined to simple bread and wine, or at least to such things as wax, candles, oil, or incense which had a direct relation to the Divine service. According to the so-called Apostolic Canons (see CANONS, APOSTOLIC) other forms of produce which might be offered for the support of the clergy were to be taken to the residence of the bishop, where he lived a sort of community life with his priests (see Funk, *Didascalia et Constitutiones Apostolorum*, I, 564). However, the bread and wine which were brought to the altar at the Offertory of the Mass were commonly presented in quantities far in excess of what was needed for the Holy Sacrifice, and they thus formed, and were intended to form, a substantial contribution towards the maintenance of those who served in the sanctuary. Various enactments were passed during the Carolingian period with the object of urging the people to remain faithful to this practice, but it seems gradually to have died out, save in certain functions of solemnity, e. g. the Mass celebrated at the consecration of a bishop, when two loaves and two small casks of wine are presented to the celebrant at the Offertory. On the other hand, this oblation of bread and wine seems to have been replaced in many localities by a contribution in money. At what period the substitution began is not quite clear. Some have thought that a trace of this practice is to be recognized as early as St. Isidore of Seville (595) who speaks of the archdeacon "receiving the money collected from the communion" (Ep. ad Leudof., xii). A less ambiguous example may be found in a letter of St. Peter Damian (c. 1050) where there is mention of gold coins being offered by the wives of certain princes at his Mass (Migne, P. L., CXLIV, 360). In any case it is certain that from the twelfth to the fifteenth century a money offering, known in England as the "mass-penny", was commonly made at the Offertory all over the Western Church. Kings and personages of high rank often

had a special coin which they presented at Mass each day and then redeemed it afterwards for a specified sum. Chaucer says of his Pardoner:—

Well could he read a lesson or a storie
But althebest he sang an offertorye;
For well he wyste, when that song was songe,
He moste preach and well affyle his tongue
To wyinne silver, as he right wel cowde,
Therefore he sang full merrily and lowde.

The offering was voluntary, and each one brought what he had to give to the altar-rail. Burckard at the beginning of the sixteenth century gives this direction: "If there be any who wish to offer, the celebrant comes to the epistle corner and there standing bareheaded with his left side turned towards the altar, he removes the maniple from his left arm and taking it in his right hand, he presents the end of it to kiss to those who offer, saying to each: 'May thy sacrifice be acceptable to God Almighty', or 'Mayst thou receive a hundredfold and possess eternal life'." This rubric was not retained in the first official and authoritative edition of the Roman Missal, printed in 1570. Possibly the struggle for precedence in going up to make the offering, of which we read in Chaucer, tended to bring this method of contributing into disfavour and led to the carrying round of an alms-dish or bag from bench to bench as is commonly done at present. Collections for specified objects, e. g. the building of a church, the construction of a bridge, the relief of certain cases of distress, etc. have at all times been common in the Church, and during the Middle Ages the people were constantly stimulated to give more generously to particular funds for pious purposes, e. g. the Crusades, by the grant of special Indulgences. These grants of Indulgence were often entrusted to preachers of note ("Pardoners") who carried them from town to town, collecting money and using their eloquence to recommend the good work in question and to enhance the spiritual privileges attached to it. This led to many abuses. The Council of Trent frankly recognized them and abolished all grants of Indulgence which were conditional upon a pecuniary contribution towards a specified object. Other collections during the Middle Ages were associated with special objects of piety—for example, noteworthy shrines, statues, or relics. Some few specimens still remain of stone alms-boxes joined to a bracket upon which some statue formerly stood, or united to Easter sepulchres, shrines, etc. One collection, that for the Holy Places, was commonly associated with the creeping to the Cross on Good Fridays, as it still is to-day.

The strain put upon the charity of the lay-folk in the Middle Ages by the large number of mendicant orders was often severely felt. Some remedy was provided by confining the appeals of those who solicited alms to certain assigned districts. The mendicants so licensed were in England often known as "limitours". A like difficulty is not unfamiliar in our own day, and the principle has consequently been recognized that a bishop has a right to prohibit strangers from collecting alms in his diocese without authorization. Although it is not always easy to exercise adequate control over these appeals, a certain check may be put upon importunate ecclesiastics by withholding permission to say Mass in the diocese. This method of exercising pressure, to be followed by complaint to the Congregation of Propaganda in case such prohibitions are neglected, is indicated in a strongly worded decree drawn up by the Third Plenary Council of Baltimore (n. 295). Similar regulations requiring that the bishop's authorization should be obtained before strangers can be allowed to collect money for charitable purposes in the diocese also prevail in England. Restrictions are further commonly imposed, either by synodal decrees or by the command of the bishop, upon certain methods of collecting money which

may be judged according to local circumstances to be likely to give scandal or to be attended with danger to souls. The sometimes intricate and delicate questions arising from the collection of money by religious when entrusted with quasi-parochial functions have been legislated for in the Apostolic Constitution "Romanos Pontifices" of 8 May, 1881.

There is a short article s. v. *Collecten* in the *Kirchenlexikon*, but there seems to be no one source of information which brings together in moderate compass the facts discussed above. The reader may, however, be referred for various points to different treatises, of which the following are the most noteworthy: FOURNET in *Dict. de théol. cath.* (1905), s. v. *Biens ecclésiastiques*; THALPHER, *Liturgie* (Freiburg, 1893), Vol. II, Pt. I; GHR, *The Mass* (tr. Freiburg, 1902), 496-514; HADDAN, SCUDAMORE, and ARMFIELD in *Dict. Christ. Antiq.*, s. vv. *Alms*; *Oblations*; *Poor*; SCUDAMORE, *Notitia Eucharistica* (London, 1876), 346 sq.; BONDROIT, *De Capacitate Possidendi Ecclesie* (Louvain, 1900); BIEDERLACK, *De Bonis Ecclesie Temporalibus* (Innsbruck, 1892); WERNZ, *Jus Decretalium* (Rome, 1908), III, 134 sq.; LAURENTIUS, *Institutiones Juris Ecclesiastici* (Freiburg, 1908), 631-657.

HERBERT THURSTON.

Collectivism.—This term is sometimes employed as a substitute for socialism. It is of later origin, and is somewhat more precise in use and content. Socialism, while sufficiently definite in the minds of those who have a right to class themselves as socialists, is frequently employed in a loose way by others. The single-tax theory, government ownership of public utilities such as railways and telegraphs, stricter public regulation of industry, and even moderate measures of social reform, are sometimes called socialism by individuals and newspapers. Collectivism is scarcely ever used except to designate that system of industry in which the material agents of production would be owned and managed by the public, the collectivity. And it usually indicates merely the economic side of socialism, without reference to any philosophical, psychological, ethical, or historical assumptions. Socialism means primarily an ideal industrial order as just described, but it is also quite properly used to characterize the entire ideological foundation upon which International or Marxian socialists build, as well as the concrete movement that is actively striving for the realization of this ideal order. Hence economic determinism, the class struggle, and the catastrophic concentration of industry would be called socialist rather than collectivist theories. Notwithstanding these advantages of definiteness, the word *collectivism* has not been widely employed, even in France and Belgium; nor does it promise to supplant the older term in the future.

While collectivism implies the substitution of collective for private property in the means of production, it is susceptible of considerable diversity in its application throughout the realm of industry. One of the most thoroughgoing of the German socialists, Karl Kautsky, in his forecast of what might be expected to happen the day after the industrial revolution, suggests that when the State has taken possession of the capitalistic industries it could sell a portion of them to the labourers who work them, another portion to co-operative associations, another to municipalities, and still another to provincial subdivisions of the nation (in America, the several States). All industries that had already become monopolized and national in scope would, of course, be operated by the nation, and the national form of industry would probably be the predominant one ultimately. Land would be collectively owned, but not always collectively operated. According to Kautsky, the small non-capitalistic farms (embracing by far the greater part of all agricultural land) might well remain in the hands of individual farmers. While not owning the ground that he tilled, and while—in all probability—paying rent to the State in proportion to the value of the land, the small farmer would own and manage his agricultural business, the machinery, seeds, horses, etc., that he used, and the product that he produced.

Thus his position would approximate that of a farmer under the single-tax system. He would not be a wage-receiver in the employ of the industrial State. Finally there are certain non-agricultural small industries which could continue to be privately owned and managed. This is especially true of those in which hand labour predominates, and which produce for immediate consumption, for example, the work of barbers, artists, custom-tailors, and dressmakers. Since the supreme aim of collectivism is the abolition of that capitalistic regime which enables one man or one corporation arbitrarily to exploit the labour and the necessities of many men, it obviously does not—in theory at least—imply equal compensation for all individuals, nor the destruction of individual initiative, nor the establishment of a bureaucratic despotism. Hence the theoretical possibility of different rates of pay, of many and diverse industrial units, of a considerable number of small industries, and of private property in the goods that minister to immediate enjoyment. As the American socialist John Spargo puts it, "we want social ownership only of those things which cannot be controlled by private owners except as means of exploiting the labour of others and making them bondsmen" (*Capitalist and Labor*, etc., 120). As in the matter of the ownership and operation of the means of production, so with regard to the ultimate directive power, the governmental functions, collectivism does not theoretically necessitate the despotic supremacy of a highly centralized State. Indeed, the Continental socialists, who detest the military governments under which they live, favour decentralization rather than the opposite; hence so many of them lay stress upon the development of the local political unit, and the inevitable increase of provincial and municipal functions in the collectivist State. Their ideal, and the ideal of collectivists generally, is a State organized on industrial lines, in which each industry, whether local or national, and its workers will be substantially autonomous, and in which government of persons will be replaced by an administration of things.

From this outline of what may be regarded as the prevailing theory of collectivism, it appears that many of the arguments against collectivism have lost something of their former strength and pertinency. This is particularly true of those objections which assume a completely centralized management of industry, equal compensation for all workers, and the entire absence of individual initiative in production. On the other hand, the very diversity of industrial direction, the vast scope given to local and provincial autonomy, and the very small part assigned to coercive and repressive activity in the collectivist system would undoubtedly prove fatal to its efficiency and stability. To suppose that the local industrial unit, say, the municipal gas works, or the local branch of the national shoe manufacture, could be operated effectively on a basis of complete industrial democracy, requires a faith surpassing that of children. The workers would lack the incentive to hard work that comes from fear of discharge, and would be under constant temptation to assume that they were more active and more efficient than their equally paid fellows in other workshops of the same class. Hence sufficient centralization to place the control of industry outside of the local unit or branch would seem to be indispensable. This means a combination of industrial and political power that could easily put an end to freedom of action, speech, and writing. Since the form of authority would be democratic, the people could no doubt vote such a government out of power; but in the concrete the people means the majority, and a majority might continue for a long series of years to impose intolerable conditions on a minority almost equal in numbers. For collectivism there seems to be no middle ground between inefficiency and despotism. An industrial system which

would increase rather than lessen social ills is obviously contrary to the interests of morality and religion. Furthermore, any collectivist regime which should seize private land or capital without compensation is condemned by the Catholic doctrine concerning the lawfulness of private ownership and the unlawfulness of theft. Setting aside these questions of feasibility and compensation are we obliged to say, or permitted to say, that collectivism as described in this article has been formally condemned by the Catholic Church? In the Encyclical "Rerum Novarum" (On the Condition of Labour), Pope Leo XIII clearly denounced those extreme forms of socialism and communism which aim at the abolition of all or practically all private property. Perhaps the nearest approach to an official pronouncement on the subject of essential and purely economic collectivism is to be found in the same document, where the Holy Father declares that man's welfare demands private ownership of "stable possessions" and of "lucrative property". (See SOCIALISM.)

JOHN A. RYAN.

Colle di Val d'Elsa (COLLIS HETRUSCUS), DIOCESE OF (COLLENSIS), suffragan to Florence. Colle is situated in the province of Siena, Tuscany, on the top of a lofty hill which overlooks the River Elsa. It is said to have been built by the inhabitants of Gracchiano, who had suffered greatly in the frequent wars between Florence and Siena. The Gospel is supposed to have been preached there by St. Martial, a reputed disciple of St. Peter. Colle had at first a collegiate church, exempt from the ordinary jurisdiction of the neighbouring bishop, and widely known through the merits of its archpriest, St. Albert, who flourished about 1202. In 1598, Clement VIII, at the request of Grand Duke Ferdinand of Tuscany, erected the Diocese of Colle, the first bishop being Usimbardo Usimbardi. The diocese has 72 parishes, 117 churches and chapels, 115 secular and 20 regular priests, 3 religious houses of men and 3 of women.

U. BENIGNI.

College.—The word *college* (Fr. *collège*, It. *collegio*, Sp. *colegio*), from the Latin *collegium*, originally signified a community, a corporation, an organized society, a body of colleagues, or a society of persons engaged in some common pursuit. From ancient times there existed in Rome corporations called *collegia*, with various ends and objects. Thus the guilds of the artisans were known as *collegia* or *sodalicia*; in other *collegia* persons associated together for some special religious worship, or for the purpose of mutual assistance. This original meaning of the word *college* is preserved in some modern corporations, as the College of Physicians, or the College of Surgeons (London, Edinburgh). There were in Rome other, more official bodies which bore the title *collegium*, as the *Collegium tribunorum*, *Collegium aurgurum*, *Collegium pontificum*, etc. In a similar sense the word is now used in such terms as the College of Cardinals (or the Sacred College), the College of Electors, the College of Justice (in Scotland), the College of Heralds (in England).

From the fourteenth century on the word *college* meant in particular "a community or corporation of secular clergy living together on a foundation for religious service". The church supported on this endowment was called a collegiate church, because the ecclesiastical services and solemnities were performed by a college, i. e. a body or staff of clergymen, consisting of a provost, or dean, canons, etc.; later, the term "collegiate" or "college church" was usually restricted to a

church connected with a large educational institution. Some of these institutions, besides carrying out the Divine service in their church, were required to take charge of an almshouse, or a hospital, or some educational establishment. It is here that we find the word *college* introduced in connexion with education, a meaning which was to become the most prominent during succeeding centuries. It seems that in the English universities the term was first applied to the foundations of the so-called second period, typified by New College, Oxford, 1379; from these the name gradually spread to the earlier foundations (Merton, Balliol) which originally were designated by the term *aula* or *domus*; then it was taken by the foundations of the third period, the colleges of the Renaissance. As used in educational history, college may be defined, in general, as "a society of scholars formed for the purposes of study or instruction"; and in particular as "a self-governing corporation, either independent of a university, or in connexion with a university, as the College of the Sorbonne in the ancient University of Paris, and the colleges of Oxford and Cambridge". In some instances, where in a university only a single college was founded or survived, the terms "college" and "university" are co-extensive and interchangeable. This is the case in Scotland and, to a great extent, in the United States. Although in the United States many small institutions claim the ambitious title of university, it is more appropriate to apply this term to those institutions which have several distinct faculties for professional study and thus resemble the universities of Europe. They differ, however, from the continental universities in one important point, namely, in the undergraduate department which is connected with the university proper. In some places, as in Harvard, the term "college" is now in a special sense applied to the undergraduate school. This is the most common and most proper acceptation of the term: an institution of higher learning of a general, not professional, character, where after a regular course of study the degree of Bachelor of Arts, or, in recent years, some equivalent degree, e. g. Bachelor of Philosophy, or Bachelor of Science, is given. (See ARTS, BACHELOR OF, and DEGREES, ACADEMIC.) It is this meaning of college which will be treated in this article; all professional schools called colleges are excluded, such as teachers' colleges (training schools for teachers), law and medical colleges, colleges of dentistry, pharmacy, mechanical engineering, agriculture, business, mines, etc. Nor will colleges be included which are divinity schools or theological seminaries, as the numerous colleges in Rome, e. g. the Collegium Germanicum, Collegium Latino-Americanum, Collegium Græcum, or the English, Irish, Scotch, North-American Colleges, and many other similar institutions.

As the origin and evolution of the college, or of its equivalent, have not been the same in different countries, it will be necessary, in order to avoid confusion, to treat separately of the colleges peculiar to England. These deserve special attention for the further reason that the American college is an outgrowth of the English college. Even at the present day the distinguishing characteristic of the Universities of Oxford and Cambridge is the existence of the colleges. Nothing like it is to be found in any other country, and the relation between these colleges and the university is very puzzling to foreigners. The colleges are distinct corporations, which manage their own property and elect their own officers; the university has no legal power over the colleges, although it has jurisdiction over the individual members of the colleges, because they are members also of the university. Mr. Bryce has used the relation between the university and the colleges as an illustration of the relations between the Federal Government and the separate States of the American Union. But one great differ-

ence has been pointed out by Mr. Rashdall: "in place of the strict limitation of spheres established by the American Constitution, the jurisdiction of both University and College, if either chose to exercise them, is legally unlimited. Expulsion from a College would not involve expulsion from the University, unless the University chose so to enact; nor could expulsion from the University prevent a man from continuing to be a member or even a Fellow of a College. The University's monopoly of the power of granting degrees is the only connecting link which ensures their harmonious co-operation" (Universities of Europe, II, 793). The professors at Oxford are university officials; tutors and lecturers are college officials; these two bodies form two different systems. The majority of students receive the greater part of their education from the tutors and lecturers. (For further details see "The University of Oxford" in "Ir. Eccl. Rec.", Jan., 1907.)

Although at the present day the collegiate system is peculiar to the Universities of Oxford and Cambridge, it was not so formerly, nor can England claim the honour of having had the first colleges. This distinction belongs to the University of Paris, the greatest school of medieval Europe. To understand the origin of the colleges and their character, it is necessary to know the social conditions in which the medieval students lived. Large numbers of youths flocked to the famous university towns; there may have been 6000 or 7000 students at Paris, 5000 at Bologna, 2000 at Toulouse, 3000 at Prague, and between 2000 and 3000 at Oxford. Writers of the latter part of the Middle Ages have, it is true, asserted that in preceding centuries Paris had over 30,000, and Oxford from 20,000 to 30,000 students; some popular writers of our days have repeated these statements, but the foremost historians who have dealt with this subject, as Rashdall, Brodrick, Paulsen, Thorold Rogers, and many others, have proved that these fabulous numbers are gross exaggerations (Rashdall, *op. cit.*, II, 581 sqq.). Still the numbers were large, many students very young, some not more than fourteen or fifteen years old; many lived in private houses, others in halls or hostels; the discipline was lax, and excesses and riots were frequent; above all, the poorer students were badly lodged and badly fed, and were at the mercy of unscrupulous and designing men and women. Generous persons, inspired by the spirit of active charity, which was very pronounced during these centuries, sought to alleviate the lot of the poor students. The result was the foundation of the "houses of scholars", later called colleges. Originally they were nothing but endowed *hospicia*, or lodging and boarding-houses for poor students; the idea of domestic instruction was absent in the early foundations. The first Parisian colleges were homes for ecclesiastical students, "academical cloisters specially planned for the education of secular clergy". About 1180 the College of the Eighteen was founded (so called from the number of students); then Saint-Thomas de Louvre (1186), and several others in the first half of the thirteenth century. The most famous of the colleges in Paris was the Sorbonne (see *SORBONNE, COLLEGE OF THE*) founded about 1257, and intended for sixteen, later for thirty-six, students of theology. In succeeding centuries the Sorbonne came to stand for the whole theological faculty of the University of Paris. In the course of time the university set aside the original autonomy of the colleges and gained complete control over them; in this the colleges of Paris differed widely from the English colleges. Another difference lay in the fact that most English colleges admitted students for faculties other than the theological. The first English college, Balliol, founded about 1261, at Oxford, was largely an imitation of the earlier foundations of Paris, and differed from the general type of English colleges. The real beginning of the English college system was

the foundation of Walter de Merton, who afterwards became Bishop of Rochester. Merton College, established 1263 or 1264, became the archetype of the colleges of Oxford and Cambridge. The scholars were to begin the study of the arts, and then to proceed to theology, a few to the study of canon and civil law. Besides the thirteen full members of the society (the *socii*, or Fellows), a number of young boys were to be admitted (twelve at first), as "secondary scholars", who were to be instructed in "grammar" until they were enabled to begin the study of arts.

The foundation of the secular colleges was greatly stimulated by the presence of the regular colleges, i. e. the establishments of the religious orders in connexion with the universities. The religious orders early profited by the advantages offered in these educational centres, and in their turn had a considerable share in the further development of the universities, particularly the Dominicans and Franciscans. (See *UNIVERSITY*.) The Dominicans established a house of study in the University of Paris in 1218, the Franciscans 1219, the Benedictines 1229, the Augustinians in 1259. At Oxford the Dominicans opened a house 1220, the Franciscans 1224. Their example was followed by the Benedictines, who founded Gloucester Hall and Durham College. These religious houses formed each a miniature Studium in the midst of a great university. The young members of the orders lived in well-organized communities which gave freedom from cares and favoured quiet study, whereas other students were left to contend with the many hardships and temptations which surrounded them on all sides. It was natural that men who realized the advantages of such a well-regulated life should endeavour to adapt this system to the needs of students who had no intention of entering religious communities. "The secular college would never perhaps have developed into the important institution which it actually became but for the example set by the colleges of the mendicants" (Rashdall, *op. cit.*, I, 478). An erroneous view has been expressed by some writers, viz., that the foundation of the colleges was a symptom of the growing opposition to ecclesiastical control of education, and especially a sign of hostility to the religious orders. The majority of secular colleges were founded by zealous ecclesiastics, in England especially by bishops, most of whom were very friendly to the religious orders. Mr. Bass Mullinger admits that Trinity Hall, Cambridge, seems to have been founded with the intention of furthering "Ultramontane interests" (*Hist. of Un. of Cambridge*, 41). Hugh de Balsham, a Benedictine, was the founder of Peterhouse, the first college at Cambridge (1284); the third Cambridge college, Pembroke Hall, was founded in 1347 by Marie de Valence, a friend of the Franciscans; one of two rectors was to be a Friar Minor, and the foundress adjured the fellows to be kind, devoted, and grateful to all religious, "especially the Friars Minor". Gonville Hall, Cambridge, was founded in 1350 by Edmund Gonville, an equally warm friend of the Dominicans, for whom he made a foundation at Thetford. The same can be shown with regard to Oxford. To give an instance, according to the statutes of Balliol, one of the outside "procurators" was to be a Franciscan. The indirect influence of religious institutions is discernible also in the semi-monastic features of colleges, some of which have survived to our own times, as the common life and obligatory attendance at chapel. With regard to the latter point it is surprising to learn that the earlier colleges enjoined attendance at Mass only on Sundays, Holy Days, and vigils. At Oxford, the statutes of New College are, as far as is known, the first which require daily attendance at Mass; towards the end of the fifteenth century this daily attendance was enforced also on the students living in the Halls (Rashdall, *op. cit.*, II, 506, 651).

The members of a college were one another's *socii*, or "Fellows". In the beginning the terms "Scholars" and "Fellows" were interchangeable, but gradually the term "Fellows" was restricted to the senior or governing members, the term "Scholars" to the junior members. The Senior Scholars or Fellows were largely employed in looking after college business, in later times particularly in teaching the Junior Scholars. In the early foundations it was understood that the inmates should receive most of their instruction outside the walls of the college; but where younger members were admitted, it was necessary to exercise supervision over their studies, and give some instruction supplementing the public lectures. This supplementary teaching gradually became more prominent; although it is not known exactly when this important educational revolution took place, it seems to belong chiefly to the fifteenth century; finally the colleges practically monopolized instruction. The number of students living in the colleges was small at first; most statutes provided only for between twelve and thirty or forty, a few for seventy or more. Most of the students continued to live outside the colleges in licensed halls or private lodgings. The lodging-house system was checked in the fifteenth century, and later the colleges absorbed most of the student population. But from the first the colleges reacted favourably on the whole student body and exercised a most salutary influence on the manners and morals of the university towns. As Cardinal Newman has said: "Colleges tended to break the anarchical spirit, gave the example of laws, and trained up a set of students who, as being morally and intellectually superior to other members of the academical body became the depositories of academical power and influence" (Hist. Sketches, III, 221). Thus the university itself was largely benefited by the colleges; it derived from them order, strength, and stability. It is true, at a much later date, the university was sacrificed to the colleges, and the colleges themselves became inactive; contrary to the intention of the founders, who had established them for the maintenance of the poor, they were occupied by the wealthy, especially after the paying boarders, "commoners", or "pensioners", became numerous. They were at times sinecures and clubs rather than places of serious study.

William of Wykeham, Bishop of Winchester, founded the first college outside a university, namely Winchester College, in 1379, for seventy boys who were to be educated in "grammar", i. e. literature. Grammar colleges had indeed existed before, in connexion with universities and cathedrals; but Winchester was the first elaborate foundation for grammatical education, independent of either a cathedral or a university. From Winchester College the students were to enter New College, Oxford, founded by the same patron of education. The example of Winchester was imitated in the foundations of Eton (1440), and in the post-Reformation schools of Harrow, Westminster (both on older foundations), Rugby, Charterhouse, Shrewsbury, and Merchant Taylors. These institutions developed into the famous "public schools". During this period, as for a long time after there was no such hard and fast line between the higher and more elementary instruction as exists at the present day. Many grammar schools of England did partly college work. Contrary to the common opinion, as voiced by Green, Mullinger, and others, the number of grammar schools before the Reformation was very great. Mr. Leach states that "three hundred grammar schools is a moderate estimate of the number in the year 1535, when the floods of the great revolution were let loose. Most of them were swept away either under Henry or his son; or if not swept away, they were plundered and damaged" (English Schools at the Reformation, 5-6). Be it remembered that the term "grammar

school" is used in the sense common in England, denoting a higher school where the classical languages form the staple subject of instruction.

A most powerful influence on the further development of the colleges was exercised by the humanistic movement. It cannot be denied that during the twelfth and thirteenth centuries the study of the classics had been comparatively neglected, as men's minds were absorbed in scholastic studies. John of Salisbury and Roger Bacon complained bitterly about the neglect of the study of the languages. (Cf. Sandys, Hist. of Class. Scholarship, 568 sqq.) This was completely changed when the enthusiasm for the ancient classics began to spread from Italy throughout Western Christendom. The "new learning" gradually made its victorious entry into the old seats of learning, while new schools were established everywhere, until, about the year 1500, "Catholic Europe presented the aspect of a vast commonwealth of scholars" (Professor Hartfelder, in Schmid's "Geschichte der Erziehung", II, ii, 140). The schools of Vittorino da Feltre, "the first modern schoolmaster", and of Guarino da Verona, became the models for schools in other countries. English scholars had early come in contact with Italian humanists and schools; Grocyn, Linacre, William Latimer, William Lily, Dean Colet were humanists, and tried to introduce the new learning into the English schools. The influence of the Renaissance is most clearly noticed in St. Paul's School, founded by Dean Colet in 1512, and in the statutes of Corpus Christi College, Oxford, 1516, where greater stress is laid on the study of Latin and Greek than in any previous foundation. When humanism had gained the day, largely through the encouragement and influence of men like Bishop John Fisher, Thomas More, and Cardinal Wolsey, English college education had assumed the form and character which were to remain for centuries. The medieval curriculum of the trivium and quadrivium (see ARTS, THE SEVEN LIBERALS) had not been entirely abandoned; it survived in the new scheme of education, but greatly changed and modified. Henceforth the classical languages were the principal subject of instruction, to which mathematics formed the most important addition. "Letters" were the essential foundation; the rest were considered accessory, subsidiary. This humanistic type of schools lasted longer in England than in any other country.

In the medieval universities outside of France and England there existed colleges, but nowhere did they obtain the importance and the influence which they gained in Paris, and most of all in Oxford and Cambridge. The colleges in the German universities, e. g. at Prague, Vienna, Cologne, as well as the Scotch colleges, were primarily intended for the teachers, and only secondarily, if at all, for the students. For the students hostels, called *bursæ*, were established which were merely lodging-houses. The colleges of the Netherlands, especially those of Louvain, came nearer the English type. The most famous college was the Collegium Trilingue at Louvain, founded in 1517 by Busleiden, after the model of the College of the Three Languages at Alcalá, the celebrated foundation of Cardinal Ximenes for the study of Latin, Greek, and Hebrew. At present, there is, on the European continent, no exact equivalent of the English colleges, but as far as the subjects of instruction are concerned, the French *lycée* and *collège*, the German *gymnasium*, and similar institutions, in their higher classes, resemble the English colleges. Many celebrated gymnasia of Teutonic countries developed from pre-Reformation schools. In Schmid's "Geschichte der Erziehung" (V, i, 50 sqq.) there is a long list of such schools which grew out of medieval institutions, e. g. the Elbing gymnasium (Protestant), established in 1536, which developed from a Senatorial school founded in 1300; the Marienburg gymnasium, from a Latin school es-

established by the Teutonic Knights in the fourteenth century; the Berlin gymnasium (1540), formerly St. Peter's School (1276); the Mary Magdalen Gymnasium of Breslau, a Protestant school (1528), which grew out of City School (1267); the Gymnasium Ilustre of Brieg (1569), a combination of the ancient Cathedral School and the City School; the Lutheran school of Sagan (1541), originally a Franciscan school (1294). During the Renaissance and Reformation period a few institutions of this kind went by the name of *Collegium*, but more were styled *Gymnasium*, *Lyceum*, *Athenaeum*, *Pædagogium*, or *Academia*, although these names in some cases were given to schools which were rather universities. Institutions of collegiate rank were also termed *Studia Particularia*, to distinguish them from a *Studium Generale*, or university. In its character the gymnasium was a humanistic school, the classical languages being the main subject of instruction. Not only the Catholic colleges of the post-Reformation period, but also the Protestant school systems, were based on the pre-Reformation schools, particularly those of the Netherlands. The famous school of Zwickau in Saxony was organized between 1535 and 1546 by Plateanus, a native of Liège, on the model of the school of the Brethren of the Common Life in Liège. John Sturm had studied in the same school at Liège, in the Collegium Trilingue at Louvain, and in the University of Paris, and from these schools he derived most of the details of his gymnasium at Strasburg, which was one of the most typical and most celebrated of early Protestant schools. Sturm's ideas in turn largely influenced another class of German institutions, the famous Fürstenschulen of Grimma, Pforta, etc. Again, Melancthon, honoured by the title of "founder of the German gymnasium", based his system on the educational principles of Erasmus and other humanists.

Many features of college life are legacies of the past; some have already been pointed out, namely attendance at chapel and the common life in the great boarding-schools. Various forms of distinctly academic dress have grown out of college practices; no particular form of garment was prescribed by university authority in medieval institutions, but in colleges they soon began to wear a "livery" of uniform colour and material. The modern viva voce examination is the successor of the former oral disputation, the examiners now taking the place of the "opponents" of olden times. As has been shown, the support of poor and deserving scholars was the root idea of the foundation of colleges; the scholarships in English and American schools, the bursarships and *stipendia* in the schools of Germany and other countries, have sprung from, and perpetuate, the same idea. In the provision for the Senior Scholars, in the fellowships of the medieval colleges, and in the practice of endowing professorships with prebends, there was an early systematic attempt at solving the question of professors' salaries. In these and other features, modern college systems are intimately linked with the Catholic past.

MURRAY (Oxford, 1893), II.

THE AMERICAN COLLEGE.—The continuity of educational ideals, and the diversity of their application, according to national needs and characteristics, is well illustrated by the American college. As regards its origin, it is an outgrowth of the English college, in particular of Emmanuel College, Cambridge, where John Harvard had been educated. In more than one respect, especially in the fundamental idea of liberal training as the proper preparation for the higher or professional studies, it perpetuates the educational traditions which spread from Paris, and later from the humanistic schools of Italy, to Oxford and Cambridge, and thence were transplanted to the New World. However, the elements derived from Europe were modified from the very beginning and have been still more changed since the foundation of Harvard, so much so that at present there is no exact counterpart of the American college in any other country. There are at present (1908) in the United States over four hundred and seventy institutions which confer degrees and are called universities or colleges, not counting those which are for women exclusively. In some cases, as has well been said, the name "university" is but a "majestic synonym for college", and some of the colleges are only small high schools. Before the American Revolution 11 colleges were founded, chief among them Harvard (1636), William and Mary (1693), Yale (1701), Princeton (1746), University of Pennsylvania (1751), Columbia (1754), Brown (1764), Dartmouth (1770); from the Revolution to 1800, 12, one of them Catholic, at Georgetown, District of Columbia; 33 from 1800 to 1830; 180 from 1830 to 1865; and about 240 from 1865 to 1908. The older foundations in the East are independent of State control, but possess charters sanctioned by legislation. Many of the more recent foundations, especially in Western and Southern States, are supported and controlled by the State; on the other hand, denominational control has largely disappeared from the old colleges and is excluded from most new foundations. At present about one-half of the colleges are registered as non-sectarian. From the early part of the nineteenth century efforts were made to offer to women the same educational opportunities as to men. Mount Holyoke Seminary, Massachusetts (1837), and Elmira College (1855), were nearly equivalent to the colleges for men. Vassar College, Poughkeepsie, New York (1865), however, has been styled the "legitimate parent" of the colleges for women, as it established the same standard as that of colleges for men. Vassar College, Wellesley College (1876), Smith College (1875), Mount Holyoke College (1893), Bryn Mawr (1885), and the Woman's College, Baltimore (1885), are the most important women's colleges in the United States. Others are affiliated with colleges or universities for men, as Radcliffe, with Harvard. Many Western and Southern colleges are co-educational.

The American college has been the main repository of liberal education, of an advanced education of general, not technical or professional, character. The "old-fashioned" college had a four-year course of prescribed studies: Latin and Greek, the inheritance of the humanistic period, and mathematics, to which had been added in the course of time natural sciences, the elements of philosophy, and still later, English literature. Modern languages, especially French, were taught to some small extent. Since the Civil War changes have been introduced which are truly revolutionary. Some colleges have grown into universities with different faculties after the model of European, especially German, universities; these institutions have two principal departments, the university proper, for graduate, or professional work, and the collegiate department in the stricter sense of the word. But this very collegiate course has undergone a far-reaching transformation; the line of separation

between university and college proper has been largely effaced, so that the college is a composite institution, of a secondary and higher nature, giving instruction which in Europe is given partly by the secondary schools, partly by the universities. The causes of this and other changes are manifold. The nineteenth century saw the extraordinary development of the "high school", a term, which in the United States, means a secondary school with a four-year course between the elementary (public) school and the college. In 1900, there were over 6000 public and nearly 2000 private schools of this grade with over 630,000 pupils, more than one-half of these being female students. Part of the work of these schools was formerly done in the college. The result of this separation and development of the secondary schools was, first, an increase of the age of applicants for college, and, secondly, higher entrance requirements. In consequence of the increase of age, many students now pass directly from the high school to professional studies, as few professional schools require a college diploma for admission. On the other hand, in order to gain a year or two, some colleges have shortened the course from four to three years (Johns Hopkins); others have kept the four-year college course, but allow the students to devote the last year, or even the last two years partly to professional work (Harvard, Columbia).

A second cause of the modifications mentioned, and one that affected the college seriously was the excessive expansion of the college curriculum, the pressure of many new subjects for recognition, some of which pertain rather to professional schools. The advance in, and enthusiasm for, the natural sciences during the nineteenth century effected changes in the schools of all civilized countries. In many quarters there was a clamour for "practical" studies, and the old classical course was decried as useless, or merely ornamental; its very foundation, the theory of mental or formal discipline, well expressed in the term *gymnasium* for classical schools in Germany, has been vigorously assailed, but not disproved. At present the pendulum seems to swing away from the utilitarian views of Spencer and others, and the conviction gains ground that the classics, although they can no longer claim the educational monopoly, are after all a most valuable means of liberal culture and the best preparation for professional studies. To meet the difficulty arising from the multitude of new studies and the growing demand for "practical" courses, the elective system was introduced. This system, in its more extreme form, is by many regarded as detrimental to serious work; few students are able to make a wise choice; many are tempted to choose subjects, not for their intrinsic value, but because they are more easy or agreeable; they follow the paths of least resistance and avoid the harder studies of greater educational value. To avoid these evils a compromise has been invented in some colleges in the form of a modified election, the group system, which allows the choice of a certain field of studies, of groups of subjects regulated by the faculty. Some choice in certain branches has been found profitable, but it is now a very general opinion that the elective system can be employed in the college only with many limitations and safeguards, and that certain valuable literary, or "culture" studies in the best sense of the term, should be obligatory. American educators of the highest repute have come to regard early specialization as a dangerous pedagogical error, and they maintain that the elective principle has its proper place in the university. Another result of the encroachment of the university on the college is the disappearance of the old-fashioned teacher with a good general knowledge and practical skill as an educator; his place is taken by the specialist, who more resembles the university professor, who lectures rather than teaches, and comes little in contact with the individual student; the classes are broken

up, and courses take their place. This means the loss of an important educational factor, namely, the personal influence of the teacher on the pupil. The larger colleges are particularly exposed to this danger; in the smaller colleges there is more personal intercourse between the faculty and the students, generally also stricter discipline.

The American college is, at the present time, in a state of transition, in a condition of unrest and fermentation. The questions of the length of the college course, of the proper function of the college, of its relation to university work, of the elective system, of the relative value of classics and modern languages, natural and social sciences—all these are topics of general discussion and matters of vital importance, and, at the same time, questions beset with great difficulties. Hence it is not surprising to find prominent educators ranged on different sides, some advocating far-reaching changes, others, more conservative, warning against hazardous experiments. Modern conditions undoubtedly demand changes in the college; it would be most desirable if the old literary curriculum and instruction in sciences and other new subjects could be combined into a harmonious system. The present tendency of the college seems to be to undertake too much in subjects and methods, instead of remaining the culmination of secondary training, the final stage of general education.

ROBERT SCHWICKERATH.

College (IN CANON LAW), a collection (Lat. *collegium*) of persons united together for a common object so as to form one body. The members are consequently said to be incorporated, or to form a corporation. Colleges existed among the Romans and Greeks from the earliest times. The Roman laws required at least three persons for constituting a college. Legal incorporation was made, at least in some cases, by decrees of the Senate, edicts of the emperor, or by special laws. There were, however, general laws under which colleges could be formed by private persons, and if the authorities judged that the members had conformed to the letter and spirit of these laws, they had incontestable rights as *collegia legitima*; if the requisites were not adhered to they could be suppressed by administrative act. The colleges could hold property in common and could sue and be sued. In case of failure this common property could be seized, but that of the individual members was not liable to seizure. The Roman *collegium* was never instituted as a corporation sole; still, when reduced to one member, that individual succeeded to all the rights of the corporation and could employ its name (J. F. Keating, "Roman Legislation on Collegia and Sodalicie" in "The Agape", London, 1901, p. 180 sqq.). Colleges were formed among the ancient Romans for various purposes. Some of these had a religious object, as the college of the Arval Brothers, of the Augurs, etc.; others were for administrative purposes, as of quaestors, tribunes of the people; others again were trade unions or guilds, as the colleges of bakers, carpenters. The early Roman Christians are said to have sometimes held church property during times of persecution under the title of *collegium*. For the evidence of this, see H. Leclercq, *Manuel d'Archéologie Chrét.* (Paris, 1907, I, 261–66). It is not admitted by Mgr. Duchesne, *Hist. anc. de l'Eglise* (Paris 1906, I).

Canon Law.—Most of the prescriptions of the

ancient civil law were received into the church law and they are incorporated in the "Corpus Juris". By canonists, a college has been defined as a collection of several rational bodies forming one representative body. Some authors consider *university* and *community* as synonymous terms with *college*, but others insist that there are points of difference. Thus, there are canonists who define university as a collection of bodies distinct from one another, but employing the same name specially conferred upon them. Pirhing remarks that a community of priests attached to the same church do not form a college unless they are members of one body whose head is a prelate elected by that body. According to canon law three persons are required to form a college. Some authors maintained that two were sufficient for the purpose, because Pope Innocent, alluding to St. Matthew, xviii, 20, says that no presbyter is to be chosen for a church where two or three form the congregation, except by their canonical election. As *congregation* here evidently means college, these writers contend that two can therefore form a college. As a matter of fact, however, the pontiff is simply affirming that the right of election will remain with an already constituted college even though only two of its members remain after the death of the prelate. Pirhing gives as the reason why two cannot constitute a college, that though it be not necessary that the college actually have a head, yet it must be at least capable of giving itself a presiding officer, or rector of the college. If, then, there be only two members and one be constituted the head, the other can not form the body, for the body requires several members, and the head is distinct from the body. He does not mean to assert, however, that if a college be reduced to two members, it can not preserve its corporate rights. On the contrary, the canon law explicitly affirms that one surviving member can conserve the privileges of the corporate body, not for himself personally, but for the college. When a legally constituted college has been reduced to two members, one can elect the other as prelate. If the college be reduced to one member, it becomes a virtual, not an actual, corporation. The single remaining member can exercise the acts belonging to the college, and although he can not elect himself prelate, yet he can choose or nominate some other proper person to the prelacy. He may also commit the election to other persons, or even to one, as the bishop.

The ancient canonists, when stating that three constitute a college, give also the numbers requisite for other canonical bodies, thus: five are necessary to form a university, two a congregation, more than two a family, and ten a parish. Among conspicuous ecclesiastical colleges may be mentioned the Sacred College of Cardinals (see *CARDINAL*) and cathedral and collegiate chapters (see *CHAPTER* and *COLLEGIATE*). The name *college* is specially applied also to corporate educational bodies within the Church, as without it. Before the Reformation, and even in the first years of Queen Elizabeth, the colleges of Oxford and Cambridge were always spoken of as ecclesiastical corporations. By the present English law they are purely lay corporations, even though all their members be clergymen. The title "Apostolic College" is applied in Rome to those institutions which are immediately subject to and controlled by the Holy See, and are consequently exempt from any other spiritual or temporal authority; the students are declared to be under the direct protection of the pope. Such institutions are, among others, the College of the Propaganda, the German, English, Irish, and Scotch Colleges, and the North and South American Colleges. (For the Apostles of Jesus Christ as a collective authority, see *COLLEGE, APOSTOLIC*.)

WILLIAM H. W. FANNING.

College, APOSTOLIC.—This term designates the Twelve Apostles as the body of men commissioned by Christ to spread the kingdom of God over the whole world and to give it the stability of a well-ordered society: i. e. to be the founders, the foundation, and pillars of the visible Church on earth. The name "apostle" connotes their commission. For an Apostle is a missionary, sent by competent authority, to extend the Gospel to new lands: a tradition, beginning with the sending of The Twelve, has consecrated this meaning of the term to the exclusion of all others which it might derive from its etymology. When we speak of the Apostles as a "college", we imply that they worked together under one head and for one purpose. Referring the reader to the article *APOSTLES* for the Scriptural and positive treatment of the question, we may now deal with its dogmatic aspects.

It is evident, a priori, that Revelation must be transmitted and communicated by means of envoys and teachers accredited by God. The consideration of the nature of revelation and its object shows that no other theory is practically possible. In fact, Christ founded a teaching, governing, and ministering Apostolate, whose charter is contained in Matthew, xxviii, 18-20. "All power is given to Me in Heaven and in earth. Going therefore [in virtue of, and endowed with, this My sovereign power: "As the Father hath sent Me, I also send you" (John, xx, 21)], teach ye [*μαθητεύσατε*—make to yourselves disciples, teach as having power—Mark, i, 22] all nations; baptizing them in the name of the Father, and of the Son, and of the Holy Ghost. Teaching them [*διδάσκοντες*] to observe all things whatsoever I have commanded you [*ἐντέλλομαι*]: and behold I am with you all days, even to the consummation of the world." This college of rulers, teachers, and ministers of the sacraments was placed under the headship of St. Peter, the rock upon whom the foundations of the Church were established. The many texts referring to this subject (see *APOSTLES*) may be summarized as follows: After accomplishing His own mission, Jesus Christ, in virtue of His absolute power and authority, sent into the world a body of teachers and preachers presided over by one head. They were His representatives, and had for their mission to publish to the world all revealed truth until the end of time. Their mission was not exclusively personal; it was to extend to their successors. Mankind were bound to receive them as Christ Himself. That their word might be His word, and might be recognized as such, He promised them His presence and the aid of the Holy Ghost to guarantee the infallibility of their doctrine; He promised external and supernatural signs as vouchers of its authenticity; He gave their doctrine an effective sanction by holding out an eternal reward to those who should faithfully adhere to it, and by threatening with eternal punishments those who should reject it. This conception of the Apostolate is set forth in the writings of St. Paul and realized in the practice of all the Apostles (Rom., x, 8-19; Eph., iv, 7-14). It runs through the whole Catholic tradition, and is the very soul of the Church at the present day. The College of the Apostles lives forth in the episcopate, which gradually took its place and filled its functions. There are, however, between the attributes of the original Apostles and those of the succeeding hierarchy some differences arising from the circumstance that the Apostles were personally chosen and trained by Christ to lay the foundation of the Church. That circumstance creates for them an exceptional and intransmissible eminence over their successors.

(1) Although both, bishops and Apostles, are appointed by Divine authority, yet the Apostles received their commission immediately from Christ, whereas the bishops receive theirs but *mediately*, i. e. through the medium of human authority. The

power of order and jurisdiction is the same in the Apostles and in their successors, but, whereas the Apostles received it from the Divine Founder Himself, the bishops receive it through the channel of other bishops. Immediate commission implies, in the missionary, the power to produce, at first hand, credentials to prove that he is the envoy of God by doing works which God alone can work. Hence the *charisma*, or gift, of miracles granted to the Apostles, but withheld from the generality of their successors whose mission is sufficiently accredited through their connexion with the original Apostolate.

(2) Another prerogative of the Apostles is the universality of their mission. They were sent to establish the Church wherever men in need of salvation were to be found. Their field of action had no limits but those of their own convenience and choice, at least if we take them collectively; directions by the chief Apostle are not excluded, for on them may have depended the good order and the success of their work.

(3) A third Apostolic prerogative is the plenitude of power. As planters of the Church the Apostles required and possessed the power to speak with full authority in their own name, without appealing to higher authorities; also the power to found and organize local churches, to appoint and consecrate bishops and to invest them with jurisdiction. The limit to their powers in this respect was: not to undo the work already done by their colleagues. Such power, if needed, could have been exercised only by the head of the Church.

(4) A fourth privilege of the Apostles is their personal infallibility in preaching the Gospel. Their successors in the hierarchy owe what infallibility they possess to the Divine assistance watching, with unfailing care, over the *magisterium*, or teaching office, as a whole, and over its head; the Apostles received, each personally, the Holy Ghost, Who revealed to them all the truth they had to preach. This Pentecostal gift was necessary in order to establish each particular church on the solid foundation of unshakable truth.

The prerogatives of the Apostles as founders of the Church were, of course, personal; they were not to be transmitted to their successors because to these they were not necessary. What was passed on is the ordinary function of teaching, ruling, ministering, i. e. the powers of order and jurisdiction. The Apostolate was an extraordinary and only temporary form of the episcopate; it was superseded by an ordinary and permanent hierarchy as soon as its constitutional work was done. There is, however, one Apostle who has a successor of equal powers in the Roman pontiff. Above the prerogatives of his colleagues St. Peter had the unique distinction of being the principle of the Church's unity and cohesion. As the Church has to endure to the end of time, so has the unifying and preserving office of St. Peter. Without such a principle, without a head, the body of the Bride of Christ would be no better than a disjointed congeries of members, unworthy of the Divine Bridegroom. In fact the connexion of the Church with Christ and the Apostles would be loosened and weakened to the breaking-point. The history of Churches separated from Rome affords abundant proof of this statement. In the Roman pontiffs, then, the Apostolate is still living and acting. Hence from the earliest times the office of the pope has been honoured with the title of Apostolate, as continuing the functions of the Apostles; the Roman See has, in the same order of ideas, been styled the Apostolic See, and the reigning pope, in the Middle Ages, used to be addressed *Apostolatus vester* and *Apostolicus*. In the Litany of the Saints we pray: "That Thou wouldst vouchsafe to preserve our apostolic prelate [*domnum nostrum apostolicum*] and all orders of the Church in holy religion."

The difference between the Apostolate of St. Peter and that of his successors bears on two points only: (1) St. Peter was chosen and appointed directly by Our Lord; the pope receives the same Divine appointment through the channel of men; the electors designate the person on whom God bestows the office. (2) The papal infallibility also differs from that of St. Peter. The pope is only infallible when, in the full exercise of his authority, *ex cathedra*, he defines a doctrine concerning faith or morals to be held by the whole Church. His infallibility rests on the Divine assistance, on the permanent presence of Christ in the Church. The infallibility of St. Peter and the Apostles rested on their being filled and penetrated by the light of the indwelling Holy Spirit of truth. The *charisma* of working miracles, granted to the Apostles, is not continued in the popes. If it was necessary to convince the first believers that the hand of God was laying the foundations of the Church, it ceases to be so when the strength, the beauty, and the vastness of the structure proclaims to the world that none but the Father in Heaven could have erected it for the good of His children.

SCHNEEBEN, *Manual of Catholic Theology*, tr. WILHELM AND SCANNELL (London, 1906), 1, 8, 9, 11.

J. WILHELM.

Collège de France, THE, was founded in the interest of higher education by Francis I. He had planned the erection of this college as far back as 1517, but not until 1530, and then under the inspiration of Budé and Jean du Bellay, did he realize his idea. As the University of Paris taught neither Hebrew nor Greek, he established chairs of these two languages, and secured for them the best teachers obtainable, Paradisi and Guidacerio Vatable for Hebrew, and Peter Danes and Jacques Toussaint for Greek. Their salaries were paid from the king's coffers, and they were to receive students gratuitously, a ruling which caused great rivalry on the part of the professors of the University of Paris, who depended on tuition fees. The professors of the college were accused before Parliament by Noël Beda, on the plea that the Vulgate would lose its authority since Hebrew and Greek were taught publicly. G. de Marillac defended the "Royal Lectors", as they were called, and won their case. Later on they were accused of a leaning towards Calvinism, and the Parliament forbade them to read or interpret any of the Sacred Books in Hebrew or Greek; however, the protection of the king prevented the execution of the sentence.

In 1534 a chair of Latin eloquence was added to the college. The succeeding kings favoured the college. During the Revolution the courses were unmolested; the Convention even raised the salaries, by decree, from one and two thousand francs to three thousand. The Collège de France was first ruled by the Grand Aumônier de France, who appointed the professors until 1661, when it became a part of the University of Paris, from which it was afterwards separated for a time, and finally reaffiliated in 1766. In 1744 the king himself took it under his direct authority. In 1795 the minister of the interior was in charge; in 1831 the minister of public works; in 1832 the minister of public instruction, who has retained the charge to the present day. It is independent of the university, and administered by its own faculty. The college has been known by different names: in 1534 it was called the "College of the Three Languages"; under Louis XIII, the "Collège Royal"; during the Revolution, the "Collège National"; Napoleon called it the "Collège Impérial", and under the Restoration, it bore the name of "Collège Royal". Through the munificence of kings and governments the college grew steadily. In 1545 Francis added to the three chairs of lan-

guage already established another with two teachers for mathematics, one teacher for medicine, and one for philosophy. Charles IX introduced surgery; Henry III gave it a course in Arabic languages; Henry IV, botany and astronomy. Louis XIII gave it canon law and Syriac; Louis XV, French literature; Louis XVIII endowed it for the Sanskrit and Chinese literatures. In 1831 political economy was introduced, and since then the progress of the sciences has necessitated new chairs, such as those of organic chemistry, physio-psychology, etc.

Renan clearly characterized the tendencies and methods of the Collège de France. In comparing them with those of the University of Paris, he wrote: "The Sorbonne guards the deposit of acquired knowledge—it does not receive sciences before they have shown the life in them—on the contrary the Collège de France favours the sciences in the process of formation. It favours scientific research." An edict of 1572 forbade any but Catholics to teach in the Collège de France. This law was strictly obeyed as long as the college remained under Catholic authority, but in recent times it has had among its professors such enemies of Catholicism as Michelet, Renan, and Havet. On the whole, however, the faculty of the Collège de France has counted in its ranks brilliant men irrespective of creed, such as Aubert, Lalande, Daubenton, Delille, Cuvier, Vauquelin, Ampère, Biot, Rollin, Sylvestre de Sacy, Abel Rémusat, Boissonade, Daunou, Burnouf, Tissot, etc. In 1907 there were fifty-nine professors and instructors.

J. B. DELAUNAY.

College of Cardinals. See CARDINAL.

Collegiate (Lat. *collegiatus*, from *collegium*), an adjective applied to those churches and institutions whose members form a college (see COLLEGE). The origin of cathedral and collegiate chapters, springing from the common life of clerics attached to cathedrals and other important churches, has been treated in the article CHAPTER, where special attention is given to what regards cathedral capitulars (see CHAPTER). Collegiate churches were formed on the model of cathedral churches, and the collegiate canons have rights and duties similar to the capitulars of a cathedral, except that they have no voice in the government of the diocese, even when the see is vacant. Their main object is the solemn celebration of the Divine Office in choir. Already in the time of Charlemagne many wealthy collegiate churches had been founded throughout his empire, especially in Germany and France, of which that at Aachen was the most celebrated. In England there was also a large number of these institutions, and at the Reformation, when they were dissolved, the revenues of some of them were used for founding public schools. The founding of a collegiate church gives the founder no right to nominate its members unless he have received a special papal indult to that effect.

For the erection of collegiate institutions, the authority of the Holy See is necessary. The pope refers the matter to the consideration of the Congregation of the Council, which makes a favourable report if certain conditions are found fulfilled, such as: the dignity of the city, the large number of clergy and people, the size and beauty of the church structure, the splendour of its belongings, and the sufficiency of the income. Although the bishop cannot erect a collegiate church, yet, if the college, owing to the death of canons or other similar cause, should cease as an active corporation but still retain, *de jure*, its status as a college, the

bishop can restore it, for this would not be a canonical erection. As the ordinary cannot erect a collegiate church, so neither can he reduce it to a merely parochial status, and still less has he the power to suppress one. Only the pope can formally dissolve a collegiate foundation. A church loses its collegiate dignity by the will of the members, or the act of the supreme ecclesiastical authority, or the death of all the canons. When the right of an institution which claims the collegiate dignity is disputed, the question is to be decided by certain signs which create a presumption in its favour. These are, among others, an immemorial reputation as a collegiate institution, a common seal proper to a college, caputal meetings of the members under the presidency of a dean, the making of contracts in the name of the college, the right of electing a prelate, the cure of souls dependent on the chapter.

Although collegiate churches are ordinarily under the jurisdiction of the bishop, yet its members are not obliged to render any service to the ordinary outside of their own churches, except in case of necessity or through contrary custom. Neither can the cathedral chapter interfere with the chapter of a collegiate church when the latter remains within its own right and privileges. Collegiate churches are distinguished into *insignes* (famous) and *non insignes*. There are, however, no rules given in canon law to discern one from the other. Canonists declare that a church is *insignis* if it be the mother church of the locality, have right of precedence in solemn functions, be of ancient foundation, and conspicuous by its structure and the number of its dignitaries and members, and likewise be situated in a famous or well-populated city. The canons of a church which is *insignis* have precedence over the canons of other collegiate institutions at synods and in public processions. When a parochial church is elevated to collegiate rank, the right to the cure of souls does not necessarily pass to the chapter, but may remain with the parish priest. When the chapter has the right of presentation and its votes are equally divided, the bishop may decide as to which part of the canons has presented a candidate of superior merit to the other. If, however, the merits of the candidates be equal, the decision must be referred to the pope, if the chapter cannot agree after taking two ballots. The chapters of collegiate churches, by common law, have the right of electing or presenting candidates for the dignities and canonries of their chapter. The rights of confirmation and installation belong to the bishop. Many innovations on these rights have been made by special decrees or customs, and, according to the prevailing discipline, account must be taken of the so-called pontifical reservations, or the rights which the pope has reserved to himself, especially as regards the highest dignity of the chapter, and also of the legitimate privileges possessed by patrons in Spain, Austria, Bavaria, etc. of nominating and presenting candidates. These privileges are still in force in many instances.

WILLIAM H. W. FANNING.

Collins, RICHARD. See HEXHAM AND NEW CASTLE, DIOCESE OF.

Colman, name of several Irish saints:—(1) COLMAN, Bishop and patron of Kilmacduagh, b. at Kiltartan c. 560; d. 29 October, 632. He lived for many years as a hermit in Arranmore, where he built two churches, both forming the present group of ruins at Kilmurvy. Thence he sought greater seclusion in the woods of Burren, in 592, and at length, in 610, founded a monastery, which became the centre of the tribal Diocese of Aidhne, practically coextensive with the present See of Kilmacduagh. Although the "Martyrology of Donegal" assigns his feast to 2 February, yet the weight of evidence and

the tradition of the diocese point to 29 October, on which day his festival has been kept from time immemorial, and which was fixed by a rescript of Pope Benedict XIV, in 1747, as a major double.

Martyrology of Donegal, ed. TODD and REEVES (Dublin, 1864); *Customs of Hy-Fiachrach*, ed. O'DONOVAN; LANIGAN, *Ecclesiastical History of Ireland* (Dublin, 1829); II; COLGAN, *Acta Sancti. Hib.* (Louvain, 1645); PETRIE, *Round Towers* (Dublin, 1845); FAHEY, *Hist. and Ant. of Kilmacduagh* (1893).

(2) COLMAN, of Templeshambo, was also a Con-nacht saint, and has been confounded with the patron of Kilmacduagh, but he lived somewhat earlier, and the sphere of his ministry lay in the present County Wexford. He was a contemporary of Saint Aidan, who appointed him Abbot of Templeshambo, the mother church of Enniscorthy. Many legends are told of Saint Colman and of his holy well with its sacred ducks, but certain it is that he laboured zealously at the foot of Mount Leinster, his monastery being known as Temple Sean Bothe. He died c. 595 on 27 October, on which day his feast is recorded in the "Martyrology of Donegal".

(3) COLMAN MAC LENINE, founder and patron of the See of Cloyne, b. in Munster, c. 510; d. 24 November, 601. He was endowed with extraordinary poetic powers, being styled by his contemporaries "Royal Bard of Munster". The Ardrigh of Ireland gave him Cloyne, in the present County Cork, for his cathedral abbey, in 560, and he laboured for more than forty years in his extensive diocese. Several of his Irish poems are still extant, notably a metrical panegyric on St. Brendan. Colgan mentions a metrical life of St. Senan by him. His feast is observed on 24 November. Another St. Colman is also venerated on the same day, as recorded by St. Aengus in his "Felire":—

Mac Lenine the most excellent

With Colman of Duth-chuilleann.

(4) COLMAN, founder of the Abbey and Diocese of Mayo, b. in Connacht, c. 605; d. 8 August, 676. He became a monk of Iona, and so famous were his virtues and learning, as testified by St. Bede, that on the death of St. Finan, in 661, he was appointed Bishop of Lindisfarne. During his brief episcopacy, the Synod of Whitby was held, in 664, as a result of which (St. Colman being a determined protagonist of the old Irish computation), owing to the decision of King Oswy on the Paschal controversy, he resigned his see. Between the years 665 and 667 St. Colman founded several churches in Scotland, and, at length, accompanied by thirty disciples, sailed for Ireland, settling down at Innisboffin, County Mayo, in 668. Less than three years later he erected an abbey, exclusively for the English monks in Mayo, subsequently known as "Mayo of the Saxons". His last days were spent on the island of Innisboffin. His feast is celebrated 8 August.

(5) COLMAN, b. in Dalaradia, c. 450; date of death uncertain. His feast is celebrated 7 June. He founded the See of Dromore, of which he is patron and over which he presided as bishop. He studied at Noendrum (Mahee Island), under St. Mochae or Coelan, one of the earliest disciples of St. Patrick. Many interesting stories are told of his edifying life at Noendrum and the miracles he worked there. To perfect his knowledge of the Scriptures St. Colman

went to the great school of Emly, c. 470 or 475, and remained there some years. At length he returned to Mahee Island to see his old master, St. Mochae, and remained under his guidance for a long period, acting as assistant in the school. Among his many pupils at Mahee Island, in the first quarter of the sixth century, was St. Finian of Moville.

(6) COLMAN ELO and COLMAN MACCATHREAD are also famed in Irish hagiology. The former was founder and first Abbot of Muckamore, and from the fact of being styled "Coarb of MacNisse", is regarded as Bishop of Connor. He was born c. 555 in Glenelly, in the present County Tyrone, and d. at Lynamly in 611, 26 September, on which day his feast is celebrated. He studied under his maternal uncle, St. Columcille, who procured for him the site of a monastery now known as Lynamly (Lann Elo). Hence his designation of Colmanellus or Colman Elo. Subsequently he founded the Abbey of Muckamore, and was appointed Bishop of Connor. He is also known as St. Colman Macusailni. The latter saint, distinguished as MacCathbad, whence Kilmackevatt, County Antrim, was Bishop of Kilroot, a minor see afterwards incorporated in the Diocese of Connor. He was a contemporary of St. Ailbe, and his feast has been kept from time immemorial on 16 October.

(7) ST. COLMAN, one of the patrons of Austria, was also an Irish saint, who, journeying to Jerusalem, was martyred near Vienna, in 1012, 13 October, on which day his feast is observed. His life, written by Erchenfrid of Melk, is in "Acta SS.", VI, 357 and "Mon. Germ. Hist.: Script.", IV, 647.

W. H. GRATTAN-FLOOD.

Colman, WALTER, Friar Minor and English martyr; date of b. uncertain; d. in London, 1645. He came of noble and wealthy parents and when quite young left England to study at the English College at Douai. In 1625 he entered the Franciscan Order at Douai, receiving in religion the name of Christopher of St. Clare, by which he is more generally known. Having completed his year of novitiate, he returned to England at the call of the provincial, Father John Jennings, but was immediately imprisoned because he refused to take the Oath of Allegiance. Released through the efforts of his friends, he went to London, where he was employed in the duties of the sacred ministry and where, during his leisure moments, he composed "The Duel of Death" (London, 1632 or 1633), an elegant metrical treatise on death, which he dedicated to Queen Henrietta Maria, consort of Charles I. When the persecution broke out anew in 1641, Colman returned to England from Douai, whither he had gone to regain his health. On 8 Dec. of the same year he was brought to trial, together with six other priests, two of whom were Benedictines and four members of the secular clergy. They were all condemned to be hanged, drawn, and quartered on 13 Dec., but through the interposition of the French ambassador the execution was stayed indefinitely. Colman lingered on in Newgate for several years until he died, exhausted by starvation and the hardships of the dungeon where he was confined.

STEPHEN M. DONOVAN.

Colmar, JOSEPH LUDWIG, Bishop of Mainz; b. at Strasburg, 22 June, 1760; d. at Mainz, 15 Dec.,

1818. After his ordination (20 Dec., 1783) he was professor of history and Greek at the Royal Seminary, and curate at St. Stephen's, Strasburg. During the reign of terror, brought about at Strasburg by the apostate monk, Eulogius Schneider, he secretly remained in the city, and under various disguises administered the sacraments. After the fall of Robespierre he went about preaching and instructing, and worked so successfully for the restoration of religion in the city of Strasburg that Napoleon appointed him Bishop of Mainz; he was consecrated at Paris, 24 August, 1802. The metropolitan see of St. Boniface had been vacant for ten years; the cathedral had been profaned and partially destroyed in 1793; a new diocese had been formed under the old title of Mainz, but subject to the Archbishop of Mechlin; revolution, war, and secularization of convents, monasteries, and the property of the former archdiocese had ruined his new diocese spiritually and financially. Colmar worked like a true apostle; he rebuilt and reconsecrated the profaned cathedral, and by his influence saved the cathedral of Speyer which was about to be destroyed by order of the Government. After many difficulties he opened a seminary (1804), which he placed under the direction of the Venerable Libermann; he visited every parish and school, and reorganized the liturgical services, confraternities, devotions, and processions, which the Revolution had swept away. His principal aim was to organize a system of catechetical instruction, to inspire his priests with apostolic zeal, and to guard them against the false enlightenment of that age. He was an active adversary of Wessenberg and the rationalistic liberal tendencies represented by him and the Illuminati. He tried to reintroduce several religious communities in his diocese, but accomplished, however, only the restoration of the Institute of Mary Ward (*Dames Anglaises*). Shortly before his death he established the Sisters of Divine Providence in the Bavarian part of his diocese (the former Diocese of Speyer). During the epidemic of 1813 and 1814, after the battle of Leipzig, he personally served the sick and dying. Colmar edited a collection of old German church hymns (1807) and several excellent prayer books. His sermons were published in seven volumes (Mainz, 1836; Ratisbon, 1879).

FREDERICK G. HOLWECK.

Cologne (Ger. KÖLN or CÖLN), German city and archbishopric.

THE CITY.—Cologne, in size the third city of Prussia, and the capital of the district (*Regierungsbezirk*) of Cologne, is situated in the lowlands of the lower Rhine on both sides of the river. Its area is 45 square miles; its population (1 December, 1905), 428,722, of whom 339,790 are Catholics, 76,718 Protestants, 11,035 of other sects.

The history of Cologne goes back to the first century before Christ. After Marcus Agrippa transplanted the Ubii from the right to the left bank of the Rhine (38 B. C.), Ara Ubiorum, the centre of the civil and religious life of this tribe, occupied the site of the modern Cologne. In A. D. 50 Agrippina, the daughter of Germanicus, founded here a colony of veterans called Colonia Agrippina; the inhabitants of the two settlements mingled freely with each other, while the Germans gradually assumed Roman customs. After the revolt of the Batavians, Cologne was made the capital of a Roman province and was repeatedly the residence of the imperial court. At an early date Christianity came to Cologne with the Roman soldiers and traders; according to Irenæus of Lyons, it was a bishop's see as early as the second century. However, Saint Maternus, a contemporary of Constantine, is the first historically certain Bishop of Cologne. As a result of its favourable situation, the city survived the stormy per-

iod of the migrations of the Teutonic tribes. When the Riparian Franks took possession of the country in the fifth century, it became the residence of their king. On account of the services of the Bishops of Cologne to the Merovingian kings, the city was to have been the metropolitan see of Saint Boniface, but Mainz was chosen, for unknown reasons, and Cologne did not become an archbishopric until the time of Charlemagne. The city suffered heavily from invasions of the Northmen, especially in the autumn of 881, but recovered quickly from these calamities, especially during the reign of the Saxon emperors and of such vigorous archbishops as Bruno, Heribert, Pilgrim, and others.

In the course of the twelfth and thirteenth centuries Cologne attained great prosperity. The basis of this prosperity was the commercial activity of the city, which placed it in relation not only with Northern Europe, but also with Hungary, Venice, and Genoa. The local crafts also flourished; the spinners, weavers, and dyers, the woollen-drappers, goldsmiths, sword-cutlers, and armour-makers of Cologne were especially celebrated. The ecclesiastical importance of the city was equally great; no city north of the Alps was so rich in great churches, sanctuaries, relics, and religious communities. It was known as the "German Rome", and was annually visited by pilgrims, especially after Rainald of Dassel, Archbishop of Cologne (1159-67), brought thither the remains of the Three Magi from Milan. Learning was zealously cultivated in the cathedral school, in the collegiate chapters, and the cloisters; famous philosophers taught here, among them Rupert of Deutz, Cæsius of Heisterbach, Duns Scotus, and Blessed Albertus Magnus. The arts also flourished, on account of the numerous churches and civil buildings. With the growth of the municipal prosperity, the pride of the citizens and their desire for independence also increased, and caused them to feel more dissatisfied with the sovereignty of the archbishop. This resulted in bitter feuds between the archbishops and the city, which lasted for two centuries with varying fortunes. The first uprising occurred under Anno II, at Easter of the year 1074; the citizens rose against the archbishop, but were defeated within three days, and severely punished. They received important concessions from Archbishop Henry I of Molenark (1225-38) and his successor, the powerful Conrad of Hostaden (1238-1261), who laid the corner-stone of the cathedral. The bloody battle of Worringen in 1288, in which the citizens of Cologne allied with Brabant took prisoner Archbishop Siegfried of Westerburg (1274-97), resulted in an almost complete freedom for the city; to regain his liberty, the archbishop recognized the political independence of Cologne, but reserved certain rights, notably the administration of justice.

A long period of peace with the outside world followed. Cologne joined the Hanseatic League in the thirteenth century, and became an imperial free city in the fourteenth. On the other hand internal dissensions frequently disturbed the city. After the close of the twelfth century the government of the city was in the hands of patrician families, who filled all the offices in the city government with members of their own order. In time the craft organizations (guilds) increased in strength and demanded a share in the government. As early as 1370, in the uprising of the weavers, they gained the upper hand for a short time, but it was not until 1396 that the rule of the patricians was finally abolished. On 14 September of that year the new democratic constitution was adopted, in accordance with which only representatives of the guilds sat in the city council. The last act of the patricians was the foundation of the university (1388), which rapidly began to prosper. By their firmness and wisdom the new rulers maintained themselves against the patricians, against Archbishop Dietrich of Mörs (1419), and against Charles

the Bold, who, in alliance with Archbishop Ruprecht, sought to bring the city again under archiepiscopal rule. It also suppressed domestic uprisings (for instance in 1481 and 1512). Throughout this period the city retained its place as the first city of the German Empire, in which learning, the fine arts, and the art of printing were vigorously cultivated.

In the religious upheavals of the sixteenth century, Cologne remained true to Catholic doctrine, thanks chiefly to the activity of the university, where such men as Cochlaeus, Ortwin Gratianus, Jacob of Hoogstraeten, and others taught. Under their influence, the city council held fast to Catholic tradition and energetically opposed the new doctrines, which found many adherents among the people and the clergy. Cologne remained a stronghold of the old beliefs, and gave active support to the Counter-Reformation (q. v.), which found earnest champions in Johannes Gropius, the Jesuits, Saint Peter Canisius, and others. The seventeenth and eighteenth centuries were a time of decadence for the city; its importance diminished especially after the Thirty Years War (1618-48) in which it was loyal to the emperor and the empire, and was never captured. The university eventually lost its prestige, because through over-caution it opposed the most justifiable reforms; trade was diverted to other channels; only its ecclesiastical glory remained to the city, which was governed by a narrow-minded class of tradesmen and often suffered from the dissensions between council and citizens (in 1679-86 and the bloody troubles caused by Nicholas Gülich). The outbreak of the French Revolution found it a community with but slight power of resistance. The French entered Cologne, 26 October, 1794, and the citizens were soon severely oppressed by requisitions, forced loans, and contributions. On 27 September, 1797, the old city constitution was finally annulled, the French administrative organization established, and the city made a part of the French department of the Roer of which Aix-la-Chapelle (Aachen) was the capital. The university was discontinued in 1798; it had dragged out a miserable existence owing to the establishment of the University of Bonn and the confused policy of the last archbishops. After the downfall of French domination in Germany, Cologne was apportioned by the Congress of Vienna to the Kingdom of Prussia. It was made neither the seat of the government of the Rhenish Province, nor the seat of the university, but it was restored to its rank of metropolitan see, and in the nineteenth century, under Prussian rule, became the third largest city of Prussia and attained unusual prosperity, economic, intellectual, and ecclesiastical.

Only brief ecclesiastical statistics can be given here. In 1907, besides the archbishop and assistant bishop, there were in Cologne 214 priests, of whom 24 were members of the cathedral chapter and 38 were parish priests, and 128 others engaged in pastoral occupations. There are 12 Dominicans and 9 Franciscans. The two deaneries of the city embrace 39 parish, and 3 military, churches; in addition to the 39 parish churches, there are 22 lesser churches and 26 chapels. Religious societies are numerous and powerful; among more than 400 religious societies and brotherhoods we may mention: Societies of Saint Vincent, Saint Elizabeth, and Saint Charles Borromeo, Marian congregations for young men and for young women, rosary confraternities, Associations of the Holy Childhood, Holy Family, of Christian Mothers, etc. Among the trades organizations the most powerful are the four Catholic Gesellenvereine, with 4 hospices and 18 Catholic workmens' unions. The male religious orders and congregations are represented by Dominicans, Franciscans, Alexian Brothers, Brothers of Charity, and Brothers of Saint Francis; the female orders and congregations by Sisters of Saint Benedict, the Borromean Sisterhood, the Cellites, Sisters of Saint Dominic, Sisters of Saint Francis, Sisters of

the Good Shepherd, Sisters of the Holy Child Jesus, the Ursuline Sisters, and Sisters of Saint Vincent; a total of 43 religious houses with about 1140 inmates. The Alexian Brothers, the Brothers of Charity, and the Brothers of Saint Francis, as well as almost all the female religious orders, conduct numerous charitable and educational institutions.

Among the churches of Cologne, the foremost is the cathedral, the greatest monument of Gothic architecture in Germany. Its corner-stone was laid by Archbishop Conrad of Hostaden, 14 August, 1248; the sanctuary was dedicated in 1322; the nave made ready for religious services in 1388; the southern tower was built to a height of about 180 feet in 1447; then the work of building was interrupted for almost four hundred years. During the French Revolution the cathedral was degraded to a hay barn. In the nineteenth century the work of building was resumed, thanks above all to the efforts of Sulpice Boisseree, who excited the enthusiasm of the Crown Prince, afterwards King Frederick William IV, for the completion of the work. The restoration was begun in 1823; in 1842 the Cathedral Building Society was founded, and generous contributions from all parts of Germany resulted. The interior was finished 15 October, 1863, and opened for Divine service; and 15 October, 1880, the completion of the entire cathedral was appropriately celebrated in the presence of the German emperor. The whole edifice covers an area of about 7370 square yards; it has a nave 445 feet long, five aisles, and a transept 282 feet wide with three aisles; the height of the nave is about 202 feet, that of the two towers, 515 feet. Among the numerous works of art, the most famous are the picture (*Dombild*) painted by Stephen Lochner about 1450, the triptych over the high altar, the 96 choir seats of the sanctuary, and the shrine in which are kept the relics of the Three Kings in the treasury of the sacristy. The last is considered the most remarkable medieval example of the goldsmith's art extant. Among the other churches of the city, the most noteworthy of those dating from the Romanesque period are Saint Gereon, Saint Ursula, Saint Mary in the Capitol, Saint Pantaleon, and the church of the Apostles; from the Transition and the Gothic periods, Saint Cunibert, Saint Mary in Lyskirchen, and the church of the Minorites; from more recent times, the Jesuit church, Saint Mary Pantaleon, and Saint Mauritius. The city contains about 25 charitable institutions under Catholic management.

THE ARCHBISHOPRIC.—According to ancient legend a disciple of Saint Peter was the first Bishop of Cologne, but the first historically authenticated bishop was Saint Maternus, who was present in 314 at the Synod of Arles. Among the earliest bishops the most prominent are: Euphrates, who took part in the Council of Sardica (344) and in 346 was deposed as a heretic by a general synod of Gaul; Saint Severinus (347-400), Saint Cunibert (623-637), councillor of the Frankish kings Dagobert and Sigibert; Anno I (711-15), who brought the remains of Saint Lambert from Maastricht to Liège; Saint Agilulfus (747-51); Hildebold (785-819), chancellor under Charlemagne and, in 799, first metropolitan of Cologne, whose suffragan sees were, Liège, Utrecht, Münster, Bremen, Osnabrück, and, after 829, Minden. During the vacancy of the archiepiscopal office (842-50) Bremen was cut off from the Archdiocese of Cologne, in spite of the protests of Gunthar (850-71). Willibert (870-89) assisted Ludwig the German to overcome Charles the Bald, by which action the archbishopric became finally a part of the German Empire. Under Hermann I (890-924) Bremen was definitively separated from Cologne. In 954 Bruno I (953-65) was made Duke of Lorraine by his brother, the Emperor Otto the Great; in this way the foundation was laid for the temporal power of the archbishopric of Cologne. For though Bruno's successors did

not inherit the ducal rank, they retained a considerable territory (the *Kölngau*, or district of Cologne), in time increased by the family possessions and acquisitions of many archbishops. Saint Heribert (999-1021) was very active in promoting the welfare of his diocese, was made chancellor for Italy by Otto III, and aided Henry II at the time of his expedition to Rome in 1004. Pilgrim (1021-36), who accompanied Henry II and Conrad II on their expeditions to Italy, obtained for himself and for his successors the office of imperial chancellor for Italy. Hermann II (1036-56) was followed by Saint Anno II, who did much for the authority and honour of the See of Cologne; at the same time he was the first archbishop to come into open conflict with the city, now rapidly growing in numbers and wealth.

As princes of the German Empire, the archbishops were very frequently involved in dissensions between popes and emperors, often to the injury of their Church, since they were frequently in opposition to the pope. Frederick I (1100-31) was the last Archbishop of Cologne to be invested with the episcopal ring and crosier; in 1111, during the three-days' fight in the streets of Rome, he saved the Emperor Henry V from defeat, after his imprisonment of Pope Paschal II, but in 1114 abandoned the imperial party. His successor, Bruno II (1132-37), was again imperial chancellor for Italy, which office, after the incumbency of Arnold II of Wied (1151-56), was permanently attached to the Archbishopric of Cologne. Rainald of Dassel (1159-67), the chancellor of Frederick Barbarossa, and Philip I of Heinsberg (1167-91) increased the prestige of the see; the latter prelate, after the fall of Henry the Lion, obtained as a fief for himself and his successors the western part of the Duchy of Saxony, under the title of Duke of Westphalia and Engern. One of the most energetic archbishops in the following years was Saint Engelbert (q. v.). In his short reign (1216-21) he furthered the moral and religious life by several synods, and by the favour he showed the new orders of Franciscans and Dominicans; he also restored order within the limits of his see, and successfully opposed the continued efforts for civic independence. The long political conflict between the archbishops and the city, during which Conrad of Hostaden (1238-61) and Engelbert II of Falkenberg (1261-74) made many concessions, was finally, as above stated, settled in favour of the city, under Siegfried of Westerburg (1274-97). The reconciliation of the archbishops with the city effected by Wikbold of Holte (1297-1304) brought with it increasing influence in the affairs of the German Empire. To the injury of his see, Henry II of Virneburg (1304-32) allied himself with Frederick the Handsome, while Walram of Jülich (1332-49) obtained many privileges from the Emperor Charles IV, whom he had raised to the imperial dignity against Louis of Bavaria. In his time the Black Death spread over Germany and entailed great misery. In 1356, under William of Gennepe (1349-62), the dignity of imperial elector, recognized since about the middle of the thirteenth century as belonging to the archiepiscopal office, was formally acknowledged by the Golden Bull. Kuno of Falkenstein (1366-71), also Archbishop of Trier, added (1370) to the temporalities of the see the County of Arnsberg. After his resignation he was succeeded by Frederick III of Saarwerden (1370-1414), who adhered to Urban VI on the occasion of the Western Schism; after Urban's death he followed a vacillating policy. His successor, Dietrich II of Mörs (1414-63), sought to make Cologne the strongest territorial power in Western Germany, but he was unfortunate in his political enterprises, and brought a heavy burden of debt on his see. Under him the city of Soest was lost to Cologne. After his death, and before the appointment of a new archbishop, the cathedral chapter, the nobility (*Ritterschaft*), and the cities of the archiepiscopal state

(*Erzstift*) concluded an agreement (*Erblandsvereinigung*) with regard to the archbishop's hereditary lands, whereby the prelate's rights as temporal lord were considerably limited in the archiepiscopal State, whose territory, it must be remembered, did not coincide with the ecclesiastical limits of the archdiocese. This agreement was henceforth sworn to by each archbishop at his election. Ruprecht von der Pfalz (1463-80) squandered the revenues of the see, sought by force to gain control of the cities and castles previously mortgaged, and thereby entered into conflicts with the holders of the mortgages. Violence, arson, and devastation visited the diocese in consequence. In 1478 Ruprecht was captured and remained a prisoner until his death. His successor, Hermann IV of Hesse, devoted his energy to the restoration of order, paid a part of the public debt, and, by the diocesan synod of 1483, whose decrees he vigorously enforced, furthered the intellectual and moral elevation of clergy and people. Philip II of Daun (1508-15) walked in the footsteps of his predecessor.

The government of Hermann V of Wied (1515-47) brought trouble and disaster on his see. At the Diet of Worms he at first opposed the religious doctrines of Luther. He urged the banning of the Reformer and held a provincial synod in 1536; gradually, however, he turned away from the Catholic Faith, chose adherents of Luther for his counsellors, and allowed the new doctrines to be preached in his diocese. When he openly favoured the spread of Protestantism, he was suspended in 1546, and forced to resign (1547). By the advice of excellent men, such as Gropper, Billick, and others, Adolph III of Schauenburg (1546-56) took strong measures against the preachers brought in by Hermann, and published vigorous decrees against immoral priests. His brother Anton (1556-58) followed a similar course. Under Johann Gebhard of Mansfeld (1558-62) Utrecht (q. v.) ceased to be a suffragan of Cologne, and the Deanery of Zylflich was incorporated with the newly founded See of Roermond. After the brief reign of Frederick IV of Wied (1562-67) and that of the vigorous Salentin of Isenburg (1567-77), who resigned because he did not wish to take priest's orders, Gebhard II Truchsess of Waldburg (q. v.), succeeded to the office. He followed the evil course of Hermann of Wied. At first loyal to the Church, he became a Calvinist in 1582, owing to his passion for Agnes von Mansfeld, and sought to Protestantize the see in 1583; he was put under the ban of the empire and deposed, and Duke Ernest of Bavaria chosen as his successor. With Protestant aid Gebhard sought to keep possession of his diocese. But the War of Cologne (*Kölnischer Krieg*), which lasted five years, and brought untold misery on the land, ended in victory for the Catholic party. These attempts of Hermann of Wied and Gebhard to alienate the archdiocese from the Catholic Faith led to the establishment of a permanent papal nunciature in Cologne which existed from 1584 to the extinction of the archiepiscopal State at the end of the eighteenth century (see NUNCIO; SECULARIZATION).

Ernest of Bavaria (1583-1612) was the first of the five princes of the house of Wittelsbach who held the Electorate of Cologne until 1761. Ferdinand of Bavaria (1612-50), Maximilian Henry (1650-88), Joseph Clemens (1688-1723), and Clemens Augustus I (1727-61) succeeded him. Following the tradition of their princely house, these five archbishops were intensely loyal to the Church, and upheld Catholicism in the archdiocese, which, however, had lost 122 parishes in consequence of the Reformation. However, in consequence of the repeated union of several bishoprics in the hands of these Bavarian prelates, the political administration of the territory was held to be of primary, its religious government of secondary, importance. Moreover, the foreign policy of these five Bavarian

THE CATHEDRAL, COLOGNE

archbishops was not always fortunate. By their alliance with France, especially during the Spanish and Austrian Wars of Succession, they furthered the political dissolution of the old German Empire (begun in the Thirty Years War) and encouraged the anti-Hapsburg policy of France which aimed at the final overthrow of the German imperial power. Similarly, their friendly relations to France favoured the introduction of rationalism into Cologne. This spirit of opposition to the Church and to the authority of the popes had a still stronger hold upon Archbishop Maximilian Frederick of Königseck (1761-84). In 1771 he founded an academy at Bonn in opposition to the loyal Catholic University of Cologne, and in 1781 issued in favour of the new academy an order according to which attendance at the University of Cologne was punished by inability to hold any office, either ecclesiastical or civil, in the diocese. The last Elector of Cologne, Maximilian Francis of Austria (1785-1801), took part in the anti-papal Congress of Ems (q. v.), nominated Eulogius Schneider as professor in the Academy of Bonn, which he raised to the rank of a University in 1786, and instituted reforms similar to those enacted by his brother, the Emperor Joseph II, in Austria. As brother of Marie Antoinette, he was at first opposed to the French Revolution, but soon adopted a policy of inactivity which ultimately resulted in the loss of independence both by the city and the electorate. At the approach of the victorious French army the elector left his residence at Bonn, never to see it again. The French entered Cologne, 26 October, 1794, and Bonn, 8 November. The conquered territory between the Meuse, the Rhine, and the Moselle was divided into four departments governed by a civil commissioner at Mainz, and incorporated with France by the Peace of Lunéville in 1801. In 1796 all the ecclesiastical property in the part of the archdiocese held by the French was seized by the civil authority; in 1802 all religious orders and congregations were suppressed and their property confiscated. By the Concordat of 1801 between the Apostolic See and Napoleon I, nearly all of the former archdiocese on the left bank of the Rhine was given to the newly founded See of Aachen (q. v.). The old ecclesiastical organization remained undisturbed in the archdiocesan territory on the right bank of the Rhine. After the death of Maximilian Francis (1801), the cathedral chapter, which had taken refuge in Arnsberg, chose the Austrian Archduke Anthony as his successor, but he never occupied his see, owing to Prussian opposition. In 1803 the remainder of the electorate was secularized, an inglorious end for the ancient Archbishopric of Cologne. The loss to the Catholic Church in Germany was great. The archbishopric, i. e. the territory in which the archbishop was also temporal ruler, included in its Rhenish territory alone (without Westphalia) 60 square miles and about 199,000 inhabitants (in 1797), of whom 180,000 were on the left bank of the Rhine.

In 1750 the archdiocese contained 860 parishes with as many parish churches, 300 benefices, 400 chapels, 42 collegiate chapters, 21 abbeys (10 Benedictine, 4 Premonstratensian, 7 Cistercian), 5 Benedictine provostships, 18 Minorite and 24 Franciscan monasteries, 2 Franciscan houses of the Third Order. There were also 20 Capuchin houses, 6 Dominican, 3 Carthusian, 11 Augustinian, 8 of Knights of the Cross, 9 Jesuit (suppressed in 1773), 2 Servite, and 2 Alexian. The Brothers of Saint Anthony, the Carmelites, the Zionites, the Brothers of Saint Martin had each one house. There were five establishments of the Teutonic Order and nine of the Knights of Malta. The female orders had a total of 146 nunneries (see below, Mooren, II, 426 sqq.). The loss in costly gold and silver church plate, vestments and the treasures of the libraries and archives, is incalculable. When the disorders of the Napoleonic regime had passed, the arch-

diocese was re-established by Pius VII. Its territory had previously been made a part of Prussia by the Congress of Vienna, in 1815. On 16 July, 1821, by the Bull "De Salute animarum" the Archdiocese of Aachen was abolished, the church of St. Peter in Cologne was again made a metropolitan church, and the territories of the Archdiocese of Cologne defined anew, with its present boundaries, except for a few unimportant changes. It then included 44 deaneries and 685 parishes (536 on the left bank of the Rhine and 149 on the right bank). On the 20th of December, 1824, Ferdinand August von Spiegel was named by the pope as the first archbishop of the new see; on 20 May, 1825, he took charge of the ecclesiastical government, which had been carried on by the vicar capitular, Johann Hermann Joseph von Caspars zu Weiss, from 1801 till his death (1822), and after that time by Prothonotary Johann Wilhelm Schmitz. Archbishop von Spiegel's administration (1824-35) was in many ways beneficial. He alleviated many evils which had crept in during the previous years and made serious efforts for the education of the clergy and for the reorganization of his diocese; nevertheless, he was too subservient to the Prussian Government, and entered into a secret agreement with it in regard to mixed marriages, contrary to the spirit of the ecclesiastical marriage laws. His successor, Clemens Augustus, Freiherr von Droste zu Vischering, who vigorously opposed the spread of the Hermesian heresy, soon came into conflict with the Prussian Government on the question of mixed marriages, as a result of which he was taken prisoner, 20 November, 1837, and confined in the castle of Minden. This event caused great excitement throughout Germany, and helped to revive the religious life and activity of the German Catholics. When Frederick William IV came to the throne, the archbishop resigned his office in favour of his coadjutor, Johann von Geissel (q. v.), Bishop of Speyer. As archbishop (1845-64), he displayed a most auspicious activity and infused fresh religious vigour into his diocese. Great injury was done the Church of Cologne by the Prussian *Kulturkampf*. During its course Archbishop Paul Melchers (1866-85) was imprisoned by the Government in 1874 (till 9 October), and then was forced to leave his diocese. The number of priests fell from 1947 to about 1500, and many parishes remained for years without a priest. After the conclusion of peace between Rome and Prussia, Archbishop Melchers abdicated his see. His successors, Philip Krementz (1885-99; cardinal, 1893), Hubert Simar (1899-1902), and Anton Fischer (since 6 November, 1902; cardinal since 22 June, 1903) devoted themselves to repairing the evil done by the *Kulturkampf* and developing to a prosperous state the religious and ecclesiastical life of the diocese.

Statistics.—The Archdiocese of Cologne includes the Prussian administrative districts of Cologne and Aachen, the greater part of the district of Düsseldorf and small portions of the districts of Coblenz, Trier, and Arnsberg, altogether, 4219 square miles, with about 2,700,000 Catholics (census of 1 December, 1900, 2,522,648). The parishes in 1907 numbered 917, with 51 deaneries; the priests included 1934 secular priests (of whom 214 were stationed in the cathedral city), 208 regulars, and about 60 priests from other dioceses. The metropolitan chapter consists of 1 cathedral provost (*Domprobst*), 1 cathedral dean (*Domdechant*), 10 residential, and 4 honorary canons. The archbishop is chosen by the cathedral chapter, the Bishops of Trier, Münster, and Paderborn are his suffragans. Within the city of Cologne there are 39 parishes and 3 military churches grouped in two deaneries. In addition to the cathedral chapter there is a collegiate chapter at Aachen (q. v.). The educational institutions under ecclesiastical control include the archiepiscopal seminary for priests at Cologne,

with 83 students (1906-07), the Collegium Albertinum at Bonn (175 students), the Collegium Leoninum at Bonn (104 students), the archiepiscopal seminaries for boys at Neuss, Münsterfeld, Rheinbach, and Opladen, 4 high schools and boarding-colleges for boys, and 26 boarding-schools for girls (the latter conducted by female orders). For the higher education of the clergy there is the Catholic faculty of theology at the University of Bonn, with 14 ecclesiastical professors, in addition to the (Cologne) seminary for priests already mentioned. Ecclesiastical teachers are also employed at 102 secondary schools (gymnasias, technical gymnasias, high schools, academies, and Latin schools, etc.), and 5 Catholic teachers' seminaries, at 42 Catholic girls' high schools and 5 Catholic training schools for women teachers. The total attendance at all the intermediate and higher schools of the archdiocese averages about 17,400 Catholic boys and 11,700 Catholic girls. The attendance at the primary schools (*Volksschulen*) is 428,000 children in 11,560 classes. (For the educational relations between the Church and the State see PRUSSIA.)

The religious orders of men in the archdiocese have 42 establishments with about 1100 members, and the orders and congregations of women have 401 with 6200 sisters, there being in the cathedral city alone 43 religious houses with 1140 inmates. The following orders or congregations are represented: Benedictines (1 establishment), Dominicans (2), Franciscans (9), Camillians (1), Capuchins (2), Carthusians (1), Redemptorists (2), Trappists (1), Fathers of the Holy Ghost and Immaculate Heart of Mary (2), Alexian Brothers (9), Brothers of Charity (6), Brothers of Saint Francis (6), Benedictine Sisters of Perpetual Adoration (3), Borromean Sisters (18), Cellites (86), Sisters of Christ (4), Congregation of the Blessed Virgin Mary of Saint Peter Fourier (1), Handmaids of Christ (69), Sisters of Saint Dominic (10), Order of Saint Elizabeth (35), Sisters of Saint Francis (96), Ladies of the Good Shepherd (3), Sisters of the Holy Child Jesus (10), Carmelite Sisters (3), Daughters of the Holy Cross (15), Sisters of Christian Charity (4), Penitent Recollects (1), School Sisters of Notre Dame (2), Ursulines (9), Sisters of Saint Vincent (31). The orders of men are devoted partly to pastoral and mission work, partly to charitable work; the orders of women devote themselves almost entirely either to educational work (instruction and care of young girls in various establishments, sewing schools, girls' high schools, and boarding-schools) or to charitable work in refuges, working-women's homes, servant-girls' homes, the care of the sick in hospitals, hospices, etc.

It is impossible to mention here all the numerous charities and organizations found within the limits of the archdiocese; complete statistics are given in M. Brandt's book, "Die katholischen Wohlthätigkeits-Anstalten und Vereine sowie das katholisch-soziale Vereinswesen insbesondere in der Erzdiözese Köln" (Cologne, 1896). In the cathedral city alone there are more than 400 religious societies and brotherhoods. The most important of the organizations and charitable institutions in the archdiocese which are not limited to a single parish are as follows: 182 congregations and 71 societies for young men, 160 Catholic working-men's clubs, 74 Catholic journeymen's associations (*Gesellenvereine*), 26 miners' associations, 29 congregations and societies of merchants, 10 societies for women employed in stores, 55 homes and schools for working-women, 22 homes for the insane and idiots, 10 homes for servant girls, 9 refuges for fallen women, 90 orphanages; also the Elizabeth societies and 225 conferences of the Society of Saint Vincent de Paul, the Saint Regis societies, and others.

The most important churches are the cathedral (*Dom*) of Cologne (see above), the cathedral of Aachen (q. v.), the churches at Cologne mentioned above, the

cathedral churches at Bonn and Essen, the church of Saint Quirinus in Neuss, the churches of the former Abbots of Werden, Knechtsteden, Cornelmünster, and Steinfeld, the double church in Schwarz-Rheindorf, etc.

A complete bibliography of the city by KRADEWIG is given in *Die Kunstdenkmäler der Stadt Köln* (Düsseldorf, 1906), I, Pt. I. The most important works are: BIANCO, *Die alte Universität Köln* (Cologne, 1855); I; KEUSSEN, *Die Matrikel der Universität Köln* (Bonn, 1892); ENNEN, *Frankreich und der Niederrhein oder Geschichte von Stadt und Kurstaat Köln seit dem 30 jährigen Kriege* (2 vols., Cologne, 1855-56); IDEM, *Geschichte der Stadt Köln* (5 vols., Cologne and Neuss, 1863-80); *Quellen zur Geschichte der Stadt Köln*, ed. by ENNEN and ECKERTZ (6 vols., Cologne, 1860-79); *Chroniken der deutschen Städte*, vols. XII-XIV (Leipzig, 1875-77); *Mittheilungen aus dem Stadtarchiv von Köln* (32 vols., Cologne, 1883-1904); *Kölner Schreinsurkunden des 13. Jahrhunderts*, ed. by HOENIGER (2 vols., Bonn, 1884-94); *Höhlbaum-Lau, Das Buch Weinsberg, Kölner Denkwürdigkeiten aus dem 16. Jahrhundert* (4 vols., Leipzig and Bonn, 1886-98); *Köln und seine Bauten* (Cologne, 1888); MOHR, *Die Kirchen von Köln* (Berlin, 1889); KORTH, *Köln im Mittelalter* (Cologne, 1891), good bibliography; STEIN, *Acten zur Geschichte der Verfassung und Verwaltung der Stadt Köln im 14. und 15. Jahrhundert* (2 vols., Bonn, 1893-95); MERLO, *Kölnische Künstler in aller und neuer Zeit* (Düsseldorf, 1895); SCHEIBLER and ALDENHOVEN, *Geschichte der Kölner Malerschule* (2 vols., with 100 photogravures, Lübeck, 1894-96); KNIPPING, *Die Kölner Stadtrichtungen des Mittelalters* (2 vols., Bonn, 1897-98); LAU, *Die Entwicklung der kommunalen Verfassung und Verwaltung der Stadt Köln bis zum Jahre 1396* (Bonn, 1898); HELMKEN, *Köln und seine Sehenswürdigkeiten* (20th ed., Cologne, 1903); H. v. LASCH, *Kölner Zunfturkunden* (2 vols., Bonn, 1905); KEUSSEN, *Historische Topographie der Stadt Köln im Mittelalter* (Bonn, 1906); STEFFEN, *Kölner Kirchenkalender für das Jahr 1907* (Cologne, 1907). For the cathedral consult: BOISSERÉE, *Geschichte und Beschreibung des Doms zu Köln* (2nd ed., Munich, 1842); BOCK, *Der Kunst- und Reliquienschatz des Kölner Doms* (Cologne and Neuss, 1870); SCHMITZ, *Der Dom zu Köln* (150 plates, with text by ENNEN, Cologne, 1868-76); WIETHASE, *Der Dom zu Köln* (40 plates with text, Frankfurt, 1884-1889); HELMKEN, *Der Dom zu Köln* (4th ed., Cologne, 1899); LINDNER, *Der Dom zu Köln* (plates, Haarlem, 1904). The older sources and works that treat of the Archdiocese of Cologne are given by WALTER in *Das alte Erzbistum und die Reichsstadt Köln* (Bonn, 1866), 3-18. Full bibliographical references, especially for the individual archbishops, are found in the *Handbuch der Erzdiözese Köln* (19th ed., Cologne, 1905), also the list of the assistant bishops, general vicars, and nuncios of Cologne. The most important works of reference are: BINTERIM and MOOREN, *Die alte und neue Erzdiözese Köln* (4 vols., Mainz, 1828-30; 2d ed. in 2 vols., Düsseldorf, 1892-93); LACOMBLET, *Urkundenbuch für die Geschichte des Niederrheins* (4 vols., Düsseldorf, 1840-58); LACOMBLET, *Archiv für die Geschichte des Niederrheins* (7 vols., Düsseldorf, 1832-70); SEIBERTZ, *Urkundenbuch zur Landes- und Rechtsgeschichte des Herzogthums Westfalen* (3 vols., Augsburg, 1839-54); MERING and REISCHERT, *Die Bischöfe und Erzbischöfe von Köln* (2 vols., Cologne, 1842-44); BINTERIM, *Die geistlichen Gerichte in der Erzdiözese Köln* (Düsseldorf, 1849); ENNEN, *Geschichte der Reformation im Bereiche der alten Erzdiözese Köln* (Cologne, 1849); KAMPSCHULTE, *Kirchlich-politische Statistik des vormaligen Erzdiözese Köln-ehriges Westfalen* (Lippstadt, 1869); PONLECH, *Geschichte der Erzdiözese Köln* (Mainz, 1879); DUMONT, *Descriptio Archidiecesis Coloniensis* (Cologne, 1879); IDEM, *Geschichte der Pfarreien der Erzdiözese Köln* (Cologne, 1883-1900), I-X; LEY, *Die kölnische Kirchengeschichte im Anschluss an die Geschichte der kölnischen Bischöfe und Erzbischöfe* (Cologne, 1883); *Geschichtlicher Atlas der Rheinprovinz* (Bonn, 1894-1901); KLEINERMANN, *Die Heiligen auf dem bischöflichen bzw. erzbischöflichen Stuhle von Köln* (Cologne, 1895); I. III, vols. I and II, Berlin, 1892 and 1894). The most important periodicals are: *Annalen des historischen Vereins für den Niederrhein insbesondere die alte Erzdiözese Köln* (at present 83 vols., Cologne, 1855-); *Jahrbücher des Vereins von Altertumsfreunden im Rheinland* (Bonn, 1842-); *Westdeutsche Zeitschrift für Geschichte und Kunst* (Trier, 1882-), with supplementary volumes.

JOSEPH LINS.

UNIVERSITY OF COLOGNE.—Though famous all through the Middle Ages for its cathedral and cloister

schools and for eminent scholars—Albertus Magnus, St. Thomas Aquinas, and Duns Scotus—Cologne had no university until near the end of the fourteenth century, when Urban VI, at the instance of the Town Council, issued (21 May, 1388) the Bull of foundation. The university was inaugurated the following year with twenty-one *magistri* and 737 matriculated students. Further privileges were granted by Boniface IX (1389, 1394), Duke Wilhelm von Geldern (1396), and Emperor Frederick III (1442); while special favour was shown the university by Gregory XII (1406), Nicholas V (1447), and Pius II; the last-named pope addressed his "Bull of Retraction" (In minoribus agentes) to the Rector and University of Cologne (26 April, 1463). The university was represented at the Councils of Constance and Basle, and was involved in the controversy regarding the authority of council and pope. It took sides with the antipope Felix V, but eventually submitted to Nicholas V. The Renaissance movement met with opposition at Cologne, though among its professors were the humanists Cæsarius, Buschius, Glareanus, Gratius, Phrissemius, and Sobius. During the same period may be mentioned the theologians Arnold of Tongres and Hoogstraaten, O. P. All these were involved in the conflict which centred about Reuchlin (q. v.) and which did the university great harm. The "Epistolæ obscurorum virorum" were directed against the theologians of Cologne. At the time of the Reformation, but few of the professors joined the Protestant movement; the university as a whole was strong in its defence of the Catholic Faith and some of its students, as Cochläus and Eck, were afterwards foremost champions of the Church. Failing on the other hand to introduce the reforms needed in its own work and organization, the university declined rapidly during the sixteenth century. The vicissitudes of war, lack of means, and withdrawal of its students reduced it to a nominal existence in the seventeenth and eighteenth centuries. In 1786 the founding of the University of Bonn (q. v.) decided the fate of Cologne, which was unable to withstand its more vigorous rival. The French troops entered Cologne in October, 1794; in April, 1796, the university was closed.

E. A. PACE.

Colomba of Rieti, BLESSED, b. at Rieti, in Umbria, Italy, 1467; d. at Perugia, 1501. Blessed Colomba of Rieti is always called after her birthplace, though she actually spent the greater part of her life away from it. Her celebrity is based—as it was even in her lifetime—mainly on two things: the highly miraculous nature of her career from its very beginning, and her intense devotion to the Blessed Sacrament. She was one amongst a number of saintly Dominican women who seem to have been expressly raised up by God in protest against, and as a sharp contrast to, the irreligion and immorality prevalent in Italy during the fifteenth and sixteenth centuries. These women, nearly all of the Third Order, had an intense devotion to St. Catherine of Siena, and made it their aim to imitate her as nearly as possible. Many seculars, men as well as women, shared this devotion, amongst these being Ercole I, Duke of Ferrara, who had a deep admiration for Colomba and for some other holy Dominican religious, her contemporaries, the most notable of whom were Blessed Osanna of Mantua and Blessed Lucy of Narni. For the latter Ercole's veneration was so great that he never rested until he had got her to come with some of her nuns to live in Ferrara, where he built her a convent and where she died after many troubles.

She began when quite a girl to practise austere penances and to subsist almost entirely on the supernatural food of the Holy Eucharist, and continued this for the greater part of her life. At nineteen she joined the Dominican Tertiaries, of whom there were many in the town, though still living at home; and she soon won the veneration of her fellow townspeople by her personal holiness as well as by some miracles that she worked. But Colomba was not destined to remain in Rieti. In 1488 she left home and went to Perugia, where the inhabitants received her as a saint, and in the course of time built her the

BL. COLOMBA OF RIETI
Perugino (?), Pinacoteca, Perugia

convent of St. Catherine, in which she assembled all the Third Order Dominicans, who desired her as superior in spite of her youth. In 1494, when a terrible plague was raging in Perugia, she offered herself as victim for the city. The plague was stayed, but Colomba herself was struck down by the scourge. She recovered only to have her sanctity severely tried by widely spread calumnies, which reached Rome, whence a commission was sent to examine into her life. She was treated for some time as an impostor, and deposed from her office of prioress; but finally her innocence triumphed. In 1495 Alexander VI, having heard of Colomba's holiness and miracles from his son the Cardinal Caesar Borgia, who had been living in Perugia, went himself to the city and saw her. She is said to have gone into an ecstasy at his feet, and also to have boldly told him of all personal sins. The pope was fully satisfied of her great sanctity, and set the seal of his approval on her mode of life. In the year 1499 she was consulted, by authorities who were examining into the matter, concerning the stigmata of Blessed Lucy of Narni, and spoke warmly in favour of their being genuine, and of her admiration for Blessed Lucy's holiness. Her relics are still venerated at Perugia, and her feast is kept by her order on 20 May.

F. M. CAPES.

Colombia, REPUBLIC OF (formerly UNITED STATES OF COLOMBIA), forms the north-west corner of the South American Continent. It is bounded on the north by the Caribbean Sea, on the east by Venezuela, on the south by Brazil and Peru, on the south-west by Ecuador. The Pacific Ocean bounds it on the west and on the north-west the Republic of Panama and the Gulf of Darien. Its area is variously calculated at

from 450,000 to about 500,000 square miles, but exact data are not obtainable. Colombia has at least eleven active or dormant volcanoes, the tallest of which, Huila, rises to about 19,000 feet and seems to be the highest point in the country. Almost on the Caribbean shores are the mud-volcanoes of Turbaco. The republic is highly favoured by nature in most parts of its territory, and capable of producing nearly every staple. It is very rich in useful tropical plants. The animal kingdom, too, is far better represented than farther south along the Pacific coast. The climate shows all possible varieties, from the moist heat of the lowlands to the bitter cold of the mountain wastes.

Since 1870 no census of the population has been attempted. To-day the number of inhabitants is variously estimated, four millions being a likely conjecture. One estimate (made in 1904) gives 3,917,000 souls; another, two years later, 4,680,000, of which 4,083,000 for the sixteen departments, 120,000 for the federal district, and 427,000 for the intendancies. Four-fifths at least of this population resides in the mountainous-western half, the eastern lowlands being mostly held by wild Indian bands. The number of aborigines is given at about 150,000, without reliable basis, however, for this estimate. The most populous city is the capital, Bogotá, situated at an altitude of 9000 feet above the sea, with 85,000 inhabitants; Medellín, in the department of Antioquia (4600 feet above the sea) comes next, with 50,000 souls, then Barranquilla, Colombia's most active seaport, with 32,000 (later accounts say 55,000). Negroes and mulattoes are numerous, and mestizos form a large proportion of the people. In the mountains the pure Indian has been reduced by amalgamation to a small proportion of the inhabitants and most of the aboriginal stocks have completely disappeared as such. Near the Gulf of Maracaibo the Goajiros still maintain autonomy, but the Tayronas, Panches, Musos, are practically extinct. Around Bogotá there are descendants of the Chibchas (q. v.), a sedentary tribe once of considerable numerical importance, for aborigines.

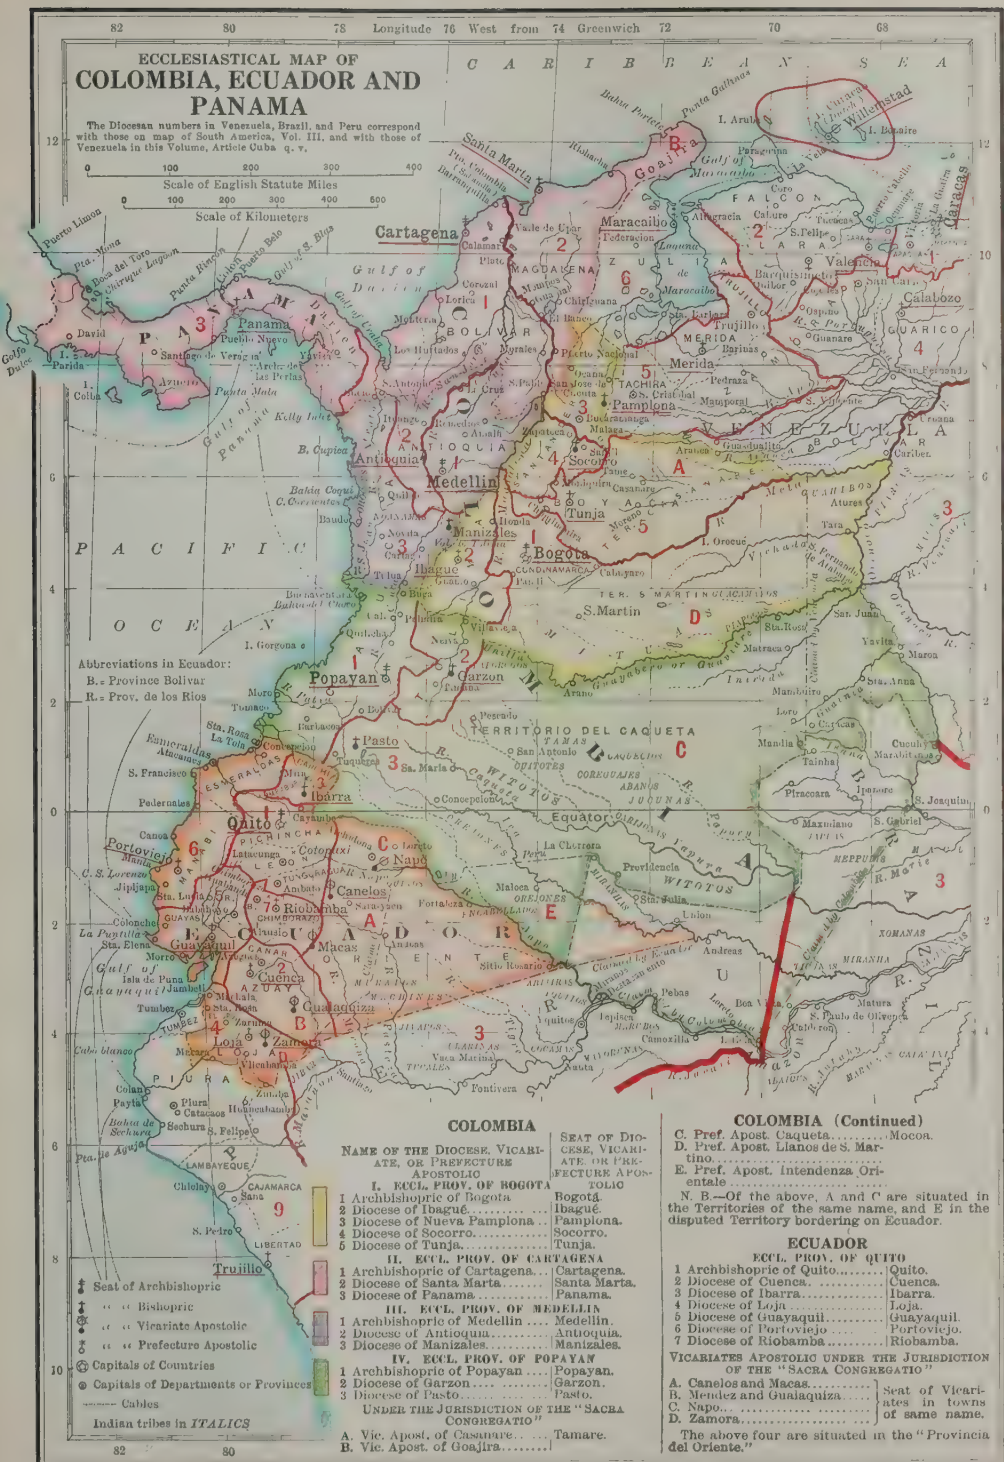

HISTORY.—The earliest information concerning the territory which was to become in the nineteenth century the Republic of Colombia goes back to the year 1500 and comes down to us from Rodrigo de Bastidas and Alonso de Ojeda. But even a few months before these explorers, Christóval Guerra and Pero Alonso Nino had coasted Venezuela and, possibly, the northern shores of Colombia, gathering pearls and gold. Bastidas saw the snowy range of Santa Marta in 1500, and Ojeda settled on the coast near by. The Spanish colonies on the Isthmus of Darien (since 1903, the Republic of Panama, but previously a province of Colombia) and the discovery of the South Sea by Balboa (q. v.) directed the course of exploration of Colombia to its north-western and Pacific sections. The banks of large rivers, Atrato, Cauca, and Magdalena, were also explored and conquered at an early period. The valleys, especially that of the Cauca, were inhabited by comparatively numerous agricultural tribes, who also gathered gold by washing and worked it into figures, ornaments, and sometimes vessels. Much of the precious metal was found in graves. The Indians of Antioquia, Ancerma, Cali, and Lile, though living in villages, were cannibals, and wars of extermination had to be waged against them. The languages of these peoples have wellnigh disappeared, as well as the tribes themselves, and their classification in four principal groups, Catiös, Nutabes, Tahamies, and Yamacies (of which the first two held both banks of the Cauca), requires confirmation. In western Colombia the Spaniards penetrated to the northern confines of Ecuador (Pasto, Popayan) comparatively early, and there met other explorers from their own people coming up from Quito. This led to strife and even to bloodshed.

The valley of the Magdalena formed the natural route into the interior. The Indian tribes around,

and to the south of, the Santa Marta Mountains (Chimilas, Panches, Tayronas, Musos) were of a sedentary and warlike character, and offered a protracted resistance. It seems that they belonged to the linguistic stock of the Chibcha (or Muysca), and considerable gold was found among them, chiefly in burial places. Up to 1536, Tamalameque (about 9° N. lat.) had been the most southern point reached from Santa Marta. In the beginning of that year, however, an important expedition was set on foot under the command of Pedro Fernandez de Lugo, with the object of penetrating into the unknown mountains to the south. Lugo soon died, but his lieutenant Gonzalo Ximénez de Quesada persevered, and reached the plateau, where he found the numerous tribes of the Chibcha established in formal settlements, and rich in gold and in emeralds obtained from the country of the Musos where they are still obtained. By August, 1538, Cundinamarca (by which name the Chibcha range is mostly known) was occupied by Quesada after considerable warfare with the natives, and the city of Santa Fé de Bogotá was founded as capital of the "Kingdom of New Granada", which continued the official designation of Colombia until its independence was achieved. Upon the conquest of the Chibcha country followed expeditions to the east and south-east, in quest of the "Gilded Man" (el Dorado) with little more than geographical results. These expeditions led towards the region now forming the Republic of Venezuela.

The establishment of a German administration in Venezuela, by the Welser family, in 1529, also led the Spaniards and Germans into Colombia from the East. Ambrosius Dalfinger (1529–32) reached Tamalameque and, in 1538, when Quesada was beginning to organize his recent conquest at Bogotá, he was surprised by the arrival of a force from Venezuela commanded by the German leader Nicolas Federmann. Shortly after this another body of Spaniards reached the plateau of Cundinamarca from the Cauca Valley. This was the expedition headed by Sebastian Belalcázar of Quito. Each of the three commanders having acted independently, each claimed the territory as his conquest, but Quesada succeeded in buying his rivals off, and remained master of the field, thus avoiding bloodshed.

New Granada, under its own *audiencia* established in 1563, formed part of the Spanish Viceroyalty of Peru until 1718, was then severed from Peru for four years, then again placed under an *audiencia*, and finally, in 1751, constituted a separate viceroyalty. During the seventeenth century, the ports of the Colombian coast were exposed to the formidable attacks of pirates. In 1671 the notorious Morgan took Panama and sacked it, and the most horrible cruelties were committed upon its inhabitants. Two years later it was the turn of Santa Marta. In 1679 the French Baron de Pointe took and pillaged Cartagena (founded 1510). Religious strife, too, between the secular and some of the regular clergy, and between the bishops and the civil authorities, troubled Cartagena, Popayan, and other dioceses. Extreme measures of taxation, exorbitant duties, provoked a popular uprising in 1781. The country remained in a state of ferment, which was aggravated by the downfall of Spain before the power of Napoleon. Miranda made in 1806 an attempt at insurrection, directed in the first instance against Venezuela, but threatening New Granada as well, had it succeeded. On 20 July, 1810, a revolutionary junta met at Bogotá, and in the following year "The United Provinces of New Granada" were proclaimed. These embraced also Venezuela and Ecuador, and soon two parties appeared among the revolutionists, so that, previous to 1816, three civil wars had taken place. Bolívar, who appeared upon the scene in 1810, was unable to establish harmony. Spain could do almost nothing to recover its colonies until 1815, when a respectable force under General Morillo landed in Venezuela. This united the factions again, and for five

years a war of extermination was carried on in the three states. During that period the Republic of Colombia was proclaimed, in 1819. The revolutionists suffered many reverses, for Morillo was an able military leader. Of the actions fought in this bloody war, that at Sogamoso (12 June, 1819) decided the fate of the remnants of the Spanish army, and the engagement at Carabobo, near Valencia in Venezuela (24 June, 1821), was the last of any consequence. The Republics of Colombia, Ecuador, and Venezuela became united under the name of Colombia. In 1829, however, Ecuador and Venezuela seceded, and Colombia was left alone.

In 1831 Colombia became "The Republic of New Granada". Thirty years later it called itself "United States of Colombia". In 1886, the "sovereign states" were reduced to departments of a "centralized republic" styled "The Republic of Colombia", under which name it is known to-day. No country of Spanish America has been, since its independence, so often and so violently disturbed, internally, as Colombia. With a single exception (Parra, 1876-80), every presidential term has been marked by one or more bloody revolutions. Panama seceded for a while, in 1856. The events of 1903 made the separation between Colombia and Panama definitive. Since 1904, conditions seem to have at last become more settled. Reorganization, after so many periods of disorder and anarchy, seems to be the aim of the present Government of Colombia.

Hardly was the territory now known as the Republic of Colombia discovered, when the Church, working in accord with the King of Spain, hastened to the natives. In spite of the honest intentions of the Spanish kings, their agents were in many cases obstacles to the religious progress of the country. What progress was attained was due to the efforts of the Dominican, Franciscan, Jesuit, and other missionaries. This great work was often opposed by the colonists and government officials who looked solely to their own worldly prosperity. The religious of the Society of Jesus, with whose history the name of the Colombian city of Cartagena is so gloriously associated (see PETER CLAVER, SAINT), were also the first during the Colonial period to found colleges for secondary instruction; eight or ten colleges were opened in which the youth of the country, and the sons of the Spaniards, were educated. In the Jesuit College of Bogotá the first instruction in mathematics and physics was given. In the expulsion of the Jesuits by Charles III the Church in New Granada lost her principal and most efficacious aid to the civilization of the country, which was practically paralysed for many years. To this day the traveller may see the effects of this arbitrary act in the immense plains of the regions of Casanare, converted in the space of one century into pasture lands for cattle, but which were once a source of great wealth, and which would have been even more so.

It is only within the last ten years that the Catholic Church, owing to the peace and liberty which she now enjoys, has turned her eyes once more to Casanare; a vicariate Apostolic has been erected there, governed by a bishop of the Order of St. Augustine, who with the members of his order labours among the savages and semi-savages of these plains.

PRESENT CONDITIONS.—The legislative power of the nation is vested in a Congress consisting of the Senate and the House of Representatives. Senators are elected for six years. Each senator has two substitutes elected with him. Every department is entitled to three senators, and the whole body is renewed, upon the completion of the term of service of one-third of its members, every two years. One representative and two substitutes correspond to a population of 50,000, and their term of office is four years. Congress, besides legislation, has power to interfere with the action of the executive in matters of contracts and treaties. The executive is headed by the president, who has a vice-

president and a substitute (or *designado*); the last takes office in case both president and vice-president become incapacitated. While the presidential term has varied from six to four years, the actual incumbent (1908), Rafael Reyes, is in possession of the office for ten years. There is a cabinet of ministers and a consultative body called the "Council of State", composed of six members with the vice-president at its head. The president appoints the members of the Supreme Court for life, or during good behaviour. The judicial districts have their superior as well as inferior courts. Courts of Commerce may be instituted when necessary, and trial by jury obtains in criminal cases. The Constitution of 1886, amended in 1904 and 1905, explicitly provides (Art. 38) that "the Catholic Apostolic Roman Religion is that of the Nation; the public authorities will protect it and cause it to be respected as an essential element of social order. It being understood that the Catholic Church is not and shall not be official, and shall preserve its independence". The next following article guarantees to all persons freedom from molestation "on account of religious opinions", and Art. 40 lays it down that "the exercise of all cults not contrary to Christian morality or the laws is permitted". A concordat, entered into between the Holy See and the Republic of Colombia in 1887, now regulates in detail the relations between Church and State. These relations are at present (1908) thoroughly cordial, while dissenters are in no way interfered with on account of their religious peculiarities. The ecclesiastical organization of Colombia consists of four provinces: Bogotá, with four suffragans, Ibagué, Nueva Pamplona, Socorro, and Tunja; Cartagena, with two suffragans, Santa Marta and Panama; Medellín, with two suffragans, Antioquia and Manizales; and Popayan, with two suffragans, Garzon and Pasto. There are also two vicariates Apostolic: Casanare and Goajira; and three prefectures Apostolic: Caqueta, Piani di S. Martino, and Intendencia Orientale. (See BOGOTÁ, CARTAGENA, etc.)

Article 41 of the Constitution provides that "public education shall be organized and directed in accordance with the Catholic Religion. Primary instruction at the expense of the public funds shall be gratuitous and not obligatory." There are no educational statistics attainable of any recent date. In 1897 it was stated there were 2026 colleges and primary schools with 143,076 pupils. Of private educational establishments no data exist. Only the faculties of medicine and natural sciences are in operation at the national capital. A School of Arts and Trades is conducted by the Salesians, and there are normal schools in five departments. Secondary institutions are almost exclusively in the hands of the Catholic clergy and religious corporations. The minister of public instruction is the official head of the department of education.

The material development of Colombia has necessarily been much retarded by the political disturbances which have occurred since the first quarter of the nineteenth century and have made its history a continuous succession of civil wars. In 1898 Colombia had 8600 miles of telegraph, but the service is very defective. Railroad lines are in operation with an aggregate length of 411 miles, the longest being only 65 miles. The metric system has been in use for weights and measures since 1857. Metallic currency has nearly disappeared, inconvertible paper forming the circulating medium. The re-establishment of gold coinage has lately been proposed. The paper currency, in 1906, had lost 99 per cent of its nominal value, 10,000 Colombian pesos (paper currency) being equal to 100 dollars. It is hoped, however, that with internal peace these unfortunate conditions will rapidly change for the better, since Colombia has unlimited natural resources. The history of the foreign debt of this

republic is a series of borrowings and attempted settlements of accumulated capital and interest, rendered impossible by political disturbances. The budget for 1905-1906 amounted to £4,203,823. There are no official or general statistics of either exports or imports. Partial data, however, may give some general idea of the principal articles of Colombian produce. The Colombian gold mines up to 1845 yielded £71,200,000. Another source states it at £115,000,000 up to 1886. The same authority (Restrepo) estimates the silver-production during the same period at £6,600,000. The average output of rock-salt from 1883 to 1897 has been 11,000 tons per year. The exploitation of the emerald mines in the Province of Musos yielded the Government, in 1904, £10,000, but the production was not always so high in former times. Among vegetable products coffee takes the first rank for export, but the annual figures have varied according to the political state of the country. Thus, in 1899, before the revolution, 254,410 bags of coffee were exported from Barranquilla. In the year following only 86,917. Peace being restored, 574,270 bags could be shipped from the same port in 1904. In the same year 24,000 tons of bananas left Barranquilla for the United States, and tobacco and india-rubber may soon figure largely in Colombian export lists.

For the periods embracing the struggle for independence see the bibliography to the articles: BOLIVIA, ECUADOR, and VENEZUELA, to which we add: BENEDETTI, *Historia de Colombia* (Lima, 1887); also a concise but quite fair sketch in the vol. *Brisol of the Univers pittoresque* (1838), by FAMIN, *Colombie et Guyanes*; PETRE, *The Republic of Colombia* (London, 1906); SCRUGGS, *The Colombian and Venezuelan Republics* (Boston, 1902).—On the protracted negotiations as to the Colombia-Costa Rica boundaries see FERNANDEZ, *Colección de Documentos para la historia de Costa Rica* (San José, 1881-1886). The *North American Review* (New York) for 1902 contains a paper by MORALES, *The Political and Economical Situation of Colombia*.—On the volcanoes of Colombia, STUBEL, *Die Vulkanberge von Colombia* (Dresden, 1906).—On the Panama question, JOHNSON, *Four Centuries of the Panama Canal* (New York, 1906). Of the numerous books of travels in Colombia in the first half of the past century may be mentioned HUMBOLDT, *Relation historique du voyage aux régions équinoxiales du nouveau continent* (Paris, 1816-22); *Vues des Cordillères, et monuments des peuples indigènes de l'Amérique* (Paris, 1816); MOLLIER, *Voyage dans la république de Colombia* (Paris, 1824). For the political history of the past century, *Constitución del estado de Cartagena de Indias sancionada en 14 de Junio del año de 1812, segundo de su Independencia* (Cartagena, 1812); *Constitución de la república de Colombia* (Bogotá, 1888). In Spanish literature from the sixteenth century early exploration and colonization of Colombia is extensively treated, notably in ENXISO, *Suma de geografía* (1519, 1530, and 1549); GOMARA, *Historia general de las Indias* (Antwerp, 1554); HERRERA, *Historia general éca.* (Madrid, 1601-15 and 1726-30; Antwerp, 1728). Colombian writers from the sixteenth century: DE QUESADA, *Tres ratos de Suecia* (1568); CASTELLANOS, *Elegías de varones ilustres de Indias*; PIEDRAHITA, *Historia general de las conquistas del Nuevo Reyno de Granada* (Antwerp, 1688); DE ZAMORA, *Historia de la provincia de San Antonio del Nuevo Reyno de Granada del orden de Predicadores* (Barcelona, 1701); CASSANI, *Historia de la provincia de la compañía de Jesús del Nuevo Reyno de Granada* (Madrid, 1741); JULIAN, *La Perla de la América* (Madrid, 1787)—important especially on the Goajiro Indians. From the nineteenth century: *Docum. inéditos de Indias y Documentos para la historia de España*. Of the highest value for the extinct Indian tribes of the Rio Cauca and its valleys as well as for the west coast of Colombia in general, CIEZA DE LEON, *Crónica del Perú* (Part I, Antwerp, 1554); ANDAGOYA, *Relación de los sucesos de Pedrarias Dávila*, tr. in *Hackluyt Soc.*, XXXIV.

AD. F. BANDELIER.

Colombo, ARCHDIOCESE OF, situated on the western seaboard of the Island of Ceylon, includes two of the nine provinces into which the island is divided, viz. the Western and the Northwestern. The history of the see begins in 1518, when Christianity was introduced by the Franciscans. The religion spread rapidly, the town and the surrounding districts were soon erected into a diocese, and Don Juan de Monteiro was created first Bishop of Colombo. This prelate received into the church Don Juan Dharmapala, the grandson of the Cingalese King Buwenekabahu VII. The young prince succeeded his grandfather in 1542. Six years after his accession, Colombo contained a Catholic population of 12,000, with two parish churches, Our Lady's and St. Laurence's, four monas-

teries or convents under the Cordeliers, Dominicans, Augustinians, and Capuchins, and a college conducted by the Jesuits.

In 1597 Don Juan Dharmapala died. By that time the Portuguese had established their authority throughout the whole island except in the Kingdom of Kandy in the centre of the island, and religion was free to develop in Jaffna and in the other parts of Ceylon. But peace was of short duration, for the Dutch arrived in the island and, after a struggle of more than fifty years, succeeded in obtaining possession of all the territory that had been held by the Portuguese; Colombo fell in 1656 and Jaffna in 1658. The new rulers made no secret of their attitude towards the Church, for in 1642 they concluded with the King of Kandy a treaty by which "all priests, friars and clergymen" were to be banished from Ceylon. The Reformed Church of Holland was declared established, and a series of severe penal enactments against Catholics followed. Catholic education was forbidden, Catholic worship abolished, and harbouring a priest was declared a capital offence. In 1796 Colombo was taken by the English, and one of their first acts was to repeal all the Dutch laws against the Catholics (1806); soon afterwards the rights restored to the Catholics of the United Kingdom by the Emancipation Act were conceded to their coreligionists in Ceylon.

During the Dutch period the ecclesiastical administration of the island had been in the hands of the Bishop of Cochín on the neighbouring continent; but in 1830 Gregory XVI constituted Ceylon a vicariate Apostolic and the first vicar Apostolic, Don Vincente de Rozario, was consecrated in 1836. In 1845 Propaganda found it necessary to increase the number of missionaries in the island, and sent the Sylvestrine Benedictines for that purpose. In 1847 Jaffna in the north of the island, was severed from the Vicariate of Colombo, and erected into a separate vicariate with Bishop H. Bettachini as vicar Apostolic. At his death in 1857, the northern vicariate was given over to the Oblates of Mary Immaculate who had arrived in Ceylon two years after the Benedictines. Bishop Semeria, O. M. I., was appointed Vicar Apostolic of Jaffna, while Bishop Bravi, O. S. B., succeeded Bishop Caetano Antonio (1843-57) as Vicar Apostolic of Colombo.

A further partition was made in 1883, when the southern vicariate was divided into two, Colombo and Kandy. The Benedictines retained the latter, the former being given to the Oblates, in whose hands it has since remained, and Bishop C. Bonjean, O. M. I., was transferred from Jaffna to Colombo. Three years later (1886) the hierarchy was established in Ceylon, and the above-mentioned Bishop of Colombo, Dr. Bonjean, was made metropolitan with two suffragan sees, Jaffna and Kandy. In 1893 two new dioceses were created and entrusted to the Jesuits, Galle in the South being severed from Colombo, and Trincomali in the East, separated from Jaffna. In the same year Bishop Melizan, O. M. I., was transferred from Jaffna to Colombo as successor to Bishop Bonjean who had died in 1892; Bishop Melizan was succeeded in 1905 by Bishop Antoine Coudert, O. M. I., from 1898 coadjutor, with right of succession.

According to the last census returns the total population of the archdiocese is 1,274,000, of whom 206,000 are Catholics. There are 100 missionaries, 91 Oblates and 9 secular priests, and 295 churches and chapels. The Cathedral of Santa Lucia, a fine building in the Renaissance style, has accommodations for 6000. Attached to the cathedral are an English school for boys and one for girls, the former with over a thousand pupils, being taught by the brothers of the Christian Schools, while in the latter, the Sisters of the Good Shepherd give instruction to 500 girls. All the charitable institutions in the archdiocese, and many educational institutions of the archdiocese are in the

hands of religious congregations. These are as follows: Brothers of Christian Schools, 47 engaged in teaching; native Brothers of St. Vincent de Paul, 20, teaching; Sisters of the Good Shepherd, 23, over schools and orphanages; Sisters of the Holy Family, 23, schools, orphanages, and hospitals; Franciscan Sisters (Missionaries of Mary), 49, school, orphanages, and hospitals; native Sisters of St. Francis Xavier, 117, teaching; native Sisters of St. Peter, 108, teaching. Three of the principal government hospitals have been entrusted to the sisters. A government reformatory for youthful offenders is in charge of the Oblates, the number of boys varying from 150 to 200. About the same number of old people are provided with a home by the Little Sisters of the Poor in Colombo. In the 397 schools of the archdiocese 35,520 children are educated. Of these schools 202 are for boys, with 20,826 pupils, and 195 for girls with 14,694 pupils. The management of the schools is entirely in the hands of the missionaries; but there is a government examination every year, on the results of which a grant is paid to the superintendent of schools. The archdiocese maintains for teachers of both sexes normal schools recognized by the Government. Higher education in English is provided for girls at the various convents in Colombo, and for boys at St. Joseph's College (800 students) conducted by the Oblate Fathers. The training of aspirants for the priesthood is carried on in two seminaries: the preparatory seminary of St. Aloysius with 24 students and St. Bernard's theological seminary with 20 students. There are 9 orphanages, 1 for boys and 8 for girls, which provide education for 673 orphans (104 boys and 569 girls). Two papers, both bi-weekly, are published at the Colombo Catholic Press, the "Ceylon Catholic Messenger" in English, and the "Nanartha Pradi-paya" in Cingalese. The management and editorial control of both papers are in the hands of the missionaries. A Cingalese monthly of a religious character is issued from the press of the boys' orphanage. Colombo has conferences of St. Vincent de Paul and of the Ladies of Charity. The Bonjean Memorial Hall is the head-quarters of the Ceylon Catholic Union, established in 1902, with branches in all the principal parts of the island. A Catholic Club was opened in 1900.

BATTANDIER, *Ann. pont. cath.* (1908); *Catholic Directory* (Madras, 1908); *Ceylon Handbook and Directory* (Colombo, 1908); TENNENT, *A History of Ceylon* (London, 1860).

ANTOINE COURDET.

Colombo, MATTEO REALDO, Italian anatomist and discoverer of the pulmonary circulation, b. at Cremona in 1516; d. at Rome, 1559. He studied medicine at Padua with Vesalius, became his assistant, and in 1544 his successor as lecturer on surgery and anatomy. In 1545 Cosimo de' Medici, who was reorganizing the University of Pisa, held out such inducements to Colombo that he became the first professor of anatomy there. Colombo occupied this post until 1548, when he received a call to the chair of anatomy in the Papal University at Rome. This he held until his death. During all his years of teaching at Padua, Pisa, and Rome, he continued to make original researches in anatomy. The results of his investigation were published under the title, "*De Re Anatomica Libri XV*" (Venice, 1559). The most important feature of this book is an accurate and complete description of the pulmonary circulation. Colombo says: "The blood is carried by the artery-like vein to the lungs, and being there made thin is brought back thence together with air by the vein-like artery to the left ventricle of the heart." Colombo knew that this was an original observation, for he adds: "This fact no one has hitherto observed or recorded in writing; yet, it may be most readily observed by any one." Harvey, in his work, "*On the Motion of the Heart and Blood in Animals*", quotes Colombo more than once and gives him credit for many origi-

nal observations in anatomy. Apparently lest there should be any diminution of Harvey's glory, English writers on the history of medicine have, as a rule, failed to give Colombo the credit which he deserves and which Harvey so readily accorded him. Colombo made as many as fourteen dissections in one year at Rome. Several hundred people sometimes attended his anatomical demonstrations, and cardinals, archbishops, and other high ecclesiastics were often present. Colombo is famous as a teacher of anatomy and physiology, and first used living animals to demonstrate various functions, especially the movements of the heart and lungs. He said one could learn more in an hour in this way than in three months from Galen. His book was dedicated to Pope Paul IV, of whom he was an intimate personal friend.

The best authority for Colombo's work in anatomy is his *De Re Anatomica* (Venice, 1559; Paris, 1562). The most complete life is that by TOLLIN in *Pflügers Archiv*, XXI-XXII. In English there is a good sketch by FISHER, *Annals of Anatomy and Surgery* (Brooklyn, 1880).

JAMES J. WALSH.

Colonia, a titular see of Armenia. Procopius (*De ædific.*, III, iv) informs us that Justinian restored a fortress which had been captured by Pompey, then fortified it and called it Colonia. This city figures in the "Synecdemus" of Hierocles and in the "Notitiæ episcopatum" as a suffragan of Sebaste, metropolis of Armenia Prima. Lequien (I, 429) mentions five bishops: Euphronius, later transferred to Nicopolis, a friend and correspondent of St. Basil; Eustathius in 458; St. John the Silent, who died a monk at St. Sabas, near Jerusalem, in 557; Proclus, exiled by the Emperor Justin in 518 as a Severian; Callinicus in 680 and 692. Bénay published in "Echos d'Orient" (IV, 93) a curious Byzantine inscription concerning a *drugarius* of Colonia. In the ninth century the city was the capital of a Byzantine theme. Its modern name is Koili Hissar; it is the chief town of a caza in the vilayet of Sivas, and has about 1800 inhabitants, among them 600 Greeks, 200 Armenians, and a few Protestant and Catholic Armenians (Cuinet, *Turquie d'Asie*, I, 792). Another Colonia, later Taxara, situated in Cappadocia Tertia, was a suffragan of Moccusus; seven bishops are mentioned by Lequien (I, 413).

S. PÉTRIDÈS.

Colonia, DOMINIQUE DE. See DRAMA, JESUIT.

Colonna, a celebrated family which played an important rôle in Italy during medieval and Renaissance times, and which still flourishes in several branches in Rome and Naples. It is commonly supposed to have been originally an offshoot of the Counts of Tusculum, deriving the family name from the castle of Colonna situated on a spur of the Alban hills, some five miles from Tusculum. The name makes its first appearance in authentic history in the person of Petrus de Columna, owner of Colonna, Monte Porzio, and Zagarolo, and claimant of Palestrina, whose castles were seized by Paschal II, A. D. 1101, in punishment of his lawless depredations. With the destruction of Tusculum by the Romans in 1191, the name of the ancient counts disappears forever, whilst the Colonna come prominently to the front. From the first their policy was anti-papal and Ghibelline, not so much from love of the emperors as from the desire to maintain towards the popes an attitude of quasi-independence. They exercised plenary jurisdiction over their vassals in matters civil and criminal and frequently contracted alliances with foreign potentates without consulting the wishes or interests of their sovereign. They were in perpetual feud with their Guelph neighbours, in particular with the rival house of the Orsini. They so frequently incurred the papal censures on account of their rebellious conduct, that it became the general but erroneous opinion of the Roman people that the yearly excommunication of the

Colonna was one of the main purposes of the Bull "In Cœna Domini". Nevertheless, members of the family were quite often appointed by friendly pontiffs to high offices of Church and State. Rarely were they without at least one representative in the Sacred College, and at one of the most critical junctures in the annals of the Church, the election to the papacy of Cardinal Odo Colonna, Martin V, put an end to the disastrous Western Schism. Twice in the course of its history this powerful house was threatened with annihilation (see BONIFACE VIII; ALEXANDER VI), but on both occasions the restoration of its members was as speedy as their fall.

The long line of Colonnese cardinals was opened in 1192, when Giovanni the Elder was created Cardinal-Priest of S. Prisca by Celestine III. He was made Bishop of Sabina by Innocent III, and was employed on important legations to Germany, Spain, Sicily, and France. He was the powerful friend of St. Francis, and was largely instrumental in obtaining from the pope the approval of the Franciscan Rule. He is remembered, at Amalfi for his munificence in building and endowing a spacious hospital. He died at Rome, 1209. Three years later Pope Innocent elevated to the cardinalate a nephew of the cardinal, known as Giovanni the Younger, Cardinal-Priest of S. Prassede. He was sent to the Orient as legate in 1217 and returned to Rome in 1222 bringing with him the Pillar of the Scourging, which remains to the present day in the chapel he built for it in his titular church. He also built and endowed two hospitals near the Lateran for the relief of the poor and of pilgrims. In 1240, after a futile attempt to reconcile Pope Gregory IX and Frederick II, the cardinal, as head of his family, together with the other Ghibellines of Rome, went over to the emperor and openly rebelled against the Holy See. He died in 1245. Matthew Paris (*ad. an.* 1244) describes him as "a vessel filled with pride and insolence; who, as he was the most illustrious and powerful in secular possessions of all the cardinals, was the most efficacious author and fosterer of discord between the emperor and the pope".

As a punishment of their Ghibellinism, no scion of the house was admitted into the Sacred College until 1278, when the magnanimous Orsini pope, Nicholas III, the son of that Matteo Rosso who had razed all the Colonna strongholds in Rome, in token of amnesty elevated to the dignity of the purple Giacomo Colonna with the title of Cardinal-Deacon of S. Maria in Via Lata. About ten years later, Honorius IV created Pietro, nephew of Giacomo, Cardinal-Deacon of the Title of S. Eustachio. These were the two cardinals whose bitter quarrel with Boniface VIII ended so disastrously for that pontiff and for the prestige of the medieval papacy. Deposed and degraded in 1297, they were reinstated in their dignities and possessions by Clement V in 1305. Both died at Avignon, Giacomo in 1318, Pietro in 1326. These unruly cardinals continued the deeply religious traditions of their family, founding and endowing the hospital of S. Giacomo for incurables and the Franciscan convent of S. Silvestro in Capite, in which they deposited the remains of the saintly sister of Giacomo, the nun Beata Margarita. Their munificence as patrons of art is attested by many masterpieces in the Roman churches, notably Turrita's mosaics in S. Maria Maggiore, pronounced by Gregorovius "the finest work of all the mosaic paintings in Rome". The learned Cardinal Egidio Colonna well deserves a special article (see COLONNA, EGIDIO). One year after Pietro's death, his nephew Giovanni, a son of the noble Senator Stefano, whose immediate family remained faithful to the Holy See during the troublous times of Louis the Bavarian, whilst his kinsman Sciarra, led the schismatic party, was raised to the cardinalate by John XXII, with the title of S. Angelo. He was universally esteemed, especially by men of letters. He wrote the

"Lives of the Roman Pontiffs from St. Peter to Boniface VIII". At his death, 1348, his intimate friend, Petrarch, wrote the beautiful sonnet, "Rotta è l'alta Colonna". At the beginning of the Great Schism Urban created two Colonna cardinals, Agapito and Stefano, but they both died shortly after. Then followed Odo Colonna, later Pope Martin V (q. v.), who, in 1430 bestowed the purple upon his youthful nephew Prospero. The latter, becoming involved in the rebellion of his family against Eugene IV, was deprived of his benefices and sentenced to perpetual exile, but was reinstated by Nicholas V, and died in 1463, lauded by the Humanists as a Mæcenas of arts and letters. In the heated conclave of 1458 it was Prospero Colonna who decided the election of Piccolomini in the famous words, "I also vote for the Cardinal of Siena, and make him pope".

Prospero's nephew, Giovanni, was the representative of his family during the pontificates of Sixtus IV, Innocent VIII, Alexander VI, Pius III, and Julius II. Created Cardinal-Deacon of S. Maria in Aquiro in his twenty-fourth year by Pope Sixtus, he was committed to the Castle of Sant' Angelo two years later, when that pontiff and the Colonna began their bitter feud. After an imprisonment of over a year, he regained his liberty. One cannot feel much sympathy with him in his misfortunes during the pontificate of the Borgia pope, who could not have been elected without his vote. When Alexander VI began his war of extermination against the Roman barons, Colonna, more fortunate than Cardinal Orsini, made his escape and did not return to Rome till the pope had passed away. He himself died in 1508. Although Julius II restored to the Colonna their possessions and dignities, and by the *Pax Romana*, 1511, put an end to the hereditary feuds of the rival houses, yet, their old-time position of quasi-independence was never again attained. The two secular heads of the family, Prospero and Fabrizio, acquired great fame as generals in the armies of the Church and of Charles V. Fabrizio's daughter was the highly gifted Vittoria (q. v.). Prospero's nephew, Pompeo, was chosen to represent the family in the Church. He consented very reluctantly, for the sword was more congenial to him than the Breviary. He received a large accumulation of benefices, was created cardinal by Leo X, in 1517, and vice-chancellor by Clement VII. In return, he took the side of the emperor in his quarrel with the pope. On 20 Sept., 1526, took place the onslaught on Rome, and the desecration of St. Peter's and the Vatican, which covers his memory with eternal infamy. He also joined with Constable Bourbon in the capture of Rome, May, 1527; but, horrified by the brutality of the sack of his native city, he did his best to shield his unfortunate countrymen within the walls of the Cancelleria. The indulgent Clement absolved and reinstated him three years later. He became viceroy of Naples and died in 1532. The good name of the house was redeemed by the next Colonnese cardinal, Marcantonio, who was carefully trained in piety and learning by the Franciscan friar, Felice Peretti, later Sixtus V. He was created Cardinal-Priest of SS. XII Apostoli, in 1565, closely imitated St. Charles Borromeo in establishing seminaries and restoring discipline, was librarian of the Vatican, fostered learning, and was extremely charitable to the poor. Before his death, in 1597, his kinsman Ascanio Colonna was elevated to the purple by Sixtus V in 1586. Although he owed his cardinalate largely to the favour of Philip II, yet he did not permit his gratitude to extinguish his patriotism. It was his defection from the Spanish ranks at a critical moment during the conclave of 1592 that defeated the aspirations of Philip's candidate, Cardinal Sanseverina and led to the election of Clement VIII. In his well-known exclamation: "I see that God will not have Sanseverina, neither will Ascanio Colonna", breathes the haughty spirit of his race. He

died in 1608, making the Lateran his heir. Succeeding cardinals of the house of Colonna were Girolamo, created by Urban VIII in 1628, d. 1666; Carlo, created by Clement XI in 1706, d. 1739; Prospero, created by Clement XII in 1739, d. 1743; Girolamo, created by Benedict XIV 1743, d. 1763; Prospero, of the Sciarra branch, created simultaneously with his kinsman in 1743, d. Prefect of the Propaganda in 1765; finally, Marcantonio, created by Clement XIII in 1759, d. in 1803. Though all were conspicuous for learning and piety and for filling high offices at the Roman court or in the most important dioceses of Italy, they need only a passing notice. The most illustrious lay prince of the Colonna was Marcantonio, who at the great sea-fight of Lepanto, 7 Oct., 1571, commanded the papal galleys and on his return to Rome was awarded a memorable triumph. To cement the friendship between the houses of Colonna and Orsini, Sixtus V married their chiefs to his nieces and ordained that they and their descendants should enjoy the dignity of Assistant Princes at the Pontifical Throne.

JAMES F. LOUGHLIN.

Colonna, EGIDIO (ÆGIDIUS A. COLUMNA), a Scholastic philosopher and theologian, b. about the middle of the thirteenth century, probably 1247, in Rome; hence the name ÆGIDIUS ROMANUS, or GILES OF ROME, by which he is generally known; d. at Avignon, 22 Dec., 1316. Having entered the Order of the Hermits of St. Augustine at Rome, he was sent to Paris for his philosophical and theological studies, and became there the disciple of Thomas Aquinas. Egidio Colonna was the first Augustinian appointed to teach in the University of Paris, and his deep learning earned for him the title of *Doctor fundatissimus*. In 1281, at the Thirty-sixth Council of Paris, in which several differences between bishops and mendicant orders were arranged, he sided with the bishops against the regulars. Referring to this, a contemporary philosopher, Godfrey of Fontaines, mentioned him as the most renowned theologian of the whole city (qui modo melior de totâ villâ in omnibus reputatur). King Philip III entrusted to him the education of his son, who later, in 1285, ascended the throne as Philip IV. When the new king, after his coronation at Reims, entered Paris, Egidio gave the address of welcome in the name of the university, insisting on justice as the most important virtue of a king. (For the text, see Ossinger, in work cited below.) Some time before this several of his opinions had been found reprehensible by Archbishop Etienne Tempier of Paris, and in 1285 Pope Honorius IV asked him for a public retraction. This, however, was far from lessening his reputation, for in 1287 a decree of the general chapter of the Augustinians held in Florence, after remarking that Egidio's doctrine "shines throughout the whole world" (venerabilis magistri nostri Ægidii doctrina mundum universum illustrat), commanded all members of the order to accept and defend all his opinions, written or to be written. After filling several important positions in his order he was elected superior general in 1292. Three years later Pope Boniface VIII appointed him Archbishop of Bourges, France, although Jean de Savigny had already been designated for this see by Pope Celestine V. The French nobility protested on the ground that Colonna was an Italian, but his appointment was maintained and approved by the king. He was present at the Council of Vienne (1311-1312) in which the Order of Knights Templars was suppressed.

The writings of Egidio Colonna cover the fields of

philosophy and theology. There is no complete edition of his works, but several treatises have been published separately. In Holy Scripture and theology he wrote commentaries on the "Hexameron", the "Canticle of Canticles", and the "Epistle to the Romans"; several "Opuscula" and "Quodlibeta", various treatises, and especially commentaries on Peter the Lombard's "Four Books of Sentences". In philosophy, besides commentaries on almost all the works of Aristotle, he wrote several special treatises. But his main work is the treatise "De regimine principum", written for, and dedicated to, his pupil, Philip IV. It passed through many editions (the first, Augsburg, 1473) and was translated into several languages. The Roman edition of 1607 contains a life of Egidio. The work is divided into three books: the first treats of the individual conduct of the king, the nature of his true happiness, the choice and acquisition of virtues, and the ruling of passions; the second deals with family life and the relations with wife, children, and servants; the third considers the State, its origin, and the proper mode of governing in times of peace and war. Egidio's pedagogical writings have been published in German by Kaufmann (Freiburg, 1904).

The attitude of Egidio Colonna in the difficulties between Pope Boniface VIII and King Philip IV was long believed to have been favourable to the king. But the contrary is now certain, since it has been proved that he is the author of the treatise "De potestate ecclesiasticâ", in which the rights of the pope are vindicated. The similarity between this treatise and the Bull "Unam Sanctam" seems to support the view taken by some writers that Egidio was the author of the Bull. He had already taken an active part in ending the discussions and controversies concerning the validity of Boniface's election to the papacy. In his treatise "De renunciatione Papæ sive Apologia pro Bonifacio VIII" he shows the legitimacy of Celestine's resignation and consequently of Boniface's election. In philosophy and theology he generally follows the opinions of his master, St. Thomas, whose works he quotes as *scripta communia*. The "Defensorium seu Correctorium corruptorii librorum Sancti Thomæ Aquinatis" against the Franciscan William de la Mare of Oxford is by some attributed to Egidio; but this remains uncertain. Nevertheless, on many points he holds independent views and abandons the Thomistic doctrine to follow the opinions of St. Augustine and of the Franciscan School. He even errs in asserting that, before the fall, grace had not been given to Adam, an opinion which he wrongly attributes to St. Augustine. After the decree of the general chapter of 1287, mentioned above, the opinions of Egidio Colonna were generally accepted in the Augustinian Order. He thus became the founder of the Ægidian School. Among the most prominent representatives of this school must be mentioned Giacomo Capoccio of Viterbo (d. 1307) and Augustinus Triumphus (d. 1328), both contemporaries of Egidio, and also students and professors in the University of Paris; Prosper of Reggio, Albert of Padua, Gerard of Siena, Henry of Frimar, Thomas of Strasburg—all in the first half of the fourteenth century. For some time after this other opinions prevailed in the Augustinian Order. But as late as the seventeenth century should be mentioned Raffaello Bonherba (d. 1681) who wrote "Disputationes totius philosophiæ . . . in quibus omnes philosophiæ inter D. Thomam et Scotum controversiæ principaliter cum doctrinâ nostri Ægidii Columnæ illustrantur" (Palermo, 1645, 1671); and Augustino Arpe (d. 1704) who wrote "Summa totius theologiæ Ægidii Columnæ" (Bologna, 1701, and Genoa, 1704). Federico Nicolò Gavardi (d. 1715), the most important interpreter of Colonna, composed "Theologia exantiquata

iuxta orthodoxam S. P. Augustini doctrinam ab Ægidio Columnā doctore fundatissimo expositam . . . " (6 vols. fol., Naples and Rome, 1683-1696); this work was abridged by Anselm Hörmannsdorfer in his "He-catombe theologica" (Presburg, 1737). Benignus Sichrowsky (d. 1737) wrote also "Philosophia vindicata ab erroribus philosophorum gentilium iuxta doctrinam S. Augustini et B. Ægidii Columnæ" (Nuremberg, 1701).

C. A. DUBRAY.

Colonna, GIOVANNI PAOLO, b. at Bologna, 1637; d. in the same city, 28 November, 1695. After studying under Agostino Fillipucci in his native city, Antonio Abbatini and Orazio Benevoli in Rome, Colonna became organist at the church of S. Apollinaris in the latter city. In 1659 he accepted the post of choir-master at the church of S. Petronio in Bologna. He not only was a charter member of the Accademia Filarmónica but founded a school of his own which has produced distinguished musicians, among them Giovanni Maria Buononcini. Colonna was one of the most noted church composers of the seventeenth century and has left a large number of works (masses, psalms, motets, litanies, antiphons, requiems, lamentations) for from one to eight voices with either organ or orchestra accompaniment. These compositions are but seldom performed at present, both on account of their not having the form or the spirit of the great period of church music, the fifteenth and sixteenth centuries, and because of the elaborate apparatus required for their performance.

JOSEPH ÖTTEN.

Colonna, VITTORIA, Italian poet, b. at Marino, 1490; d. at Rome, February 25, 1547. She was the daughter of Fabrizio Colonna, lord of various Roman fiefs and grand constable of Naples. Her mother, Agnese da Montefeltro, was a daughter of Federigo da Montefeltro, first Duke of Urbino. In 1509 Vittoria was married to Ferrante Francesco d'Avalos, Marquis of Pescara, a Neapolitan nobleman of Spanish origin, who was one of the chief generals of the Emperor Charles V. Pescara's military career culminated in the victory of Pavia (24 February, 1525), after which he became involved in Morone's conspiracy for the liberation of Italy, and was tempted from his allegiance to the emperor by the offer of the crown of Naples. Vittoria earnestly dissuaded him from this scheme, declaring (as her cousin, Cardinal Pompeo Colonna, tells us) that she "preferred to die the wife of a most brave marquis and a most upright general, than to live the consort of a king dishonoured with any stain of infamy". Pescara died in the following November, leaving his young heir and cousin, Alfonso d'Avalos, Marchese del Vasto, under Vittoria's care.

Vittoria henceforth devoted herself entirely to religion and literature. We find her usually in various monasteries, at Rome, Viterbo, and elsewhere, living in conventual simplicity, the centre of all that was noblest in the intellectual and spiritual life of the times. She had a peculiar genius for friendship, and the wonderful spiritual tie that united her to Michelangelo Buonarroti made the romance of that great

artist's life. Pietro Bembo, the literary dictator of the age, was among her most fervent admirers. She was closely in touch with Ghiberti, Contarini, Giovanni Morone, and all that group of men and women who were working for the reformation of the Church from within. For a while she had been drawn into the controversy concerning justification by faith, but was kept within the limits of orthodoxy by the influence of the beloved friend of her last years, Cardinal Reginald Pole, to whom she declared she owed her salvation. Her last wish was to be buried among the nuns of S. Anna de' Funari at Rome; but it is doubtful whether her body ultimately rested there, or was removed to the side of her husband at San Domenico in Naples.

Vittoria is undoubtedly greater as a personality than as a poet. Her earlier "Rime", which are mainly devoted to the glorification of her husband, are somewhat monotonous. Her later sonnets are almost exclusively religious, and strike a deeper note. A longer poem in terza-rima, the "Trionfo di Cristo", shows the influence of Dante and Savonarola, as well as that of Petrarch. Her latest and best biographer, Mrs. Jerrold, to whom we are indebted for a number of beautiful and faithful translations of Vittoria's poetry, has drawn a suggestive analogy between it and the work of Christina Rossetti. Many of Vittoria's letters, and a prose meditation upon the Passion of Christ, have also been preserved.

EDMUND G. GARDNER.

Colonnade, a number of columns symmetrically arranged in one or more rows. It is termed monostyle when of one row, polystyle when of many. If surrounding a building or court, it is called a peristyle; when projecting beyond the line of the building a portico. Sometimes it supports a building, sometimes a roof only. For ecclesiastical architecture the most famous specimen is the colonnade of St. Peter's, erected 1665-67 by Bernini, with 284 columns and 162 statues of saints on balustrades (see *THE CATHOLIC ENCYCLOPEDIA*, II, s. v. BERNINI).

THOMAS H. POOLE.

Colophon, a titular see of Asia Minor. It was one of the twelve Ionian cities, between Lebedos (ruins near Hypsil-Hissar) and Ephesus (Aya-Solouk). In Greek antiquity two sons of Codrus, King of Athens, established a colony there. It was the birthplace of the philosopher Xenophanes and the poet Minnermus. It was destroyed by Lysimachus, one of the successors of Alexander. Notium served as the port, and in the neighbourhood was the village of Clarus, with its famous temple and oracle of Apollo Clarius,

VITTORIA COLONNA,
(Colonna Gallery, Rome)

where Calchas vied with Mopsus in divinatory science. The cavalry of Colophon was renowned. Its pine-trees supplied a rosin or colophony highly valued for the strings of musical instruments. In Roman times Colophon lost its importance; the name was transferred to the site of Notium, and the latter name disappeared between the Peloponnesian War and the time of Cicero. The "Notitiæ episcopatum" mentions Colophon or Colophone, as late as the twelfth or thirteenth century, as a suffragan of Ephesus. Lequien (I, 723) gives the names of only four bishops: St. Sosthenes (I Cor., i, 1) and St. Tychicus (Tit., iii, 12) are merely legendary; Euthalius was present at the Council of Ephesus in 431, and Alexander was alive in 451. The ruins of the city are at the Castro of Ghiaour-Keui, an insignificant village in the vilayet of Smyrna, caza of Koush-Adasi.

S. PÉTRIDÈS.

Colorado, the thirty-fifth, in point of admission, of the United States of America. It lies between the 37th and 41st degrees of N. latitude and the 102nd and 109th degrees of W. longitude, the meridian lines making its shape a parallelogram as exact as the curvature of the earth will allow.

When its original territorial limits were discussed it was suggested that the crest of the Rocky Mountains was a natural boundary, and it was on the reply of Colonel William Gilpin, who became its first governor, that railroads and political unity had superseded natural boundaries, that it was placed squarely across the divide and so has its mountain centre with a slope to either ocean. After the Cliff-dwellers, its Indian tribes were the Utes and Arapahoes. It became part of French and Spanish America, and was covered by the Louisiana Purchase (1803), the Texas cession (1850), and the cession from Mexico by the treaty of Guadalupe-Hidalgo (1848). Its area is 103,900 square miles. The third of the State east of Denver is a part of the great plains, level and arid. The altitude at the base of the State capitol is exactly one mile; going east, it falls to about 4000 feet at the State line. Through the centre, north and south, runs the main Rocky Mountain range containing the highest peaks of these mountains, thirty-two of which exceed 14,000 feet and several so nearly the same height that it is a matter of dispute as to which is the highest, probably Mount Massive, 14,498 feet. On their western slope they form a plateau country. Between encircling ranges are natural parks (South, Middle, North, San Luis, Estes) at an altitude of about 9000 feet, which are notable stock-raising lands. The Rio Grande, Arkansas, and Platte Rivers all rise in this State, flowing south and east, and the Great Colorado River flowing west has its headwaters here. The Grand Cañon of the Arkansas, Mount of the Holy Cross, and the Garden of the Gods, are the principal scenic attractions.

Climate.—The climate is exceptionally dry, healthful, and invigorating. The summers are cool and the winters moderate. There is an average of 181 clear days out of 365. Manitou, Glenwood, and Sulphur Springs are noted sanatoria. The annual rainfall is low, but so widely variant in localities that no intelligible average can be stated. Extremes are 12 and 29 inches.

IV.—9

Population.—By the census of 1900 the population was 539,700: whites, 529,046; negroes, 8570; Indians, 1437; Chinese, 599. The estimate by the State Board of Health for 1906 was 615,570. The greatest number of immigrants are from States on the same parallel. There are many native-born citizens of Spanish descent in the southern counties. Representatives from every country in Europe are included among the population, but none localized in colonies to any extent; 88 per cent of the population are native-born; 4 per cent are illiterate. Denver, the State capital and largest city, has a population approximating 200,000. Pueblo, Colorado Springs, Leadville, Trinidad, and Greeley are the larger cities.

Resources.—Mining and agriculture are the principal industries. The manufacture of steel has been started, and commerce is incident to all other industries, but the mine and ranch are the exploited features of the commonwealth. In both gold and silver, Colorado is the largest producer of any of the States. In 1906, gold to the value of \$23,506,069, and 13,381,575 ounces of silver were mined. There was also a heavy production of lead, zinc, and iron. Coal underlies a very large area, much larger than in Pennsylvania; the output for 1906 being 11,240,078 tons bituminous and 68,343 tons anthracite. Cripple Creek, Ouray, and Leadville are the most active mining camps, but the mineral belt covers every mountain county from Routt in the north-west corner to the New Mexico line. The Georgetown district claims to produce the highest grade of silver ore mined in the United States.

The average wheat yield is about twenty-one bushels to the acre. East of the foothills is a deep loam overlying a gravel subsoil, and wherever water can be got the land is very productive. The western slope, including the valleys between the mountain ranges, has an even richer soil, especially adapted to fruit production. All the grains and fruits of the temperate zone are produced, but those crops which seem best adapted to local conditions are wheat, apples, potatoes, cantaloupes, and the sugar-beet. The value of the output of agriculture, dairy, and poultry for 1906 was \$72,600,000; fruit, \$7,000,000. Until recently no land not under ditch was considered safe to farm, the annual rainfall not ensuring a crop. But such land is now cultivated under scientific methods called "dry farming", so that the value of this land in Eastern Colorado has doubled within the last three years. Nevertheless irrigation is the specific incident of Colorado farming. It has been studied to secure the most economic results, and ultimately no water will leave the State, all being caught and stored in reservoirs. In 1900 there were 7374 miles of main ditches covering by laterals 390 acres to the mile. The estimated value of the manufactures, outside of smelting, for 1906 is \$15,000,000. Six railroad lines enter the State from the east and two cross its western boundary. Every town of any size in the State has railroad connexion. The railway mileage in 1905 was 5081.

Education.—Public education with compulsory attendance is provided for the whole State, with a high school in every large town. The university, located at Boulder, is supported by an annual two-fifths of a mill State tax which gives it an ample foundation. It gives law, medical, engineering, and academic courses. In 1906 it had 840 students, besides 525 in the preparatory school. There are also the University of Denver (Methodist), Colorado College at Colorado Springs (secular), the Jesuit College of the Sacred Heart, and the Loretto Heights Academy at Denver. The State Normal School is at Greeley. Other schools are the Agricultural College at Fort Collins and the School of Mines at Golden, with special State institutions for the deaf and blind. The principal school support comes from the ownership of the 16th and 36th sections of

SEAL OF COLORADO

each non-mineral township, the value of which is beyond accurate approximation, besides school district ownership of over \$9,000,000. The total number of pupils enrolled in 1906 was 144,007. The teachers numbered 4600 and the schoolhouses 2010. The expenditure for that year was \$4,486,226.78. The pupils attending parochial schools number 5905 students; in Catholic colleges, 261; girls in academies, 595; total youth under Catholic care 7574. There is a total of 537 sisters in charge of hospitals and schools.

History.—Coronado (q. v.) probably crossed the south-east corner of the State in his celebrated expedition of 1541-2, and Francisco Escalante explored its southern border in 1776. The first immigration was Spanish from New Mexico, at Pueblo, Trinidad, and other places south of the Arkansas River. In 1806 Zebulon M. Pike crossed the plains on an official exploration and gave his name to Pike's Peak. Long's expedition was in 1819. John C. Fremont and Kit Carson explored the mountain passes in the forties. In 1858 gold was discovered in Cherry Creek, which led to the Pike's Peak excitement and immigration of 1859. That year is the date of the first real settlement of the country by English-speaking people. Colorado was organized as a Territory in 1861, and admitted as a State in 1876, with a constitution formed in that year. This explains its sentimental title of "The Centennial State". The State motto is *Nil Sine Numine*.

Colorado coming in as an organized territory just as the Civil War broke out, the question of loyalty or secession agitated the population, but the Union men were in overwhelming majority. The Territory contributed two regiments to the Union Army. Since 1876 the State has generally gone Republican, but being so large a producer of silver it supported the Democratic ticket so long as the double standard of money remained an issue. There have been two or three occasions since admission when the State has paid the price for encouraging innovations parading themselves as reforms. In 1894 Governor Davis H. Waite, elected as a Populist but really a Socialist, ordered out the State troops in opposition to the armed police of Denver; cannon were trained on the City Hall and only his yielding at the last moment prevented what threatened to be a serious civil revolution. Under his administration the militia were ordered out in the interest of the striking miners at Cripple Creek, and later in 1904 they were ordered to the same district under Governor Peabody in support of the mine-owners. Drastic deportations and vigilance-committee violence were committed by the State authorities, excusable, as they alleged, owing to the extreme conditions. This led to an exciting election in the fall of that year, in which Alva Adams, the Democratic candidate for governor, was undoubtedly elected and received his certificate, but was allowed to hold office only until a recount by the legislature was decided against him and Jesse McDonald, the Republican candidate for lieutenant-governor, was given the seat.

Woman suffrage was adopted by popular vote in 1893. It has since been in full operation, but its results for good have been *nil*. Only during the first few sessions were one, two, and, at most, three women elected to the legislature out of its 100 members. No woman has been elected to any State office except to that of superintendent of public instruction. Instead of being represented in conventions by nearly half, women delegates now are scarcely seen in such bodies. As a political factor they have not made either of the great parties stronger or weaker.

Religious Factors.—The State constitutes one diocese, with its see at Denver. Citizens of Spanish descent, about 20,000, are practically all Catholics, and there are 8,000 to 10,000 Catholic Austrians and Poles at Trinidad, Denver, and Pueblo. The Catholic

population is estimated (1908) at about 100,000. Among the Catholics prominent in the development of Colorado may be mentioned Gen. Bela M. Hughes, the Democratic candidate for governor at the first State election; Casimiro Barela and James T. Smith, both in the legislature or executive departments of the State Government for over thirty years; Peter W. Breene and Francis Carney, who held the lieutenant-governorship; Senator H. A. W. Tabor, Hon. Bernard J. O'Connell of Georgetown, Martin Currihan, and John K. Mullen of Denver. John H. Reddin, an attorney of Denver, was the organizer of the Knights of Columbus in this State. The Catholic Church numerically exceeds any one of the Protestant denominations. The next in numbers is the Methodist, and then comes the Presbyterian. Although the State adjoins Utah there are very few Mormons.

Absolute freedom of worship is guaranteed by the Constitution, and there is apparently no disposition to infringe this law. In no State is there better feeling between the Church and non-Catholic denominations. The common law of Sunday prevails with no specific statutory change. In the cities the matter is left to local ordinance. Stores in all towns large and small are generally closed. In nearly all the cities liquor is sold under licence. In Colorado Springs, Boulder, and Greeley it is prohibited. In 1907 a local option law was passed allowing any city, ward, or precinct to prohibit all sales of liquor except by druggists on prescription. Little or no attempt is made in the large cities and the mountain towns to enforce the Sunday liquor law; but the reverse is the rule in most of the smaller towns in Eastern Colorado.

Legal Oaths.—A statutory form of oath is prescribed: the affiant shall with his or her hand uplifted swear "by the ever living God". It has been unchanged since the first revision of the statutes. Any person having conscientious scruples against taking an oath is allowed to solemnly affirm. Interrupting religious meetings by profane swearing is made a misdemeanour by statute. The use of profane language is everywhere prohibited by city or town ordinance.

The State Penitentiary is at Cañon City. Each county has its jail for confinement of persons held for trial or convicted of misdemeanours. There is a State School of Reform for boys and another for girls. The latter was created by an Act providing substantially that all its officers must be women, and has been as conspicuous for mismanagement as the school for boys has been for successful results. The legislature in 1907 created a Juvenile Court for the care of neglected children.

Charitable Institutions and Bequests.—Charitable institutions of any sort may be incorporated under the Acts relating to corporations not organized for profit. Barring the question whether the old English statutes of mortmain would be held in force under a Colorado statute adopting, with limitations, the common law and Acts of the British Parliament prior to the fourth year of James I (1607), which point has never been decided in this State, there is no limitation on the power of such institutions to take property by deed or will and no limitations on the power of a testator to bequeath his property to them, except that neither husband nor wife can by will deprive the survivor of one half of his or her estate.

Church Property Exemptions.—Any church organization may incorporate under provisions relating to religious societies (Rev. Stats. of 1908, §§ 1018 to 1033); but title to Catholic Church property as a rule is held by the bishop and the parishes have ordinarily no need to organize under these laws. Churches, schools, hospitals, and cemeteries not organized for profit are exempt from taxation. Public aid to any sectarian purpose is prohibited by the Constitution. Clergymen are not in terms exempt from jury duty,

but are always excused as a matter of custom. They are specifically exempt from military duty. Each branch of the legislature selects a chaplain who opens sessions with prayer. Christmas is a legal holiday; Good Friday is not. Confessions made to any clergyman or priest are protected against disclosure.

Marriage and Divorce.—Marriage is a civil contract but may be performed by a clergyman of any denomination. The law of divorce is extremely loose. It may be granted for any of the usual statutory reasons, but the greatest abuse of the law is under the phrase called the sentimental cruelty clause, where the statute says it may be granted where either party has been guilty of acts of cruelty and that "such acts of cruelty may consist as well in the infliction of mental suffering as of bodily violence". Under this clause any discontented man or wife can frame a complaint which will state a case for divorce. The number of divorces has greatly increased since the adoption of woman suffrage. No one thing has done more to strengthen the moral influence of the Catholic Church in this State and command respect and gather converts from the denominations than its firm stand against divorce.

The ratio of deaths by suicide in 1906 was one in every 84, or 1.18 per cent, and the statistics of the State Board of Health do not indicate any notable increase since 1900.

ROBERT S. MORRISON.

Colossæ, a titular see of Phrygia in Asia Minor, suppressed in 1894. Little is known about its history. The later name, Colassæ, is probably the old Phrygian form. Colossæ was at one time the chief city of South-Western Phrygia, lying on the trade-route from Sardis to Celenæ; it produced fine wool, the colour of which was called *colossinus*. The ruin of the city was brought about by the change of road system, the foundation of Laodicea, eleven miles distant, and severe earthquakes. It retained municipal independence, but at the time of Strabo (XII, viii, 4) it was "a small town". It had its own coinage under the empire. St. Paul (probably about 61) addressed an epistle from Rome to the inhabitants of Colossæ, who had perhaps been evangelized by him. Colossæ was the home of his companions, Archippus and Philemon, of his very dear sister, Appia, and of Onesimus and Epaphras, who probably founded the Church of Colossæ. The ruins of the city are visible near Chonæ, in the vilayet of Smyrna, on the left bank of the Lycus (Tehuruk Su); they include the acropolis, an aqueduct, theatre, etc. There is also a curious petrifying river, the Ak Su. Under the Byzantine Empire the territory of Colossæ rose again to importance, and a strong fortress was built (perhaps by Justinian) at Chonæ, three miles south-south-east of Colossæ. The centre of population long remained at the old site, but about the eighth century it was moved to a shelf of land beneath the castle. Chonæ (vulgar Greek Khonés, Turk. Honas) is still a little village, twelve miles east of Denizli; it has been rendered famous by its miraculous church of St. Michael. Colossæ was a suffragan of Laodicea in Phrygia Pacatiana. Besides St. Epaphras, two bishops are mentioned: Epiphanius in 451 and Cosmas in 692; Archippus and Philemon, especially the latter, are very doubtful. Chonæ was made an archbishopric about 858-60, and in some later "Notitiæ episcopatum" appears as a metropolis without suffragans. Many titulars are known: Dositheus at Nicæa, in 787; Samuel, a friend of Photius, who sent him to Rome, was present at the Council of Constantinople in 866; Constantine, in 1028; Nicholas, in 1066 and 1080; in 1143 Nicetas, the godfather of the historian Nicetas Acominatus, who was born at Chonæ, as was his brother Michael, the famous Metropolitan of Athens.

S. PÉTRIDÈS.

Colossians, EPISTLE TO THE, is one of the four Captivity Epistles written by St. Paul during his first imprisonment in Rome—the other three being Ephesians, Philemon, and Philippians. That they were written in prison is stated in the Epistles themselves. The writer mentions his "chain" and his "bonds" (Eph., vi, 20; Coloss., iv, 3, 18; Philip., i, 7, 13, 17); he names his fellow prisoners (Coloss., iv, 10; Philem., 23); he calls himself a prisoner (Eph., iii, 1; iv, 1; Philem., 9): "Paul an old man, and now a prisoner". It was supposed by some that these letters were written during the two years' captivity at Cæsarea; but it is now generally acknowledged (by all who admit their authenticity) that they were written during the years immediately following, in Rome, during the time that "Paul was suffered to dwell by himself, with a soldier that kept him. . . . And he remained two whole years in his own hired lodging; and he received all that came in to him" (Acts, xxviii, 16-30). As St. Paul had appealed to the emperor, he was handed over, to await his trial, to the prefect of the Prætorian Guard, who was at that time probably the famous Burrhus, the friend of Seneca. He allowed the Apostle to live near the imperial palace in what was known as *custodia militaris*, his right wrist being connected day and night, by means of a chain, to the left arm of a soldier, who was relieved at regular intervals (Conybeare, Howson, Lewin). It was in such circumstances that these Epistles were written, some time between A. D. 61 and 63. It cannot be objected that there is no mention in them of the earthquake spoken of by Tacitus and Eusebius as having destroyed Laodicea; for there is no evidence that its effects reached Colossæ, and Eusebius fixes the date later than these letters. Colossians, Ephesians, and Philemon were written and despatched at one and the same time, while Philippians was composed at a somewhat different period of the captivity. The first three are all very closely connected. Tychicus is the messenger in Eph., vi, 21 and Coloss., iv, 7, 8, 9. In the latter he is accompanied by Onesimus, in whose favour the Epistle to Philemon was written. In both Colossians and Philemon greetings are sent from Aristarchus, Mark, Epaphras, Luke, and Demas, and there is the closest literary affinity between Ephesians and Colossians (see AUTHENTICITY OF THE EPISTLE below).

READERS ADDRESSED.—Three cities are mentioned in Colossians, Colossæ (i, 2), Laodicea, and Hierapolis (iv, 13.) These were situated about 120 miles east from Ephesus in Phrygia, in Western Asia Minor, Colossæ and Laodicea being on the banks of the Lycus, a tributary of the Meander. All three were within two or three hours' walk from one another. Sir William Ramsay has shown that these towns lay altogether outside the routes followed by St. Paul in his missionary journeys; and it is inferred from Coloss., i, 4, 6, 7, 8 and ii, 1, that they were never visited by the Apostle himself. The great majority of the Colossian Christians appear to have been Gentile converts of Greek and Phrygian extraction (i, 26, 27; ii, 13), though it is probable that there was a small proportion of Jews living amongst them, as it is known that there were many scattered over the surrounding districts (Josephus, Ant., XII, iii, 4, and Lightfoot).

WHY WRITTEN.—Colossians was written as a warning against certain false teachers, about whom St. Paul had probably heard from Epaphras, his "fellow-prisoner" and the founder of the Church of the Colossians. The most diverse opinions have been held regarding these seducers. They were called philosophers by Tertullian, Epicureans by St. Clement of Alexandria,

Jews by Eichhorn, heathen followers of Pythagoras by Grotius. They have also been called Chaldean magicians, Judaizing Christians, Essenes, Ebionites, Cabbalists, Gnostics, or varying combinations of all these (see Jacquier, *Histoire*, I, 316; Cornely, *Introduction*, III, 514). The main outlines of their errors are, however, stated with sufficient clearness in the Epistle, which contains a two fold refutation of them: first, by a direct statement of the true doctrine on Christ, by which the very foundations of their erroneous teaching are shown to be baseless; and secondly, by a direct polemic in which is laid bare the hollowness of what they put forth under the specious name of "philosophy". Here, philosophy in general is not condemned, but only the philosophy of those false teachers (Hort, *Jud. Chr.*, 118). This was not "according to Christ", but according to the "tradition of men", and was in keeping only with the very alphabet of worldly speculation (*κατὰ τὰ στοιχεῖα τοῦ κόσμου*—see Gal., iv, 3). Josephus and Philo apply the word "philosophy" to Jewish teaching, and there can be no doubt that it was applied so in Coloss., ii; some of its details are given in 16-23: (1) The false teachers wished to introduce the observance of Sabbaths, new moons, and other such days. (2) They forbade the eating and drinking and even the very tasting and touching of certain things. (3) Under the false pretence of humility they inculcated the worship (*θρησκεία*) of angels, whom they regarded as equal or superior to Christ. The best modern commentators, Catholic and non-Catholic, agree with St. Jerome that all these errors were of Jewish origin. The Essenes held the most exaggerated ideas on Sabbath observance and external purism, and they appear to have employed the names of the angels for magical purposes (Bel. *Jud.*, II, vii, 2-13; Lightfoot, *Col. and Dissertations*). Many scholars are of opinion that the "elements of this world" (*στοιχεῖα τοῦ κόσμου*) mean elemental spirits; as, at that time, many Jews held that all material things had special angels. In the Book of Enoch and the Book of Jubilees we read of angels of the stars, seasons, months, days of the year, heat, cold, frost, hail, winds, clouds, etc. Abbott (Eph. and Coloss., p. 248) says that "the term properly used of the elements ruled by these spirits might readily be applied to the spirits themselves, especially as there was no other convenient term". At any rate, angels play an important part in most of early apocryphal books of the Jews, e. g. in the two books just mentioned, the Book of the Secrets of Enoch, the Testament of the Twelve Patriarchs, etc.

It may be noted in passing, that the words of the Epistle against the superstitious worship of angels cannot be taken as condemning the Catholic invocation of angels. Dr. T. K. Abbott, a candid non-Catholic scholar, has a very pertinent passage which bears on this point (Eph. and Coloss., p. 268): "Zonaras . . . says there was an ancient heresy of some who said that we should not call on Christ for help or access to God, but on the angels. . . . This latter view, however, would place Christ high above the angels, and therefore cannot have been that of Colossians, who required to be taught the superiority of Christ." The objection sometimes brought from a passage of Theodoret, on the Council of Laodicea, is clearly and completely refuted by Estius (Comm. in Coloss., II, 18). Another difficulty may be mentioned in connexion with this portion of the Epistle. The statement that the vain philosophy was in accordance with "the tradition of men" is not any disparagement of Apostolic traditions, of which St. Paul himself speaks as follows: "Therefore, brethren, stand fast; and hold the traditions which you have learned, whether by word or by our Epistle" (II Thess., ii, 14). "Now I praise you, brethren, that in all things you are mindful of me: and keep my ordinances as I have delivered them to you" (I Cor., xi, 2.—See also II

Thess., iii, 6; I Cor., vii, 17; xi, 23; xiv, 33; II Cor., i, 18; Gal., i, 8; Coloss., ii, 6, 7; II Tim., i, 13, 14; ii, 2; iii, 14; II John, i, 12; III John, 13). Finally, the very last verse, dealing with the errors (ii, 23), is considered one of the most difficult passages in the whole of the Scriptures. "Which things have indeed a show of wisdom in superstition and humility, and not sparing the body; not in any honour to the filling of the flesh." The last words of this verse have given rise to a multitude of the most conflicting interpretations. They have been taken as a condemnation of bodily mortification, and as an exhortation to it. Modern commentators devote much space to an enumeration of the many opinions and to an exhaustive study of these words without any satisfactory result. There can be little doubt that the opinion of Hort, Haupt, and Peake (Exp. Greek Test., 535) is the right one, viz. that the correct reading of this verse became irrevocably lost, in transcription, in very early times.

CONTENTS.—*First Part* (i, ii).—The Epistle consists of two parts, the first two chapters being dogmatico-polemical, and the last two practical or moral. In the first part the writer shows the absurdity of the errors by a direct statement of the supereminent dignity of Christ, by Whose blood we have the redemption of sins. He is the perfect image of the invisible God, begotten before all creatures. By Him and for Him were created all things in heaven and on earth, visible and invisible, spiritual as well as material, and by Him are all things upheld. He is the Head of the Church and He has reconciled all things through the blood of His cross, and the Colossians "also he hath reconciled . . . through death". St. Paul, as the Apostle of the Gentiles and a prisoner for their sakes, exhorts them to hold fast to Christ in Whom the plenitude of the Godhead dwells, and not to allow themselves under the plausible name of philosophy, to be re-enslaved by Jewish traditions based on the Law of Moses, which was but the shadow of which Christ was the reality and which was abrogated by His coming. They are not to listen to vain and rudimentary speculations of the false teachers, nor are they to suffer themselves to be deluded by a specious plea of humility to put angels or demons on a level with Christ, the creator of all, the master of angels, and conqueror of demons.

Second Part (iii, iv).—In this portion of the Epistle St. Paul draws some practical lessons from the foregoing teaching. He appeals to them that as they are risen with Christ they should mind the things that are above; put off the old man and put on the new. In Christ there is to be neither Gentile nor Jew, barbarian nor Scythian, bond nor free. The duties of wives and husbands, children and servants are next given. He recommends constant prayer and thanksgiving, and tells them to walk with wisdom towards them that are without, letting their speech be always in grace seasoned with salt, that they may know how to answer every man. After the final greeting, the Apostle ends with: "The salutation of Paul with my own hand. Be mindful of my bands. Grace be with you. Amen".

AUTHENTICITY OF THE EPISTLE.—*External Evidence*.—The external evidence for the Epistle is so strong that even Davidson has gone to the extent of saying that "it was unanimously attested in ancient times". Considering its brevity, controversial character, and the local and ephemeral nature of the errors dealt with, it is surprising how frequently it was used by early writers. There are traces of it in some of the Apostolic Fathers, and it was known to the writer of the Epistle of Barnabas, to St. Polycarp, and Theophilus of Antioch. It was quoted by Justin Martyr, Irenæus, Tertullian, Clement of Alexandria, etc. From the Muratorian Fragment and early versions it is evident that it was contained in the very first collections of St. Paul's Epistles. It was used as Scrip-

ture early in the second century, by Marcion, the Valentinians, and by other heretics mentioned in the "Philosophoumena"; and they would not have accepted it had it originated among their opponents after they broke away from the Church.

Internal Evidence.—The Epistle claims to have been written by St. Paul, and the internal evidence shows close connexion with Philippians (von Soden) and Philemon, which are admitted to be genuine letters of St. Paul. Renan concedes that it presents several traits which are opposed to the hypothesis of its being a forgery, and of this number is its connexion with the Epistle to Philemon. It has to be noted, too, that the moral portion of the Epistle, consisting of the last two chapters, has the closest affinity with similar portions of other Epistles, while the whole admirably fits in with the known details of St. Paul's life, and throws considerable light upon them.

OBJECTIONS.—As the historical evidence is much stronger than that for the majority of classical writings, it may be asked why its genuineness was ever called in question. It was never doubted until 1838, when Meyerhoff, followed by others, began to raise objections against it. It will be convenient to deal with these objections under the following four heads: (1) Style; (2) Christology; (3) Errors dealt with; and (4) Similarity to Ephesians.

(1) *Style.*—(a) In general, on comparing the Epistle with Corinthians, Romans, and Galatians, it will be seen that the style, especially in the earlier part, is heavy and complicated. It contains no sudden questions, no crushing dilemmas, no vehement outbursts of sweeping Pauline eloquence. Some of the sentences are long and involved, and though the whole is set forth in a lofty and noble strain, the presentment is uniform, and not quite in the manner, say, of Galatians. Hence it is objected that it could not have been written by St. Paul. But all this can be very naturally explained when it is borne in mind that the Epistle was written after several years of monotonous confinement, when Christianity had taken firm root, when the old type of Judaizer had become extinct and St. Paul's position securely established. His advancing years, also, should be taken into account. It is unfair, moreover, to compare this Epistle, or but parts of it, with *only certain portions* of one or two of the earlier ones. There are long and involved sentences scattered throughout Romans, I and II Corinthians, and Galatians, and the generally admitted Epistle to the Philippians. It has also to be observed that many of the old Pauline expressions and methods of reasoning are most naturally and inextricably interwoven with the very tissue and substance of the Epistle. Ample proofs for all these statements and others throughout this article, are given in works mentioned in the bibliography. Dr. Sanday has voiced the opinion of fair-minded critics when he says that nobody can view the Epistle as a whole, without being impressed by its unbreakable unity and genuine Pauline character.

(b) Many of St. Paul's favourite expressions are wanting. From eight to a dozen words not unfrequently used by him in earlier writings are absent from this short Epistle; and about a dozen connecting particles, which he employs elsewhere, are also missing. One or two instances will show how such objections may readily be solved, with the aid of a concordance. The words *δικαίος*, *σωτηρία*, and *νόμος* are not found in the Epistle. Therefore, etc.—But *δικαίος* is wanting both in I Cor. and I Thess.; *σωτηρία* is not contained either in I Cor. or Gal.; *νόμος* is not found at all in I Thess. or II Cor. In the same way (with regard to connecting particles) *ἀρα*, which is not in this Epistle, is not found either in Philipp. or the first hundred verses of I Cor., a space much longer than the whole of the Epistle; *ἀρα οὖν*, which is frequent in Romans, is not met with in I and II Cor. and

only once in Gal. (See the details of the argument in Abbott and Jacquier.)

(c) It is objected that the Epistle contains many strange words, nowhere else used by St. Paul. That, however, is precisely what we should expect in an Epistle of St. Paul. Every Epistle written by him contains many words employed by him nowhere else. Alford gives a list of thirty-two *ἄπαξ λεγόμενα* in this Epistle, and of these eighteen occur in the second chapter, where the errors are dealt with. The same thing occurs in the earlier Epistles, where the Apostle is speaking of new subjects or peculiar errors, and there *ἄπαξ λεγόμενα* most abound. This Epistle does not show more than the ordinary proportion of new words and in this respect compares favourably with the genuine II Cor. Furthermore, the compound words found in the Epistle have their analogues in similar passages of the authentic Epistle to the Romans. It would be most absurd to bind down to a narrow and set vocabulary a writer of such intellectual vigour and literary versatility as St. Paul. The vocabulary of all writers changes with time, place, and subject-matter. Salmon, Mahaffy, and others have pointed out that similar changes of vocabulary occur in the writings of Xenophon, who was a traveller like St. Paul. Compare the earlier and later letters of Lord Acton (edited by Abbot Gasquet) or of Cardinal Newman.

(2) *Christology.*—It has been objected that the exalted idea of Christ presented in the Epistle could not have been written by St. Paul. In answer to this it will be sufficient to quote the following passage from the genuine Epistle to the Philippians: "Who [Christ Jesus] being in the form of God, thought it not robbery to be equal with God: but emptied himself, taking the form of a servant" (ii, 6, 7, etc. See Romans, i, 3, 4; Gr. text, viii, 3; I Cor., viii, 6; II Cor., viii, 9; Gal., iv, 6, etc.). That the Christology of the Epistle does not differ in any essential point from that of St. Paul's other Epistles is seen from an impartial study of these latter. The subject has been scientifically worked out by Père Rose (Rev. bibl., 1903), M. Lépin (Jésus Messie, 341), Sanday (Criticism of the Fourth Gospel, lect. vii, Oxford, 1905), Knowling (The Testimony of St. Paul to Christ, London, 1905), Lacey (The Historic Christ, London, 1905), etc. Nor can the words (i, 24): *ἰ . . . "fill up those things that are wanting of the sufferings of Christ, in my flesh, for his body, which is the church"*, present any difficulty when it is remembered that he had just said that Christ had reconciled all through the blood of His cross, and that the correct meaning of *ἀναναπληρῶ τὰ ὑστερήματα τῶν θλίψεων τοῦ Χριστοῦ ἐν τῇ σαρκί μου ὑπὲρ τοῦ σώματος αὐτοῦ, ὃ ἐστὶν ἡ ἐκκλησία* is: "I am filling up those Christian sufferings that remain for me to endure for the sake of the Church of Christ", etc. Compare II Cor., i, 5, "For as the sufferings of Christ abound in us" (*τὰ παθήματα τοῦ Χριστοῦ*).

(3) *Errors dealt with.*—The objection under this heading need not detain us long. Some years ago it was frequently asserted that the errors combated in this Epistle were Gnostic errors of the second century, and that the Epistle was therefore written many years after St. Paul's death. But this opinion is now considered, even by the most advanced critics, as exploded and antiquated. Nobody can read the writings of these Gnostics without becoming convinced that terms employed by them were used in a quite different sense from that attached to them in the Epistle. Baur himself appears to have had considerable misgivings on the point. The errors of Judaic Gnosticism, condemned in the Epistle, were quite embryonic when compared with the full-blown Greek Gnosticism of the second century (see Lightfoot, Coloss., etc.).

(4) *Similarity to Ephesians.*—The principal objection to the Epistle is its great similarity to Ephesians.

Davidson stated that out of 155 verses in the latter Epistle 78 were identical with Colossians. De Wette held that Ephesians was but a verbose amplification of Colossians. Baur thought Ephesians the superior letter, and Renan asked how can we suppose the Apostle spending his time in making a bald transcription of himself. But, as Dr. Salmon pointed out, an Apostle might write a circular letter, that is, he might send to different places letters couched in identical words. Many theories have been elaborated to explain these undoubted resemblances. Ewald maintained that the substance was St. Paul's, while the composition was left to Timothy. Weiss and Hitzig had recourse to a theory of interpolations. But the theory that has gained the greatest amount of notoriety is that of H. J. Holtzmann. In his "Kritik der Epheser- und Kolosser-Briefe" (1872) he instituted a most elaborate and exhaustive comparison between the two Epistles. He took a number of passages which seemed to prove the priority of Ephesians and an equal number which were just as conclusive that Colossians was the earlier. The natural conclusion would be that all these similarities were due to the same author writing and dispatching these Epistles at one and the same time. But Holtzmann's explanation was quite different. He supposed that St. Paul wrote a short epistle to the Colossians. From the study of this epistle a later writer composed the Epistle to the Ephesians. Then taking St. Paul's short Epistle to the Colossians he made interpolations and additions to it from his own composition to the Ephesians, and thus built up our present Epistle to the Ephesians, and that with such success that the thing was never suspected until the nineteenth century. This intricate and complicated theory did not gain a single adherent, even amongst the most advanced critical school. Hilgenfeld rejected it in 1873; but its best refutation is von Soden's detailed criticism of 1885. He held that only about eight verses could be regarded as interpolations. Sanday in Smith's "Dict. of the Bible" (I, 625) pointed out that von Soden's lines of demarcation were purely imaginary, and Pfeleiderer showed the inconsistency involved in his rejection of these verses. The results of these criticisms and of further study convinced von Soden, in 1891, that the whole Epistle was genuine, with the exception of a single verse—a verse now generally held to be genuine. In 1894 Jülicher stated that the best solution was to admit the authenticity of both Epistles, though he speaks more hesitatingly in "Encyc. Bibl.", 1889. J. Weiss made an abortive attempt to resuscitate Holtzmann's moribund theory in 1900.

Whilst Holtzmann's facts are incontestable, and only go to prove the community of authorship, his explanation (in which he seems to have lost faith) is rejected by scholars as artificial and unreal. It affords no explanation of many things connected with these Epistles. It does not explain how the early Christians allowed a genuine letter of St. Paul to become completely lost, without trace or mention, for the sake of two forgeries of much later date. Each Epistle, taken by itself, shows such unity and connexion of argument and language, that if the other were not in existence no one would have suspected the slightest degree of interpolation. The parts rejected as interpolations break the unity of argument and flow of ideas. Why should a forger, capable of writing the bulk of both Epistles, take the trouble to interpolate verses and half of his own production from one Epistle into the other, and that in quite a different connexion? Besides, as Principal Salmond observes, there is not a dull sameness of style in both Epistles. Ephesians is round, full, rhythmical; Colossians more pointed, logical, and concise. Ephesians has several references to the O. T.; Colossians only one. There are different new words in each, and there are whole passages in the one and nothing like them found in the other.

The expressions supposed to have come from Colossians occur quite naturally in Ephesians, but by no means in the same context and connexion, and vice versa. As Holtzmann's hypothesis has completely broken down, his study of the Epistles shows such close relationship between them that there can be only one other possible explanation: that both are the genuine writings of one man, and that man was St. Paul. Paley, who wrote his "Horæ Paulinæ" in 1790, set forth this side of the argument long before these objections were thought of; and the fact that he can still be quoted, without qualification, in this connexion, is the best proof of the futility of all such objections. He says (Horæ Paulinæ, London, 1790, 215):—

"Whoever writes two letters or discourses nearly upon the same subject and at no great distance of time, but without any express recollection of what he had written before will find himself repeating some sentences in the very order of the words in which he had already used them; but he will more frequently find himself employing some principal terms, with the order inadvertently changed, or with the order disturbed by the intermixture of other words and phrases expressive of ideas rising up at the time, or in many instances repeating not single words, nor yet whole sentences, but parts and fragments of sentences. Of all these varieties the examination of our two epistles will furnish plain examples, and I should rely on this class of instances more than on the last, because although an impostor might transcribe into a forgery entire sentences and phrases, yet the dislocation of words, the partial recollection of phrases and sentences, the intermixture of new terms and new ideas with terms and ideas before used, which will appear in the examples that follow, and which are the natural products of writing produced under the circumstances in which these epistles are represented to have been composed—would not, I think, have occurred to the invention of a forger, nor, if they had occurred would they have been so easily executed. This studied variation was a refinement in forgery which I believe did not exist, or if we can suppose it to have been practised in the instances adduced below, why, it may be asked, was not the same art exercised upon those which we have collected in the preceding class?" He then goes on to illustrate all these points by numerous examples taken from all parts of these Epistles.

Colours, LITURGICAL.—By a law of her liturgy the Church directs that the vestments worn by her sacred ministers, and the drapery used in the decoration of the altar should correspond in colour to that which is prescribed for the Office of the day. The colours thus sanctioned by the Church in connexion with her public worship are called the liturgical colours. Here it will be enough to examine (1) their number; (2) the drapery and vestments affected by them; (3) their obligation; (4) their antiquity, and (5) their symbolism.

I. NUMBER.—In the Roman Rite, since Pius V, colours are five in number, viz.: white, red, green, violet, and black. Rose colour is employed only on Lætare and Gaudete Sundays. Blue is prescribed in some dioceses of Spain for the Mass of the Immaculate Concep-

tion. White is the colour proper to Trinity Sunday, the feasts of Our Lord, except those of His Passion, the feasts of the Blessed Virgin, angels, confessors, virgins and women, who are not martyrs, the Nativity of St. John the Baptist, the chief feast of St. John the Evangelist, the feast of the Chains and of the Chair of St. Peter, the Conversion of St. Paul, All Saints, to the consecration of churches and altars, the anniversaries of the election and coronation of the pope and of the election and consecration of bishops; also for the octaves of these feasts and the Offices of *tempore* from Holy Saturday to the vigil of Pentecost; it is used for votive Masses when the feasts have white, and for the nuptial Mass; also in services in connexion with the Blessed Sacrament, at the burial of children, in the administration of baptism, Holy Viaticum, and matrimony.

Red is used the week of Pentecost, on the feasts of Christ's Passion and His Precious Blood, the Finding and Elevation of the Cross, the feasts of Apostles and martyrs; and in votive Masses of these feasts. It is used on Holy Innocents if the feast occur on Sunday and always on its octave.

Green is employed in Offices of *tempore* from the octave of the Epiphany to Septuagesima, and from the octave of Pentecost to Advent, except on ember-days and vigils during that time, and on Sundays occurring within an octave.

Violet is used during Advent and from Septuagesima to Easter, on vigils that are fast days, and on ember-days, except the vigil of Pentecost and the ember-days during the octave of Pentecost. Violet is also used for Mass on rogation-days, for votive Masses of the Passion and of penitential character, at the blessing of candles and of holy water. The stole used in the administration of penance and of extreme unction and in the first part of the baptismal ceremonies must be violet.

Black is used in offices for the dead, and on Good Friday.

II.—The drapery and vestments affected by the law of liturgical colours are (a) the antependium of the altar, and as a matter of appropriateness, the tabernacle veil; (b) the burse and chalice veil; (c) maniples, stole, chasuble, cope, and humeral veil; (d) maniples, stole, tunic, and dalmatic of the sacred ministers, and also the broad stole and folded chasuble when employed. All these must correspond with the rules prescribing the use of each colour. The rubrical prescriptions regard the main or constitutive portion of each vestment, so that the borders or other ornamental accessories do not determine the quality of colour. Neither does the lining, but the Roman practice is to have it in harmony with the vestment itself, yellow however being generally adopted instead of pure white.

III. OBLIGATION.—The obligation of using any particular colour begins with the First Vespers of the Office of which it is characteristic, or with the Matins if the Office has no First Vespers, and ceases as soon as the following Office begins. Vestments made of pure cloth of gold may be employed for red, white, and green colours (Decret. Authent., nn. 3145, 3646, ed. 1900); cloth of silver may be used instead of white. Multi-coloured vestments cannot be used except for the predominant colour.

IV. ANTIQUITY.—Benedict XIV (De Sacro Sacrificio Missæ I, VIII, n. 16) says that up to the fourth century white was the only liturgical colour in use. Other colours were introduced soon afterwards. Innocent III (d. 1216) is among the first to emphasize a distinction. He mentions four principal colours, white, red, green, black (De Sac. Alt. Mys., I, lxxv) as of general use, and one, viz. violet, as occasionally employed. This latter was regularly used from the thirteenth century. An "Ordo Romanus" of the fourteenth century enumerates five. Between the twelfth

and sixteenth centuries blue and yellow were common but they may not be used without very special authorization (Cong. of Rites, Sept., 1837).

V. SYMBOLISM.—Outside of Rome uniformity of observance was effected in the second quarter of the nineteenth century by the abrogation of other uses. In the Western Church only the Ambrosian Rite (q. v.) retains its peculiar colours. Most of the Oriental rites have no prescribed liturgical colours. The Greek Rite (q. v.) alone has a fixed usage but even among them it is not of strict obligation. The Ruthenians follow the Roman regulation since 1891. The variety of liturgical colours in the Church arose from the mystical meaning attached to them. Thus white, the symbol of light, typifies innocence and purity, joy and glory; red, the language of fire and blood, indicates burning charity and the martyrs' generous sacrifice; green, the hue of plants and trees, bespeaks the hope of life eternal; violet, the gloomy east of the mortified, denotes affliction and melancholy; while black, the universal emblem of mourning, signifies the sorrow of death and the sombreness of the tomb.

PATRICK MORRISROE.

Colton, CHARLES H. See BUFFALO, DIOCESE OF.

Columba, SAINT, OF TERRYGLASS, son of Crinthanin and a disciple of St. Finnian of Clonard. When the latter was in *extremis*, from the plague, Columba administered Holy Viaticum. Having completed his studies, he took charge of Caemhan, Fintan, and Mocumin, who are numbered among the saints. He founded the celebrated monastery of Tirdaglas, or Terryglass, 548. It is said that he visited Tours and brought thence relics of St. Martin. He died of the plague, 13 December, 552, and was buried within the precincts of his own monastery at Terryglass. Some fifteen other saints of Ireland, bearing the name Columba, are mentioned in the Martyrology of Gorman.

BUTLER, *Lives of Saints*, XI; LANGAN, *Ecclesiastical History of Ireland* (Dublin, 1829), II, 71; HENRY BRADSHAW SOC., *Martyrology of Gorman* (1895), p. 345; USSHER, *Works* (Dublin, 1847), VI, 533.

COLUMBA EDMONDS.

Columba, SAINT.—There are two saints of this name, virgins and martyrs.

(1) ST. COLUMBA OF SENS, who suffered towards the end of the third century, probably under the Emperor Aurelian. She is said to have been beheaded near a fountain called d'Azon; and the tradition is that her body was left by her murderers on the ground, until it was buried by a man called Aubertus, in thanksgiving for his restoration to sight on his invoking her. A chapel was afterwards built over her relics; and, later on, rose the Abbey of Sens, which at one time was a place of pilgrimage in her honour. She is also said to have been patroness of the parish church of Chevilly in the Diocese of Paris, but her whole history is somewhat legendary.

BUTLER, *Lives of the Saints*, IV, 592; BRULLÉE, *Histoire de l'Abbaye royale de Sens* (1852), containing a rhymed life of the martyr published at Paris in 1660. This book was written partly in the hope of restoring popular devotion to St. Columba.

(2) ST. COLUMBA, a Spanish nun, of whom it is related that she was beheaded by the Moors at the monastery of Tabanos in 853. Her body is said to have been thrown into the Guadalquivir, but was rescued by the Christians. Her relics were kept and venerated in Old Castile at two churches, the priory of St. Columba and the royal Abbey of Our Lady at Nagara.

BUTLER, *Lives of the Saints*, III, 491; SUYSKEN in *Acta SS.*, Sept., V, 618 sqq.; *Bibl. hagiogr. lat.* (1899), 283 sq.

F. M. CAPES.

Columba, SAINT, ABBOT OF IONA, b. at Gartan, County Donegal, Ireland, 7 December, 521; d. 9 June, 597. He belonged to the Clan O'Donnell, and was of royal descent. His father's name was Fedhlimidh and that of his mother Eithne. On his father's side he was great-great-grandson of Niall of the Nine Hostages, an Irish king of the fourth century. His baptismal name was Colum, which signifies a dove, hence the latinized form Columba. It assumes another form in Colum-cille, the suffix meaning "of the Churches". He was baptized at Tulach-Dubhglaise, now Temple-Douglas, by a priest named Cruithnechan, who afterwards became his tutor or foster-father. When sufficiently advanced in letters he entered the monastic school of Moville under St. Finnian, who had studied at St. Ninian's "Magnum Monasterium" on the shores of Galloway. Columba at Moville embraced monastic life and received the diaconate. In the same place his sanctity first manifested itself by miracles. By his prayers, tradition says, he converted water into wine for the Holy Sacrifice (Adam., II, i). Having completed his training at Moville, he travelled southwards into Leinster, where he became a pupil of an aged bard named Gemman. On leaving him, Columba entered the monastery of Clonard, governed at that time by Finnian, a man remarkable, like his namesake of Moville, for sanctity and learning. Here he imbibed the traditions of the Welsh Church, for Finnian had been trained in the schools of St. David. Here also he became one of those twelve Clonard disciples known in subsequent history as the Twelve Apostles of Ireland. About this same time he was promoted to the priesthood by Bishop Ethen of Clonfad. The story that St. Finnian wished Columba to be consecrated bishop, but through a mistake only priest's orders were conferred, is regarded by competent authorities as the invention of a later age (Reeves, Adam., 226).

Another preceptor of Columba was St. Mobhi, whose monastery at Glasnevin was frequented by such famous men as St. Canice, St. Congall, and St. Ciaran. A pestilence which devastated Ireland in 544 caused the dispersion of Mobhi's disciples, and Columba returned to Ulster, the land of his kindred. The following years were marked by the foundation of several important monasteries, Derry, Durrow, and Kells. Derry and Durrow were always specially dear to Columba. While at Derry it is said that he planned a pilgrimage to Rome and Jerusalem, but did not proceed farther than Tours. Thence he brought a copy of the Gospels that had lain on the bosom of St. Martin for the space of 100 years. This relic was deposited in Derry (Skene, Celtic Scotland, II, 483). Columba left Ireland and passed over into Scotland in 563. The motives for this migration have been frequently discussed. Bede simply says: "Venit de Hibernia . . . prædicaturus verbum Dei" (H. E., III, iv); Adamnan: "pro Christo perigrinari volens enavigavit" (Præf., II). Later writers state that his departure was due to the fact that he had induced the clan Neill to rise and engage in battle against King Diarmait at Cool-drevny in 561. The reasons alleged for this action of Columba are: (1) The king's violation of the right of sanctuary belonging to Columba's person as a monk, on the occasion of the murder of Prince Curnan, the saint's kinsman; (2) Diarmait's adverse judgment concerning the copy Columba had secretly made of St. Finnian's psalter. Columba is said to have supported by his prayers the men of the North who were fighting, while Finnian did the same for Diarmait's men. The latter were defeated with a loss of three thousand. Columba's conscience smote him, and he had recourse to his confessor, St. Molaise, who imposed this severe penance: to leave Ireland and preach the Gospel so as to gain as many souls to Christ as lives lost at Cool-drevny, and never more to look upon his native land. Some writers hold that these are legends invented by

the bards and romancers of a later age, because there is no mention of them by the earliest authorities (O'Hanlon, Lives of the Ir. Saints, VI, 353). Cardinal Moran accepts no other motive than that assigned by Adamnan, "a desire to carry the Gospel to a pagan nation and to win souls to God". (Lives of Irish Saints in Great Britain, 67). Archbishop Healy, on the contrary, considers that the saint did incite to battle, and exclaims: "*O felix culpa* . . . which produced so much good both for Erin and Alba" (Schools and Scholars, 311).

IONA.—Columba was in his forty-fourth year when he departed from Ireland. He and his twelve companions crossed the sea in a *currach* of wickerwork covered with hides. They landed at Iona on the eve of Pentecost, 12 May, 563. The island, according to Irish authorities, was granted to the monastic colonists by King Connall of Dalriada, Columba's kinsman. Bede attributes the gift to the Picts (Fowler, p. lxxv). It was a convenient situation, being midway between his countrymen along the western coast and the Picts of Caledonia. He and his brethren proceeded at once to erect their humble dwellings, consisting of a church, refectory, and cells, constructed of wattles and rough planks. After spending some years among the Scots of Dalriada, Columba began the great work of his life, the conversion of the Northern Picts. Together with St. Congall and St. Canice (Kenneth) he visited King Brude in his royal residence near Inverness. Admittance was refused to the missionaries, and the gates were closed and bolted; but before the sign of the cross the bolts flew back, the doors stood open, and the monks entered the castle. Awe-struck by so evident a miracle, the king listened to Columba with reverence and was baptized. The people soon followed the example set them, and thus was inaugurated a movement that extended itself to the whole of Caledonia. Opposition was not wanting, and it came chiefly from the Druids, who officially represented the paganism of the nation.

The thirty-two remaining years of Columba's life were mainly spent in preaching the Christian Faith to the inhabitants of the glens and wooded straths of Northern Scotland. His steps can be followed not only through the Great Glen, but eastwards also, into Aberdeenshire. The "Book of Deer" (p. 91) tells us how he and Drostan came, as God had shown them, to Aberdour in Buchan, and how Bede, a Pict, who was high steward of Buchan, gave them the town in freedom forever. The preaching of the saint was confirmed by many miracles, and he provided for the instruction of his converts by the erection of numerous churches and monasteries. One of his journeys brought him to Glasgow, where he met St. Mungo, the apostle of Strathclyde. He frequently visited Ireland; in 575 he attended the synod of Drumceatt, in company with the Scottish King Aidan, whom shortly before he had inaugurated successor of Connall of Dalriada. When not engaged in missionary journeys, he always resided at Iona. Numerous strangers sought him there, and they received help for soul and body. From Iona he governed those numerous communities in Ireland and Caledonia, which regarded him as their father and founder. This accounts for the unique position occupied by the successors of Columba, who governed the entire province of the Northern Picts, although they had received priest's orders only. It was considered unbecoming that any successor in the office of Abbot of Iona should possess a dignity higher than that of the founder. The bishops were regarded as being of a superior order, but subject nevertheless to the jurisdiction of the abbot. At Lindisfarne the monks reverted to the ordinary law and were subject to a bishop (Bede, H. E., IV, xxvii).

Columba is said never to have spent an hour without study, prayer, writing, or similar occupations. When at home he was frequently engaged in trans-

scribing. On the eve of his death he was engaged in the work of transcription. It is stated that he wrote 300 books with his own hand, two of which, "The Book of Durrow" and the psalter called "The Cathach", have been preserved to the present time. The psalter, enclosed in a shrine, was originally carried into battle by the O'Donnells as a pledge of victory. Several of his compositions in Latin and Irish have come down to us, the best known being the poem "Altus Prosator", published in the "Liber Hymnorum", and also in another form by the late Marquess of Bute. There is not sufficient evidence to prove that the rule attributed to him was really his work.

In the spring of 597 he knew that his end was approaching. On Saturday, 8 June, he ascended the hill overlooking his monastery and blessed for the last time the home so dear to him. That afternoon he was present at Vespers, and later, when the bell summoned the community to the midnight service, he forestalled the others and entered the church without assistance. But he sank before the altar, and in that place breathed forth his soul to God, surrounded by his disciples. This happened a little after midnight between the 8th and 9th of June, 597. He was in the seventy-seventh year of his age. The monks buried him within the monastic enclosure. After the lapse of a century or more his bones were disinterred and placed within a suitable shrine. But as Northmen and Danes more than once invaded the island, the relics of St. Columba were carried for purposes of safety into Ireland and deposited in the church of Downpatrick. Since the twelfth century history is silent regarding them. His books and garments were held in veneration at Iona, they were exposed and carried in procession, and were the means of working miracles (Adam., II, xlv). His feast is kept in Scotland and Ireland on the 9th of June. In the Scottish Province of St. Andrews and Edinburgh there is a Mass and Office, proper to the festival, which ranks as a double of the second class with an octave. He is patron of two Scottish dioceses, Argyre and the Isles and Dunkeld. According to tradition St. Columba was tall and of dignified mien. Adamnan says: "He was angelic in appearance, graceful in speech, holy in work" (Præf., II). His voice was strong, sweet, and sonorous, capable at times of being heard at a great distance. He inherited the ardent temperament and strong passions of his race. It has been sometimes said that he was of an angry and vindictive spirit, not only because of his supposed part in the battle of Coolrevny, but also because of instances related by Adamnan (II, xxiii sq.). But the deeds that roused his indignation were wrongs done to others, and the retribution that overtook the perpetrators was rather predicted than actually invoked. Whatever faults were inherent in his nature he overcame, and he stands before the world conspicuous for humility and charity not only towards his brethren, but towards strangers also. He was generous and warm-hearted, tender and kind even to dumb creatures. He was ever ready to sympathize with the joys and sorrows of others. His fasts and vigils were carried to a great extent. The stone pillow on which he slept is said to be still preserved in Iona. His chastity of body and purity of mind are extolled by all his biographers. Notwithstanding his wonderful austerities, Adamnan assures us he was beloved by all, "for a holy joyousness that ever beamed from his countenance revealed the gladness with which the Holy Spirit filled his soul". (Præf., II.)

INFLUENCE, AND ATTITUDE TOWARDS ROME.—He was not only a great missionary saint who won a whole kingdom to Christ, but he was a statesman, a scholar, a poet, and the founder of numerous churches and monasteries. His name is dear to Scotsmen and Irishmen alike. And because of his great and noble work even non-Catholics hold his memory in veneration. For

the purposes of controversy it has been maintained by some that St. Columba ignored papal supremacy, because he entered upon his mission without the pope's authorization. Adamnan is silent on the subject; but his work is neither exhaustive as to Columba's life, nor does it pretend to catalogue the implicit and explicit belief of his patron. Indeed, in those days a mandate from the pope was not deemed essential for the work which St. Columba undertook. This may be gathered from the words of St. Gregory the Great, relative to the neglect of the British clergy towards the pagan Saxons (Haddan and Stubbs, III, 10). Columba was a son of the Irish Church, which taught from the days of St. Patrick that matters of greater moment should be referred to the Holy See for settlement. St. Columbanus, Columba's fellow-countryman and fellow-churchman, asked for papal judgment (*judicium*) on the Easter question; so did the bishops and abbots of Ireland. There is not the slightest evidence to prove that St. Columba differed on this point from his fellow-countrymen. Moreover, the Stowe Missal, which, according to the best authority, represents the Mass of the Celtic Church during the early part of the seventh century, contains in its Canon prayers for the pope more emphatic than even those of the Roman Liturgy. To the further objection as to the supposed absence of the cultus of Our Lady, it may be pointed out that the same Stowe Missal contains before its Canon the invocation "Sancta Maria, ora pro nobis", which epitomizes all Catholic devotion to the Blessed Virgin. As to the Easter difficulty, Bede thus sums up the reasons for the discrepancy: "He [Columba] left successors distinguished for great charity, Divine love, and strict attention to the rules of discipline; following indeed uncertain cycles in the computation of the great festival of Easter, because, far away as they were out of the world, no one had supplied them with the synodal decrees relating to the Paschal observance" (H. E., III, iv). As far as can be ascertained, no proper symbolical representation of St. Columba exists. The few attempts that have been made are for the most part mistaken. A suitable pictorial representation would exhibit him clothed in the habit and cowl usually worn by the Basilian or Benedictine monks, with Celtic tonsure and crozier. His identity could be best determined by showing him standing near the shell-strewn shore, with *currach* hard by, and the Celtic cross and ruins of Iona in the background.

COLUMBA EDMONDS.

Columbanus, SAINT, Abbot of Luxeuil and Bobbio, b. in West Leinster, Ireland, in 543; d. at Bobbio, Italy, 21 Nov., 615. His life was written by Jonas, an Italian monk of the Columban community, at Bobbio, c. 643. This author lived during the abbacy of Attala, Columbanus's immediate successor, and his informants had been companions of the saint. Mabillon in the second volume of his "Acta Sanctorum O. S. B." gives the life in full, together with an appendix on the miracles of the saint, written by an anonymous member of the Bobbio community.

Columbanus, whose birth took place the year St. Benedict died, was from childhood well instructed. He was handsome and prepossessing in appearance, and this exposed him to the shameless temptations of several of his countrywomen. He also had to struggle with his own temptations. At last he betook himself to a religious woman, who advised him thus: "Twelve years ago I fled from the world, and shut

myself up in this cell. Hast thou forgotten Samson, David and Solomon, all led astray by the love of women? There is no safety for thee, young man, except in flight." He thereupon decided to act on this advice and retire from the world. He encountered opposition, especially from his mother, who strove to detain him by casting herself before him on the threshold of the door. But, conquering the feelings of nature, he passed over the prostrate form and left his home forever. His first master was Sinell, Abbot of Cluaninis in Lough Erne. Under his tuition he composed a commentary on the Psalms. He then betook himself to the celebrated monastery of Bangor on the coast of Down, which at that time had for its abbot St. Comgall. There he embraced the monastic state, and for many years led a life conspicuous for fervour, regularity, and learning. At about the age of forty he seemed to hear incessantly the voice of God bidding him preach the Gospel in foreign lands. At first his abbot declined to let him go, but at length he gave consent.

Columbanus set sail with twelve companions; their names have thus come down to us: St. Attala, Columbanus the Younger, Cummain, Domgal, Eogain, Eunan, St. Gall, Gurgano, Libran, Lua, Sigisbert, and Waldoleno (Stokes, "*Apenines*", p. 112). The little band passed over to Britain, landing probably on the Scottish coast. They remained but a short time in England, and then crossed over to France, where they arrived probably in 585. At once they began their apostolic mission. Wherever they went the people were struck by their modesty, patience, and humility. France at that period needed such a band of monks and preachers. Owing partly to the incursions of barbarians, and partly to the remissness of the clergy, vice and impiety were prevalent. Columbanus, by his holiness, zeal, and learning, was eminently fitted for the work that lay before him. He and his followers soon made their way to the court of Gontram, King of Burgundy. Jonas calls it the court of Sigisbert, King of Austrasia and Burgundy, but this is manifestly a blunder, for Sigisbert had been slain in 575. The fame of Columbanus had preceded him. Gontram gave him a gracious reception, inviting him to remain in his kingdom. The saint complied, and selected for his abode the half-ruined Roman fortress of Annegray in the solitudes of the Vosges Mountains. Here the abbot and his monks led the simplest of lives, their food oftentimes consisting of nothing but forest herbs, berries, and the bark of young trees. The fame of Columbanus's sanctity drew crowds to his monastery. Many, both nobles and rustics, asked to be admitted into the community. Sick persons came to be cured through his prayers. But Columbanus loved solitude. Often he would withdraw to a cave seven miles distant, with a single companion, who acted as messenger between himself and his brethren. After a few years the ever-increasing number of his disciples obliged him to build another monastery. Columbanus accordingly obtained from King Gontram the Gallo-Roman castle named Luxeuil, some eight miles distant from Annegray. It was in a wild district, thickly covered with pine forests and brushwood. This foundation of the celebrated Abbey of Luxeuil took place in 590. But these two monasteries did not suffice for the numbers who came, and a third had to be erected at Fontaines. The superiors of these houses always remained subordinate to Columbanus. It is said that at this time he was able to institute a perpetual service of praise, known as *Laus perennis*, by which choir succeeded choir, both day and night (Montalembert, *Monks of the West*, II, 405). For these flourishing communities he wrote his rule, which embodies the customs of Bangor and other Celtic monasteries.

For wellnigh twenty years Columbanus resided in France and during that time observed the unreformed

paschal computation. But a dispute arose. The Frankish bishops were not too well disposed towards this stranger abbot, because of his ever-increasing influence; and at last they showed their hostility. They objected to his Celtic Easter and his exclusion of men as well as women from the precincts of his monasteries. The councils of Gaul held in the first half of the sixth century had given to bishops absolute authority over religious communities, even going so far as to order the abbots to appear periodically before their respective bishops to receive reproof or advice, as might be considered necessary. These enactments, being contrary to the custom of the Celtic monasteries, were not readily accepted by Columbanus. In 602 the bishops assembled to judge him. He did not appear, lest, as he tells us, "he might contend in words", but instead addressed a letter to the prelates in which he speaks with a strange mixture of freedom, reverence, and charity. In it he admonishes them to hold synods more frequently, and advises that they pay attention to matters equally important with that of the date of Easter. As to his paschal cycle he says: "I am not the author of this divergence. I came as a poor stranger into these parts for the cause of Christ, Our Saviour. One thing alone I ask of you, holy Fathers, permit me to live in silence in these forests, near the bones of seventeen of my brethren now dead." When the Frankish bishops still insisted that the abbot was wrong, then, in obedience to St. Patrick's canon, he laid the question before Pope St. Gregory. He dispatched two letters to that pontiff, but they never reached him, "through Satan's intervention". The third letter is extant, but no trace of an answer appears in St. Gregory's correspondence, owing probably to the fact that the pope died in 604, about the time it reached Rome. In this letter he defends the Celtic custom with considerable freedom, but the tone is affectionate. He prays "the holy Pope, his Father", to direct towards him "the strong support of his authority, to transmit the verdict of his favour". Moreover, he apologizes "for presuming to argue, as it were, with him who sits in the Chair of Peter, Apostle and Bearer of the Keys". He directed another epistle to Pope Boniface IV, in which he prays that, if it be not contrary to the Faith, he confirm the tradition of his elders, so that by the papal decision (*judicium*) he and his monks may be enabled to follow the rites of their ancestors. Before Pope Boniface's answer (which has been lost) was given, Columbanus was outside the jurisdiction of the Frankish bishops. As we hear no further accusations on the Easter question—not even in those brought against his successor, Eustasius of Luxeuil in 624—it would appear that after Columbanus had removed into Italy he gave up the Celtic Easter (cf. *Acta SS. O. S. B.*, II, p. 7).

In addition to the Easter question Columbanus had to wage war against vice in the royal household. The young King Thierry, to whose kingdom Luxeuil belonged, was living a life of debauchery. He was completely in the hands of his grandmother, Queen Brunehault (Brunehild). On the death of King Gontram the succession passed to his nephew, Childebert II, son of Brunehault. At his death the latter left two sons, Theodebert II and Thierry II, both minors. Theodebert succeeded to Austrasia, Thierry to Burgundy, but Brunehault constituted herself their guardian, and held in her own power the government of the two kingdoms. As she advanced in years she sacrificed everything to the passion for sovereignty, hence she encouraged Thierry in the practice of concubinage in order that there might be no rival queen. Thierry, however, had a veneration for Columbanus, and often visited him. On these occasions the saint admonished and rebuked him, but in vain. Brunehault became enraged with Columbanus, and stirred up the bishops and nobles to find fault with his rules regarding monastic enclosure. Finally, Thierry and his party went

to Luxeuil and ordered the abbot to conform to the usages of the country. Columbanus refused, whereupon he was taken prisoner to Besançon to await further orders. Taking advantage of the absence of restraint he speedily returned to his monastery. On hearing this, Thierry and Brunehaut sent soldiers to drive him back to Ireland. None but Irish monks were to accompany him. Accordingly, he was hurried to Nevers, made to embark on the Loire, and thus proceed to Nantes. At Tours he visited the tomb of St. Martin and sent a message to Thierry that within three years he and his children would perish. At Nantes, before the embarkation, he addressed a letter to his monks, full of affection. It is a memorial of the love and tenderness which existed in that otherwise austere and passionate soul. In it he desires all to obey Attala, whom he requests to abide with the community unless strife should arise on the Easter question. His letter concludes thus: "They come to tell me the ship is ready. . . . The end of my parchment compels me to finish my letter. Love is not orderly; it is this which has made it confused. Farewell, dear hearts of mine; pray for me that I may live in God." As soon as they set sail, such a storm arose that the ship was driven ashore. The captain would have nothing more to do with these holy men; they were thus free to go where they pleased. Columbanus made his way to the friendly King Clothaire at Soissons in Neustria, where he was gladly welcomed. Clothaire in vain pressed him to remain in his territory. Columbanus left Neustria in 611 for the court of King Theodebert of Austrasia. At Metz he received an honourable welcome, and then proceeding to Mainz, he embarked upon the Rhine in order to reach the Suevi and Alamanni, to whom he wished to preach the Gospel. Ascending the river and its tributaries, the Aar and the Limmat, he came to the Lake of Zurich. Tuggen was chosen as a centre from which to evangelize, but the work was not successful. Instead of producing fruit, the zeal of Columbanus only excited persecution. In despair he resolved to pass on by way of Arbon to Bregenz on Lake Constance, where there were still some traces of Christianity. Here the saint found an oratory dedicated to St. Aurelia, into which the people had brought three brass images of their tutelary deities. He commanded St. Gall, who knew the language, to preach to the inhabitants, and many were converted. The images were destroyed, and Columbanus blessed the little church, placing the relics of St. Aurelia beneath the altar. A monastery was erected, and the brethren forthwith observed their regular life. After about a year, in consequence of another rising against the community, Columbanus resolved to cross the Alps into Italy. An additional reason for his departure was the fact that the arms of Thierry had prevailed against Theodebert, and thus the country on the banks of the Upper Rhine had become the property of his enemy.

On his arrival at Milan in 612, Columbanus met with a kindly welcome from King Agilulf and Queen Theodelinda. He immediately began to confute the Arians and wrote a treatise against their teaching, which has been lost. At the request of the king, he wrote a letter to Pope Boniface on the debated subject of "The Three Chapters". These writings were considered to favour Nestorianism. Pope St. Gregory, however, tolerated in Lombardy those persons who defended them, among whom was King Agilulf. Columbanus would probably have taken no active part in this matter had not the king pressed him so to do. But on this occasion his zeal certainly outran his knowledge. The letter opens with an apology that a "foolish Scot" should be charged to write for a Lombard king. He acquaints the pope with the imputations brought against him, and he is particularly severe with the memory of Pope Vigilius. He entreats the

pontiff to prove his orthodoxy and assemble a council. He says that his freedom of speech accords with the usage of his country. "Doubtless", Montalembert remarks, "some of the expressions which he employs would be now regarded as disrespectful and justly rejected. But in those young and vigorous times, faith and austerity could be more indulgent" (II, 440). On the other hand, the letter expresses the most affectionate and impassioned devotion to the Holy See. The whole, however, may be judged from this fragment: "We Irish, though dwelling at the far ends of the earth, are all disciples of St. Peter and St. Paul. . . . Neither heretic, nor Jew, nor schismatic has ever been among us; but the Catholic Faith, just as it was first delivered to us by yourselves, the successors of the Apostles, is held by us unchanged. . . . We are bound [devincti] to the Chair of Peter, and although Rome is great and renowned, through that Chair alone is she looked on as great and illustrious among us. . . . On account of the two Apostles of Christ, you [the pope] are almost celestial, and Rome is the head of the whole world, and of the Churches". If zeal for orthodoxy caused him to overstep the limits of discretion, his real attitude towards Rome is sufficiently clear. He declares the pope to be: "his Lord and Father in Christ", "The Chosen Watchman", "The Prelate most dear to all the Faithful", "The most beautiful Head of all the Churches of the whole of Europe", "Pastor of Pastors", "The Highest", "The First", "The First Pastor, set higher than all mortals", "Raised near unto all the Celestial Beings", "Prince of the Leaders", "His Father", "His immediate Patron", "The Steersman", "The Pilot of the Spiritual Ship" (Allnatt, "Cathedra Petri", 105).

But it was necessary that, in Italy, Columbanus should have a settled abode, so the king gave him a tract of land called Bobbio, between Milan and Genoa, near the River Trebbia, situated in a defile of the Apennines. On his way thither he taught the Faith in the town of Mombrione, which is called San Colombano to this day. Padre della Torre considers that the saint made two journeys into Italy, and that these have been confounded by Jonas. On the first occasion he went to Rome and received from Pope Gregory many sacred relics (Stokes, Apennines, 132). This may possibly explain the traditional spot in St. Peter's, where St. Gregory and St. Columba are supposed to have met (Moran, Irish SS. in Great Britain, 105). At Bobbio the saint repaired the half-ruined church of St. Peter, and erected his celebrated abbey, which for centuries was a stronghold of orthodoxy in Northern Italy. Thither came Clothaire's messengers inviting the aged abbot to return, now that his enemies were dead. But he could not go. He sent a request that the king would always protect his dear monks at Luxeuil. He prepared for death by retiring to his cave on the mountain-side overlooking the Trebbia, where, according to a tradition, he had dedicated an oratory to Our Lady (Montalembert, "Monks of the West", II, 444). His body has been preserved in the abbey church at Bobbio, and many miracles are said to have been wrought there through his intercession. In 1482 the relics were placed in a new shrine and laid beneath the altar of the crypt, where they are still venerated. But the altar and shrine are once more to be restored, and for this end in 1907 an appeal was made by Cardinal Logue, and there is every prospect of the work being speedily accomplished. The sacristy at Bobbio possesses a portion of the skull of the saint, his knife, wooden cup, bell, and an ancient water vessel, formerly containing sacred relics and said to have been given him by St. Gregory. According to certain authorities, twelve teeth of the saint were taken from the tomb in the fifteenth century and kept in the treasury, but these have now disappeared (Stokes, Apennines, p. 183). St. Columbanus is named in the Roman Martyrology on 21 November,

but his feast is kept by the Benedictines and throughout Ireland on 24 November. Among his principal miracles are: (1) procuring of food for a sick monk and curing the wife of his benefactor; (2) escape from hurt when surrounded by wolves; (3) obedience of a bear which evacuated a cave at his bidding; (4) producing a spring of water near his cave; (5) repletion of the Luxeuil granary when empty; (6) multiplication of bread and beer for his community; (7) curing of the sick monks, who rose from their beds at his request to reap the harvest; (8) giving sight to a blind man at Orléans; (9) destruction by his breath of a cauldron of beer prepared for a pagan festival; (10) taming a bear, and yoking it to a plough.

Like other men, Columbanus was not faultless. In the cause of God he was impetuous and even headstrong, for by nature he was eager, passionate, and dauntless. These qualities were both the source of his power and the cause of mistakes. But his virtues were very remarkable. He shared with other saints a great love for God's creatures. As he walked in the woods, the birds would alight upon his shoulder that he might caress them, and the squirrels would run down from the trees and nestle in the folds of his cowl. The fascination of his saintly personality drew numerous communities around him. That he possessed real affection for others is abundantly manifest in his letter to his brethren. Archbishop Healy eulogizes him thus: "A man more holy, more chaste, more self-denying, a man with loftier aims and purer heart than Columbanus was never born in the Island of Saints" (Ireland's Ancient Schools, 378). Regarding his attitude towards the Holy See, although with Celtic warmth and flow of words he could defend mere custom, there is nothing in his strongest expressions which implies that, in matters of faith, he for a moment doubted Rome's supreme authority. His influence in Europe was due to the conversions he effected, and to the rule that he composed. What gave rise to his apostolate? Possibly the restless energy of the Celtic character, which, not finding sufficient scope in Ireland, directed itself in the cause of Christ to foreign lands. It may be that the example and success of St. Columba in Caledonia stimulated him to similar exertions. The example, however, of Columbanus in the sixth century stands out as the prototype of missionary enterprise towards the countries of Europe, so eagerly followed up from England and Ireland by such men as Killian, Virgilius, Donatus, Wilfrid, Willibrord, Swithbert, and Boniface. If Columbanus's abbey in Italy became a citadel of faith and learning, Luxeuil in France became the nursery of saints and apostles. From its walls went forth men who carried his rule, together with the Gospel, into France, Germany, Switzerland, and Italy. There are said to have been sixty-three such apostles (Stokes, *Forests of France*, 254). These disciples of Columbanus are accredited with founding over one hundred different monasteries (ib., 74). The canton and town still bearing the name of St. Gall testify how well one disciple succeeded.

Columbanus has left us his own writings. They demonstrate that his attainments were of no mean order. He continued his literary studies till the very eve of his death. His works (Migne, P. L., LXXX) include: (1) "Penitential" which prescribes penances according to guilt, a useful guide in the absence of elaborate treatises on moral theology; (2) "Seventeen Short Sermons"; (3) "Six Epistles"; (4) "Latin Poems"; (5) "A Monastic Rule". This last is much shorter than that of St. Benedict, consisting of only ten chapters. The first six of these treat of obedience, silence, food, poverty, humility, and chastity. In these there is much in common with the Benedictine code, except that the fasting is more rigorous. Chapter vii deals with the choir Offices. Sunday Matins in winter consisted of seventy-five

psalms and twenty-five antiphons—three psalms to each antiphon. In spring and autumn these were reduced to thirty-six, and in summer to twenty-four. Fewer were said on weekdays. The day hours consisted of Terce, Sext, None, and Vespers. Three psalms were said at each of these Offices, except Vespers, when twelve psalms were said. Chapter x regulates penances for offences, and it is here that the Rule of St. Columbanus differs so widely from that of St. Benedict. Stripes or fasts were enjoined for the smallest faults. The habit of the monks consisted of a tunic of undyed wool, over which was worn the *cuculla*, or cowl, of the same material. A great deal of time was devoted to various kinds of manual labour. The Rule of St. Columbanus was approved of by the Council of Maçon in 627, but it was destined before the close of the century to be superseded by that of St. Benedict. For several centuries in some of the greater monasteries the two rules were observed conjointly. In art St. Columbanus is represented bearded wearing the monastic cowl; he holds in his hand a book within an Irish satchel, and stands in the midst of wolves. Sometimes he is depicted in the attitude of taming a bear, or with sunbeams over his head (Husenbeth, "Emblems", p. 33).

MABILLON, *Acta Sanctorum* O. S. B., II; MIGNE, *Patrologia Latina*, LXXX; LANIGAN, *Ecclesiastical Hist. of Ireland* (Dublin, 1829), II, IV; MONTALEMBERT, *Monks of the West* (Edinburgh, 1861), II; MORAN, *Essays on Early Irish Ch.* (Dublin, 1864); DALGAIKINS, *Apostles of Europe* (London, 1876), I; MANN, *Lives of the Popes* (London, 1902), I; BUTLER, *Lives of the Saints*, IV, 383 sqq.; HEALY, *Ireland's Ancient Schools and Scholars* (Dublin, 1890); STOKES, *Six Months in the Apennines* (London, 1892); IDEM, *Three Months in the Forests of France* (London, 1895); see HOLE in *Dict. Christ. Biog.*, s. v., and HUNT in *Dict. Nat. Biog.*, s. v. MARTIN, *Saint Columban* (540-615) in *Les Saints* (Paris, 1908). There is lacking a satisfactory edition of the works of Columbanus. Valuable contributions have been made in the pages of the *Zeitschrift für Kirchengeschichte* by SEEBASS, notably his addition of the *Penitential* of Columbanus, the rule of the saint (no longer extant in its original form), in same review (Leipzig, 1894, XIV, 441 sqq., and 1895, XV, 366 sqq.). Cf. the dissertation of SEEBASS, *Über Columbanus Klosterregel und Bussbuch* (Dresden, 1883); CHEVALIER, *Bio-bibl.*, s. v., and *Topo-bibl.*, s. vv. Bobbio, Luxeuil.

COLUMBA EDMONDS.

Columbus, CHRISTOPHER (It. CRISTOFORO COLOMBO; Sp. CRISTÓBAL COLÓN), b. at Genoa, or on Genoese territory, probably 1451; d. at Valladolid, Spain, 20 May, 1506. His family was respectable, but of limited means, so that the early education of Columbus was defective. Up to his arrival in Spain (1485) only one date has been preserved. His son Fernando, quoting from his father's writings says that in February, 1467, he navigated the seas about "Tile" (probably Iceland). Columbus himself in a letter to King Ferdinand says that he began to navigate at the age of fourteen, though in the journal of his first voyage (no longer in existence), in 1493, he was said to have been on the sea twenty-three years, which would make him nineteen when he first became a mariner. The early age at which he began his career as a sailor is not surprising for a native of Genoa, as the Genoese were most enterprising and daring seamen. Columbus is said in his early days to have been a corsair, especially in the war against the Moors, themselves merciless pirates. He is also supposed to have sailed as far south as the coast of Guinea before he was sixteen years of age. Certain it is that while quite young he became a thorough and practical navigator, and later acquired a fair knowledge of astronomy. He also gained a wide acquaintance with works on cosmography such as Ptolemy and the "Imago Mundi" of Cardinal d'Ailly, besides entering into communication with the cosmographers of his time. The fragment of a treatise written by him and called by his son Fernando "The Five Habitable Zones of the Earth" shows a degree of information unusual for a sailor of his day. As in the case of most of the documents relating to the life of Columbus the genuineness of the

letters written in 1474 by Paolo Toscanelli, a renowned physicist of Florence, to Columbus and a member of the household of King Alfonso V of Portugal, has been attacked on the ground of the youth of Columbus, although they bear signs of authenticity. The experiences and researches referred to fit in satisfactorily with the subsequent achievements of Columbus. For the rest, the early part of Columbus's life is interwoven with incidents, most of which are unsupported by evidence, though quite possible. His marriage about 1475 to a Portuguese lady whose name is given

CELL OF PRIOR JUAN PEREZ, LA RÁBIDA

sometimes as Doña Felipa Moniz and sometimes as Doña Felipa Perestrella seems certain.

Columbus seems to have arrived in Portugal about 1471, although 1474 is also mentioned and supported by certain indications. He vainly tried to obtain the support of the King of Portugal for his scheme to discover the Far East by sailing westward, a scheme supposed to have been suggested by his brother Bartholomew, who is said to have been earning a livelihood at Lisbon by designing marine charts. Columbus went to Spain in 1485, and probably the first assistance he obtained there was from the Duke of Medina Celi, Don Luis de la Cerda, for whom he performed some service that brought him a compensation of 3000 maravedis in May, 1487. He lived about two years at the home of the duke and made unsuccessful endeavours to interest him in his scheme of maritime exploration. His attempts to secure the help of the Duke of Medina Sidonia were equally unproductive of results. No blame attaches to these noblemen for declining to undertake an enterprise which only rulers of nations could properly carry out. Between 1485 and 1488 Columbus began his relations with Doña Beatriz Enriquez de Arana, or Harana, of a good family of the city of Cordova, from which sprang his much beloved son Fernando, next to Christopher and his brother Bartholomew the most gifted of the Colombos.

Late in 1485 or early in 1486 Columbus appeared twice before the court to submit his plans and while the Duke of Medina Celi may have assisted him to some extent, the chief support came from the royal treasurer, Alonzo de Quintanilla, Friar Antonio de Marchena (confounded by Irving with Father Perez of La Rábida), and Diego de Deza, Bishop of Placencia. Columbus himself declared that these two priests were always his faithful friends. Marchena also obtained for him the valuable sympathy of Cardinal Gonzalez de Mendoza. Through the influence of these men the Government appointed a junta or commission of ecclesiastics that met at Salamanca late in 1486 or early in 1487, in the Dominican convent of San Estéban to investigate the scheme, which they finally rejected. The commission had no connexion with the celebrated University of Salamanca, but was under the guidance of the prior of Prado. It seems that Columbus gave but scant and unsatisfactory information to

the commission, probably through fear that his ideas might be improperly made use of and he be robbed of the glory and advantages that he expected to derive from his project. This may account for the rejection of his proposals. The prior of Prado was a Hieronymite, while Columbus was under the especial protection of the Dominicans. Among his early friends in Spain was Luis de Santangel, whom Irving calls "receiver of the ecclesiastical revenues of Aragon", and who afterwards advanced to the queen the funds necessary for the first voyage. If Santangel was receiver of the church revenues and probably treasurer and administrator, it was the Church that furnished the means (17,000 ducats) for the admiral's first voyage.

It would be unjust to blame King Ferdinand for declining the proposals of Columbus after the adverse report of the Salamanca commission, which was based upon objections drawn from Seneca and Ptolemy rather than upon the opinion of St. Augustine in the "De Civitate Dei". The king was then preparing to deal the final blow to Moorish domination in Spain after the struggle of seven centuries, and his financial resources were taxed to the utmost. Moreover, he was not easily carried away by enthusiasm and, though we now recognize the practical value of the plans of Columbus, at the close of the fifteenth century it seemed dubious, to say the least, to a cool-headed ruler, wont to attend first to immediate necessities. The crushing of the Moorish power in the peninsula was then of greater moment than the search after distant lands for which, furthermore, there were not the means in the royal treasury. Under these conditions Columbus, always in financial straits himself and supported by the liberality of friends, bethought himself of the rulers of France and England. In 1488 his brother Bartholomew, as faithful as sagacious, tried to induce one or the other of them to accept the plans of Christopher, but failed. The idea was too novel to appeal to either. Henry VII of England was too cautious to entertain proposals from a comparatively unknown seafarer of a foreign nation, and Charles VIII of France was too much involved in Italian affairs. The prospect was disheartening. Nevertheless, Columbus, with the assistance of his friends, concluded to make another attempt in Spain. He proceeded to court again in 1491, taking with him his son Diego. The court being then in camp before Granada, the last Moorish stronghold, the time could not have been more inopportune. Another junta was called before Granada while the siege was going on, but the commission again reported unfavourably. This is not surprising, as Ferdinand of Aragon could not undertake schemes that would involve a great outlay, and divert his attention from the momentous task he was engaged in. Columbus always directed his proposals to the king and as yet the queen had taken no official notice of them, as she too was heart and soul in the enterprise destined to restore Spain wholly to Christian rule.

The junta before Granada took place towards the end of 1491, and its decision was such a blow to Columbus that he left the court and wandered away with his boy. Before leaving, however, he witnessed the fall of Granada, 2 January, 1492. His intention was to return to Cordova and then, perhaps, to go to France. On foot and reduced almost to beggary, he reached the Dominican convent of La Rábida probably in

SIGNATURE OF COLUMBUS

January, 1492. The prior was Father Juan Perez, the confessor of the queen, frequently confounded with Fray Antonio Marchena by historians of the nineteenth century, who also erroneously place the arrival of Columbus at La Rábida in the early part of his sojourn in Spain. Columbus begged the friar who acted as door-keeper to let his tired son rest at the convent over night. While he was pleading his cause the prior was standing near by and listening. Something struck him in the appearance of this man, with a foreign accent, who appeared to be superior to his actual condition. After providing for his immediate wants Father Perez took him to his cell, where Columbus told him all his aspirations and blighted hopes. The result was that Columbus and his son stayed at the convent as guests and Father Perez hurried to Santa Fé near Granada, for the purpose of inducing the queen to take a personal interest in the proposed undertaking of the Italian navigator.

the Niña, both caravels, i. e. undecked, with cabins and forecastles. These three ships carried altogether 120 men. Two seamen of repute, Martin Alonso Pinzon and his brother Vicente Yañez Pinzon, well-to-do residents of Palos commanded, the former the Pinta, the latter the Niña, and experienced pilots were placed on both ships. Before leaving, Columbus received the Sacraments of Penance and Holy Eucharist, at the hands (it is stated) of Father Juan Perez, the officers and crews of the little squadron following his example. On 3 August, 1492, the people of Palos with heavy hearts saw them depart on an expedition regarded by many as foolhardy.

Las Casas claims to have used the journal of Columbus's first voyage, but he admits that he made an abridged copy of it. What and how much he left out, of course, is not known. But it is well to bear in mind that the journal, as published, is not the original in its entirety. The vessels touched at the Canaries, and

THE SANTA MARIA, NIÑA, AND PINTA
(Restored from the models in the Marine Museum, Madrid)

Circumstances had changed with the fall of Granada, and the Dominican's appeal was favourably received by Isabella who, in turn, influenced her husband. Columbus was called to court at once, and 20,000 maravedis were assigned him out of the queen's private revenues that he might appear in proper condition before the monarch. Some historians assert that Luis de Santangel decided the queen to espouse the cause of Columbus, but the credit seems rather to belong to the prior of La Rábida. The way had been well prepared by the other steadfast friends of Columbus, not improbably Cardinal Mendoza among others. At all events negotiations progressed so rapidly that on 17 April the first agreement with the Crown was signed, and on 30 April the second. Both show an unwise liberality on the part of the monarchs, who made the highest office in what was afterwards the West Indies hereditary in the family of Columbus. Preparations were immediately begun for the equipment of the expedition. The squadron with which Columbus set out on his first voyage consisted of three vessels—the Santa Maria, completely decked, which carried the flag of Columbus as admiral, the Pinta, and

then proceeded on the voyage. Conditions were most favourable. Hardly a wind ruffled the waters of the ocean. The dramatic incident of the mutiny, in which the discouragement of the crews is said to have culminated before land was discovered, is a pure invention. That there was dissatisfaction and grumbling at the failure to reach land seems to be certain, but no acts of insubordination are mentioned either by Columbus, his commentator Las Casas, or his son Fernando. Perhaps the most important event during the voyage was the observation, 17 September, by Columbus himself, of the declination of the magnetic needle, which Las Casas attributes to a motion of the polar star. The same author intimates that two distinct journals were kept by the admiral, "because he always represented [feigned] to the people that he was making little headway in order that the voyage should not seem long to them, so that he kept a record by two routes, the shorter being the fictitious one, and the longer the true one". He must therefore either have kept two log-books, or he must have made two different entries in the same book. At any rate Las Casas seems to have had at his command both sets of data,

since he gives them almost from day to day. This precautionary measure indicates that Columbus feared insubordination and even revolt on the part of the crews, but there is no evidence that any mutiny really broke out. Finally, at ten o'clock, p. m., 11 October, Columbus himself descried a light which indicated land and was so recognized by the crew of his vessel. It reappeared several times, and Columbus felt sure that the shores so eagerly expected were near. At 2 a. m. on 12 October the land was seen plainly by one of the *Pinta's* crew, and in the forenoon Columbus landed, on what is now called Watling's Island in the Bahama group, West Indies. The discoverers named the island San Salvador. The Indians inhabiting it belonged to the widespread Arawak stock (q. v.) and are said to have called the island Guanahani. Immediately after landing Columbus took possession of the island for the Spanish sovereigns.

The results of the first voyage, aside from the discovery of what the admiral regarded as being approaches to India and China, may be summed up as follows: partial recognition of the Bahamas; the discovery and exploration of a part of Cuba, and the establishment of a Spanish settlement on the coast of what is now the Island of Haiti or Santo Domingo. Cuba Columbus named Juana, and Santo Domingo, Hispaniola.

It was on the northern coast of the large island of Santo Domingo that Columbus met with the only serious mishap of his first voyage. Having established the nucleus of the first permanent Spanish settlement in the Indies, he left about three score men to hold it. The vicinity was comparatively well peopled by natives, Arawaks like those of the Bahamas, but slightly more advanced in culture. A few days previous to the foundation Martin Alonso Pinzon disappeared with the caravel *Pinta* which he commanded and only rejoined the admiral on 6 January, 1493, an act, to say the least, of disobedience, if not of treachery. The first settlement was officially established on Christmas Day, 1492, and hence christened "La Navidad". On the same day the admiral's ship ran aground. It was a total loss, and Columbus was reduced for the time being to the *Niña*, as the *Pinta* had temporarily deserted. Happily the natives were friendly. After ensuring, as well as he might, the safety of the little colony by the establishment of friendly relations with the Indians, Columbus left for Spain, where, after weathering a frightful storm during which he was again separated from the *Pinta*, he arrived at Palos, 15 March, 1493.

From the journal mentioned we also gather (what is not stated in the letters of Columbus) that while on the northern shores of Santo Domingo (Hispaniola) the admiral "learned that behind the Island Juana [Cuba] towards the South, there is another large island in which there is much more gold. They call that island Yamaye. . . . And that the island Española or the other island Yamaye was near the mainland, ten days distant by canoe, which might be sixty or seventy leagues, and that there the people were clothed [dressed]". Yamaye is Jamaica, and the mainland alluded to as sixty or seventy leagues distant to the south (by south the west is meant), or 150 to 175 English miles (the league, at that time, being counted at four *miles* of 3000 Spanish feet), was either Yucatan or Honduras. Hence the admiral brought the news of the existence of the American continent to Europe as early as 1493. That he believed the continent to be Eastern Asia does not diminish the importance of his information.

Columbus had been careful to load his ships with all manner of products of the newly discovered countries and he also took some of the natives. Whether, among the samples of the vegetable kingdom, tobacco was included, is not yet satisfactorily ascertained. Nor is it certain that, when upon his return he presented himself to the monarchs at Barcelona, an impos-

ing public demonstration took place in his honour. That he was received with due distinction at court and that he displayed the proofs of his discovery can not be doubted. The best evidence of the high appreciation of the King and Queen of Spain is the fact, that the prerogatives granted to him were confirmed, and everything possible was done to enable him to continue his explorations. The fact that Columbus had found a country that appeared to be rich in precious metals was of the utmost importance. Spain was poor, having been robbed, ages before, of its metallic wealth by the Romans. As gold was needed the discovery of a new source of that precious metal made a strong impression on the people of Spain, and a rush to the new regions was inevitable.

Columbus started on his second voyage to the Indies from Cadiz, 25 September, 1493, with three large vessels and thirteen caravels, carrying in all about 1500 men. On his first trip he had heard about other, smaller islands lying some distance south of Hispaniola, and said to be inhabited by ferocious tribes who had the advantage over the Arawaks of being intrepid seafarers, and who made constant war upon the inhabitants of the Greater Antilles and the Bahamas, carrying off women and children into captivity. They were believed to practise cannibalism. These were the Caribs (q. v.) and the reports about them were true, outside of some exaggerations and fables like the story of the Amazons. Previous to the arrival of Columbus the Caribs had driven the Arawaks steadily north, depopulated some of the smaller islands, and were sorely pressing the people of Hispaniola, parts of Cuba, Porto Rico, and even Jamaica. Columbus wished to learn more about these people. The helpless condition of the Arawaks made him eager to protect them against their enemies. The first land sighted, 3 November, was the island now known as Dominica, and almost at the same time that of Marie Galante was descried. Geographically the second voyage resulted in the discovery of the Caribbean Islands (including the French Antilles), Jamaica, and minor groups. Columbus having obtained conclusive evidence of the ferocious customs of the Caribs, regarded them as dangerous to the settlements he proposed to make among the Arawaks and as obstacles to the Christianization and civilization of these Indians. The latter he intended to make use of as labourers, as he soon perceived that for some time to come European settlers would be too few in numbers and too new to the climate to take advantage of the resources of the island. The Caribs he purposed to convert eventually, but for the time being they must be considered as enemies, and according to the customs of the age, their captors had the right to reduce them to slavery. The Arawaks were to be treated in a conciliatory manner, as long as they did not show open hostility. Before long, however, there was a change in these relations.

After a rapid survey of Jamaica, Columbus hastened to the northern coast of Haiti, where he had planted the colony of La Navidad. To his surprise the little fort had disappeared. There were to be seen only smouldering ruins and some corpses which were identified as Spanish. The natives, previously so friendly, were shy, and upon being questioned were either mute or contradictory in their replies. It was finally ascertained that another tribe, living farther inland and hostile to those on the coast, had fallen upon the fort, killed most of the inmates, and burnt the buildings. Those who escaped had perished in their flight. But it also transpired that the coast-people themselves had taken part in the massacre. Columbus, while outwardly on good terms with them, was on his guard and, in consequence of the aversion of his people to a site where only disaster had befallen them, moved some distance farther east and established on the coast the larger settlement of Isabella. This stood ten

leagues to the east of Cape Monte Cristo, where the ruins are still to be seen.

The existence of gold on Haiti having been amply demonstrated on the first voyage, Columbus inaugurated a diligent search for places where it might be found. The gold trinkets worn by the Indians were washings or *placers*, but mention is also made, on the first voyage, of quartz rock containing the precious metal. But it is likely that the yellow mineral was iron pyrites, probably gold-bearing but, in the backward state of metallurgy, worthless at the time. Soon after the settlement was made at Isabella the colonists began to complain that the mineral wealth of the newly discovered lands had been vastly exaggerated and one, who accompanied the expedition as expert in metallurgy, claimed that the larger nuggets held by the natives had been accumulated in the course of a long period of time. This very sensible supposition was unjustly criticized by Irving, for since Irving's time it has been clearly proved that pieces of metal of unusual size and shape were often kept for generations by the Indians as fetishes.

A more important factor which disturbed the Spaniards was the unhealthiness of the climate. The settlers had to go through the slow and often fatal process of acclimatization. Columbus himself suffered considerably from ill-health. Again, the island was not well provided with food suitable for the newcomers. The population, notwithstanding the exaggerations of

THE LANDING OF COLUMBUS
(Wood-engraving, printed at Florence,
1493. Original in British Museum)

Las Casas and others, was sparse. Isabella with its fifteen hundred Spanish immigrants was certainly the most populous settlement. At first there was no clash with the natives, but parties sent by Columbus into the interior came in contact with hostile tribes. For the protection of the colonists Columbus built in the interior a little fort called Santo

Tomás. He also sent West Indian products and some Carib prisoners back to Spain in a vessel under the command of Antonio de Torres. Columbus suggested that the Caribs be sold as slaves in order that they might be instructed in the Christian Faith. This suggestion was not adopted by the Spanish monarchs, and the prisoners were treated as kindly in Spain as the friendly Arawaks who had been sent over.

The condition of affairs on Hispaniola (Haiti) was not promising. At Isabella and on the coast there was grumbling against the admiral, in which the Benedictine Father Buil (Boil) and the other priests joined, or which, at least, they did not discourage. In the interior there was trouble with the natives. The commander at Santo Tomás, Pedro Margarite, is usually accused of cruelty to the Indians, but Columbus himself in his Memorial of 30 January, 1494, commends the conduct of that officer. However, he had to send him reinforcements, which were commanded by Alonzo de Ojeda.

Anxiously following up his theory that the newly discovered islands were but outlying posts of Eastern Asia and that further explorations would soon lead him to the coast of China or to the Moluccas, Columbus, notwithstanding the precarious condition of the colony, left it in charge of his brother Diego and four counsellors (one of whom was Father Buil), and with three vessels set sail towards Cuba. During his ab-

sence of five months he explored parts of Cuba, discovered the Isle of Pines and several groups of smaller islands, and made the circuit of Jamaica, landing there almost every day. When he returned to Isabella (29 September, 1494), he was dangerously ill and in a stupor. Meanwhile his brother Bartholomew had arrived from Spain with a small squadron and supplies. He proved a welcome auxiliary to the weak Diego, but could not prevent serious trouble. Margarite, angered by interference with his administration in the interior, returned to the coast, and there was joined by Father Buil and other malcontents. They seized the three caravels that had arrived under the command of Bartholomew Columbus, and set sail in them for Spain to lay before the Government what they considered their grievances against Columbus and his administration.

That there was cause for complaint there seems to be no doubt, but it is almost impossible now to determine who was most at fault, Columbus or his accusers. He was certainly not as able an administrator as he was a navigator. Still, taking into consideration the difficulties, the novelty of the conditions, and the class of men Columbus had to handle, and placing over against this what he had already achieved on Haiti, there is not so much ground for criticism. The charges of cruelty towards the natives are based upon rather suspicious authority, Las Casas being the principal source. There were errors and misdeeds on both sides, which, however, might not have brought about a crisis had not disappointment angered the settlers, who had based their expectations on the glowing reports of Columbus himself, and disposed them to attribute all their troubles to their opponents.

Before the return of Columbus to Isabella, Ojeda had repulsed an attempt of the natives to surprise Santo Tomás. Thereupon the Indians of various tribes of the interior now formed a confederation and threatened Isabella. Columbus, however, on his return, with the aid of fire-arms, sixteen horses, and about twenty blood-hounds easily broke up the Indian league. Ojeda captured the leader, and the policy of kindness hitherto pursued towards the natives was replaced by repression and chastisement. According to the customs of the times the prisoners of war were regarded as rebels, reduced to slavery, and five hundred of them were sent to Spain to be sold. It is certain that the condition of the Indians became much worse thereafter, that they were forced into unaccustomed labours, and that their numbers began to diminish rapidly. That these harsh measures were authorized by Columbus there can be no doubt.

While the Spanish monarchs in their dispatches to Columbus continued to show the same confidence and friendliness they could not help hearing the accusations made against him by Father Buil, Pedro Margarite, and the other malcontents, upon their return to Spain. It was clear that there were two factions among the Spaniards in Haiti, one headed by the admiral, the other composed of perhaps a majority of the settlers including ecclesiastics. Still the monarchs enjoined the colonists by letter to obey Columbus in everything and confirmed his authority and privileges. The incriminations, however, continued, and charges were made of nepotism and spoliation of royal revenue. There was probably some foundation for these charges, though also much wilful misrepresentation. Unable to ascertain the true condition of affairs, the sovereigns finally decided to send to the Indies a special commissioner to investigate and report. Their choice fell upon Juan de Aguado who had gone with Columbus on his first voyage and with whom he always had been on friendly terms. Aguado arrived at Isabella in October, 1495, while Columbus was absent on a journey of exploration across the island. No clash appears to have occurred between Aguado and Bartholomew Columbus, who was in charge of the colony during his

brother's absence, much less with the admiral himself upon the latter's return. Soon after, reports of important gold discoveries came from a remote quarter of the island accompanied by specimens. The arrival of Aguado convinced Columbus of the necessity for his appearance in Spain and that new discoveries of gold would strengthen his position there. So he fitted out two ships, one for himself and one for Aguado, placing in them two hundred dissatisfied colonists, a captive Indian chief (who died on the voyage), and thirty Indian prisoners, and set sail for Spain on 10 March, 1496, leaving his brother Bartholomew at Isabella as temporary governor. As intercourse between Spain and the Indies was now carried on at almost regular intervals Bartholomew was in communication with the mother country and was at least tacitly recognized as his brother's substitute in the government of the Indies. Columbus reached Cadiz 11 June, 1496.

The story of his landing is quite dramatic. He is reported to have gone ashore, clothed in the Franciscan garb, and to have manifested a dejection which was wholly uncalled for. His health, it is true, was greatly impaired, and his companions bore the marks of great physical suffering. The impression created by their appearance was of course not favourable and tended to confirm the reports of the opponents of Columbus about the nature of the new country. This, as well as the disappointing results of the search for precious metals, did not fail to have its influence. The monarchs saw that the first enthusiastic reports had been exaggerated and that the enterprise while possibly lucrative in the end, would entail large expenditures for some time to come. Bishop Fonseca, who was at the head of colonial affairs, urged that great caution should be exercised. What was imputed to Bishop Fonseca as jealousy was only the sincere desire of an honest functionary to guard the interests of the Crown without blocking the way of an enthusiastic but somewhat visionary genius who had been unsuccessful as an administrator. Later expressions (1505) of Columbus indicate that his personal relations to Fonseca were at the time far from unfriendly. But the fact that Columbus had proposed the enslaving of American natives and actually sent a number of them over to Spain had alienated the sympathy of the queen to a certain degree, and thus weakened his position at court.

Nevertheless, it was not difficult for Columbus to organize a third expedition. Columbus started on his third voyage from Seville with six vessels on 30 May, 1498. He directed his course more southward than before, owing to reports of a great land lying west and south of the Antilles and his belief that it was the continent of Asia. He touched at the Island of Madeira, and later at Gomera, one of the Canary Islands (q. v.), whence he sent to Haiti three vessels. Sailing southward, he went to the Cape Verde Islands and, turning thence almost due west, arrived on 31 July, 1498, in sight of what is now the Island of Trinidad which was so named by him. Opposite, on the other side of a turbulent channel, lay the lowlands of north-eastern South America. Alarmed by the turmoil caused by the meeting of the waters of the Orinoco (which empties through several channels into the Atlantic opposite Trinidad) with the Guiana current, Columbus kept close to the southern shore of Trinidad as far as its south-western extremity, where he found the water still more turbulent. He therefore gave that place the name of *Boca del Drago*, or Dragon's Mouth. Before venturing into the seething waters Columbus crossed over to the mainland and cast anchor. He was under the impression that this was an island, but a vast stream of fresh water gave evidence of a continent. Columbus landed, he and his crew being thus the first Europeans to set foot on South American soil. The natives were friendly and gladly exchanged pearls for European trinkets. This discovery of pearls in American waters was important and very welcome.

A few days later the admiral, setting sail again, was borne by the currents safely to the Island of Margarita, where he found the natives fishing for pearls, of which he obtained three bags by barter.

Some of the letters of Columbus concerning his third voyage are written in a tone of despondency. Owing to his physical condition, he viewed things with a discontent far from justifiable. And, as already said, his views of the geographical situation were somewhat fanciful. The great outpour opposite Trinidad he justly attributed to the emptying of a mighty river coming from the west, a river, so large that only a continent could afford it space. In this he was right, but in his eyes that continent was Asia, and the sources of that river must be on the highest point of the globe. He was confirmed in this idea by his belief that Trinidad was nearer the Equator than it actually is and that near the Equator the highest land on earth should be found. He thought also that the sources of the Orinoco lay in the Earthly Paradise and that the great river was one of the four streams that according to Scripture flowed from the Garden of Eden. He had no accurate knowledge of the form of the earth, and conjectured that it was pear-shaped.

On 15 August, fearing a lack of supplies, and suffering severely from what his biographers call gout and from impaired eyesight, he left his new discoveries and steered for Haiti. On 19 August he sighted that island some distance west of where the present capital of the Republic of Santo Domingo now stands. During his absence his brother Bartholomew had abandoned Isabella and established his head-quarters at Santo Domingo so called after his father Domenico. During the absence of Columbus events on Haiti had been far from satisfactory. His brother Bartholomew, who was then known as the *adelantado*, had to contend with several Indian outbreaks, which he subdued partly by force, partly by wise temporizing. These outbreaks were, at least in part, due to a change in the class of settlers by whom the colony was reinforced. The results of the first settlement far from justified the buoyant hopes based on the exaggerated reports of the first voyage, and the pendulum of public opinion swung back to the opposite extreme. The clamour of opposition to Columbus in the colonies and the discouraging reports greatly increased in Spain the disappointment with the new territorial acquisitions. That the climate was not healthful seemed proved by the appearance of Columbus and his companions on his return from the second voyage. Hence no one was willing to go to the newly discovered country, and convicts, suspects, and doubtful characters in general who were glad to escape the regulations of justice were the only reinforcements that could be obtained for the colony on Hispaniola. As a result there were conflicts with the aborigines, sedition in the colony, and finally open rebellion against the authority of the *adelantado* and his brother Diego. Columbus and his brothers were Italians, and this fact told against them among the malcontents and lower officials, but that it influenced the monarchs and the court authorities is a gratuitous charge.

As long as they had not a common leader Bartholomew had little to fear from the malcontents, who separated from the rest of the colony, and formed a settlement apart. They abused the Indians, thus causing almost uninterrupted trouble. However, they soon found a leader in the person of one Roldan, to whom the admiral had entrusted a prominent office in the colony. There must have been some cause for complaint against the government of Bartholomew and Diego, else Roldan could not have so increased the number of his followers as to make himself formidable to the brothers, undermining their authority at their own head-quarters and even among the garrison of Santo Domingo. Bartholomew was forced to compromise on unfavourable terms. So, when the ad-

miral arrived from Spain he found the Spanish settlers on Haiti divided into two camps, the stronger of which, headed by Roldan, was hostile to his authority. That Roldan was an utterly unprincipled man, but energetic and above all, shrewd and artful, appears from the following incident. Soon after the arrival of Columbus the three caravels he had sent from Gomera with stores and ammunition struck the Haitian coast where Roldan had established himself. The latter represented to the commanders of the vessels that he was there by Columbus's authority and easily obtained from them military stores as well as reinforcements in men. On their arrival shortly afterwards at Santo Domingo the caravels were sent back to Spain by Columbus. Alarmed at the condition of affairs and his own impotence, he informed the monarchs of his critical situation and asked for immediate help. Then he entered into negotiations with Roldan. The latter not only held full control in the settlement which he commanded, but had the sympathy of most of the mili-

VESSEL ON DRY DOCK
(End of fifteenth century)

tary garrisons that Columbus and his brothers relied upon as well as of the majority of the colonists. How Columbus and his brother could have made themselves so unpopular is explained in various ways. There was certainly much unjustifiable ill will against them, but there was also legitimate cause for discontent, which was adroitly exploited by Roldan and his followers.

Seeing himself almost powerless against his opponents on the island, the admiral stooped to a compromise. Roldan finally imposed his own conditions. He was reinstated in his office and all offenders were pardoned; and a number of them returned to Santo Domingo. Columbus also freed many of the Indian tribes from tribute, but in order still further to appease the former mutineers, he instituted the system of *repartimientos*, by which not only grants of land were made to the whites, but the Indians holding these lands or living on them were made perpetual serfs to the new owners, and full jurisdiction over life and property of these Indians became vested in the white settlers. This measure had the most disastrous effect on the aborigines, and Columbus has been severely blamed for it, but he was then in such straits that he had to go to any extreme to pacify his opponents until assistance could reach him from Spain. By the middle of the year 1500 peace apparently reigned again in the colony, though largely at the expense of the prestige and authority of Columbus.

Meanwhile reports and accusations had reached the court of Spain from both parties in Haiti. It became constantly more evident that Columbus was no longer master of the situation in the Indies, and that some steps were necessary to save the situation. It might be said that the Court had merely to support Columbus whether right or wrong. But the West Indian colony had grown, and its settlers had their connexions and supporters in Spain, who claimed some attention and prudent consideration. The clergy who were

familiar with the circumstances through personal experience for the most part disapproved of the management of affairs by Columbus and his brothers. Queen Isabella's irritation at the sending of Indian captives for sale as slaves had by this time been allayed by a reminder of the custom then in vogue of enslaving captive rebels or prisoners of war addicted to specially inhuman customs, as was the case with the Caribs. Anxious to be just, the monarchs decided upon sending to Haiti an officer to investigate and to punish all offenders. This *visitador* was invested with full powers, and was to have the same authority as the monarchs themselves for the time being, superseding Columbus himself, though the latter was Viceroy of the Indies. The *visita* was a mode of procedure employed by the Spanish monarchs for the adjustment of critical matters, chiefly in the colonies. The *visitador* was selected irrespective of rank or office, solely from the standpoint of fitness, and not infrequently his mission was kept secret from the viceroy or other high official whose conduct he was sent to investigate; there are indications that sometimes he had summary power over life and death. A *visita* was a much dreaded measure, and for very good reasons.

The investigation in the West Indies was not called a *visita* at the time, but such it was in fact. The *visitador* chosen was Francisco de Bobadilla, of whom both Las Casas and Oviedo (friends and admirers of Columbus) speak in favourable terms. His instructions were, as his office required, general, and his faculties, of course, discretionary; there is no need of supposing secret orders inimical to Columbus to explain what afterwards happened. The admiral was directed, in a letter addressed to him and entrusted to Bobadilla, to turn over to the latter, at least temporarily, the forts and all public property on the island. No blame can be attached to the monarchs for this measure. After an experiment of five years the administrative capacity of Columbus had failed to prove satisfactory. Yet, the vice-regal power had been vested in him as an hereditary right. To continue adhering to that clause of the original contract was impracticable, since the colony refused to pay heed to Columbus and his orders. Hence the suspension of the viceregal authority of Columbus was indefinitely prolonged, so that the office was reduced to a mere title and finally fell into disuse. The curtailment of revenue resulting from it was comparatively small, as all the emoluments proceeding from his other titles and prerogatives were left untouched. The tale of his being reduced to indigence is a baseless fabrication.

A man suddenly clothed with unusual and discretionary faculties is liable to be led astray by unexpected circumstances and tempted to go to extremes. Bobadilla had a right to expect implicit obedience to royal orders on the part of all and, above all, from Columbus as the chief servant of the Crown. When on 24 August, 1500, Bobadilla landed at Santo Domingo and demanded of Diego Columbus compliance with the royal orders, the latter declined to obey until directed by the admiral who was then absent. Bobadilla, possibly predisposed against Columbus and his brothers by the reports of others and by the sight of the bodies of Spaniards dangling from gibbets in full view of the port, considered the refusal of Diego as an act of direct insubordination. The action of Diego was certainly unwise and gave colour to an assumption that Columbus and his brothers considered themselves masters of the country. This implied rebellion and furnished a pretext to Bobadilla for measures unjustifiably harsh. As *visitador* he had absolute authority to do as he thought best, especially against the rebels, of whom Columbus appeared in his eyes as the chief.

Within a few days after the landing of Bobadilla, Diego and Bartholomew Columbus were imprisoned and put in irons. The admiral himself, who returned with the greatest possible speed, shared their fate.

The three brothers were separated and kept in close confinement, but they could hear from their cells the imprecations of the people against their rule. Bobadilla charged them with being rebellious subjects and seized their private property to pay their personal debts. He liberated prisoners, reduced or abolished imposts, in short did all he could to place the new order of things in favourable contrast to the previous management. No explanation was offered to Columbus for the harsh treatment to which he was subjected, for a visitador had only to render account to the king or according to his special orders. Early in October, 1500, the three brothers, still in fetters, were placed on board ship, and sent to Spain, arriving at Cadiz at the end of the month. Their treatment while aboard seems to have been considerate; Villejo, the commander, offered to remove the manacles from Columbus's hands and relieve him from the chains, an offer, however, which Columbus refused to accept. It seems, nevertheless, that he did not remain manacled, else he could not have written the long and piteous letter to the nurse of Prince Juan, recounting his misfortunes on the vessel. He dispatched this letter to the court at Granada before the reports of Bobadilla were sent.

The news of the arrival of Columbus as a prisoner was received with unfeigned indignation by the monarchs, who saw that their agent Bobadilla had abused the trust placed in him. The people also saw the injustice, and everything was done to relieve Columbus from his humiliating condition and assure him of the royal favour, that is, everything except to reinstate him as Governor of the Indies. This fact is mainly responsible for the accusation of duplicity and treachery which is made against King Ferdinand. Critics overlook the fact that in addition to the reasons already mentioned no new colonists could be obtained from Spain, if Columbus were to continue in office, and that the expedient of sending convicts to Haiti had failed disastrously. Moreover, the removal of Columbus was practically implied in the instructions and powers given to Bobadilla, and the conduct of the admiral during Aguado's mission left no room for doubt that he would submit to the second investigation. He would have done so, but Bobadilla, anxious to make a display and angered at the delay of Diego Columbus, exceeded the spirit of his instructions, expecting thereby to rise in royal as well as in popular favour.

In regard to the former he soon found out his mistake. His successor in the governorship of Haiti was soon appointed in the person of Nicolas de Ovando. Bobadilla was condemned to restore to Columbus the property he had sequestered, and was recalled. The largest fleet sent to the Indies up to that time sailed under Ovando on 13 February, 1502. It is not without significance that 2500 people, some of high rank, flocked to the vessels that were to transport the new governor to the Indies. This shows that with the change in the administration of the colony faith in its future was restored among the Spanish people.

By this time the mental condition of Columbus had become greatly impaired. While at court for eighteen months vainly attempting to obtain his restoration to a position for which he was becoming more and more unfitted, he was planning new schemes. Convinced that his third voyage had brought him nearer to Asia, he proposed to the monarchs a project to recover the Holy Sepulchre by the western route, that would have led him across South America to the Pacific Ocean. He fancied that the large river he had discovered west of Trinidad flowed in a direction opposite to its real course, and thought that by following it he could reach the Red Sea and thence cross over to Jerusalem. So preoccupied was he with these ideas that he made arrangements for depositing part of his revenue with the bank of Genoa to be used in the reconquest of the Holy Land. This alone disposes of the allegation that Columbus was left without resources after his liberation

from captivity. He was enabled to maintain a position at court corresponding to his exalted rank, and favours and privileges were bestowed on both of his sons. The project of testing the views of Columbus in regard to direct communication with Asia was seriously considered, and finally a fourth voyage of exploration at the expense of the Spanish Government was conceded to Columbus. That there were some misgivings in regard to his physical and mental condition is intimated by the fact that he was given as companions his brother Bartholomew, who had great influence with him, and his favourite son Fernando. Four vessels carrying, besides these three and a representative of the Crown to receive any treasure that might be found, about 150 men, set sail from San Lucar early in May, 1502. Columbus was enjoined not to stop at Haiti, a wise measure, for had the admiral landed there so soon after the arrival of Ovando, there would have been danger of new disturbances.

OCEAN BOAT. END OF FIFTEENTH CENTURY
(Contemporaneous wood-engraving)

Disobeying these instructions, Columbus attempted to enter the port of Santo Domingo, but was refused admission. He gave proof of his knowledge and experience as a mariner by warning Ovando of an approaching hurricane, but was not listened to. He himself sheltered his vessels at some distance from the harbour. The punishment for disregarding the friendly warning came swiftly; the large fleet which had brought Ovando over was, on sailing for Spain, overtaken by the tempest, and twenty ships were lost, with them Bobadilla, Roldan, and the gold destined for the Crown. The admiral's share in the gold obtained on Haiti, four thousand pieces directly sent to him by his representative on the island, was not lost, and on being delivered in Spain, was not confiscated. Hence it is difficult to see how Columbus could have been in need during the last years of his life.

The vessels of Columbus having suffered comparatively little from the tempest, he left the coast of Haiti in July, 1502, and was carried by wind and current to the coast of Honduras. From 30 July, 1502, to the end of the following April he coasted Central America beyond Colon to Cape Tiburon on the South American Continent. On his frequent landings he found traces of gold, heard reports of more civilized tribes of natives farther inland, and persistent statements about another ocean lying west and south of the land he was coasting, the latter being represented to him as a narrow strip dividing two vast seas. The mental condi-

tion of Columbus, coupled with his physical disabilities, prevented him from interpreting these important indications otherwise than as confirmations of his vague theories and fatal visions. Instead of sending an exploring party across the isthmus to satisfy himself of the truth of these reports, he accepted this testimony to the existence of a sea beyond, which he firmly believed to be the Indian Ocean, basing his confidence on a dream in which he had seen a strait he supposed to be the Strait of Malacca. As his crews were exasperated by the hardships and deceptions, his ships worm-eaten, and he himself emaciated, he turned back towards Haiti with what he thought to be

MONUMENT TO COLUMBUS, GENOA (CANZIO, 1862).

the tidings of a near approach to the Asiatic continent. It had been a disastrous voyage; violent storms continuously harassed the little squadron, two ships had been lost, and the treasure obtained far from compensated for the toil and suffering endured. This was all the more exasperating when it became evident that a much richer reward could be obtained by penetrating inland, to which, however, Columbus would not or perhaps could not consent.

On 23 June, 1503, Columbus and his men, crowded on two almost sinking caravels, finally landed on the inhospitable coast of Jamaica. After dismantling his useless craft, and using the material for temporary shelter, he sent a boat to Haiti to ask for assistance and to dispatch thence to Spain a vessel with a pitiful letter giving a fantastic account of his sufferings which in itself gave evidence of an over-excited and disordered mind.

Ovando to whom Columbus's request for help was delivered at Jaragua (Haiti) cannot be acquitted of unjustifiable delay in sending assistance to the shipwrecked and forsaken admiral. There is no foundation for assuming that he acted under the orders or in accordance with the wishes of the sovereigns. Colum-

bus had become useless, the colonists in Haiti would not tolerate his presence there. The only practical course was to take him back to Spain directly and remove him forever from the lands the discovery of which had made him immortal. In spite of his many sufferings, Columbus was not utterly helpless. His greatest trouble came from the mutinous spirit of his men who roamed about, plundering and maltreating the natives, who, in consequence, became hostile and refused to furnish supplies. An eclipse of the moon predicted by Columbus finally brought them to terms and thus prevented starvation. Ovando, though informed of the admiral's critical condition, did nothing for his relief except to permit Columbus's representative in Haiti to fit out a caravel with stores at the admiral's expense and send it to Jamaica; but even this tardy relief did not reach Columbus until June, 1504. He also permitted Mendez, who had been the chief messenger of Columbus to Haiti, to take passage for Spain, where he was to inform the sovereigns of the admiral's forlorn condition. There seems to be no excuse for the conduct of Ovando on this occasion. The relief expedition finally organized in Haiti, after a tedious and somewhat dangerous voyage, landed the admiral and his companions in Spain, 7 November, 1504.

A few weeks later Queen Isabella died, and grave difficulties beset the king. Columbus, now in very feeble health, remained at Seville until May, 1505, when he was at last able to attend court at Valladolid. His reception by the king was decorous, but without warmth. His importunities to be restored to his position as governor were put off with future promises of redress, but no immediate steps were taken. The story of the utter destitution in which the admiral is said to have died is one of the many legends with which his biography has been distorted. Columbus is said to have been buried at Valladolid. His son Diego is authority for the statement that his remains were buried in the Carthusian Convent of Las Cuevas, Seville, within three years after his death. According to the records of the convent, the remains were given up for transportation to Haiti in 1536, though other documents place this event in 1537. It is conjectured, however, that the removal did not take place till 1541, when the cathedral of Santo Domingo was completed, though there are no records of this entombment. When, in 1795, Haiti passed under French control, Spanish authorities removed the supposed remains of Columbus to Havana. On the occupation of Cuba by the United States they were once more removed to Seville (1898).

Columbus was unquestionably a man of genius. He was a bold, skilful navigator, better acquainted with the principles of cosmography and astronomy than the average skipper of his time, a man of original ideas, fertile in his plans, and persistent in carrying them into execution. The impression he made on those with whom he came in contact even in the days of his poverty, such as Fray Juan Perez, the treasurer Luis de Santangel, the Duke of Medina Sidonia, and Queen Isabella herself, shows that he had great powers of persuasion and was possessed of personal magnetism. His success in overcoming the obstacles to his expeditions and surmounting the difficulties of his voyages exhibit him as a man of unusual resources and of unflinching determination. Columbus was also of a deeply religious nature. Whatever influence scientific theories and the ambition for fame and wealth may have had over him, in advocating his enterprise he never failed to insist on the conversion of the pagan peoples that he would discover as one of the primary objects of his undertaking. Even when clouds had settled over his career, after his return as a prisoner from the lands he had discovered, he was ready to devote all his possessions and the remaining years of his life to set sail again for the purpose of rescuing Christ's Sepulchre from the hands of the infidel.

Other members of the Columbus family also acquired fame:—

DIEGO, the first son of Christopher and heir to his titles and prerogatives, was b. at Lisbon, 1476, and d. at Montalvan, near Toledo, 23 February, 1526. He was made a page to Queen Isabella in 1492, and remained at court until 1508. Having obtained confirmation of the privileges originally conceded to his father (the title of viceroy of the newly discovered countries excepted) he went to Santo Domingo in 1509 as Admiral of the Indies and Governor of Hispaniola. The authority of Diego Velazquez as governor, however, had become too firmly established, and Diego was met by open and secret opposition, especially from the royal *Audiencia*. Visiting Spain in 1520 he was favourably received and new honours bestowed upon him. However, in 1523, he had to return again to Spain to answer charges against him. The remainder of his life was taken up by the suit of the heirs of Columbus against the royal treasury, a memorable legal contest only terminated in 1564. Diego seems to have been a man of no extraordinary attainments, but of considerable tenacity of character.

FERDINAND, better known as FERNANDO COLON, second son of Christopher, by Doña Beatriz Enriquez, a lady of a noble family of Cordova in Spain, was b. at Cordova, 15 August, 1488; d. at Seville, 12 July, 1539. As he was naturally far more gifted than his half-brother Diego, he was a favourite with his father, whom he accompanied on the last voyage. As early as 1498 Queen Isabella had made him one of her pages and Columbus in his will (1505) left him an ample income, which was subsequently increased by royal grants. Fernando had decided literary tastes and wrote well in Spanish. While it is stated that he wrote a history of the West Indies, there are now extant only two works by him: "Descripción y cosmografía de España", a detailed geographical itinerary begun in 1517, published at Madrid in the "Boletín de la Real Sociedad geográfica" (1906-07); and the life of the admiral, his father, written about 1534, the Spanish original of which has been lost. It was published in an Italian translation by Ulloa in 1571 as "Vita dell' ammiraglio", and retranslated into Spanish by Barcia, "Historiadores primitivos de Indias" (Madrid, 1749). As might be expected this biography is sometimes partial, though Fernando often sides with the Spanish monarchs against his father. Of the highest value is the report by Fray Roman Pane on the customs of the Haitian Indians which is incorporated into the text. (See ARAWAKS.) Fernando left to the cathedral chapter of Seville a library of 20,000 volumes, a part of which still exists and is known as the Biblioteca Colombina.

BARTHOLOMEW, elder brother of Christopher, b. possibly in 1445 at Genoa; d. at Santo Domingo, May, 1515. Like Christopher he became a seafarer at an early age. After his attempts to interest the Kings of France and England in his brother's projects, his life was bound up with that of his brother. It was during his time that bloodhounds were introduced into the West Indies. He was a man of great energy and some military talent, and during Christopher's last voyage took the leadership at critical moments. After 1506 he probably went to Rome and in 1509 back to the West Indies with his nephew Diego.

DIEGO, younger brother of Christopher and his companion on the second voyage, b. probably at Genoa; d. at Santo Domingo after 1509. After his release from chains in Spain (1500) he became a priest and returned to the West Indies in 1509.

The tract of CHRISTOPHER COLUMBUS, *De prima in mari Indico Illustratione*, was published with the *Bellum Christianarum principum* of ROBERT, ABBOT OF SAINT-REMI (Basle, 1533). *Códice diplomático-Colombo-Americano, ossia Raccolta di documenti spettanti a Cr. Col.*, etc. (Genoa, 1823); ANON., *Cr. Col. aiutato dei minorile nella scoperta del nuovo mondo* (Genoa, 1846); SANGUINETTI, *Vita di Colombo* (Genoa, 1846); BOSSI, *Vita di Cr. Col.* (Milan, 1818); SPOTORNO, *Della origine e della*

patria di Cr. Col. (Genoa, 1819); NAVARRETE, *Colección de los viajes y descubrimientos . . . desde fines del siglo XV* (Madrid, 1825), I, II; AYEZAC-MACAYA, *Année véritable de la naissance de Chr. Col.* (Paris, 1873); ROSELLY DE LORGNES, *Vie et voyages de Chr. Col.* (Paris, 1861), from which was compiled by BARRY, *Life of Chr. Col.* (New York, 1869); ROSELLY DE LORGNES, *Salon contre Chr. Col.* (Genoa, 1846); COLUMBUS, FERDINAND, French fr. by MÜLLER, *Hist. de la vie et des découvertes de Chr. Col.* (Paris, s. d.); MAJOR (tr.), *Select Letters of Chr. Col.* (London, 1847 and 1870); HARRISSE, *Fernando Colon historiador de su padre* (Seville, 1871); VIGNAUD, *La maison d'Alba et les archives colombiennes* (Paris, 1904); UHAGON, *La Patria de Colón según los documentos de las ordenes militares* (Madrid, 1892); UZZIELLO in *Congresso geografico italiano: Atti* for April, 1901, Toscanelli, Colombo e Vespucci (Milan, 1902); WINSOR, *Christopher Columbus* (Boston, 1891); ADAMS, *Christopher Columbus, in Makers of America* (New York, 1892); DEBO, *Colón y la Historia Póstuma* (Madrid, 1885); THACHER, *Christopher Columbus: His Life, His Work, His Remains* (3 vols., New York, 1903-1904); IRVING, *Life and Voyages of Christopher Columbus* (3 vols., New York, 1868); PETER MARTYR, *De orbe novo* (Alcalá, 1530); LAS CASAS, *Historia de las Indias in Documentos para la historia de España*; OVIEDO, *Hist. general* (Madrid, 1850). The last three authors had personal intercourse with Columbus, and their works are the chief source of information concerning him. CLARKE, *Christopher Columbus in The Am. Cath. Quart. Rev.* (1892); STELLA, *Columbus, This Century's Estimate of His Life and Work* (ibid.); U. S. CATH. HIST. SOC., *The Cosmographia Introductio of Martin Waldseemüller* (New York, 1908).

AD. F. BANDELIER.

Columbus, DIOCESE OF.—The Diocese of Columbus comprises that part of the State of Ohio, south of 40 degrees and 41 minutes, lying between the Ohio River on the east and the Scioto River on the west, and also the Counties of Delaware, Franklin, and Morrow, twenty-nine counties of the eighty-eight into which the State of Ohio is divided; it contains 13,685 square miles. This portion of the State belonged originally to the Diocese of Cincinnati, and was recommended to Rome for erection as a see by the Fathers of the Second Plenary Council, of Baltimore, held in 1866. It was not until 3 March, 1868, that the official documents were issued erecting the diocese and naming as its first bishop Sylvester Horton Rosecrans, who had been consecrated Auxiliary Bishop of Cincinnati and Titular Bishop of Pompeiopolis, 25 March, 1862. The portion of Ohio assigned to this diocese was in 1863 to a large extent but sparsely populated; no railroad had as yet penetrated some of the counties, and the bishop was forced to make many of the journeys on his visitations by stage, wagon, or steamboat. The Dominican Fathers were the earliest missionaries in Ohio, locating at St. Joseph's, Perry County, in the early part of the nineteenth century, and from their number was chosen the first Bishop of Cincinnati, Edward Fenwick. The first place of Catholic worship in Ohio was at St. Joseph's, Perry County. This chapel was built of logs and was blessed 6 December, 1818, by Rev. Edward Fenwick and his nephew, Rev. N. D. Young, both natives of Maryland, and receiving their jurisdiction from Bishop Flaget, who was then the only bishop between the Alleghenies and the Mississippi. The congregation consisted of ten families. An humble convent was built near by, and its inmates were one American, N. D. Young, one Irishman, Thos. Martin, and one Belgian, Vincent De Rymacher. The second chapel erected in Ohio was also in this diocese, blessed in 1822, near what is now Danville, Knox County, then known as Sapp's Settlement, a colony from near Cumberland, Maryland, many of its members direct descendants of the colonists of Lord Baltimore. This chapel was built of logs and was blessed by Dominican Fathers and the humble congregation ministered to by them. Within a few miles of this second Catholic settlement in Ohio is the college town of Gambier, seat of Kenyon College and the Episcopalian Seminary of the Diocese of Ohio, over which in 1868 presided, before his conversion, Dr. James Kent Stone, afterwards Father Fidelis of the Congregation of St. Paul of the Cross. From its walls have gone forth many illustrious men who in after-life turned their eyes to the Church, among them Bishop Rosecrans and his brother, General Rosecrans, Henry Richards,

father of Rev. James Havens Richards, S. J., and William Richards.

In its early days the diocese was largely an agricultural district, the first settlers from Pennsylvania and Maryland being tillers of the soil. Later came the emigrants from Ireland and Germany, who were followed by priests of their native lands. At the present time mining and manufacturing have so far advanced as to predominate and control. Immigration has also added to the variety of races among the Catholic population; notably Poles, Hungarians, Greeks, Lithuanians, and Slavs may be found among the mining population of the eastern and southern parts of the diocese; while Belgians are numerous among the workmen employed in the manufacture of glass, an industry that has risen of late years to prominence in Ohio, owing to the discovery of natural gas, which is an important feature in this business. The native-born descendants of the pioneer Catholics have taken a notable place in the walks of business and professional life, especially in the larger centres of population. The bishop and a large number of the clergy are natives of the State. All this has worked a decided change in the attitude of non-Catholics towards the Church and their Catholic fellow-citizens.

Sylvester Horton Rosecrans, the first bishop, died 21 October, 1878. He was succeeded by John Ambrose Watterson, who was consecrated 8 August, 1880, and died 17 April, 1899. The next bishop was Henry Moeller, consecrated 25 August, 1900, promoted to the Archiepiscopal See of Areopolis and made Coadjutor to the Archbishop of Cincinnati, 27 April, 1903. The fourth bishop, James Joseph Hartley, was consecrated 25 February, 1904.

There are 142 priests—105 secular and 37 regular—in the diocese, with 34 brothers and 450 sisters. The total population of the diocese is about 1,000,000; of this number 80,000 are Catholics. The parishes number 75, with 45 parochial schools and 9361 pupils, 4520 boys and 4841 girls. There are two orphan asylums, with 460 orphans; a Convent of the Good Shepherd, with 207 inmates; four hospitals, treating 4000 patients annually; a preparatory seminary, with 22 students; a theological seminary, "The Pontifical

of the diocese. The State and nation also have received many a notable service, both in war and peace, from sons of the diocese. General Philip H. Sheridan was in his boyhood a resident of Somerset, Perry Co., the cradle of Catholicity in Ohio. General W. S. Rosecrans, brother of the first bishop of the diocese, both converts, General Don Carlos Buell, Generals Hugh and Charles Ewing of the Ewing family of Lan-

ST. JOSEPH'S CATHEDRAL, COLUMBUS

College Josephinum of the Sacred Congregation for the Propagation of the Faith", with 161 students; a college, with 100 students; and three academies, with 430 pupils.

The Diocese of Columbus has given to the Church two bishops, Fitzgerald of Little Rock and Gallagher of Galveston; while the names of Henni, Archbishop of Milwaukee, Lamy, Archbishop of Santa Fé, De Goesbriand, Bishop of Burlington, Vermont, may be found on the baptismal registers of the early mission churches

Column, in architecture a round pillar, a cylindrical solid body, or a many-sided prism, the body of which is sometimes reeded or fluted, but practically cylindrical in shape, and which supports another body in a vertical direction. A column has, as its most essential portion, a long solid body, called the shaft, set vertically on a stylobate, or on a congeries of mouldings which forms its base, the shaft being surmounted by a more or less bulky mass, which forms its capital. Columns are distinguished by the names of the styles of architecture to which they belong; thus there are Hindu, Egyptian, Grecian, Roman, and Gothic columns. In classic architecture they are further distinguished by the name of the order to which they belong, as Doric, Ionic, Composite, or Tuscan columns. They may also be characterized by some peculiarity of position, of construction, of form, or of ornament, as attached, twisted, cabled, etc. Columns are either insulated or attached. They are said to be attached or engaged when they form part of a wall, projecting one-half or more, but not the whole, of their substance. Cabled or reudent columns are such as have their flutings filled with cables or astragals to about the third of the height. Carolitic columns have their shafts foliated. In the earliest columnar architecture, that of the Egyptians, and in the Greek Doric, there were no bases. Capitals, however, are universal, but are mainly decorative in character. In Grecian and Roman architecture the proportions are settled, and vary according to the order. The term is sometimes applied to the pillars or piers in Norman and Gothic architecture. In modern usage the term is applied to supports of iron or wood.

THOMAS H. POOLE.

Comacchio, DIOCESE OF (COMACLENSIS), suffragan of Ravenna. Comacchio is a town in the province of Ferrara in the Romagna, Italy, situated on islands near the mouths of the Po, and connected with the sea by a canal built by Cardinal Palotta. The ancient name of the town was *Cymadium*. The first known Bishop of Comacchio was Pacatianus, present in 503 at a synod held in Rome under Pope Symmachus. St. Gregory the Great reckons the see among the suffragans of Ravenna. In 708 a certain Vincencius is mentioned as Bishop of Comacchio. In the seventh century Gregory, the youthful son of Isaac, Exarch of Ravenna, died at Comacchio in a monastery dedicated to St. Maurus, as is recorded in a Greek inscription. During the fifteenth century the town was held by the Venetians, but was retaken in 1509 by Alfonso II, Duke of Ferrara, and fortified by him. At the death of Alfonso in 1597, Comacchio, with the rest of the Duchy of Ferrara passed under the control of the Holy See. One of its bishops, Alfonso Pandolfo (1631), was a polished writer and poet, and established the *Accademia dei Flutuantini*. In the vicinity of Comacchio is the ancient shrine of Santa Maria in Aula Regia, approached by a long portico of 142 arches, built in 1647 by the papal legate, Cardinal Giovanni Stefano Dongo. In 1708 Emperor Joseph I, on the pretence of having an ancient claim on the city seized Comacchio, which was, however, restored in 1724. In 1796 the town was occupied by the French. The famous Benedictine Abbey of Pomposa is in the Diocese of Comacchio. The diocese has a population of 40,630, with 114 parishes, 24 churches and oratories, 26 secular and 6 regular priests, 1 religious house of men, and 1 of women.

U. BENIGNI.

Comana, a titular see of Asia Minor. According to ancient geographers, Comana was situated in Cappadocia (Cataonia). Eustathius (Comment. ad Dionys., 694) surnames it *Chryse*, "Golden". Another surname in epigraphy is Hieropolis, owing to a famous temple of the Syrian goddess Enyo or Mā. Strabo and Caesar visited it; the former (XI, 521; XII, 535, 537) enters into long details about its position on the Sarus (Seihoun), the temple and its *hieroduli*. St. Basiliscus was put to death at Comana and was buried there; according to Palladius, the historian of St. Chrysostom, he was bishop of the city, but this is very doubtful. Its bishop, Elpidius, was present at the Council of Nicæa, in 325. Leontius, a Semi-Arian, held the see in the time of the Emperor Jovian. Heraclius appeared at Chalcedon in 451: Comana was then a suffragan of Melitene, the metropolis of Armenia Secunda; since then it figures as such in most of the "Notitiæ episcopatum" to the twelfth century. Two other bishops are known: Hormizes, or Hormisdas, about 458 (letter to the Emperor Leo; see also Photius, *Biblioth.*, Cod. 51) and Theodorus at the Fifth (Ecumenical) Council, in 553. The ruins of Comana are visible ten miles north-west of Guksun (Cocussus), in the vilayet of Adana (Lequien, I, 447; Ramsay, *Hist. Geogr. of Asia Minor, passim*). Another Comana, suffragan of Neocæsarea, was situated in Pontus Polemiacus; it had also a temple of Mā, and was surnamed Hierocæsarea. It was captured by Sulla, 83 B. C. Six bishops are mentioned by Lequien (I, 517); the first is St. Alexander the Charcoal-Seller, consecrated by St. Gregory the Wonder-Worker. This town is to-day Gömenek, or Gomanak, a village south-west of Neocæsarea (Niksar), in the vilayet of Sivas. Lequien (I, 1009) gives another Comana in Pamphylia Prima, suffragan of Side; the true name is Conana. Zoticus, who lived at the time of Montanus, was Bishop of Conana, or of Comama,

not of Comana in Cappadocia. Cosmas of Conana appeared at Constantinople in 680. Conana is to-day Günen, in the vilayet of Adana.

SMITH, *Dict. of Gr. and Rom. Geogr.* (London, 1878), I, 649. S. PÉTRIDÈS.

Comayagua, DIOCESE OF, suffragan to Guatemala, includes the entire Republic of Honduras in Central America, a territory of about 46,250 square miles, and a population (1902), exclusive of uncivilized Indians, of 684,400, mostly baptized Catholics. It also includes a group of islets in the Bay of Honduras (Ruātān, Bonacca, Utila, Barbareta, and Moret). The surface is mountainous, with many fertile plains and plateaux. Communication is difficult, as there are few good roads, but a railroad from Puerto Cortez to La Pimienta (sixty miles) is destined to reach the Pacific. The mineral wealth is great, and the trade in bananas very lucrative. The climate in the interior is usually healthy, but fevers are frequent along the low coast. The capital of the State, Tegucigalpa, has 17,000 inhabitants. The first missionaries were Franciscans, though the records of their labours have disappeared in the disastrous conflagrations that the wars of the nineteenth century visited on Comayagua, and in which the archives of the cathedral perished. The diocese was established in 1527 by Clement VII, and confirmed in 1539 by Paul III. It is supposed that Bishop Pedrasa, who went in that year to Trujillo, was the first bishop. Under the fourth, Jeronimo de Corella, Pius IV transferred (1561) the see to Nueva Valladolid, now Comayagua. The prosperous missions among the savage Indians on the north coast were broken up in 1601 by English pirates; colonists and missionaries were scattered, and the Indians (now about 90,000) relapsed into their original savagery. The revolution of 1821 did great damage to the Church. Before that time there were more than 300 ecclesiastical foundations, and public worship was everywhere carried on with dignity. The revolutionary Government confiscated the ecclesiastical property to the value of more than a million pesos, according to a presidential message of 1842. Since then parishes depended for public worship on precarious alms, and the clergy diminished in number. Nevertheless, tithes were still paid to the Church, and from them the bishop, the cathedral services, and the seminary were supported. The latter was open only to externs and only the sciences were taught; ecclesiastics and young men destined for the law were educated there together.

Between 1878 and 1880 the new president of Honduras, imposed by Guatemala, confiscated anew the ecclesiastical resources put together by the faithful, the parochial properties, residences of clergy and churches, abolished the tithes, and, to complete the ruin of the ecclesiastical order, suppressed in the university the courses of canon law and moral theology, and in the colleges even the study of Latin. These oppressive acts hampered greatly the proper formation of the clergy, public worship, and the administration of the diocese. Lately the seminary has been reopened, but despite the separation of Church and State the former is subject to many restrictions. The civil government is no longer hostile, but in its name provincial and local authorities exhibit no little hostility to the parish priests. The episcopal city, which has 8000 inhabitants, suffered much from the civil wars of the period of federation (1823-39) and has never regained its former size or prosperity. Bishop Joseph Maria Martinez Cabañas (1908) is the twenty-eighth or twenty-ninth of the line. The five parish priests of the Department of Comayagua represent the former cathedral canons, and assist the bishop on occasions; at his death they elect the vicar capitular. There are seventy secular priests, and no regulars; the Government has never tolerated the return

of the latter since their expulsion (1821). There is a missionary on the northern coast and at Comayagua a Salesian Father. The wealthier classes of the diocese, with very few exceptions, are indifferent to religion. There are no parochial schools, as the people of the pueblos are unable to support them, after paying taxes for the public schools; moreover the clergy are unable to conduct them, being obliged at all times to move about from one small town to another and among the widely scattered villages and the mountains. (See HONDURAS; GUATEMALA.)

FELICIANO HERRERA.

Combefis, FRANÇOIS, patrologist. b. November, 1605, at Marmande in Guyenne; d. at Paris, 23 March, 1679. He made his preliminary studies in the Jesuit College at Bordeaux, and joined the Dominican Order in 1624. After finishing his theological course, he became professor of theology, and taught in several houses of his order. In 1640 he was transferred to Paris where the opportunities for research afforded by the libraries led him to abandon teaching and to undertake the publication of patristic texts. He published successively the works of Amphilochius of Iconium, of Methodius of Patara, and of Andreas of Crete, together with some hitherto unedited writings of St. John Chrysostom. In 1648 appeared his "Novum Auctarium Græco-Latinæ Bibliothecæ Patrum" in two parts, exegetical and historico-dogmatic. The "Historia hæresis monothelitarum sanctæque in eam sextæ synodi actorum vindiciæ", which formed part of the historical section of this work, met with much opposition in Rome, principally because it was at variance with the opinions of Bellarmine and Baronius. The character of the work in which Combefis was engaged met so thoroughly the approval of the French clergy that in an assembly of the French bishops held in Paris, 1655, an annual subsidy was voted to enable him to carry on his publications, the sum voted being subsequently doubled. This generous action produced the most fruitful results, and the number of his publications increased every year. In 1656 he edited St. John Chrysostom's "De educandis Liberis", in 1660 a collection of Acts of the martyrs. In 1662 there appeared the "Bibliotheca Patrum Concionatoria", or "Preachers' Library of the Fathers", a rich and comprehensive work, prepared in the most painstaking manner from all the available manuscripts, and containing a short historical account of all the authors whose names appeared in the work. Another important work, "Auctarium Novissimum Bibliothecæ Patrum", appeared at Paris in 1672. The three following years saw many publications from the pen of Combefis. In 1674 appeared "Ecclesiastes Græcus, i. e. illustrium Græcorum Patrum ac oratorum digesti sermones ac tractatus", etc. In 1675 appeared "Theodoti Ancyranæ adv. Nestorium liber et S. Germani patriarchæ Constantinop. in S. Mariæ Dormitionem et Translationem oratio historica", and in the same year an edition of the works of Maximus Confessor in two volumes with a Latin translation. A third volume of the works of Maximus Confessor was ready when Combefis died. Perhaps the most important of the works of Combefis is his edition of St. Basil in two volumes, "Basilii magnus ex integro recensitus, textus ex fide optimorum codicum ubique castigatus, auctus, illustratus, haud incertâ quandoque conjecturâ emendatus. Versiones recognitæ", etc. (Paris, 1679). This is a work of the highest merit and shows the critical skill of Combefis at its best, though later surpassed by the famous Maurist edition (Paris, 1721-30). Besides these and several other critical editions of works of the Fathers, there are in existence some polemical works of Combefis which have

little value for the present time. Though known to all the learned men of his time, and widely celebrated even in his lifetime for his great learning, Combefis always remained a mild and obedient monk.

PATRICK J. HEALY.

Comboni, DANIEL, missionary. b. 15 March, 1831, in Limone San Giovanni near Brescia, Italy; d. 10 Oct., 1881, at Khartoum. Educated in Mazza's Institute, Verona, he learned, in addition to theology, several languages and medicine. Ordained priest in 1854, he was sent (1857) by Don Mazza to Central Africa, but returned (1859) because of ill health. After teaching in Mazza's Institute from 1861-64 he published "Piano per la rigenerazione dell' Africa" (Turin, 1864) and visited France, Spain, England, Germany, and Austria to collect funds. In Verona Comboni established (1867) his *Istituto delle Missioni per la Nigritia* to educate priests and brothers for the missions, and the *Istituto delle Pie Madri* to supply female help; he also opened similar institutions in Cairo, Egypt, to acclimatize missionaries for the fever-stricken regions of Central Africa. Appointed (1872) Pro-vicar Apostolic of Central Africa (vicariate since 1846), embracing Nubia, Egyptian Sudan, and the territory south to the Lakes (with nearly 100,000,000 inhabitants) Comboni began his great work with only two missions, El-Obeid (Kordofan) and Khartoum. Others rapidly followed: Berber, Delen, Malbes (near El-Obeid). In 1877 Comboni was made Vicar Apostolic of Central Africa and titular Bishop of Claudopolis. His death was pronounced a "great loss" by Leo XIII.

Comboni aroused the interest of Europe in negro missions, and journeyed five times from Africa to Europe to secure missionaries and funds. By means of his intimate acquaintance with the khedive and the Governor of the Sudan he effectually checked the slave-trade. Besides his "Quadro storico delle Scoperte Africane" (1880) he contributed material for scientific works, notably on geography. Mitternitzer's works on the Dinka and Bari dialects (Brixen, 1866, 1867) are based on Comboni's manuscripts. He was a "language genius" (Cardinal Simeoni), master of six European tongues, of Arabic, and the dialects of the Dinka, Bari, and Nuba negroes. His "Istituto", since 1894 the Congregation of the Sons of the Sacred Heart, continues his work in Central Africa. Mgr. Geyer (appointed vicar Apostolic in 1903) was assisted in 1907 by 29 priests, 23 brothers, and 35 sisters ministering to 11 churches, 9 schools, and 6 orphanages.

COMBONI'S account of his work is in *Annalen d. Verbreitung d. Glaubens* (Munich, 1878), XLVI, 94-114, 233-256; GEYER, *Daniel Comboni, eine Lebensskizze in Annalen*, etc. (Munich, 1882), I, 172-238; *Katholische Missionen* (Freiburg, 1882), 159-162; GEYER, *Khartoum, ein Zentrum d. Kultur in Inner-Africa* (Vienna, 1907).

JOHN M. LENHART.

Comforter. See PARACLETE.

Comgall, SAINT, founder and abbot of the great Irish monastery at Bangor, flourished in the sixth century. The year of his birth is uncertain, but according to the testimony of the Irish annals it must be placed between 510 and 520; his death is said to have occurred in 602 ("Annals of Tighernach") and "Chronicon Scotorum"), or 597 (Annals of Innisfallen). He was born in Dalaradia in Ulster near the place now known as Magheramorne in the present County Antrim. He seems to have served first as a soldier, and on his release from military service he is said to have studied at Clonard with St. Finnian, and at Clonmacnoise with St. Ciaran, who died in 549. We next find him in Ulster in an island on Lough Erne accompanied by a few friends following a very severe form

of monastic life. He intended to go to Britain, but was dissuaded from this step by Lugidius, the bishop who ordained him, at whose advice he remained in Ireland and set himself to spread the monastic life throughout the country. The most famous of the many monasteries said to have been founded by St. Comgall is Bangor, situated in the present County Down, on the southern shore of Belfast Lough and directly opposite to Carrickfergus. According to the Irish annals Bangor was founded not later than 552, though Ussher and most of the later writers on the subject assign the foundation to the year 555. According to Adamnan's "Life of Columba", there was a very close connexion between Comgall and Columba, though there does not appear to be sufficient authority for stating that Comgall was the disciple of Columba in any strict sense. He is also said to have been the friend of St. Brendan, St. Cormac, St. Cainnech, and Finbarr of Moville. After intense suffering he received the Eucharist from St. Fiaca and expired in the monastery at Bangor.

Comgall belonged to what is known as the Second Order of Irish Saints. These flourished in the Irish Church during the sixth century. They were for the most part educated in Britain, or received their training from those who had grown up under the influence of the British schools. They were the founders of the great Irish monastic schools, and contributed much to the spread of monasticism in the Irish Church. It is an interesting question how far Comgall, or men like him, had advanced in their establishments at Bangor and elsewhere in introducing the last stages of monasticism then developed on the Continent by St. Benedict. In other words, did St. Comgall give his monks at Bangor a strict monastic rule resembling the Rule of St. Benedict? There has come down to us a Rule of St. Comgall in Irish, but the evidence would not warrant us in saying that as it stands at present it could be attributed to him. The fact, however, that Columbanus, a disciple of Comgall and himself a monk of Bangor, drew up for his Continental monasteries a "Regula Monachorum" would lead us to believe that there had been a similar organization in Bangor in his time. This, however, is not conclusive, since Columbanus might have derived inspiration from the Benedictine Rule then widely spread over South-Western Europe. St. Comgall is mentioned in the "Life of Columbanus" by Jonas, as the superior of Bangor, under whom St. Columbanus had studied. He is also mentioned under 10 May, his feast-day in the "Felire" of Oengus the Culdee published by Whitley Stokes for the Henry Bradshaw Society (2nd ed.), and his name is commemorated in the Stowe Missal (MacCarthy), and in the Martyrology of Tallaght.

Two lives of St. Comgall are published in the *Acta SS.*, 10 May; *Acta Sanctorum O. S. Benedicti*, II; MS. lives of the saint are found in the Bodleian Library, Rawlinson, B. 505, 485, and in the British Museum, Harley 6576; *Oengus the Culdee*, ed. STOKES, for the Henry Bradshaw Society (London, 1905); USSHER, *Antiquitates Ecclesiar. Brit.* (Dublin, 1635); O'HANLON, *Lives of the Irish Saints* (Dublin), 10 May.

JAMES MACCARTEY.

Comma Johanneum. See THREE WITNESSES.

Commandments of God, called also simply THE COMMANDMENTS, or DECALOGUE (Gr. *déka*, ten, and *lógos*, a word), the Ten Words or Sayings, the latter name generally applied by the Greek Fathers; ten precepts bearing on the fundamental obligations of religion and morality and embodying the revealed expression of the Creator's will in relation to man's whole duty to God and to his fellow-creatures. They are found twice recorded in the Pentateuch, in Ex. xx and Deut., v, but are given in an abridged form in the catechisms. Written by the finger of God on two tables of stone, this Divine code was received from the Almighty by Moses amid the thunders of Mount Sinai, and by him made the ground-work of the Mosaic Law. Christ resumed these Commandments in the double precept

of charity—love of God and of the neighbour; He proclaimed them as binding under the New Law in Matt., xix and in the Sermon on the Mount (Matt., v). He also amplified or interpreted them, e. g. by declaring unnecessary oaths equally unlawful with false, by condemning hatred and calumny as well as murder, by enjoining even love of enemies, and by condemning indulgence of evil desires as fraught with the same malice as adultery (Matt., v). The Church, on the other hand, after changing the day of rest from the Jewish Sabbath, or seventh day of the week, to the first, made the Third Commandment refer to Sunday as the day to be kept holy as the Lord's Day. The Council of Trent (Sess. VI, can. xix) condemns those who deny that the Ten Commandments are binding on Christians.

There is no numerical division of the Commandments in the Books of Moses, but the injunctions are distinctly tenfold, and are found almost identical in both sources. The order, too, is the same, except for the final prohibitions pronounced against concupiscence, that of Deuteronomy being adopted in preference to Exodus. A confusion, however, exists in the numbering, which is due to a difference of opinion concerning the initial precept on Divine worship. The system of numeration found in Catholic Bibles is based on the Hebrew text, was made by St. Augustine (fifth century) in his book of "Questions on Exodus" ("Questionum in Heptateuchum libri VII", Bk. II, Question lxxi), and was adopted by the Council of Trent. It is followed also by the German Lutherans, except those of the school of Bucer. This arrangement makes the First Commandment relate to false worship and to the worship of false gods as to a single subject and a single class of sins to be guarded against—the reference to idols being regarded as a mere application of the precept to adore but one God and the prohibition as directed against the particular offence of idolatry alone. According to this manner of reckoning, the injunction forbidding the use of the Lord's Name in vain comes second in order; and the decimal number is safeguarded by making a division of the final precept on concupiscence—the Ninth pointing to sins of the flesh and the Tenth to desires for the unlawful possession of goods. Another division has been adopted by the English and Helvetian Protestant Churches on the authority of Philo Judeus, Josephus Origen, and others, whereby two Commandments are made to cover the matter of worship, and thus the numbering of the rest is advanced one higher; and the Tenth embraces both the Ninth and Tenth of the Catholic division. It seems, however, as logical to separate at the end as to group at the beginning, for, while one single object is aimed at under worship, two specifically different sins are forbidden under covetousness; if adultery and theft belong to two distinct species of moral wrong, the same must be said of the desire to commit these evils.

The Supreme Law-Giver begins by proclaiming His Name and His Titles to the obedience of the creature man: "I am the Lord, thy God. . . ." The laws which follow have regard to God and His representatives on earth (first four) and to our fellow-man (last six). Being the one true God, He alone is to be adored, and all rendering to creatures of the worship which belongs to Him falls under the ban of His displeasure; the making of "graven things" is condemned: not all pictures, images, and works of art, but such as are intended to be adored and served (First). Associated with God in the minds of men and representing Him, is His Holy Name, which by the Second Commandment is declared worthy of all veneration and respect and its profanation reprobated. And He claims one day out of the seven as a memorial to Himself, and this must be kept holy (Third). Finally, parents being the natural providence of their offspring, invested with authority for their guidance and correc-

tion, and holding the place of God before them, the child is bidden to honour and respect them as His lawful representatives (Fourth). The precepts which follow are meant to protect man in his natural rights against the injustice of his fellows. His life is the object of the Fifth; the honour of his body as well as the source of life, of the Sixth; his lawful possessions, of the Seventh; his good name, of the Eighth. And in order to make him still more secure in the enjoyment of his rights, it is declared an offence against God to desire to wrong him: in his family rights by the Ninth and in his property rights by the Tenth.

This legislation expresses not only the Maker's positive will, but the voice of nature as well—the laws which govern our being and are written more or less clearly in every human heart. The necessity of the written law is explained by the obscuring of the unwritten in men's souls by sin. These Divine mandates are regarded as binding on every human creature, and their violation, with sufficient reflection and consent of the will, if the matter be grave, is considered a grievous or mortal offence against God. They have always been esteemed as the most precious rules of life and are the basis of all Christian legislation.

HUMMELAUER, *Comment. in Ez. et Lev.* (Paris, 1897), 196 sq.; IDEM, *Comment. in Deut.* (Paris, 1901), 230 sq.—For explanations of the Commandments, see *Catechism of the Council of Trent*, Pt. III, ch. i, and other catechisms; SLATER, *Manual of Moral Theology* (New York, 1908), I.

JOHN H. STAPLETON.

Commandments of the Church.—We shall consider: I. the nature of the Commandments of the Church in general; II. the history of the Commandments of the Church; III. their classification.

I. NATURE OF THESE COMMANDMENTS.—The authority to enact laws obligatory on all the faithful belongs to the Church by the very nature of her constitution. Entrusted with the original deposit of Christian revelation, she is the appointed public organ and interpreter of that revelation for all time. For the effective discharge of her high office, she must be empowered to give to her laws the gravest sanction. These laws, when they bind universally, have for their object: (1) the definition or explanation of some doctrine, either by way of positive pronouncement or by the condemnation of opposing error; (2) the prescription of the time and manner in which a Divine law, more or less general and indeterminate, is to be observed, e. g. the precept obliging the faithful to receive the Holy Eucharist during the paschal season and to confess their sins annually; (3) the defining of the sense of the moral law in its application to difficult cases of conscience, e. g. many of the decisions of the Roman Congregations; (4) some matter of mere discipline serving to safeguard the observance of the higher law, e. g. the Commandment to contribute to the support of one's pastors (Vacant, *Dict. de théol. cath.*, s. v.). All these laws when binding on the faithful universally are truly commandments of the Church. In the technical sense, however, the table of these Commandments does not contain doctrinal pronouncements. Such an inclusion would render it too complex. The Commandments of the Church (in this restricted sense) are moral and ecclesiastical, and as a particular code of precepts are necessarily broad in character and limited in number.

II. HISTORY OF THE COMMANDMENTS.—We outline here only in a general way the history of the form and number of the precepts of the Church. The discussion of the content of the several Commandments and of the penalties imposed by the Church for violation of these Commandments will be found under the various subjects to which they refer. We do not find in the early history of the Church any fixed and formal body of Church Commandments. As early, however, as the time of Constantine, especial insistence was put upon the obligation to hear Mass on Sundays and Holy Days,

to receive the sacraments and to abstain from contracting marriage at certain seasons. In the seventh-century Penitentiary of Theodore of Canterbury we find penalties imposed on those who contemn the Sunday and fail to keep the fasts of the Church as well as legislation regarding the reception of the Eucharist; but no reference is here made to any precepts of the Church accepted in a particular sense. Neither do we discover such special reference in one of the short sermons addressed to neophytes and attributed to St. Boniface, but probably of later date, in which the hearers are urged to observe Sunday, pay tithes to the Church, observe the fasts, and receive at times the Holy Eucharist. In German books of popular instruction and devotion from the ninth century onwards special emphasis was laid on the obligation to discharge these duties. Particularly does this appear in the forms prepared for the examination of conscience. According to a work written at this time by Regino, Abbot of Prüm (d. 915), entitled "*Libri duo de synodaliibus causis et disciplinis*", the bishop in his visitation is, among other inquiries, to ask "if any one has not kept the fast of Lent, or of the ember-days, or of the rogations, or that which may have been appointed by the bishop for the staying of any plague; if there be any one who has not gone to Holy Communion three times in the year, that is at Easter, Pentecost and Christmas; if there be any one who has withheld tithes from God and His saints; if there be any one so perverse and so alienated from God as not to come to Church at least on Sundays; if there be any one who has not gone to confession once in the year, that is at the beginning of Lent, and has not done penance for his sins" (Hafner, *Zur Geschichte der Kirchengesetze*, in *Theologische Quartalschrift*, LXXX, 104).

The insistence on the precepts here implied, and the fact that they were almost invariably grouped together in the books already referred to, had the inevitable effect of giving them a distinct character. They came to be regarded as special Commandments of the Church. Thus in a book of tracts of the thirteenth century attributed to Celestine V (though the authenticity of this work has been denied) a separate tractate is given to the precepts of the Church and is divided into four chapters, the first of which treats of fasting, the second of confession and paschal Communion, the third of interdicts on marriage, and the fourth of tithes. In the fourteenth century Ernest von Parduvitz, Archbishop of Prague, instructed his priests to explain in popular sermons the principal points of the catechism, the Our Father, the Creed, the Commandments of God and of the Church (Hafner, loc. cit., 115). A century later (1470) the catechism of Dietrich Coelde, the first, it is said, to be written in German, explicitly set forth that there were five Commandments of the Church. In his "*Summa Theologica*" (part I, tit. xvii, p. 12) St. Antoninus of Florence (1439) enumerates ten precepts of the Church universally binding on the faithful. These are: to observe certain feasts, to keep the prescribed fasts, to attend Mass on Sundays and Holy Days, to confess once a year, to receive Holy Communion during paschal time, to pay tithes, to abstain from any act upon which an interdict has been placed entailing excommunication, to refrain also from any act interdicted under pain of excommunication *late sententie*, to avoid association with the excommunicated, finally not to attend Mass or other religious functions celebrated by a priest living in open concubinage. In the sixteenth century the Spanish canonist, Martín Aspilcueta (1586), gives a list of five principal precepts of the Church. These are: to hear Mass on Holy Days of obligation, to fast at certain prescribed times, to pay tithes, to go to confession once a year and to receive Holy Communion at Easter (*Enchiridion, sive manuale confessoriorum et penitentium*, Rome, 1588, ch. xxi, n. 1). At this time, owing to the prevalence of

heresy, there appeared many popular works in defence of the authority of the Church and setting forth in a special manner her precepts. Such among others were the "Summa Doctrina Christiana" (1555) of St. Peter Canisius and the "Doctrina Christiana" of Bellarmine (1589). It is plain, however, that the precepts of the Church, as a particular and distinct body of laws, were recognized long before the sixteenth century; the contention that they were first definitely formulated by St. Peter Canisius is unwarranted.

III. CLASSIFICATION.—The Church in her supreme authority has defined nothing regarding the form and number of the Commandments of the Church. The Council of Trent while recommending in a general way in its twenty-fifth session the observance of these precepts says nothing regarding them as a particular body of laws. Neither is any specific mention made of them in the "Catechismus ad parochos" published by order of the council and known as the "Catechism of the Council of Trent" or "Roman Catechism". We have seen that St. Antoninus of Florence enumerates ten such commandments while Martin Aspilcueta mentions only five. This last number is that given by St. Peter Canisius. According to this author the precepts of the Church are: To observe the feast days appointed by the Church; to hear Mass reverently on these feast days; to observe the fasts on the days during the seasons appointed; to confess to one's pastor annually; to receive Holy Communion at least once a year and that around the feast of Easter. Owing undoubtedly to the influence of Canisius, the catechisms generally used at present throughout Germany and Austria-Hungary have adopted the above enumeration. The fourth precept has, however, been amended so as to allow of confession being made to any duly authorized priest.

In Spanish America the number of church precepts is also five; this being the number, as we have seen, set down by Aspilcueta in the sixteenth century. Here, however, the First and Second commandment in the table of Canisius are combined into one, and the precept to pay tithes appears. It is to be noted, also, that the precept of annual confession is more specific; it enjoins that this confession be made in Lent, or before, if there be danger of death. (Synod of Mexico, 1585, Lib. I, tit. i, in Hardouin, Conc., X, 1596.) French and Italian catechists reckon six precepts of the church, the enumeration given by Bellarmine. According to this writer the Commandments of the Church are: To hear Mass on Sundays and Holy Days; to fast during Lent, on prescribed vigils, and the ember-days; to abstain from meat on Fridays and Saturdays; to go to confession once a year; to receive Holy Communion at Easter; to pay tithes; and finally not to solemnize marriage during the prohibited times.

The French catechisms, following that of Bossuet, omit the last two precepts, but retain the same number as that given by Bellarmine. This they do by making two Commandments cover the obligations to observe Sunday and the Holy Days, and two also regarding the obligations of fast and abstinence. It will be readily observed that the omission by French writers of the Commandment to pay tithes was owing to local conditions. In a "Catechism of Christine Doctrine" approved by Cardinal Vaughan and the bishops of England, six Commandments of the Church are enumerated. These are: (1) To keep the Sundays and Holy Days of obligation holy, by hearing Mass and resting from servile work; (2) to keep the days of fasting and abstinence appointed by the Church; (3) to go to confession at least once a year; (4) to receive the Blessed Sacrament at least once a year and that at Easter or thereabouts; (5) to contribute to the support of our pastors; (6) not to marry within a certain degree of kindred nor to solemnize marriage at the forbidden times. This list is the same

as that which the Fathers of the Third Plenary Council of Baltimore (1886) prescribed for the United States.

JOHN WEBSTER MELOYD.

Commemoration (IN LITURGY) is the recital of a part of the Office or Mass assigned to a certain feast or day when the whole cannot be said. When two Offices fall on the same day and when, according to the rules of the rubrics, one of them cannot be transferred to another day, it is in part celebrated by way of a commemoration. Offices have different degrees of importance (doubles, semi-doubles, etc.) assigned them at their institution, and it is this that mainly determines precedence in cases of conflict.

At Mass a commemoration consists in saying the collect, Secret, and Post-Communion proper to the feast or day which is being commemorated. In the Office commemorations occur at Lauds and Vespers and consist in reciting the antiphons, with their versicles and responses, of the Benedictus and Magnificat respectively, adding in each case an *oremus* with the *oratio* proper. These are called special commemorations as distinguished from the common, which are certain prayers said in Mass with corresponding ones in the Office when the latter is of an inferior rite. These commemorative prayers of the Mass vary according to the season of the year. When two or more special commemorations have to be made, the order is determined by the rank or relative importance of the feasts and Offices. When two Offices fall on the same day there is said to be "occurrence"; and when the second Vespers of a preceding Office coincides with the first Vespers of the following there is "concurrence." When one of the two occurring, or concurring, Offices is very solemn and the other relatively unimportant, all mention of the latter is omitted.

Commendatory Abbot, an ecclesiastic, or sometimes a layman, who holds an abbey in *commendam*, that is, who draws its revenues and, if an ecclesiastic, may also have some jurisdiction, but does not exercise any authority over its inner monastic discipline. Originally only vacant abbeys, or such as were temporarily without an actual superior, were given in commendam, in the latter case only until an actual superior was elected or appointed. An abbey is held in *commendam*, i. e. provisionally, in distinction to one held in *titulum*, which is a permanent benefice. As early as the time of Pope Gregory the Great (590-604) vacant abbeys were given in commendam to bishops who had been driven from their episcopal sees by the invading barbarians. The practice began to be seriously abused in the eighth century when the Anglo-Saxon and Frankish kings assumed the right to set commendatory abbots over monasteries that were

occupied by religious communities. Often these commendatory abbots were laymen, vassals of the kings, or others who were authorized to draw the revenues and manage the temporal affairs of the monasteries in reward for military services. While the notorious Marozia was influential in Rome and Italy, and during the reigns of Henry IV of Germany, Philip I of France, William the Conqueror, William Rufus, Henry I and II of England, the abuse reached its climax. The most worthless persons were often made commendatory abbots, who in many cases brought about the temporal and spiritual ruin of the monasteries. When in 1122 the dispute concerning investiture was settled in favour of the Church, the appointment of laymen as commendatory abbots and many other abuses were abolished. The abuses again increased while the popes resided at Avignon (1309-1377) and especially during the schism (1378-1417), when the popes, as well as the antipopes, gave numerous abbey in commendam in order to increase the number of their adherents.

After the eighth century various attempts were made by popes and councils to regulate the appointment of commendatory abbots, still the abuses continued. Boniface VIII (1294-1303) decreed that a benefice with the cure of souls attached should be granted in commendam only in great necessity or when evident advantage would accrue to the Church, but never for more than six months (c. 15, VI, De elect., 1, 6). Clement V (1305-14) revoked benefices which had been granted by him in commendam at an earlier date (Extr. comm., c. 2, De præb., 3, 2). The Council of Trent (Sess. XXV, cap. xxi, de Regularibus) determined that vacant monasteries should be bestowed only on pious and virtuous regulars, and that the principal or mother-house of an order and the abbey and priories founded immediately therefrom should no longer be granted in commendam. The succeeding Bull "Superna" of Gregory XIII, and the Constitution "Pastoralis" of Innocent X greatly checked the abuses, but did not abolish them entirely. Especially in France they continued to flourish to the detriment of the monasteries. Finally, the French Revolution and the general secularization of monasteries in the beginning of the eighteenth century destroyed the evil with the good. Since that time commendatory abbots have become very rare, and the former abuses have been abolished by wise regulations. There are still a few commendatory abbots among the cardinals, and Pope Pius X is Commendatory Abbot of the Benedictine monastery at Subiaco near Rome. The powers of a commendatory abbot are as follows: If the monastery is occupied by a religious community where there is a separate *mensa abbatialis*, i. e. where the abbot and the convent have each a separate income, the commendatory abbot, who must then be an ecclesiastic, has jurisdiction *in foro externo* over the members of the community and enjoys all the rights and privileges of an actual abbot, and if, as is generally the case, the monastery has a special superior, he is subject to the commendatory abbot as a claustral prior is subject to his actual abbot. If there is no separate *mensa abbatialis*, the power of the commendatory abbot extends only over the temporal affairs of the monastery. In case of vacant monasteries the commendatory abbot generally has all the rights and privileges of an actual abbot.

MICHAEL OTT.

Commendone, GIOVANNI FRANCESCO, Cardinal and Papal Nuncio, b. at Venice, 17 March, 1523; d. at Padua, 26 Dec., 1584. After receiving a thorough

education in the humanities and in jurisprudence at the University of Padua, he came to Rome in 1550. The ambassador of Venice presented him to Pope Julius III, who was so favourably impressed by the unusual learning of the youthful scholar that he appointed him one of his secretaries. After successfully performing various papal missions of minor importance, he accompanied Cardinal Legate Dandino to the Netherlands, whence Pope Julius III sent him in 1553 on an important mission to Queen Mary Tudor, who had just succeeded Edward VI on the English throne. He was to treat with the new queen concerning the restoration of the Catholic Faith in England. Accompanied by Penning, a servant and confidant of Cardinal Reginald Pole, Commendone arrived in London on 8 Aug., 1553. Though Mary Tudor was a loyal Catholic, she was surrounded at court by numerous opponents of papal authority, who made it extremely difficult for Commendone to obtain a secret interview with her. By chance he met John Lee, a relation of the Duke of Norfolk and an attendant at court, with whom he had become acquainted in Italy, and Lee succeeded in arranging the interview. Mary received Commendone kindly, and expressed her desire to restore the Catholic Faith and to acknowledge the spiritual authority of the pope, but considered it prudent to act slowly on account of her powerful opponents. Commendone hastened to Rome, arriving there on 11 September, and informed the pope of the joyful news, at the same time handing him a personal letter from the queen. Commendone continued to hold the office of papal secretary under Paul IV, who esteemed him very highly and in return for his services appointed him Bishop of Zante in 1555. In the summer of 1556 he accompanied Cardinal Legate Scipione Rebiba on a papal mission to the Netherlands, to the courts of Emperor Charles V and King Philip II, the consort of Queen Mary of England. Commendone had received instructions to remain as nuncio at the court of Philip, but he was recalled to Rome soon after his arrival in the Netherlands. On 16 September of the same year the pope sent him as extraordinary legate to the Governments of Urbino, Ferrara, Venice, and Parma in order to obtain help against the Spanish troops who were occupying the Campagna and threatening Rome.

In 1560, when Pius IV determined to reopen the Council of Trent, Commendone was sent as legate to Germany to invite the Catholic and Protestant Estates to the council. He arrived in Vienna on 3 Jan., 1561, and after consulting with Emperor Ferdinand, set out on 14 January for Naumburg, where the Protestant Estates were holding a religious convention. He was accompanied by Delfino, Bishop of Lesina, who had been sent as papal nuncio to Ferdinand four months previously and was still at the imperial court. Having arrived at Naumburg on 28 January, they were admitted to the convention on 5 February and urged upon the assembled Protestant Estates the necessity of a Protestant representation at the Council of Trent in order to restore religious union, but all their efforts were of no avail. From Naumburg, Commendone traveled northward to invite the Estates of Northern Germany. He went by way of Leipzig and Magdeburg to Berlin, where he arrived on 19 February and was well received by Joachim of Münsterberg, the Elector of Brandenburg. Joachim spoke respectfully of the pope and the Catholic Church and expressed his desire for a religious reconciliation, but did not promise to appear at the council. Here Commendone met also the son of Joachim, the young Archbishop Sigismund of Magdeburg, who promised to appear at the council but did not keep his word. Leaving Berlin, Commendone visited Beeskow, Wolfenbüttel, Hanover, Hildesheim, Iburg, Paderborn, Cologne, Cleves, the Netherlands, and Aachen, inviting all the Estates he met in these

places. From Aachen he turned to Lübeck with the intention of crossing the sea to invite Kings Frederick II of Denmark and Eric XIV of Sweden. The King of Denmark, however, refused to receive the legate, while the King of Sweden invited him to England, whither he had planned to go in the near future. Queen Elizabeth of England had forbidden the papal nuncio Hieronimo Martinengo to cross the English Channel when he was sent to invite the queen to the council, hence it was very improbable that she would allow Commendone to come to England. He therefore repaired to Antwerp, awaiting further instructions from Rome. Being recalled by the pope, he returned to Italy in Dec., 1561, by way of Lorraine and Western Germany. Although his mission was without any results as regards Protestant representation at the Council of Trent, still his spotless character and his strong and unselfish pleas for a return to Catholic unity made a deep impression upon many Protestant Estates. The numerous letters which Commendone wrote during this mission to St. Charles Borromeo present a sad but faithful picture of the ecclesiastical conditions in Germany during those times. These and others were published in "*Miscellanea di Storia Italiana*" (Turin, 1869, VI, 1-240).

In Jan., 1563, the legates of the Council of Trent sent Commendone to Emperor Ferdinand at Innsbruck, to treat with him regarding some demands which he had made upon the council in his "*Libel of Reformation*". In October of the same year Pius IV sent him as legate to King Sigismund of Poland with instruction to induce this ruler to give political recognition to the Tridentine decrees. Yielding to the requests of Commendone and of Hosius, Bishop of Ermland, Sigismund not only enforced the Tridentine reforms, but also allowed the Jesuits, the most hated enemies of the Reformers, to enter Poland. While still in Poland, on the recommendation of St. Charles Borromeo, Commendone was created cardinal on 12 March, 1565. He remained in Poland until the death of Pius IV (9 Dec., 1565), and before returning to Italy he went as legate of the new pope, Pius V, to the Diet of Augsburg, which was opened by Maximilian II on 23 March, 1566. He had previously warned the emperor under pain of excommunication not to discuss religion at the diet. He also seized the opportunity to exhort the assembled Estates to carry into execution the Tridentine decrees. In Sept., 1568, Pius V sent him a second time as legate to Maximilian II. In union with Biglia, the resident nuncio at Vienna, he was to induce the emperor to make no new religious concessions to the Protestant Estates of Lower Austria and to recall several concessions which he had already made. While engaged in this mission, Commendone was also empowered by a papal Brief dated 10 Oct., 1568, to make an apostolic visitation of the churches and monasteries of Germany and the adjacent provinces. An account of this visitation in the Dioceses of Passau and Salzburg in the year 1569 is published in "*Studien und Mittheilungen aus dem Benedictiner und Cistercienser Orden*" (Brünn, 1893, XIV, 385-398 and 567-589). In Nov., 1571, Pius V sent him as legate to the emperor and to King Sigismund of Poland in the interest of a crusade. After the death of King Sigismund, in 1572, he promoted the election of Henry, Duke of Anjou, as King of Poland, thereby incurring the displeasure of the emperor. Upon his return to Italy in 1573, Gregory XIII appointed him a member of the newly founded *Congregatio Germanica*, the purpose of which was to safeguard Catholic interests in Germany. He was so highly esteemed by the Sacred College that, when Gregory XIII fell dangerously ill, it was generally believed that Commendone would be elected pope, but he was outlived by Gregory.

MICHAEL OTT.

Commentaries on the Bible.—"To write a full history of exegesis," says Farrar, "would require the space of many volumes." Nor is this surprising when it is borne in mind that the number of commentaries on such a recent writer as Dante reached the grand total of thirteen hundred at the beginning of the twentieth century. As the ground to be covered is so extensive, only the barest outline can be given here. The bibliography at the end will enable the reader to pursue the subject further. We touch upon the salient points of Jewish, patristic, medieval, and modern (Catholic and non-Catholic) commentaries. We begin with the Jewish writers, and deal briefly with the Targums, Mishna, and Talmuds; for, though these cannot be regarded as Bible commentaries, in the proper sense of the word, they naturally lead up to these latter. Those who require further information on this head may be referred to the special articles in *THE CATHOLIC ENCYCLOPEDIA*, and to the works mentioned in the bibliography. Special attention is directed to the list of the best modern non-Catholic commentaries in English [V (3)]. The article is divided as follows: I. Jewish Commentaries; II. Patristic; III. Medieval; IV. Modern Catholic; V. Non-Catholic.

I. JEWISH COMMENTARIES.—(1) *Philo*.—There was a story among the Jews in the Middle Ages to the effect that Aristotle accompanied Alexander the Great to Jerusalem, and, with characteristic Greek craftiness, obtained possession of the wisdom of Solomon, which he subsequently palmed off on his countrymen as his own. This accounted for everything that was good in Aristotle; the defects were the only thing peculiar to the philosopher. That Greek literature, in general, got its inspiration from Moses was an uncritical idea that dated back as far as Philo, the great Jewish writer of Alexandria. A visitor to Alexandria at the time when Christ was preaching in Galilee would find there and in its vicinity a million Jews using the Septuagint as their Bible, and could enter their magnificent Great Synagogue of which they were justly proud. Whoever had not seen it was not supposed to have beheld the glory of Israel. The members of their Sanhedrin, according to Sukkah, were seated on seventy-one golden thrones valued at tens of thousands of talents of gold; and the building was so vast that a flag had to be waved to show the people when to respond. At the head of this assembly, on the highest throne, was seated the alabarch, the brother of Philo. Philo himself was a man of wealth and learning, who mingled with all classes of men and frequented the theatre and the great library. Equally at home in the Septuagint and the Greek classics, he was struck and perplexed by the many beautiful and noble thoughts contained in the latter, which could bear comparison with many passages of the Bible. As this difficulty must have frequently presented itself to the minds of his coreligionists, he endeavoured to meet it by saying that all that was great in Socrates, Plato, etc. originated with Moses. He set about reconciling Pagan philosophy with the Old Testament, and for this purpose he made extensive use of the allegorical method of interpretation. Many passages of the Pentateuch were not intended to be taken literally. They were literally false, but allegorically true. He did not hit upon the distinction, made later by St. Thomas Aquinas and other Catholic

thinkers, between natural and revealed religion. The Bible contains not only revealed but also natural religion, free from error and with Divine sanction. Pagan systems may have natural religion highly developed, but with much concomitant error. Though this distinction did not occur to Philo, his exegesis served to tide over the difficulty for the time amongst the Hellenistic Jews, and had great influence on Origen and other Alexandrian Christian writers.

(2) *The Targums*.—In order to get on the main lines of Jewish interpretation it is necessary to turn to the Holy Land. Farrar, in his "Life of Christ", says that it has been suggested that when Christ visited the Temple, at twelve years of age, there may have been present among the doctors Jonathan ben Uzziel, once thought the author of the Yonathan Targum, and the venerable teachers Hillel and Shammai, the handers-on of the Mishna. The Targums (the most famous of which is that on the Pentateuch erroneously attributed to Onkelos, a misnomer for Aquila, according to Abrahams) were the only approach to anything like a commentary on the Bible before the time of Christ. They were interpretative translations or paraphrases from Hebrew into Aramaic for the use of the synagogues when, after the Exile, the people had lost the knowledge of Hebrew. It is doubtful whether any of them were committed to writing before the Christian Era. They are important as indicating the character of the Hebrew text used, and because they agree with the New Testament in interpreting certain passages Messianically which later Jews denied to have any Messianic bearing.

(3) *The Mishna and Talmuds*.—Hillel and Shammai were the last "pair" of several generations of "pairs" of teachers. These pairs were the successors of the early scribes who lived after the Exile. These teachers are said to have handed down and expanded the Oral Law, which, according to the uncritical view of many Jews, began with Moses. This Oral Law, whose origin is buried in obscurity, consists of legal and liturgical interpretations and applications of the Pentateuch. As no part of it was written down, it was preserved by constant repetition (*Mishna*). On the destruction of Jerusalem several rabbis, learned in this Law, settled at Jamnia, near the sea, twenty-eight miles west of Jerusalem. Jamnia became the head-quarters of Jewish learning until 135. Then schools were opened at Sepphoris and Tiberias to the west of the Sea of Galilee. The rabbis comforted their countrymen by teaching that the study of the Law (Oral as well as Written) took the place of the sacrifices. They devoted their energies to arranging the Unwritten Torah, or Law. One of the most successful at this was Rabbi Akiba who took part in the revolt of Bar-Kokba, against the Romans, and lost his life (135). The work of systematization was completed and probably committed to writing by the Jewish patriarch at Tiberias, Rabbi Jehudah ha-Nasi "The Prince" (150-210). He was of noble birth, wealthy, learned, and is called by the Jews "Our Master the Saint", or simply Rabbi *par excellence*. The compilation made by this Rabbi is the Mishna. It is written in New Hebrew, and consists of six great divisions or orders, each division containing, on an average, about ten tractates, each tractate being made up of several chapters. The Mishna may be said to be a compilation of Jewish traditional moral theology, liturgy, law, etc. There were other traditions not embodied in the work of Rabbi, and these are called additional Mishna.

The discussions of later generations of rabbis all centred round the text of the Mishna. Interpreters or "speakers" laboured upon it both in Palestine and Babylonia (until 500), and the results are comprised in the Palestinian and Babylonian Talmuds. The word *Talmud* means teaching, doctrine. Each Talmud consists of two parts, the Mishna (in Hebrew), in

sixty-three tractates, and an explanation of the same (*Gemara*), ten or twelve times as long. The explanatory portion of the Palestinian Talmud is written in Western Aramaic and that of the Babylonian Talmud in Eastern Aramaic, which is closely allied to Syriac or Mandaic. The passages in the Gemara containing additional Mishna are, however, given in New Hebrew. Only thirty-nine tractates of the Mishna have Gemara. The Talmud, then, consists of the Mishna (traditions from 450 B. C. till A. D. 200), together with a commentary thereon, Gemara, the latter being composed about A. D. 200-500. Next to the Bible the Babylonian Talmud is the great religious book of orthodox Jews, though the Palestinian Talmud is more highly prized by modern scholars. From the year 500 till the Middle Ages the rabbis (*geonim*) in Babylonia and elsewhere were engaged in commenting on the Talmud and reconciling it with the Bible. A list of such commentaries is given in "The Jewish Encyclopedia".

(4) *The Midrashim*.—Simultaneously with the Mishna and Talmud there grew up a number of Midrashim, or commentaries on the Bible. Some of these were legalistic, like the Gemara of the Talmud; but the most important were of an edifying, homiletic character (*Midrash Haggadah*). These latter are important for the corroborative light which they throw on the language of the New Testament. The Gospel of St. John is seen to be steeped in early Jewish phraseology, and the words of Ps. cix, "The Lord said to my Lord", etc. are in one place applied to the Messias, as they are in St. Matthew, though Rashi and later Jews deprived them of their Messianic sense by applying them to Abraham.

(5) *Karaite Commentators*.—When the nature of the Talmud and other such writings is considered, it is not surprising that they produced a violent reaction against Rabbinism even among the Jews themselves. In spite of the few gems of thought scattered through it at long intervals, there is nothing in any literature so entirely uninviting as the Talmud. The opposition to these "traditions of men" finally took shape. Anan ben David, a prominent Babylonian Jew in the eighth century, rejected Rabbinism for the written Old Testament and became the founder of the sect known as Karaites (a word indicating their preference for the written Bible). This schism produced great energy and ability on both sides. The principal Karaite Bible commentators were Mahavendi (ninth century); Abul-Faraj Harun (ninth century), exegete and Hebrew grammarian; Solomon ben Yerucham (tenth century); Sahal-ben Mazliach (d. 950), Hebrew grammarian and lexicographer; Joseph al-Bazir (d. 930); Japhet ben Ali, the greatest Karaite commentator of the tenth century; and Judah Hadassi (d. 1160).

(6) *Middle Ages*.—Saadia of Fayûm (d. 892), the most powerful writer against the Karaites, translated the Bible into Arabic and added notes. Besides commentaries on the Bible, Saadia wrote a systematic treatise bringing revealed religion into harmony with Greek philosophy. He thus became the forerunner of Maimonides and the Catholic Schoolmen. Solomon ben Isaac, called Rashi (b. 1040) wrote very popular explanations of the Talmud and the Bible. Abraham Ibn Ezra of Toledo (d. 1168) had a good knowledge of Oriental languages and wrote learned commentaries on the Old Testament. He was the first to maintain that Isaiah contains the work of two prophets. Moses Maimonides (d. 1204), the greatest Jewish scholar of the Middle Ages, of whom his coreligionists said that "from Moses to Moses there was none like Moses", wrote his "Guide to the Perplexed", which was read by St. Thomas. He was a great admirer of Aristotle, who was to him the representative of natural knowledge as the Bible was of the supernatural. There were the two Kimchis, especially David (d. 1235) of

Narbonne, who was a celebrated grammarian, lexicographer, and commentator inclined to the literal sense. He was followed by Nachmanides of Catalonia (d. 1270), a doctor of medicine who wrote commentaries of a cabalistic tendency; Immanuel of Rome (b. 1270); and the Karaites, Aaron ben Joseph (1294), and Aaron ben Elias (fourteenth century).

(7) *Modern.*—Isaac Abarbanel (b. Lisbon, 1437; d. Venice, 1508) was a statesman and scholar. None of his predecessors came so near the modern ideal of a commentator as he did. He prefixed general introductions to each book, and was the first Jew to make extensive use of Christian commentaries. Elias Levita (d. 1549) and Azarias de Rossi (d. 1577) have also to be mentioned. Moses Mendelssohn of Berlin (d. 1786), a friend of Lessing, translated the Pentateuch into German. His commentaries (in Hebrew) are close, learned, critical, and acute. He has had much influence in modernizing Jewish methods. Mendelssohn has been followed by Wessely, Jaroslaw, Homberg, Euchel, Friedlander, Hertz, Herxheimer, Philippson, etc., called "Biurists", or expositors. The modern liberal school among the Jews is represented by Munk, Luzzato, Zunz, Geiger, Fürst, etc. In past ages the Jews attributed both the Written and the Unwritten Torahs to Moses; some modern Jews seem disposed to deny that he had anything to do with either.

II. PATRISTIC COMMENTARIES.—The history of Christian exegesis may be roughly divided into three periods: the Age of the Fathers, the Age of Catena and Scholia (seventh to sixteenth century), and the Age of Modern Commentaries (sixteenth to twentieth century). Most of the patristic commentaries are in the form of homilies, or discourses to the faithful, and range over the whole of Scripture. There are two schools of interpretation, that of Alexandria and that of Antioch.

(1) *Alexandrian School.*—The chief writers of the Alexandrian School were Pantænus, Clement of Alexandria, Origen, Dionysius of Alexandria, Didymus the blind priest, Cyril of Alexandria, and Pierius. To these may be added St. Ambrose, who, in a moderate degree, adopted their system. Its chief characteristic was the allegorical method. This was, doubtless, founded on passages in the Gospels and the Epistles of St. Paul, but it received a strong impulse from the writings of Alexandrian Jews, especially of Philo. The great representative of this school was Origen (d. 254). From his very earliest years Origen manifested such extraordinary marks of piety and genius that he was held in the very highest reverence by his father, himself a saint and martyr. Origen became the master of many great saints and scholars, one of the most celebrated being St. Gregory Thaumaturgus; he was known as the "Adamantine" on account of his incessant application to study, writing, lecturing, and works of piety. He frequently kept seven amanuenses actively employed; it was said he became the author of 6000 works (Epiphanius, *Hær.*, lxiv, 63); according to St. Jerome, who reduced the number to 2000 (*Contra. Rufin.*, ii, 22), he left more writings than any man could read in a lifetime (*Ep. xxxiii.*, ad Paulam). Besides his great labours on the Hexapla he wrote scholia, homilies, and commentaries on the Old and the New Testament. In his scholia he gave short explanations of difficult passages after the manner of his contemporaries, the annotators of the Greek classics. Most of the scholia, in which he chiefly sought the literal sense, are unfortunately lost, but it is supposed that their substance is embodied in the writings of St. John Chrysostom and other Fathers. In his other works Origen pushed the allegorical interpretation to the utmost extreme. In spite of this, however, his writings were of great value, and with the exception of St. Augustine, no writer of ancient times had such influence. It is lamentable that this great man fell

into serious error on the origin of souls, the eternity of hell, etc.

(2) *Antiochene School.*—The writers of the Antiochene School disliked the allegorical method, and sought almost exclusively the literal, primary, or historical sense of Holy Scripture. The principal writers of this school were St. Lucian, Eusebius of Nicomedia, Maris of Chalcedon, Eudoxius, Theognis of Nicæa, Asterius, Arius the heresiarch, Diodorus of Antioch (Bishop of Tarsus), and his three great pupils, Theodore of Mopsuestia, Theodore's brother Polychromius, and St. John Chrysostom. With these may be counted St. Ephraem on account of his preference for the literal sense. The great representatives of this school were Diodorus, Theodore of Mopsuestia, and St. John Chrysostom. Diodorus, who died Bishop of Tarsus (394), followed the literal to the exclusion of the mystical or allegorical sense. Theodore was born at Antioch, in 347, became Bishop of Mopsuestia, and died in the communion of the Church, 429. He was a powerful thinker, but an obscure and prolix writer. He felt intense dislike for the mystical sense, and explained the Scriptures in an extremely literal and almost rationalistic manner. His pupil, Nestorius, became a founder of heresy; the Nestorians translated his books into Syriac and regarded Theodore as their great "Doctor". This made Catholics suspicious of his writings, which were finally condemned after the famous controversy on The Three Chapters. Theodore's commentary on St. John's Gospel, in Syriac, has recently been published, with a Latin translation, by a Catholic scholar, Dr. Chabot. St. John Chrysostom, priest of Antioch, became Patriarch of Constantinople in 398. As an interpreter of Holy Scripture he stands in the very first rank of the Fathers. He left homilies on most of the books of the Old and the New Testament. There is nothing in the whole of antiquity to equal his writings on St. Matthew's Gospel and St. Paul's Epistles. When St. Thomas Aquinas was asked by one of his brethren whether he would not like to be the owner of Paris, so that he could dispose of it to the King of France and with the proceeds promote the good works of his order, he answered that he would prefer to be the possessor of Chrysostom's "Super Matthæum". This reply may be taken as the true expression of the high admiration in which the writings of St. Chrysostom have ever been held in the Church. St. Isidore of Pelusium said of him that if the Apostle St. Paul could have used Attic speech he would have explained his own Epistles in the identical words of St. John Chrysostom.

(3) *Intermediate School.*—The other Fathers combined what was best in both these systems, some leaning more to the allegorical and some to the literal sense. The principal were Isidore of Pelusium, Theodoret, St. Basil, St. Gregory of Nazianzus, St. Gregory of Nyssa, St. Hilary of Poitiers, Ambrosiaster, St. Jerome, St. Augustine, St. Gregory the Great, and Pelagius. St. Jerome, perhaps the greatest Biblical scholar of ancient times, besides his famous translations of the Scripture, and other works, left many useful commentaries, some of great merit. In others he departed too much from the literal meaning of the text. In the hurry of composition he did not always sufficiently indicate when he was quoting from different authors, and this, according to Richard Simon, accounts for his apparent discrepancies.

III. MEDIEVAL COMMENTARIES.—The medieval writers were content to draw from the rich treasures left them by their predecessors. Their commentaries consisted, for the most part, of passages from the Fathers, which they connected together as in a chain, *catena* (q. v.). We cannot give more than the names of the principal writers, with the century after each. Though they are not all known as catenists they may be regarded as such, for all practical purposes.

(1) *Greek Catenists*.—Procopius of Gaza (sixth century) was one of the first to write a catena. He was followed by St. Maximus, Martyr (seventh), St. John Damascene (eighth), Olympiodorus (tenth), Eucemnius (tenth), Nicetas of Constantinople (eleventh), Theophylactus, Archbishop in Bulgaria (eleventh), Euthymius Zigabenus (twelfth), and the writers of anonymous catenæ edited by Cramer and Cardinal Mai.

(2) *Latin Catenists, Scholiasts, etc.*—The principal Latin commentators of this period were the Venerable Bede, Walafrid Strabo, Anselm of Laon, Hugh of Saint-Cher, St. Thomas Aquinas, and Nicholas de Lyra. The Venerable Bede (seventh to eighth century), a good Greek and Hebrew scholar, wrote a useful commentary on most of the books of the Old and the New Testament. It is in reality a catena of passages from Greek and Latin Fathers judiciously selected and digested. Walafrid Strabo (ninth century), a Benedictine, wrote the "Glossa Ordinaria" on the entire Bible. It is a brief explanation of the literal and mystical sense, based on Rabanus Maurus and other Latin writers, and was one of the most popular works during the Middle Ages, being as well known as "The Sentences" of Peter Lombard. Anselm, Dean of Laon, and professor at Paris (twelfth century), wrote the "Glossa Interlinearis", so called because the explanation was inserted between the lines of the Vulgate. The Dominican cardinal, Hugh of Saint-Cher (Hugo de Sancto Caro, thirteenth century), besides his famous "Concordance", composed a short commentary on the whole of the Scriptures, explaining the literal, allegorical, analogical, and moral sense of the text. His work was called "Postillæ", i. e. *post illa (verba textus)*, because the explanation followed the words of the text. St. Thomas Aquinas (thirteenth century) left commentaries on Job, Psalms, Epistles of St. Paul, and was the author of the well-known "Catena Aurea" on the Gospels. This consists of quotations from over eighty Greek and Latin Fathers. He throws much light on the literal sense and is most happy in illustrating difficult points by parallel passages from other parts of the Bible. Nicholas de Lyra (thirteenth century), a converted Jew, joined the Franciscans in 1291, and brought to the service of the Church his great knowledge of Hebrew and rabbinical learning. He wrote short notes or "Postillæ" on the entire Bible, and set forth the literal meaning with great ability, especially of the books written in Hebrew. This work was most popular, and in frequent use during the late Middle Ages, and Luther was indebted to it for his display of learning. A great impulse was given to exegetical studies by the Council of Vienne which decreed, in 1311, that chairs of Hebrew, Chaldean, and Arabic should be established at Paris, Oxford, Bologna, and Salamanca.

Besides the great writers already mentioned the following are some of the principal exegetes, many of them Benedictines, from patristic times till the Council of Trent: Cassiodorus (sixth century); St. Isidore of Seville (seventh); St. Julian of Toledo (seventh); Aleuin (eighth); Rabanus Maurus (ninth); Druthmar (ninth); Remigius of Auxerre (ninth); St. Bruno of Würzburg, a distinguished Greek and Hebrew scholar; St. Bruno, founder of the Carthusians (eleventh); Gilbert of Poirée; St. Rupert (twelfth); Alexander of Hales (thirteenth); Albertus Magnus (thirteenth); Paul of Burgos (fourteenth to fifteenth); Alphonsus Tostatus of Avila (fifteenth); Ludolph of Saxony; and Dionysius the Carthusian, who wrote a pious commentary on the whole of the Bible; Jacobus Faber Stapulensis (fifteenth to sixteenth); Gagneus (fifteenth to sixteenth). Erasmus and Cardinal Cajetan (sixteenth) wrote in a scientific spirit, but have been justly blamed for some rash opinions.

IV. MODERN CATHOLIC COMMENTARIES.—The in-

flux of Greek scholars into Italy on the fall of Constantinople, the Christian and anti-Christian Renaissance, the invention of printing, the controversial excitement caused by the rise of Protestantism, and the publication of polyglot Bibles by Cardinal Ximenes and others, gave renewed interest to the study of the Bible among Catholic scholars. Controversy showed them the necessity of devoting more attention to the literal meaning of the text, according to the wise principle laid down by St. Thomas in the beginning of his "Summa Theologica".

It was then that the sons of St. Ignatius, who founded his order in 1534, stepped into the front rank to repel the attacks on the Church. The Ratio Studiorum of the Jesuits made it incumbent on their professors of Scripture to acquire a mastery of Greek, Hebrew, and other Oriental languages. Salmeron, one of the first companions of St. Ignatius, and the pope's theologian at the Council of Trent, was a distinguished Hebrew scholar and voluminous commentator. Bellarmine, one of the first Christians to write a Hebrew grammar, composed a valuable commentary on the Psalms, giving an exposition of the Hebrew, Septuagint, and Vulgate texts. It was published as part of Cornelius a Lapide's commentary on the whole Bible. Cornelius a Lapide, S. J. (b. 1566), was a native of the Low Countries, and was well versed in Greek and Hebrew. During forty years he devoted himself to teaching and to the composition of his great work, which has been highly praised by Protestants as well as Catholics. Maldonatus, a Spanish Jesuit, born 1534, wrote commentaries on Isaiah, Baruch, Ezechiel, Daniel, Psalms, Proverbs, Canticles (Song of Solomon), and Ecclesiastes. His best work, however, is his Latin commentary on the Four Gospels, which is generally acknowledged to be one of the best ever written. When Maldonatus was teaching at the University of Paris the hall was filled with eager students before the lecture began, and he had frequently to speak in the open air. Great as was the merit of the work of Maldonatus, it was equalled by the commentary on the Epistles by Estius (b. at Gorcum, Holland, 1542), a secular priest, and superior of the College at Douai. These two works are still of the greatest help to the student. Many other Jesuits were the authors of valuable exegetical works, e. g.: Francis Ribera of Castile (b. 1514); Cardinal Toletus of Cordova (b. 1532); Manuel Sa (d. 1596); Bonfrère of Dinant (b. 1573); Mariana of Talavera (b. 1537); Alcazar of Seville (b. 1554); Barradius "the Apostle of Portugal"; Sánchez of Alcalá (d. 1628); Serarius of Lorraine (d. 1609); Lorinus of Avignon (b. 1559); Tirinus of Antwerp (b. 1580); Menochius of Pavia; Pereira of Valencia (d. 1610); and Pineda of Seville.

The Jesuits were rivalled by Arias Montanus (d. 1598), the editor of the Antwerp Polyglot Bible; Sixtus of Siena, O. P. (d. 1569); John Wild (Ferus), O. S. F.; Dominic Soto, O. P. (d. 1560); Masius (d. 1573); Jansen of Ghent (d. 1576); Génébrard of Cluny (d. 1597); Agellius (d. 1608); Luke of Bruges (d. 1619); Calasius, O. S. F. (d. 1620); Malvenda, O. P. (d. 1628); Jansen of Ypres; Simeon de Muis (d. 1644); Jean Morin, Oratorian (d. 1659); Isaac Le Maistre (de Sacy); John Sylveira, Carmelite (d. 1687); Bossuet (d. 1704); Richard Simon, Oratorian (d. 1712); Calmet, Oratorian, who wrote a valuable dictionary of the Bible, of which there is an English translation, and a highly esteemed commentary on all the books of Scripture (d. 1757); Louis de Carrières, Oratorian (d. 1717); Piconio, Capuchin (d. 1709); Lamy, Oratorian (d. 1715); Guarin, O. S. B. (d. 1729); Houbigant, Oratorian (d. 1783); Smits, Recollet (1770); Le Long, Oratorian (d. 1721); Brentano (d. 1797). During the nineteenth century the following were a few of the Catholic writers on the Bible: Scholz, Hug, Jahn, Le Hir, Allioli, Mayer, van Essen, Claire, Beelin, Hane-

berg, Meignan, Reithmayr, Patrizi, Loch, Bisping (his commentary on the New Testament styled "excellent" by Vigouroux), Corluy, Fillion, Lèsêtre, Trochon (Introductions and Comm. on Old and New Test., "La Sainte Bible", 27 vols.), Schegg, Bacuez, Kenrick, McEvilly, Arnould, Schanz (a most valuable work, in German, on the Gospels), Fouard, Maas, Vigouroux (works of Introduction), Ward, McIntyre, etc. Catholics have also published important scientific books. There is the great Latin "Cursus" on the whole of the Bible by the Jesuit Fathers, Cornely, Knabenbauer, and Hummelauer. The writings of Lagrange (Les Juges), Condamin (Isaïe), Calmes (Saint Jean), Van Hoonacker (Les Douze Petits Prophètes), etc., are all valuable works. For a list of modern Catholic publications on the Scripture, the reader may be referred to the "Revue biblique", edited by Lagrange (Jerusalem and Paris), and the "Biblische Zeitschrift", published by Herder (Freiburg im Breisgau). For further information concerning the principal Catholic commentators see respective articles.

V. NON-CATHOLIC COMMENTARIES.—(1) *In General*.—The commentaries of the first Reformers, Luther, Melancthon, Calvin, Zwingli, etc., are mostly controversial, and are now seldom quoted by scholars. Their immediate successors were too energetically engaged in polemics among themselves to devote much time to regular works of exegesis. The following wrote on Holy Scripture during the 17th and 18th centuries. Lutherans: Gerhard; Geier; Calov; S. Schmid; J. H. Michaelis; Lange. Calvinists: Drusus; Louis de Dieu (great Oriental scholar); Cappel; Bochart; Cocceius; Vitringa. Socinians: John Crell and Jonas Schlichting. Arminians: Hugo Grotius (a man of great erudition); Limbroch; John le Clerc (rationalistic). English Writers: Brian Walton (London Polyglot), John Lightfoot (Horæ Heb. et Talm.), both mines of learning; Pearson, etc., editors of "Critici Sacri" (compiled from the best Continental writers, Catholic and Protestant); Mayer; S. Clarke (brief judicious notes); Wells; Gill; John Wesley; Dodd; W. Lowth; R. Lowth; and the editors of the Reformer's Bible. During the nineteenth century: Priestley (1803); Burder (1809); D'Oyly and Mant (1820); A. Clarke (1826, learned); Boothroyd (1823, Hebrew scholar); Thomas Scott (1822, popular); Matthew Henry (1827, a practical comm. on Old and New Test.); Bloomfield (Greek Test., with Eng. notes, 1832, good for the time); Kuinoel (Philological Comm. on New Test., 1828); Oldshausen (1839); Haevernick (1845); Baumgarten (1859); Tholuck (1843); Trench (Parables, Sermon on the Mount, Miracles, N. T. Syn.—very useful); "The Speakers Commentary" (still valuable); Alford (Greek Test., with critical and exeg. comm., 1856, good); Franz Delitzsch (1870), Ebrard Hengstenberg (1869); Wordsworth (The Greek Test., with notes, 1877); Keil; Ellicott (Epp. of St. Paul, highly esteemed); Conybeare and Howson (St. Paul, containing much useful information); Lange, together with Schroeder, Fay, Cassel, Bacher, Zoekler, Moll, etc. (Old and N. Test., 1864-78); Lewin (St. Paul, 1878); Beet; Cook; Gloag; Perowne; Bishop Lightfoot (Epp. of St. Paul); Westcott. There were many commentaries published at Cambridge, Oxford, London, etc. (see publishers' catalogues, and notices in "Expositor", "Expository Times", and "Journal of Theological Studies"). Other writers are Farrar, A. B. Davidson, Fausset, Plummer, Plumptre, Salmon, Swete, Bruce, Dods, Stanley, Driver, Kirkpatrick, Sanday, Green, Hovey, Robinson, Schaff, Briggs, Moore, Gould, etc. "The International Critical Commentary" is a work by many distinguished American and English scholars. There are also the Bible dictionaries of Kitto, Smith, and Hastings. Many of these works, especially the later ones, are valuable for their scientific method,

though not of equal value for their views or conclusions. [See below (3) *The best modern (non-C.) Commentaries in English*.]

(2) *Rationalistic Commentaries*.—The English deists, Lord Herbert of Cherbury (d. 1648), Hobbes, Blount, Toland, Lord Shaftesbury (d. 1713), Mandeville, Collins, Woolston (1731), Tindal, Morgan, Chubb, Lord Bolingbroke (d. 1751), Annet, and David Hume (d. 1776), while admitting the existence of God, rejected the supernatural, and made desperate attacks on different parts of the Old and the New Testament. They were ably refuted by such men as Newton, Cudworth, Boyle, Bentley, Lesley, Locke, Ibbot, Whiston, S. Clarke, Sherlock, Chandler, Gilbert West, George Lord Lytton, Waterland, Foster, Warburton, Leland, Law, Lardner, Watt, Butler. These replies were so effective that in England deism practically died with Hume. In the meantime, unfortunately, the opinions of the English rationalists were disseminated on the Continent by Voltaire and others. In Germany the ground was prepared by the philosophy of Christian Wolff and the writings of his disciple Semler. Great scandal was caused by the posthumous writings of Raimarus, which were published by Lessing between 1774-78 (The Fragments of Wolfenbüttel). Lessing pretended that he discovered the manuscript in the ducal library of Wolfenbüttel and that the author was unknown. According to the "Fragments", Moses, Christ, and the Apostles were impostors. Lessing was vigorously attacked, especially by Götte; but Lessing, instead of meeting his opponent's arguments, with great literary skill turned him to ridicule. The rationalists, however, soon realized that the Scriptures had too genuine a ring to be treated as the results of imposture. Eichhorn, in his "Introduct. to the Old Test." (1789), maintained that the Scriptures were genuine productions, but that, as the Jews saw the intervention of God in the most ordinary natural occurrences, the miracles should be explained naturally, and he proceeded to show how. Paulus (1761-1850), following the lead of Eichhorn, applied to the Gospels the naturalistic method of explaining miracles. When Paulus was a boy, his father's mind became deranged, he constantly saw his deceased wife and other ministering angels, and he perceived miracles everywhere. After a time the young Paulus began to shake off this nightmare and amused himself by taking advantage of his father's weakness, and playing practical jokes upon him. He grew up with the most bitter dislike for everything supernatural, and his judgment became almost as warped as that of his father, but in the opposite direction. The Apostles and early Christians appeared to him to be people just like his worthy parent, and he thought that they distorted natural facts through the medium of their excited imaginations. This led him to give a naturalistic explanation of the Gospel miracles.

The common sense of the German rationalists soon perceived, however, that if the authenticity of the Sacred Books were admitted, with Eichhorn and Paulus, the naturalistic explanation of these two writers was quite as absurd as the impostor system of Raimarus. In order to do away with the supernatural it was necessary to get rid of the authenticity of the books; and to this the observations of Richard Simon and Astruc readily lent themselves. G. L. Bauer, Heyne (d. 1812), and Creuzer denied the authenticity of the greater portion of the Pentateuch and compared it to the mythology of the Greeks and Romans. The greatest advocate of such views was de Wette (1780-1849), a pupil of Paulus, of the hollowness of whose method he soon became convinced. In his "Introduct. to the Old Test." (1806) he maintained that the miraculous narratives of the Old Testament were but popular legends, which, in passing from mouth to mouth, in the course of centuries, be-

came transformed and transfused with the marvellous and the supernatural, and were finally committed to writing in perfectly good faith. Strauss' (1808-74), in his "Das Leben Jesu" (1835) applied this mythical explanation to the Gospels. He showed most clearly that if with Paulus the Gospels are allowed to be authentic, the attempt to explain the miracles naturally breaks down completely. Strauss rejected the authenticity and regarded the miraculous accounts in the Gospels as naïve legends, the productions of the pious imaginations of the early generations of Christians. The views of Strauss were severely criticized by the Catholics, Kuhn, Mack, Hug, and Sepp, and by the Protestants Neander, Tholuck, Ullman, Lange, Ewald, Riggenbach, Weiss, and Keim. Baur especially, the founder of the Tübingen School, proved that Strauss ran counter to the most clearly established facts of early Christian history, and showed the folly of denying the historical existence of Christ and His transcendent personality. Even Strauss lost all confidence in his own system. Baur, unfortunately, originated a theory which was for a time in great vogue, but which was afterwards abandoned by the majority of critics. He held that the New Testament contains the writings of two antagonistic parties amongst the Apostles and early Christians. His principal followers were Zeller, Schwegler, Planck, Köslin, Ritsch, Hilgenfeld, Volkmar, Tobler, Keim, Hosten, some of whom, however, emancipated themselves from their master.

Besides the writers already mentioned, the following wrote in a rationalistic spirit: Ernesti (d. 1781), Semler (1791), Berthold (1822), the Rosenmüllers, Crusius (1843), Bertheau, De Wette, Hupfeld, Ewald, Thienius, Fritzsche, Justi, Gesenius (d. 1842), Longkerke, Bleek, Bunsen (1860), Umbreit, Kleinert, Knobel, Nicolas, Hirzel, Kuenen, J. C. K. von Hoffmann, Hitzig (d. 1875), Schulz (1869), B. Weiss, Renan, Tuch, H. A. W. Meyer (and his continuators Huther, Luneman, Dusterdieck, Brückner, etc.), Wellhausen, Wieseler, Jülicher, Beyschlag, H. Holtzmann, and his collaborators Schmiedel, von Soden, etc. Holtzmann, while practically admitting the authenticity of the Gospels, especially of St. Mark, endeavours to explain away the miracles. He approaches the subject with his mind made up that miracles do not happen, and he tries to get rid of them by cleverly attempting to show that they are merely echoes of Old Testament miracle stories. In this he is quite as unsuccessful as Paulus, who saw in them only the counterpart of the distorted imaginings of his unfortunate father. Holtzmann is severely taken to task by several writers in the "International Critical Commentary". The attempt to get rid of the supernatural has completely failed; but the activity of so many acute minds has thrown great light on the language and literature of the Bible.

(3) *The Best Modern (non-Catholic) Commentaries in English.*—There is a very useful list of such commentaries in "The Expository Times" (vol. XIV, Jan. and Feb., 1903, 151, 203), by Henry Bond, Librarian of Woolwich. It is the result of opinions which he obtained from many of the most renowned English scholars. The number of votes given for the different works is printed after each name; but no name appears on the list unless it received more than five votes. The editor, Dr. James Hastings, added judicious notes and observations (270, 358). The following list is based, in great measure, on these papers, supplemented from other sources. The works are distinguished as follows: (e) excellent; (g) good; (f) fair. Some of those marked (g) and (f) were excellent for the time in which they were published; and they may still be regarded as serviceable. The characterization of each is, of course, from the non-Catholic point of view.

Old Testament.—Introduction: Driver, "Introd.

to the Literature of the Old Test.", written from a "Higher Critical" standpoint; on the other side is the powerful book by Orr, "The Problem of the Old Testament" (London, 1906). Both contain ample literatures.—Genesis: Skinner, in "International Critical Commentary"; Spurrell (g) (notes on the text); Delitzsch (g), and Dillmann (g); Dods in "Handbook Series".—Exodus: There is, at present, no first-class commentary on Exod.; Kennedy in "Int. Crit. Comm."; Chadwick (g).—Leviticus: Stenning in "Int. Crit. Comm."; Kalish (g) the best in English; Driver and White (f) in Polychrome Bible; Ginsburg (London); Kellogg (f) (London).—Numbers: Buchanan Gray (e) in "Int. Crit. Comm."; Kittell, "History of the Hebrews"; there is little else to refer to, as the others are out of date.—Deuteronomy: Driver (e) in "Int. Crit. Comm."; Harper (g).—Josue: Smith in "Int. Crit. Comm."; Maclear (f).—Judges: Moore (e) in "Int. Crit. Comm."; Watson (f); Lias (f).—Ruth: Briggs in "Int. Crit. Comm.".—Samuel: Smith (e) in "Int. Crit. Comm."; Kirkpatrick (e).—Kings: Brown in "Int. Crit. Comm."; Lumby, an excellent popular work.—Chronicles (Paralip.): Curtis in "Int. Crit. Comm."; also his article in Hastings, "Dict. of the Bible"; Bennett (g); Barnes (g).—Esdras and Nehemias: Batten in "Int. Crit. Comm."; Ryle's is an excellent popular commentary; Adeney (f).—Esther: Paton in "Int. Crit. Comm."; Lange (f); Adeney (f).—Job: There appears to be no first-rate students' commentary on Job; Davidson's is an excellent popular book; earlier works of Driver, Gibson, and Cox are fair.—Psalms: Briggs (e) in "Int. Crit. Comm."; Delitzsch (e); Kirkpatrick (e); Perowne (g); Cheyne (f).—Proverbs: Toy (e) in "Int. Crit. Comm.".—Ecclesiastes: Barton (e) in "Int. Crit. Comm."; Strong (e); Tyler (g); Plumptre, a good popular comm.; Delitzsch (f); Wright (f).—Song of Solomon (Canticles): Briggs in "Int. Crit. Comm."; Harper, a valuable work; Ginsburg (f).—Isaiah: Driver and Gray in "Int. Crit. Comm."; Smith (e); Delitzsch (g); Cheyne (f).—Jeremias: Kirkpatrick in "Int. Crit. Comm.".—Streane an excellent popular work; that of Ball and Bennett is good; Orelli (f).—Lamentations: Briggs in "Int. Crit. Comm."; Streane and Adeney, good popular books.—Ezekiel: Cooke and Burney in "Int. Crit. Comm."; Coburn (g); Toy (f) in "Polychrome Bible"; Davidson (e), an excellent popular commentary.—Daniel: Peters in "Int. Crit. Comm."; Kennedy (g); Bevan (g); Driver has a first-class popular commentary.—Amos and Osee: Harper (e) in "Int. Crit. Comm."; three excellent popular works are by Smith, Driver, and Cheyne.—Other Minor Prophets: Smith, etc., in "Int. Crit. Comm."; Smith (e); Davidson (g), and Perowne (g); Orelli (f); Dods, "Post-exilic Prophets", in Handbook Series; Low (g); Zechariah (g); Pusey (f).

New Testament.—Introduction: Salmon, "Introd. to the New Test.", an excellent book; Westcott, "Canon of the New Test." (7th ed., 1896); Lightfoot, "Essays on Supernatural Religion" (1893), a powerful reply to the attacks of an anonymous rationalist on the New Test.; also his "Dissertations on the Apostolic Age", and Biblical Essays; Ramsay, "St. Paul the Traveller", "Was Christ born in Bethlehem?", etc.; Harnack, "St. Luke the Physician", defends the authenticity of the Gospel and Acts; Hawkins, "Horæ Synopticæ". Text: "Variatium New Test."; Weymouth, "The Resultant Greek Test.", showing the Greek readings of eleven great editions; Westcott and Hort, "The New Test. in Greek", vol. II, Introd.; Salmon, "Some Criticism of the Text" (1897), a criticism of Westcott and Hort; "The Oxford Debate on the Textual Criticism of the New Test." (Oxford, 1897); Kenyon, "Our Bible and the Ancient Manuscripts", an invaluable book; also his.

"Handbook of the Textual Criticism of the New Test." (1901); Hammond, "Outlines of Text. Crit. applied to N. Test." (Oxford); Nestle (also tr.), and the exhaustive work by von Soden (both in German).—St. Matthew's Gospel: Allen (e) in "Int. Crit. Comm."; Meyer (e), one of the older works, but still used, Dr. Hastings says, by some of the finest scholars, who keep it always near at hand; Bruce (g) in "Exp. Greek Test."; Alford (f); Morison (g); Carr (g); "Camb. Greek Test."—St. Mark: Swete (e); Gould (g) in "Int. Crit. Comm."; Hort (g) Lindsay, an excellent little book.—St. Luke: Plummer (e) in "Int. Crit. Comm."; Wright (g), "St. Luke's Gospel in Greek"; Godet (g); Farrar (g).—St. John: Westcott (e) in "Speaker's Comm.", the most highly praised of all the commentaries on St. John's Gospel; Bernard in "Int. Crit. Comm."; Godet (g); Milligan and Moulton (g); Dods in "Exp. Gr. Test." (g); Reith (g).

Acts: Knowing (e), "Exp. Gr. Test.", one of the best commentaries on Acts in any language; Turner in "Int. Crit. Comm."; Rendall (g); Lumby (g) Rackham (g); Page (g).—Romans: Sanday and Headlam (e) in "Int. Crit. Comm.", one of the best commentaries in existence on Romans, rendering all other English commentaries superfluous.—I Corinthians: Robertson and Walker in "Int. Crit. Comm."; Evans (g) in "Speaker's Comm."; Findlay (g) in "Exp. Greek Test."; Edwards (g); Ellicott (g); Godet (f); Massie in Century Bible (g).—II Corinthians: Meyer (g) in "Int. Crit. Comm."; Bernard (g) in "Exp. Greek Test."; Waite (g) in "Speaker's Commentary".—Galatians: Lightfoot (e) (London, 1874), a masterpiece of exegesis; Burton in "Int. Crit. Comm."; Rendall (g) in "Exp. Greek Test."; Ellicott (g); Ramsay (g); Sanday (g).—Ephesians: Abbott (e) in "Int. Crit. Comm." (Edinburgh); Armitage Robinson (e); Macpherson (g); Ellicott (g); Salmon (g) in "Exp. Greek Test."; Alford (f) (London); Meyer (f); Miller, good but daring.—Philippians and Philemon: Lightfoot (e), another masterpiece; Vincent (e) in "Int. Crit. Comm."; Ellicott (f); Moule (g), "Philippian Studies", and in "Camb. Greek Test."—Colossians: Lightfoot (e), another great work; Abbott (e) in "Int. Crit. Comm." (in the same volume as Ephesians); Peake (g) in "Exp. Greek Test."; Maclaren (g); Ellicott (f); Findlay (f) in "Pulpit Comm."; Moule (g), "Colossian Studies".—Thessalonians: Milligan (e), highly esteemed; Frame in "Int. Crit. Comm."; Ellicott (e); Meyer and Alford (f); Findlay (e); Denney (g); Mason (g).—Pastoral Epistles: Lock in "Int. Crit. Comm."; Ellicott (e); Bernard (g) in "Camb. Greek Test."; Meyer (f); Lilley (g) in "Handbook Series"; to these must be added the valuable book by James, "The Genuineness and Authorship of the Pastoral Epistles" (1906).—Hebrews: Westcott (e), on a level with Lightfoot, the greatest work on Hebrews; Nairne in "Int. Crit. Comm."; Davidson (g); Farrar (g).—Ep. of St. James: Mayor (e); Ropes in "Int. Crit. Comm."; Alford and Meyer (f); Plumptre (g).—Epp. of St. Peter and St. Jude: Bigg (e) in "Int. Crit. Comm."; Hort (e), a splendid fragment; Masterman (g), "I Peter"; Salmon (g), "I Peter" in "Popular Commentary".—Epp. of St. John: Westcott (e), another of his great works; Haupt (g) and Huther (g); Watson (g), "I John".—Revelation (Apocalypse): Swete (e), the greatest commentary on the Apocalypse; Charles in "Int. Crit. Comm."; Milligan (e); Simcox (g); Hort (e).

Jewish Commentators.—ABRAHAM, *Short History of Jewish Literature* (London, 1906); GRAETZ, *History of the Jews* (Philadelphia, 1891-98); OESTERLEY and BOX, *The Religion and Worship of the Synagogue* (London, 1907); BACHER, *Bible Exegesis in Jewish Encyc.*; SCHUCHTER, *Talmud in Hist. Dict. Bib.*; FARRAR, *History of Interpretation* (London, 1886); VON SCHÜBER, *The Jewish People in the Time of Jesus Christ* (Edinburgh, 1902). Patristic Commentaries.—BARDENHEWER, *Gesch. der altkirchlichen Literatur* (Freiburg, 1902-3); IDEM, *Patrologie* (1894; Fr. tr., Paris, 1899); TURNER in HAST., *Dict. of the Bible*, extra vol.; EHRHARD, *Altchr. Literatur* (Freiburg, 1900). Later Commentators.—CALMET, *Dict. Bib.*; I, DIXON, *General Introduct. to the*

S. Scriptures (Dublin, 1872); II; GIGOT, *General Introduct. to the Holy Scriptures* (New York, 1900); RICHARD SIMON, *Histoire critique des principaux commentateurs du N. T.* (Rotterdam, 1689); HORNE, *Introduct. to the Scriptures* (London, 1834); II; HURTER, *Nomenclator*; VIGOUROUX, *Manuel biblique* (Paris, 1882); IDEM, *Les Livres saints et la critique rationaliste* (Paris, 1886); II.

C. AHERNE.

Commines (also COMINES or COMYNES), PHILIPPE DE, French historian and statesman, b. in Flanders probably before 1447; d. at the Château d'Argenton, France, about 1511. He was the son of Colard van den Clyte, chief bailiff of Flanders for the Duke of Burgundy, and of Marguerite d'Armuyden. His family owned the seignior of Commines on the Lys, and some of his ancestors had been aldermen of Ypres. He was brought up as a knight, spoke Flemish and French, but complains that he had never learned Latin—in the course of his travels he had learned Italian. In 1464 Commines was presented at the court of the Duke of Burgundy in Lille and became squire to the duke's son, the Count of Charolais, afterwards Charles the Bold. From 1464 to 1472 he was in the service of Charles, took part in his expeditions, and in 1465 was present at the battle of Monthéry. After the death of Philip the Good he was made chamberlain to the new Duke of Burgundy (1467). During the interview held at Péronne (1468) Commines was taken into Charles' the Bold's confidence and then turned to Louis XI whom he secretly informed of his master's intentions. He nevertheless remained in the service of Charles who entrusted him with various missions to the governor of Calais (1470), to Brittany, and to Spain (1471). Nevertheless, on 8 August, 1472, he suddenly abandoned Charles the Bold during the duke's expedition in Normandy and went to Ponts-de-Cé to join Louis XI. The latter loaded him with favours and estates, and in 1473 arranged his marriage with Helène de Chembes, a wealthy heiress whose dowry was the seignior of Argenton in Poitou. Commines now became one of the king's confidants and chief diplomatic agents.

However, after the death of Charles the Bold, the frankness with which Commines urged moderation upon the king aroused passing disfavour, but in 1478 Louis XI appointed him to conduct some difficult negotiations with the princes of Italy. After the conspiracy of the Pazzi he saved the power of the Medici, allies of France, who were threatened by the pope and the dukes of Milan; in 1479 he protected the young Duke of Savoy against Lodovico il Moro, and in 1481 succeeded in maintaining French influence in Savoy. Upon the death of Louis XI, however, in 1483, at which event he was present, Commines permitted himself, however, to be drawn into the faction of the Duke of Orléans and conspired against the regent, Anne of Beaujeu. In 1487 he was arrested, confined at Loches in one of the iron cages used by Louis XI, and afterwards banished by Parliament to his own estates; he was also deprived of his principality of Talmont which was reclaimed by the La Trémoille family. In 1491 he returned to court and, although opposed to the expedition of Charles VIII into Italy, he nevertheless accompanied it and was sent to Venice, where he was utterly powerless to prevent the intrigues that culminated in the league against Charles VIII (1495). After the battle of Fornovo, he returned to Venice and Milan, where he was totally unsuccessful.

On the accession of Louis XII in 1498, Commines, for some unknown reason, lost caste at court and only reappeared there in 1505, thanks to the influence of Anne of Brittany. His "Mémoires" give but meagre information as to himself and leave many points in doubt; even the exact dates of his birth and death are uncertain, and but little is known of the part he played at Péronne, of his defection in 1472, his retirement at the accession of Louis XII, and of other matters. The

"Mémoires" constitute a political history of Europe from 1464 to 1498 and, according to the preface, are material intended exclusively for the use of Angelo Cato, Archbishop of Vienna, who was to write a Latin history of Louis XI. The first part of the work, dealing with the period between 1464 and 1483, was prepared between 1489 and 1491, that containing the account of the reign of Charles VIII being completed in 1498. Commynes is rather analytic than graphic, devotes himself more to ascertaining the causes of events than to describing the events themselves; his language seems inferior to his thought and his style is abrupt and periphrastic. The thought bears the impress of the realistic politics of the Renaissance, but the manner of expression is still medieval. The work has been preserved in manuscript and in sixteenth-century editions, the first edition being that of Galliot du Pré (Paris, 1524, fol.). A manuscript, written about 1530, and recovered by de Mandrot, is the only one containing the complete text. The chief editions are those of Mlle Dupont in the publications of the Société de l'Histoire de France (Paris, 1847, 3 vols.), Chantelauze (Paris, 1881), and de Mandrot (Paris, 1903, 2 vols.). Commynes' tomb, on which is a kneeling figure of him and also one of his wife, Hélène de Chambes, is preserved in the Louvre.

Introduction to the editions of Mlle Dupont and de Mandrot; KERVYN DE LETTENHOVE, *Lettres et négociations de Philippe de Commines* (Brussels, 1874); FIEVILLÉ, *Documents inédits sur Philippe de Commines* (Paris, 1881); CHANTÉLAUZE, *Philippe de Commines in the Correspondance* (1880-81); SCOBLE, tr. in *Bohn's Library of French Memoirs* (London, 1855); J. H. Commynes' tomb is reproduced in PETIT DE JULLEVILLE, *Histoire de la littérature française* (Paris, 1896), II, 330.

LOUIS BRÉHIER.

Commissariat of the Holy Land, in the Order of Friars Minor the territory or district assigned to a commissary, whose duty it is to collect alms for the maintenance of the Holy Places in Palestine committed to the care of the Friars Minor; also, in a more restricted sense, the convent where the aforesaid commissary resides. The commissary, who is always a member of the order, receives his appointment by letters patent from the minister general, to whom he is bound to transmit every year a detailed account of the alms received. These alms may not, under any circumstances, without express permission of the Holy See, be applied to other purposes, however pious and meritorious, under grave ecclesiastical penalties. The alms taken up by the bishops at the annual collections for the Holy Land are conveyed to the custos in Jerusalem through the commissary in whose district the dioceses of the bishops are situated. There are at present forty commissariats throughout the Christian world. The most ancient is that of Naples, founded in 1333, when Robert of Anjou redeemed the Holy Places from the Sultan of Egypt. In English-speaking countries there are seven—three in the United States, one in Canada, one in Great Britain, one in Ireland, and one in Australia. The Commissariat of the United States was founded in 1882, and the commissary resides in the new convent of Mount St. Sepulchre, Washington, D. C. In 1902, commissariats were erected in California and at St. Louis.

Conspectus Omnium Missionum Ord. FF. Minorum exhibitis Capitulo Generali Romæ habito die 30 Maii, 1903 (Rome, 1903); *Regula et Constitutiones Generales Frat. Minorum* (Rome, 1897); several Bulls and Briefs issued at different periods by the Holy See, of which the following are the principal: SIXTUS V., *Nostri pastoralis* (13 Dec., 1589); PAUL V., *Cælestis Regis* (22 Jan., 1618); URBAN VIII., *Alnus a felix* (18 June, 1634) in *Bull. Rom.* XV, 320 sqq.; BENEDICT XIV., *Emanavit nuper* (20 Aug., 1743) in *Bullar.* Benedict. XIV (Prato, 1845), I, 313; PIUS VI., *Inter cætera* (31 July, 1778) in *Bull. Rom. Cont.* (Turin), VI, pt. I, 505; LEO XIII., *Saluatoris* (26 Dec., 1887). See also *S. C. Offici* (28 June, 1876); *S. C. Prop. Fide* (20 Feb., 1891) in *Collectanea S. C. Prop.*, n. 1632, 1638.

GREGORY CLEARY.

Commissary Apostolic (Lat. *Commissarius Apostolicus*), one who has received power for a legitimate

superior authority to pass judgment in a certain cause or to take informations concerning it. When such a delegate has been appointed by the pope, he is called a commissary Apostolic. The custom of appointing such commissaries by the Holy See is a very ancient one. A noteworthy instance is the commission issued to St. Cyril of Alexandria by Pope Celestine I, in the early part of the fifth century, by which that holy patriarch was empowered to judge Nestorius in the pope's name. English history furnishes, among other instances, that of the commission which constituted Cardinals Wolsey and Campeggio papal representatives for the judicial hearing of the divorce case of Henry VIII. Sometimes Apostolic commissions are constituted permanently by the Holy See. Such are the various Roman congregations presided over by the cardinals. The full extent of the authority of commissaries Apostolic must be learnt from the diploma of their appointment. The usual powers which they possess, however, are defined in the common law of the Church. Commissaries are empowered not only for judicial but also for executive purposes. When a papal commission mentions explicitly certain persons and certain things as subject to the authority of a commissary, and then adds in general that "other persons and other things" (*quidam alii et res alie*) are also included, it is understood that the latter phrase refers only to persons and things of equal or lower importance than those that are expressly named, and under no circumstances can the commissary's power extend to what is higher or more dignified (Cap. xv, de rescript.). If a bishop be appointed commissary Apostolic in matters that already belong to his ordinary jurisdiction, he does not thereby receive a delegated jurisdiction superadded to that which he already possessed; such an Apostolic commission is said to excite, not to alter, the prelate's ordinary jurisdiction.

As a commissary Apostolic is a delegate of the Holy See, an appeal may be made to the pope against his judgments or administrative acts. When several commissaries have been appointed for the same case, they are to act together as one; but if, owing to death or any other cause, one or other of the commissaries should be hindered from acting, the remaining members have full power to execute their commission. In case the commissaries be two in number and they disagree in the judgment to be given, the matter must be decided by the Holy See. A commissary Apostolic has the power to subdelegate another person for the cause committed to him, unless it has been expressly stated in his diploma that, owing to the importance of the matter at issue, he is to exercise jurisdiction personally. By the plenitude of his power, the pope can constitute a layman commissary Apostolic for ecclesiastical affairs, but according to the common law only prelates or clerics of the higher orders should receive such a commission (Lib. Sext., c. II, de rescr., 1, 3). The Council of Trent (Sess. XXV, c. xvi, de Ref.) prescribes that each bishop should transmit to the Holy See the names of four persons capable of receiving such delegation for his diocese. It has consequently become customary for the pope to choose commissaries Apostolic from the locality where they are to investigate or pass judgment or execute a mandate.

HUMPHREY, *Urbs et Orbis* (London, 1899); ANDRÉ-WAGNER, *Dict. de droit canon.* (Paris, 1901), I; PIGNATELLI, *Consul. Canon.* (Venice, 1894), IX.

WILLIAM H. W. FANNING.

Commissions, ECCLESIASTICAL, bodies of ecclesiastics juridically established and to whom are committed certain specified functions or charges. They are I. Pontifical; II. Roman Prelatial; III. Diocesan.

I. Pontifical commissions are special committees of cardinals created by the pope for some particular

purpose, e. g. for the proper interpretation and defence of Sacred Scripture (see BIBLICAL COMMISSION), for historical studies (see ECCLESIASTICAL HISTORY), for the codification of the canon law (see LAW), for the supervision, correction, etc. of the liturgical books of the Roman Church, e. g. the Breviary, Missal, Pontifical, Ritual, etc. (see BREVIARY; LITURGY), for the restoration and perfection of ecclesiastical music (see GREGORIAN CHANT), for the reunion of dissenting churches (see EASTERN CHURCH), for the preservation of the Faith (see ITALY; ROME).

II. Prelatitinal commissions are composed of Roman prelates, secretaries, consultants, etc., and may be presided over by a cardinal. Such, e. g., are the Commission of Sacred Archæology (see ARCHÆOLOGY), for the preservation and illustration of the Christian antiquities of Rome, the commission for the administration of Peter's-pence (q. v.), and the Palatine Commission (established by Leo XIII) for the settlement of controversies or lawsuits between the personnel of the Vatican or other papal residences. Most of these commissions, however, are attached to the Roman Congregations, as special departments or sections, and are described in the article CONGREGATIONS, ROMAN, e. g. the Liturgical Commission attached to the Congregation of Rites; the commissions for the examination of episcopal reports, for the revision and correction of the liturgical books of the Eastern Church (q. v.), and for the examination of religious institutes in Propaganda territory, all three attached to the Congregation of Propaganda; for the examination of new religious institutes attached to the Congregation of Bishops and Regulars; for the selection of bishops in Italy (now suppressed and its attributions vested in the Congregation of the Inquisition).

III. The diocesan commissions provided for by general ecclesiastical law are four: the commission for seminaries (in two sections for spiritual and temporal concerns, respectively), according to the Council of Trent (Sess. XXIII, cap. xviii, De ref.), for which see SEMINARY, ECCLESIASTICAL; the commission of examiners of the clergy (see EXAMINERS, SYNODAL), to aid in the control of all competition for vacant parochial benefices; the commission on sacred music (Motu proprio of Pius X, 22 Nov., 1903) for the improvement of the character and execution of ecclesiastical music in the churches; a vigilance committee (*Consilium a vigilantia*) for the repression of modernism (Pius X, "Pascendi Dominici Gregis", 8 Sept., 1907). In many dioceses of England there exist diocesan school commissions or associations. There exists also in England (since 1853) for each diocese a commission of investigation for criminal and disciplinary causes of ecclesiastics (Taunton, 210-213); a similar commission for the dioceses of the United States, established by Propaganda in 1878, was abrogated in 1884 in favour of a new form of procedure, detailed in the Instruction of that year, "Cum Magnopere". For Ireland see "Acta et Decreta", by the Synod of Maynooth (1900), p. 75; and for Scotland, Taunton, op. cit., 214-220. The scope, authority, and attributions of these bodies are described either in the pontifical documents that create them, or in the legislation pertaining to the Roman congregations, or in the common ecclesiastical law and its authoritative interpretations.

THOMAS J. SHAHAN.

Commodianus, a Christian poet, the date of whose birth is uncertain, but generally placed at about the middle of the third century, or between the end of Diocletian's persecution and the issuing of the edict of Maxentius (305-11). It has lately been asserted,

however, that Commodianus lived under Julian or even in the middle of the fifth century. He is not known outside of his own writings except through a notice by Gennadius, "De Viris Illustribus" (ch. xv), and the condemnation of Pseudo-Gelasius, who prohibits the reading of his books ("De Libris recipiendis et non recipiendis", in Migne, P. L., LIX, 163). Gennadius seems to draw his information chiefly from the works themselves, and claims that Commodianus imitated Tertullian, Lactantius, and Papias. From two passages in his manuscripts it was gleaned that Commodianus came from Gaza in Palestine and had been invested with the episcopal dignity, but the first of these passages has a very uncertain meaning, and the second has been attributed to the mistake of a copyist. Commodianus declares that he is not a "doctor", which has led to the belief that he was a layman. He styles himself "mendicant of Christ", *mendicus Christi*, but that could also mean "one who implores Christ" or "one who begs for Christ". What is certain, however, is that, after various religious experiences, such as associating with pagans and practising the occult sciences, and probably conforming to the religious doctrines and rites of the Jews, he adopted Christianity, having been converted by reading the Bible.

His works are a collection of "Instructions" and a "Carmen apologeticum". The former consists of eighty acrostic, or abecedarian, essays, divided into two books. The plan of this work and the Biblical quotations introduced therein reveal the influence of St. Cyprian's "Testimonia". The first book is against the Jews and pagans, the second being addressed to different categories of the faithful: catechumens, baptized Christians, penitents, *matrones*, clerks, priests, and bishops. In parts its tone is decidedly satirical. The author is manifestly engrossed with ethics, and recommends alms-deeds above all else. The "Carmen apologeticum" has a misleading title, thanks to Pitra, its first editor (1852). It may be divided into four parts: a preamble (1-88); a résumé of the doctrine on God and Christ (89-578); a demonstration of the necessity of faith for salvation (579-790); and a description of the end of the world (791-1060). It is principally this picture that has made the name of Commodianus famous. According to it the Christians are a prey to a seventh persecution—the number is symbolical and indicates the last persecution. The Goths surprise and destroy Rome. Suddenly Nero, the Antichrist of the West, reappears, recaptures Rome from the Goths, associates himself with two Cæsars and maltreats the Christians for three and a half years. Then a second Antichrist, the man from Persia, comes from the East, conquers Nero, burns Rome, establishes himself in Judea, and works wonders. But God, with an army of the blessed, advances from beyond Persia in a triumphal march; Antichrist is overcome, and Christ and His saints settle in Jerusalem. To learn what follows we must consult the "Instructions" (II, 1-4). First of all the elect rise from the dead and for 1000 years lead lives of pleasure and happiness. At the end of that time the world is destroyed by fire, Christ appears, and all the dead arise for the Last Judgment, which leads either to the joys of Paradise or the pains of Hell.

The sources of Commodianus's information were the Bible—principally the Apocalypse, the Prophets, and the Fourth Book of Esdras—the Sibylline oracles, Tertullian, Minucius Felix, Cyprian, and Lactantius. From Terence, Lucretius, Horace, Cicero, and most of all from Virgil, he borrows modes of expression. His theology is not reliable; besides Millenarianism, he seems to profess Monarchianism and Patripassianism, two heresies in regard to the Trinity. His language is not only crude, but incorrect, and it would be a mistake to seek in Commodianus the origin of versification based on accent. Although unacquainted

with prosody, he tries to write in dactylic hexameter, and succeeds in only 63 out of more than 2000 verses. However, his shortcomings are somewhat atoned for by his use of parallelism, rhyme, and the acrostic, and the regular division of his verses; moreover, in spite of its defects, his work is decidedly energetic. He has well-defined formulæ, he conjures up magnificent pictures, and among the many artists and writers who have attempted a portrayal of the end of the world, Commodianus occupies a prominent place. His works have been edited by Ludwig (Leipzig, 1877-78) and by Dombart (Vienna, 1877, in "Corpus scriptorum eccles. latinorum", XV). The poem against Marcio, attributed by some critics to Commodianus, is the work of an imitator.

III, 427-36; MONCEAUX, *Histoire littéraire de l'Afrique chrétienne* (Paris, 1905), III, 451-89; BREWER, *Commodian von Gaza, ein aretainsischer Laiendichter aus der Mitte des fünften Jahrhunderts* (Paderborn, 1906)—the thesis implied in this title is very uncertain, see *Revue critique d'histoire et de littérature* (Paris, 1907), II, 199.

PAUL LEJAY.

Commodus (MARCUS AURELIUS COMMODUS ANTONINUS), Roman Emperor, b. 161; d. at Rome, 31 December, 192. He was the son of Marcus Aurelius and

Annia Faustina, and was the first among the Roman emperors to enjoy the distinction of being born in the purple. His reign, 180-193, was the turning-point in the greatness of Rome. Some historians have attempted to exonerate Commodus from the charge of innate depravity and to attribute the failure of his career to weakness of character and vicious associates. It is, however, undeniable that a condition, which resulted in the slow but inevitable destruction of the Roman power, was brought about by the lack of capacity and evil life of Commodus, coupled with the overcentralization in Roman administration by which, since the time of Augustus, the most absolute power in the State and religious affairs had been gradually vested in the person of the emperor. Every stage in the career of Commodus was marked by greed and suspicion, producing, as might be expected in those times, wholesale confiscation and numerous murders. One result of his cruel policy was to divert attention for a time from the Christians and to lead to a partial cessation of persecution. No edicts were issued against the Christians who, though persecuted by the proconsuls in some provinces, enjoyed a period of respite and comparative immunity from pursuit. There were many Christians at the court of Commodus and in the person of Marcia, the concubine or morganatic wife of the emperor, they had a powerful advocate through whose kind offices on one occasion many Christian prisoners were released from the mines in Sardinia. Commodus was murdered by strangling, one of the conspirators being Marcia. There is no evidence that the Christians were in any way connected with his death.

EMPEROR COMMODUS AS HERCULES
(Capitoline Museum, Rome)

The works of DIO CASSIUS, HERODIAN, AURELIUS VICTOR, and EUTHROPIUS, and the *Scriptores Historiae Augustae* are the principal pagan sources. TERULLIAN, HIPPOLYTUS, and EUSEBIUS are the principal Christian sources. The Roman histories of GIBBON, MERIVALE, DURUY, and SCHILLER should also be consulted.

Common Life, BRETHREN OF THE, a community founded by Geert De Groote, of rich burgher stock, b. at Deventer in Gelderland in 1340; d. 1384. Having read at Cologne, at the Sorbonne, and at Prague, he took orders and obtained preferment—a canon's stall at Utrecht and another at Aachen. His relations with the German *Gottesfreunde* and the writings of Ruysbroek, who later became his friend, gradually inclined him to mysticism, and on recovering from an illness in 1373 he resigned his prebends, bestowed his goods on the Carthusians of Arnhem, and lived in solitude for seven years. Then, feeling himself constrained to go forth and preach, he went from place to place calling men to repentance, proclaiming the beauty of Divine love, and bewailing the relaxation of ecclesiastical discipline and the degradation of the clergy. The effect of his sermons was marvellous; thousands hung on his lips. "The towns", says Moll, "were filled with devotees; you might know them by their silence, their ecstasies during Mass, their mean attire, their eyes, flaming or full of sweetness." A little band of these attached themselves to Groote and became his fellow-workers, thus becoming the first "Brethren of the Common Life". The reformer, of course, was opposed by the clerks whose evil lives he denounced, but the cry of heresy was raised in vain against one who was no less zealous for purity of faith than for purity of morals. The best of the secular clergy enrolled themselves in his brotherhood, which in due course was approved by the Holy See. Groote, however, did not live long enough to perfect the work he had begun. He died in 1384, and was succeeded by Florence Radewyns, who two years later founded the famous monastery of Windesheim which was thenceforth the centre of the new association.

The Confraternity of the Common Life resembled in several respects the Beghard and Beguine communities which had flourished two centuries earlier and were then decadent. The members took no vows, neither asked nor received alms; their first aim was to cultivate the interior life, and they worked for their daily bread. The houses of the Brethren were more closely knit together, and the brothers and sisters alike occupied themselves exclusively with literature and education, and priests also with preaching. When Groote began, learning in the Netherlands was as rare as virtue; the University of Louvain had not yet been founded, and the fame of the schools of Liège was only a memory. Save for a clerk here and there who had studied at Paris or Cologne, there were no scholars in the land; even amongst the higher clergy there were many who were ignorant of Latin, and the burgher was quite content if when his children left school they were able to read and write. Groote determined to change all this, and his disciples accomplished much. Through their unflinching toil in the scriptorium and afterwards at the press they were able to multiply their spiritual writings and to scatter them broadcast throughout the land, instinct with the spirit of the "Imitation". Amongst them are to be found the choicest flowers of fifteenth-century Flemish prose. The Brethren spared no pains to obtain good masters, if necessary from foreign parts, for their schools, which became centres of spiritual and intellectual life; amongst those whom they trained or who were associated with them were men like Thomas à Kempis, Dierick Maertens, Gabriel Biel, and the Dutch Pope Adrian VI.

Before the fifteenth century closed, the Brethren of the Common Life had studded all Germany and the Netherlands with schools in which the teaching was given for the love of God alone. Gradually the course, at first elementary, embraced the humanities, philosophy, and theology. The religious orders looked askance at these Brethren, who were neither monks nor friars, but the Brethren found protectors in Popes Eugenius IV, Pius II, and Sixtus IV. The great Cardinal Nicholas of Cusa had been their pupil and became their staunch protector and benefactor. He was likewise the patron of Rudolph Agricola, who in his youth at Zwolle had sat at the feet of Thomas à Kempis; and so the Brethren of the Common Life, through Cusa and Agricola, influenced Erasmus and other adepts in the New Learning. More than half of the crowded schools—in 1500 Deventer counted over two thousand students—were swept away in the religious troubles of the sixteenth century. Others languished until the French Revolution, while the rise of universities, the creation of diocesan seminaries, and the competition of new teaching orders gradually extinguished the schools that regarded Deventer and Windesheim as their parent establishments. A life of De Groote is to be found among the works of Thomas à Kempis.

ERNEST GILLIAT-SMITH.

Common Sense, PHILOSOPHY OF.—The term *common sense* designates (1) a special faculty, the *sensus communis* of the Aristotelean and Scholastic philosophy; (2) the sum of original principles found in all normal minds; (3) the ability to judge and reason in accordance with those principles (*recta ratio*, good sense). It is the second of these meanings that is implied in the philosophy of common sense—a meaning well expressed by Fénelon when he identifies common sense with “those general ideas or notions which I can neither contradict nor examine, but according to which I examine and decide on everything; so that I smile rather than answer whenever anything is proposed to me that obviously runs counter to those unchangeable ideas” (*De l'existence de Dieu*, p. XXII, c. ii). The philosophy of common sense sometimes called Scottish philosophy from the nationality of its exponents (though not all Scottish philosophers were adherents of the Common Sense School), represents one phase of the reaction against the idealism of Berkeley and Hume which in Germany was represented by Kant. The doctrine of ideas, which Locke had adopted from Descartes, had been made use of by Berkeley as the foundation of his theory of pure idealism, which resolved the external world into ideas, without external reality, but directly impressed on the mind by Divine power. Hume, on the other hand, had contended that there was no ground for assuming the existence of any mental substance as the subjective recipient of impressions and ideas, all that we know of mind being a succession of states produced by experience. Thus, between the two, both subject and object disappeared, and philosophy ended in mere scepticism.

Thomas Reid (1710–1796), whose dissent from Locke's doctrine of ideas had been to some extent anticipated by Francis Hutcheson (1694–1746), set out to vindicate the common sense, or natural judgment, of mankind, by which the real existence of both subject and object is held to be directly known (natural realism). He argued that if it cannot be proved that there is any real external world or continuously existing mind, the true conclusion is not that these have no existence or are unknowable, but that our consciousness of them is an ultimate fact, which neither needs nor is capable of proof, but is itself the ground of all proof. “All knowledge and

all science must be built upon principles that are self-evident; and of such principles every man who has common sense is a competent judge” (Works, ed. 1863, p. 422). Dugald Stewart (1753–1828), who followed Reid's method without serious modification, was more precise, and gave greater prominence than Reid to his doctrine of “suggestion”, or the association of ideas. Dr. Thomas Brown (1778–1820), while accepting Reid's main principle, carried the analysis of the phenomena of perception further than either Reid or Stewart, resolving some of their first principles into elements of experience, particularly in his treatment of the notion of causality. Sir James Mackintosh (1765–1832) adopted the principles of common sense, but accepted the utilitarian criterion of morality, held by the school of Hartley, and applied the analytic method to the moral faculty which Reid had taken to be “an original power in man”. Sir William Hamilton (1788–1856) illustrated the principle of common sense with wider learning and greater philosophical acumen than any of his predecessors. He was much influenced by Kant, and he introduced into his system distinctions which the Common Sense School had not recognized. While professing himself a natural realist, he held a somewhat extreme doctrine of the relativity of knowledge. His comments on Reid indicate many ambiguities and inaccuracies on the part of that author. James Oswald (1727–1793) made use of Reid's principles in support of religious belief, and James Beattie (1735–1803) in defence of the existence of a moral faculty.

The common sense philosophy, adopting the Baconian method of “interrogation”, or analysis, rejects, as contrary to the universal convictions of mankind, the notion of ideas as a *tertium quid* intervening between the object perceived and the perceiving subject. All knowledge comes by way of sensation; and the reality of the external object is implied in sensation, together with the metaphysical principles of the existence of bodily and mental substance, of causality, and of design and intelligence in causation. What sensation is in itself it is impossible to say; it is an ultimate fact, and cannot be described or defined. But sensations are clearly not images or ideas of the objects which cause them; there is no resemblance between the pain of a wound and the point of a sword. Reid and his successors insist on the distinction between primary and secondary qualities, the former (extension, figure, hardness, etc.) being “suggested” by sensations as essentially belonging to the object perceived, and the latter (as colour, taste, smell, etc.) being no more than sensations in the subject arising from qualities of the object which are only accidental or contingent. Hamilton, however, subdivides secondary qualities into secondary and secundo-primary, a distinction now generally considered to be ill-founded. The mental powers are divided into intellectual and active, a distinction corresponding to the peripatetic classification of cognitive and appetitive. All cognition has thus an intellectual element, and takes place by way of suggestion, or association (a theory in which Reid was anticipated by Hutcheson). In cognition the mind is partly active and partly passive; the notion that it is a mere receptacle for ideas is rejected. Consciousness is regarded by Reid as a separate faculty, somewhat resembling the scholastic *sensus communis*; Brown and Hamilton dissent from this view, holding “consciousness” to be merely a general expression for the fundamental condition of all mental activity. The idea of causality, which implies the universal necessity of causation, cannot be deduced from experience, since necessity (as opposed to mere invariableness) cannot be known by experience; it is therefore an original principle in the mind. In like manner, the will is known immediately as free; its freedom is not susceptible of proof but is intuitively recognized; and it is from the con-

sciousness of will-power in ourselves that we derive our notion of causation. Brown, however, while accepting Reid's intuitional view of the idea of causality, inclines towards Hume in his definition of causation as no more than invariable sequence; he also differs from Reid in making will a modification of desire or appetite. The belief in the uniformity of nature, on which all scientific discovery is based, is held by Reid to be an original principle in the mind. Conscience, or the moral sense, is taken to be an original faculty by the Common Sense School in general, with the exception of Mackintosh, who derives the so-called faculty in great measure from the influence of social experience upon the will.

The psychological analysis of this school is valuable; but its main principle has been considerably weakened by contact with Kantian criticism and the evolutionist doctrine, and with Hamilton lost much of its polemical effectiveness. "The philosophy of Common Sense, devised by Reid as a safeguard against Scepticism and Idealism, was so transmuted by Hamilton as to lead back again to the conclusion that nothing can be known, and consequently that nothing can be affirmed or denied, beyond the fleeting phenomena of consciousness" (Laurie, *Scottish Philosophy*, p. 291). In France, Royer-Collard (1763-1845) introduced the principles of the Scottish School; Jouffroy (1796-1842) translated the works of Reid; and Cousin (1792-1867) in his "Philosophie écossaise" praised Reid's philosophy in the highest terms. It may be safely said that the materialistic tendency of French speculation was checked by the influences derived from the philosophy of common sense.

A. B. SHARPE.

Commune, MARTYRS OF THE PARIS, the secular priests and the religious who were murdered in Paris, in May, 1871, on account of their sacred calling. They may be divided into three groups: (1) those who on the 24th of May were executed within the prison of La Roquette; (2) the Dominican Fathers, who, on the following day, were shot down at the Barrière d'Italie; (3) the priests and religious, who, on the 26th of May, were massacred at Belleville. The revolutionary party which took possession of the city after the siege of Paris by the Prussians began, in the last days of March, to arrest the priests and religious to whom personal character or official position gave a certain prominence. No reason was given for these arbitrary measures, except the hatred with which the leaders of the Commune regarded the Catholic Church and her ministers.

(1) At the head of the first group of martyrs is the Archbishop of Paris, Monseigneur Georges Darboy, to

whom the discomforts of his prison life were peculiarly trying on account of his feeble health. His fellow sufferers were: the Abbé Deguerry, curé of the important parish of La Madeleine, an old man, well advanced in years, but bright and vigorous; the Abbé Allard, a secular priest, who had rendered good service to the wounded during the siege, and two Jesuits, Fathers Ducoudray and Clerc. The first was rector of the Ecole Sainte-Geneviève, a well known preparatory school for the army; the second had been a distinguished naval officer; both were gifted and holy men. To these five ecclesiastics was added a magistrate, Senator Bonjean. After several weeks of confinement, first in the prison of Mazas, then at La Roquette, these six prisoners were executed on 24 May. There was no pretence made of judging them, neither was any accusation brought against them. The revolutionary party still held possession of the east side of Paris, but the regular army, whose head-quarters were at Versailles, was fast approaching, and the leaders of the Commune, made desperate by failure, wished to inflict what evil they could on an enemy they no longer hoped to conquer. The priests had, one and all, endured their captivity with patience and dignity; the Jesuits, their letters prove it, had no illusions as to their probable fate; Archbishop Darboy and the Abbé Deguerry were more sanguine. "What have they to gain by killing us? What harm have we done them?" often said the latter. The execution took place in the evening. The archbishop absolved his companions, who were calm and recollected. They were told to stand against a wall, within the precincts of the prison, and here they were shot down at close quarters by twenty men, enlisted for the purpose. The archbishop's hand was raised to give a last blessing: "Here, take my blessing", exclaimed one of the murderers and by discharging his gun he gave the signal for the execution.

(2) The Dominican Fathers, who perished the following day, 25 May, belonged to the College of Arcueil, close to Paris. Their superior was Father Captier, who founded the college and under whose government it had prospered. With him were four religious of his order: Fathers Bourard, Delhorme, Cottraut, and Chatagneret, and eight laymen, who belonged to the college, either as professors or as servants. They were arrested on the 19th of May and imprisoned in the outlying fort of Bicêtre, where they suffered from hunger and thirst. On the 25th of May they were transferred from Bicêtre to a prison within the city, situated on the Avenue d'Italie. The excitement and anarchy that reigned in Paris, and the insults that were levelled at the prisoners as they were led from one prison to another prepared them for the worst; they made their confession and prepared for death. Towards five in the afternoon, they were commanded to go into the street one by one: Father Captier, whose strong faith sustained his companions' courage, turned to them: "Let us go, my friends, for the sake of God". The street was filled with armed men who discharged their guns at the prisoners as they passed. Father Captier was mortally wounded; his companions fell here and there; some were killed on the spot; others lingered on till their assassins put them out of pain. Their dead bodies remained for twenty-four hours on the ground, exposed to every insult; only the next morning, when the troops from Versailles had conquered the Commune, were they claimed by the victims' friends and conveyed to Arcueil.

(3) The third group of martyrs perished on the 26th of May; the revolutionists were now driven back by the steady advance of the regular troops, and only the heights of Belleville were still in possession of the Commune. Over fifty prisoners were taken from the prison of La Roquette and conducted on foot to this last stronghold of the revolution. Among them were

eleven ecclesiastics: three Jesuits, four members of the Congregation of the Sacred Hearts of Jesus and Mary, three secular priests, and one seminarist. All displayed heroic courage; the best known among them was Father Olivaint, rector of the Jesuit house of the Rue de Sèvres, who thirsted for martyrdom. After a painful journey through the streets, which were filled with an infuriated rabble, the prisoners were driven into an enclosure, called the *cité Vincennes*, on the heights of Belleville. Here they were literally hacked to pieces by a crowd of men, women, and even children. There was no attempt to organize a regular execution like the one at La Roquette; the massacre lasted an hour, and most of the bodies were disfigured beyond recognition. Only a few hours later the regular troops forced their way to La Roquette, delivered the prisoners that still remained there, and took possession of Belleville, the last stronghold of the Commune.

BARBARA DE COURSON.

Communicatio Idiomatum, a technical expression in the theology of the Incarnation. It means that the properties of the Divine Word can be ascribed to the man Christ, and that the properties of the man Christ can be predicated of the Word. The language of Scripture and of the Fathers shows that such a mutual interchange of predicates is legitimate; in this article its source and the rules determining its use will be briefly considered.

I. SOURCE.—The source of the *communicatio idiomatum* is not to be sought in the close moral union between Christ and God as maintained by the Nestorians, nor in Christ's fullness of grace and supernatural gifts, nor, again, in the fact that the Word owns the human nature of Christ by right of creation. God the Father and the Holy Ghost have the same right and interest as the Son in all created things except in the human nature of Jesus Christ. This the Son by Assumption has made His own in a way that it is not theirs, i. e. by the incommunicable property of personal union. In Christ there is one person with two natures, the human and the Divine. In ordinary language all the properties of a subject are predicated of its person; consequently the properties of Christ's two natures must be predicated of His one person, since they have only one subject of predication. He Who is the Word of God on account of His eternal generation is also the subject of human properties; and He Who is the man Christ on account of having assumed human nature is the subject of Divine attributes. Christ is God; God is man.

II. USE.—The *communicatio idiomatum* is based on the oneness of person subsisting in the two natures of Jesus Christ. Hence it can be used as long as both the subject and the predicate of a sentence stand for the person of Jesus Christ, or present a common subject of predication. For in this case we simply affirm that He Who subsists in the Divine nature and possesses certain Divine properties is the same as He Who subsists in the human nature and possesses certain human properties. The following considerations will show the application of this principle more in detail:—

(1) In general, concrete terms stand for the person: hence, statements interchanging the Divine and human properties of Christ are, generally speaking, correct if both their subjects and predicates be concrete terms. We may safely say, "God is man", though we must observe certain cautions: (a) The concrete human names of Christ describe His person according to His human nature. They presuppose the Incarnation, and their application to Christ previously to the completion of the hypostatic union would involve the

Nestorian view that Christ's human nature had its own subsistence. Consequently, such expressions as "man became God" are to be avoided. (b) Concrete terms used reduplicatively emphasize the nature rather than the person. The statement "God as God has suffered" means that God according to His Divine nature has suffered; needless to say, such statements are false. (c) Certain expressions, though correct in themselves, are for extrinsic reasons, inadmissible; the statement "One of the Trinity was crucified" was misapplied in a Monophysite sense and was therefore forbidden by Pope Hormisdas; the Arians misinterpreted the words "Christ is a creature"; both Arians and Nestorians misused the expressions "Christ had a beginning" and "Christ is less than the Father" or "less than God"; the Docetists abused the terms "incorporeal" and "impassible".

(2) Abstract terms generally stand for their respective nature. Now in Christ there are two natures. Hence statements interchanging the Divine and human properties of Christ are, generally speaking, incorrect if their subject and predicate, either one or both, be abstract terms. We cannot say, "the Divinity is mortal", or, "the humanity is increased". The following cautions, however, must be added: (a) Aside from the personal relations in God there is no real distinction admissible in Him. Hence abstract names and attributes of God, though standing formally for the Divine nature, imply really also the Divine persons. Absolutely speaking, we may replace a concrete Divine name by its corresponding abstract one and still keep the *communicatio idiomatum*. Thus we may say, "Omnipotence was crucified", in the sense that He Who is omnipotent (Omnipotence) is the same as He Who was crucified. But such expressions are liable to be misunderstood and great care must be exercised in their use. (b) There is less danger in the use of those abstract terms which express attributes appropriated to the Second Person of the Trinity. We may say, "Eternal Wisdom became man". (c) There is no *communicatio idiomatum* between the two natures of Christ, or between the Word and the human nature as such or its parts. The fundamental error of the Ubiquitists (q. v.) consists in predicating of the human nature or of humanity the properties of the Divine nature. We cannot say that "the Word is the humanity", and still less that "the Word is the soul" or "the body of Christ".

(3) In statements which interchange the Divine and the human properties of Christ, care must be taken not to deny or destroy one of Christ's natures or its properties. This is apt to be done: (a) In negative sentences: though it be true that Christ did not die according to His Divine nature, we cannot say, "Christ did not die", without impairing His human nature; (b) in exclusive sentences: if we say, "Christ is only God" or "Christ is only man", we destroy either His human or His Divine nature; (c) in the use of ambiguous terms: the Arians, the Nestorians, and the Adoptionists misused the term "servant", inferring from the expression, "Christ is the servant of God", conclusions agreeing with their respective heresies. (For the use of the *communicatio idiomatum* in a wider sense, i. e. as applied to the Body of Christ and the Sacramental Species, see EUCHARIST. See also INCARNATION; JESUS CHRIST.)

Communion, HOLY. See HOLY COMMUNION.

Communion-Antiphon.—The term Communion (*Communio*) is used, not only for the reception of the Holy Eucharist, but also as a shortened form for the

antiphon (*Antiphona ad Communionem*) that was originally sung while the people were receiving the Blessed Sacrament, but which has now been displaced, so as to follow that moment. In the Ambrosian Rite this antiphon is called the *Transitorium*, apparently because the celebrant after the Communion goes over (*transit*) to the Epistle side of the altar to read it. It is the fourth and last of the changeable parts of the Mass (*Proprium*) sung by the choir (Introit, Gradual, Offertory, Communion), and is at least as old as the fourth century. In St. Augustine's time (d. 430), together with the Offertory-Antiphon, it had lately been introduced into Africa; he wrote a treatise (*Contra Hilarium*) to defend their use (Duchesne, *Origines*, 166, 179). But the present Communion is only a fragment of the older chant. It was originally a psalm, with the Gloria Patri, preceded and concluded by an antiphon. The First Roman Ordo (about 770) contains the direction: "As soon as the pontiff begins to give Communion in the Senatorium [where the most distinguished people stood] at once the choir begins the antiphon for the Communion, singing it alternately with the subdeacons; and they go on until all the people have received Communion. Then the pontiff makes a sign to them to sing the Gloria Patri; and so, when they have repeated the antiphon [*repetito versu*] they stop" (ed. Atchley, 144). This is the first definite rubric we have about the *Communio*. It shows us that it was to be sung while the celebrant goes around to Communicate the people; and that it consisted of a psalm, sung alternately with its antiphon, as were, at that time, also the Introit and Offertory. So also Micrologus (Bernold of Constance, d. 1100) says that when the people Communicate, "meanwhile the antiphon is sung which takes its name from the Communion, to which a psalm must be added with its Gloria Patri if need be" (ch. xviii in Migne, P. L., CLI, 973 sq.). It was, then, like the other three parts that make up the *Proprium* of the choir, a chant to be sung so as to fill up the time while the clergy were engaged in some action.

The two changes in its history are that it has been removed to its place after the Communion and has been shortened. Its postponement began in the twelfth century. Abbot Rupert of Deutz (d. 1135) says: "The chant that we call the Communion, which we sing after the heavenly food, is a thanksgiving" (De div. off., II, xviii, in Migne, P. L., CLXX, 13 sq.), and Durandus: "The antiphon, which is called Post-communion by many because it is sung after the Communion . . ." (Rationale, IV, 56). But he goes on to describe the final collect as that which "is properly called Post-communion" (ib., 57). There are other instances of this antiphon occasionally being called Post-Communion. The reason of its removal seems to have been, on the one hand, the place of the Agnus Dei, which at that time began to be sung during the Communion, and to be repeated thrice, thus taking up more time (Gihl, *Messopfer*, 671); on the other hand, the gradual lessening of the number of communicants at high Mass. Its shortened form is part of the curtailing of all the prayers of the Mass that was the result of the multiplication of low Masses. Only in requiems have we a remnant of the older form. Here after the first verse (*Lux æterna*) follows an antiphon (*Cum sanctis tuis*), then the "Requiem æternam"—last vestige of the psalm—and the antiphon is repeated. Otherwise the Communion is always one short antiphon, sung by the choir immediately after the Agnus Dei, and said by the celebrant after the Communion. It is generally a verse from Holy Scripture, referring, not to the Holy Eucharist, but rather to the feast which is celebrated or to the special season (*de tempore*) or to the purpose (in votives) for which the Mass is offered. But not seldom it is a text taken from some other source, or specially composed for this use. It is always said by the priest at the altar. Since

the common use of low Mass, in which he substitutes the choir's part himself, the rule is that the priest also says whatever is sung by them. As soon as he has arranged the chalice and paten in the middle of the altar (at high Mass the subdeacon does this, and takes them to the credence-table) he goes with joined hands to the Missal, which has been replaced at the Epistle side, and there, the hands still joined, reads the Communion from the *Proprium*. He then comes back to the middle for the Dominus vobiscum before the Post-Communion.

ADRIAN FORTESCUE.

Communion-Bench, an adaptation of the sanctuary-guard or altar-rail. [See sub-title *Altar-Rail* s. v. ALTAR (IN LITURGY).] Standing in front of this barrier, in a space called the chancel, or pectoral, the faithful were wont in early times to receive Holy Communion, the men taking the Consecrated Bread into their hands and the women receiving it on a white cloth, called the domanical, while deacons administered the Precious Blood which each took through a reed of gold or silver. About the twelfth century when the custom arose of receiving under one kind only, the priests placed the small Hosts on the tongues of the communicants at the chancel-rail. Later on, about the fifteenth century the practice was introduced of receiving Holy Communion kneeling, and so the altar-rail gradually came to assume a form better suited to its modern use, and like what it is at present (Bourassé, *Dict. D'Arch.*, Paris, 1851). When large crowds approach the altar on special occasions so that the ordinary accommodation for receiving is not adequate, a row of *prie-Dieu* or benches provided with Communion cloths or cards, with a lighted candle at the end of each row, may be arranged around the chancel. (Cong. of Rites, Decr. 3086, Nov. ed.)

PATRICK MORRISROE.

Communion-Cloth. See ALTAR, under *Altar-Rail*.

Communion of Children.—In order to get some insight into the historical aspect of this subject it will be useful to dwell upon (1) the ancient practice, and (2) the present discipline of the Church in regard to the Communion of children.

(1) ANCIENT PRACTICE.—It is now well established that in the early days of Christianity it was not uncommon for infants to receive Communion immediately after they were baptized. Among others St. Cyprian (Lib. de Lapsis, c. xxv) makes reference to the practice. In the East the custom was pretty universal, and even to this day exists in some places, but in the West infant Communion was not so general. Here, moreover, it was restricted to the occasions of baptism and dangerous illness. Probably it originated in a mistaken notion of the absolute necessity of the Blessed Eucharist for salvation, founded on the words of St. John (vi, 54). In the reign of Charlemagne an edict was published by a Council of Tours (813) prohibiting the reception by young children of Communion unless they were in danger of death (Zaccaria, *Bibl. Rit.*, II, p. 161) and Odo, Bishop of Paris, renewed this prohibition in 1175. Still the custom died hard, for we find traces of it in Hugh of St. Victor (De Sac., I, c. 20) and Martène (De Ant. Ecc. Rit., I bk., I, c. 15) alleges that it had not altogether disappeared in his own day. The manner of Communicating infants was by dipping the finger in the consecrated chalice and then applying it to the tongue of the child. This would seem to imply that it was only the Precious Blood that was administered, but evi-

dence is not wanting to show that the other Consecrated Species was also given in similar circumstances (cf. Sebastiano Giribaldi, *Op. Mor.*, I, c. 72). That infants and children not yet come to the use of reason may not only validly but even fruitfully receive the Blessed Eucharist is now the universally received opinion, but it is opposed to Catholic teaching to hold that this sacrament is necessary for their salvation (Council of Trent, Sess. XXI, can. iv).

II. PRESENT DISCIPLINE.—The existing legislation with regard to the Communion of children has been definitely settled by the Fourth Lateran Council, which was afterwards confirmed by the authority of the Council of Trent. According to its provisions children may not be admitted to the Blessed Eucharist until they have attained to years of discretion, but when this period is reached then they are bound to receive this sacrament. When may they be said to have attained the age of discretion? In the best-supported view of theologians this phrase means, not the attainment of a definite number of years, but rather the arrival at a certain stage in mental development, when children become able to discern the Eucharistic from ordinary bread, to realize in some measure the dignity and excellence of the Sacrament of the Altar, to believe in the Real Presence, and adore Christ under the sacramental veils. De Lugo (*De Euch.*, disp. xiii, n. 36, Ben. XIV, *De Syn.*, vii) says that if children are observed to assist at Mass with devotion and attention it is a sign that they are come to this discretion.

Thus it is seen that a keener religious sense, so to speak, is demanded for the reception of Communion than for confession. Moreover, it is agreed that children in danger of death ought to be admitted to Communion even though they may not have the same degree of fitness that would be required in ordinary circumstances. In answer to a question as to whether a certain episcopal ordinance should be upheld that fixed a definite age-limit under which children could not be admitted to First Communion, the Congregation of the Council replied in the affirmative, provided, however, that those children adjudged to have reached the discretion required by the Councils of Lateran and Trent might not be excluded (21 July, 1888). This reply bears out the interpretation already given of "the years of discretion" and it may be said in the words of the Catechism of the Council of Trent (pt. II, c. iv, q. 63) that "no one can better determine the age at which the sacred mysteries should be given to young children than their parents and confessor".

The duty of preparing candidates for First Communion is the most important that can fall to the lot of a pastor (*O'Kane*, *Rubrics of Rom. Rit.*, p. 391). This is amply recognized by the Church in every country, for almost every diocese has its statutes regulating with scrupulous exactness all the preliminaries of this sacred and solemn event (cf. *Decr. of III Plen. Balt.*, no. 217, 218, etc.). A long course of religious instruction is usually prescribed while the moral training and virtuous formation of the mind is also urgently insisted upon. In regard to First Communion it may be observed: (1) that it should take place during paschal time; (2) that it should be received as a rule in the parochial church, unless the consent of the pastor is had for receiving it elsewhere; (3) that no effort should be spared to fix the occasion indelibly on the mind of the young communicant; and (4) that for this purpose the Mass at which it is received should be celebrated with special solemnity, boys and girls being suitably attired and assigned to separate sections of the church. A short address may be given in this case immediately before the distribution of Communion (*De Herdt*, *Praxis Lit.*, I, 277; *Rom. Rit.*, *De Euch.*, t. XXIII). The decree "Sacra Tridentina Synodus", published Dec., 1905, about daily Communion applies to all persons, young and old, who have made their First Communion (*Anal. Eccl.*, 1906, p. 833).

PATRICK MORRISROE.

Communion of Saints (*communio sanctorum*, *κοινωνία ἁγίων*, a fellowship of, or with, the saints), the doctrine expressed in the second clause of the ninth article in the received text of the Apostles' Creed: I believe . . . the Holy Catholic Church, the Communion of Saints. This, probably the latest, addition to the old Roman Symbol, is found in the Gallican Liturgy of the seventh century (P. L., LXXII, 349, 597); in some letters of the Pseudo-Augustine (P. L., XXXIX, 2189, 2191, 2194), now credited to St. Cæsarius of Arles (c. 543); in the "De Spiritu Sancto" (P. L., LXII, 11), ascribed to Faustus of Riez (c. 460); in the "Explanatio Symboli" (P. L., LII, 871) of Nicetas of Remesiana (c. 400); and in two documents of uncertain date, the "Fides Hieronymi" (*Analecta Maredsolana*, 1903), and an Armenian confession (Hahn, *Bibliothek der Symbole*, § 128). On these facts critics have built various theories. Harnack (*Das apost. Glaubensbekenntniss*, Berlin, 1892, p. 31) holds the addition to be a protest against Vigilantius, who condemned the veneration of the saints; and he connects that protest with Faustus in Southern Gaul and probably also with Nicetas in Pannonia, who was influenced by the "Catecheses" of St. Cyril of Jerusalem. Swete (*The Apostles' Creed*, London, 1894) sees in it at first a reaction against the separatism of the Donatists, therefore an African and Augustinian conception bearing only on church membership, the higher meaning of fellowship with the departed saints having been introduced later by Faustus. Morin thinks that it originated, with an anti-Donatist meaning, in Armenia, whence it passed to Pannonia, Gaul, the British Isles, Spain, etc., gathering new meanings in the course of its travels till it finally resulted in the Catholic synthesis of medieval theologians. These and many other conjectures leave undisturbed the traditional doctrine, ably represented by Kirsch, according to which the communion of saints, wheresoever it was introduced into the Creed, is the natural outgrowth of Scriptural teaching, and chiefly of the baptismal formula; still the value of the dogma does not rest on the solution of that historical problem.

CATHOLIC DOCTRINE.—The communion of saints is the spiritual solidarity which binds together the faithful on earth, the souls in purgatory, and the saints in heaven in the organic unity of the same mystical body under Christ its head, and in a constant interchange of supernatural offices. The participants in that solidarity are called saints by reason of their destination and of their partaking of the fruits of the Redemption (I Cor., i, 2—Greek Text). The damned are thus excluded from the communion of saints. The living, even if they do not belong to the body of the true Church, share in it according to the measure of their union with Christ and with the soul of the Church. St. Thomas teaches (III, Q. viii, a. 4) that the angels, though not redeemed, enter the communion of saints because they come under Christ's power and receive of His *gratia capitis*. The solidarity itself implies a variety of inter-relations: within the Church Militant, not only the participation in the same faith, sacraments, and government, but also a mutual exchange of examples, prayers, merits, and satisfactions; between the Church on earth on the one hand, and purgatory and heaven on the other, suffrages, invocation, intercession, veneration. These connotations belong here only in so far as they integrate the transcendent idea of spiritual solidarity between all the children of God. Thus understood, the communion of saints, though formally defined only in its particular bearings (Council of Trent, Sess. XXV, decrees on purgatory; on the

invocation, veneration, and relics of saints and on sacred images; on indulgences), is, nevertheless, a dogma commonly taught and accepted in the Church. (See Holden, "Divinae fidei analysis" in Migne, "Theologiae Cursus Completus", VI, 803; Natalis Alexander, "De Symbolo", *ibid.*, 333; Christmann, "Collectio dogmatum credendorum", *ibid.*, 997.) It is true that the Catechism of the Council of Trent (Pt. I, ch. x) seems at first sight to limit to the living the bearing of the phrase contained in the Creed, but by making the communion of saints an exponent and function, as it were, of the preceding clause, "the Holy Catholic Church", it really extends to what it calls the Church's "constituent parts, one gone before, the other following every day"; the broad principle it enunciates thus: "every pious and holy action done by one belongs and is profitable to all, through charity which seeketh not her own".

In this vast Catholic conception rationalists see not only a late creation, but also an ill-disguised reversion to a lower religious type, a purely mechanical process of justification, the substitution of impersonal moral value in lieu of personal responsibility. Such statements are met best by the presentation of the dogma in its Scriptural basis and its theological formulation. The first spare yet clear outline of the communion of saints is found in the "kingdom of God" of the Synoptics, not the individualistic creation of Harnack nor the purely eschatological conception of Loisy, but an organic whole (Matt., xiii, 31), which embraces in the bonds of charity (Matt., xxii, 39) all the children of God (Matt., xix, 28; Luke, xx, 36) on earth and in heaven (Matt., vi, 20), the angels themselves joining in that fraternity of souls (Luke, xv, 10). One cannot read the parables of the kingdom (Matt., xiii) without perceiving its corporate nature and the continuity which links together the kingdom in our midst and the kingdom to come. (See Rose, *Studies on the Gospel*.) The nature of that communion, called by St. John a fellowship with one another ("a fellowship with us"—I John, i, 3) because it is "a fellowship with the Father, and with his Son", and compared by him to the organic and vital union of the vine and its branches (John, xv), stands out in bold relief in the Pauline conception of the mystical body. Repeatedly St. Paul speaks of the one body whose head is Christ (Col., i, 18), whose energizing principle is charity (Eph., iv, 16), whose members are the saints, not only of this world, but also of the world to come (Eph., i, 20; Heb., xii, 22). In that communion there is no loss of individuality, yet such an interdependence that the saints are "members one of another" (Rom., xii, 5), not only sharing the same blessings (I Cor., xii, 13) and exchanging good offices (*ibid.*, xii, 25) and prayers (Eph., vi, 18), but also partaking of the same corporate life, for "the whole body . . . by what every joint supplieth . . . maketh increase . . . unto the edifying of itself in charity" (Eph., iv, 16).

Recent well-known researches in Christian epigraphy have brought out clear and abundant proof of the principal manifestations of the communion of saints in the early Church. Similar evidence, carefully sifted by Kirsch, is to be found in the Apostolic Fathers with an occasional allusion to the Pauline conception. For an attempt at the formulation of the dogma we have to come down to the Alexandrian School. Clement of Alexandria shows the "gnostic's" intimate relations with the angels (Strom., VI, xii, 10) and the departed souls (*ibid.*, VIII, xii, 78); and he all but formulates the *thesaurus ecclesiae* in his presentation of the vicarious martyrdom, not of Christ alone, but also of the Apostles and other martyrs (*ibid.*, IV, xii, 87). Origen enlarges, almost to exaggeration, on the idea of vicarious martyrdom (Exhort. ad martyr., ch. l) and of communion between man and angels (De orat., xxxi); and accounts for it by the unifying power of Christ's Redemption, *ut celestibus ter-*

rena sociaret (In Levit., hom. iv) and the force of charity, stranger in heaven than upon earth (De orat., xi). With St. Basil and St. John Chrysostom the communion of saints has become an obvious tenet used as an answer to such popular objections as these: what need of a communion with others? (Basil, Ep. cciii); another has sinned and I shall atone? (Chrysostom, Hom. i, de poenit.). St. John Damascene has only to collect the sayings of the Fathers in order to support the dogma of the invocation of the saints and the prayers for the dead.

But the complete presentation of the dogma comes from the later Fathers. After the statements of Tertullian, speaking of "common hope, fear, joy, sorrow, and suffering" (De poenit., ix and x); of St. Cyprian, explicitly setting forth the communion of merits (De lapsis, xvii); of St. Hilary, giving the Eucharistic Communion as a means and symbol of the communion of saints (in Ps. lxiv, 14), we come to the teaching of St. Ambrose and St. Augustine. From the former, the *thesaurus ecclesiae*, the best practical test of the communion of saints, receives a definite explanation (De poenit., I, xv; De officiis, I, xix). In the transcendent view of the Church taken by the latter (Enchir., lvi) the communion of saints, though never so called by him, is a necessity; to the *Civitas Dei* must needs correspond the *unitas caritatis* (De unitate eccl., ii), which embraces in an effective union the saints and angels in heaven (Enarr. in Psalmos, XXXVI, iii, 4), the just on earth (De bapt., III, xvii), and, in a lower degree, the sinners themselves, the *putrida membra* of the mystic body; only the declared heretics, schismatics, and apostates are excluded from the society, though not from the prayers, of the saints (Serm. cxxxvii). The Augustinian concept, though somewhat obscured in the catechetical expositions of the Creed by the Carolingian and later theologians (P. L., XCIX, CI, CVIII, CX, CLII, CLXXXVI), takes its place in the medieval synthesis of Peter Lombard, St. Bonaventure, St. Thomas, etc. (See Schwane-Degert, *Hist. des dogmes*, V, 229.)

Influenced no doubt by early writers like Yvo of Chartres (P. L., CLXII, 6061), Abelard (P. L., CLXXXIII, 630), and probably Alexander of Hales (III, Q. lxix, a. 1), St. Thomas (Expos. in symb., 10) reads in the neuter the phrase of the Creed, *communio sanctorum* (participation of spiritual goods), but apart from the point of grammar his conception of the dogma is thorough. General principle: the merits of Christ are communicated to all, and the merits of each one are communicated to the others (*ibid.*). The manner of participation: both objective and intentional, *in radice operis, ex intentione facientis* (Suppl., lxxi, a. 1). The measure: the degree of charity (Expos. in symb., 10). The benefits communicated: not the sacraments alone but the superabundant merits of Christ and the saints forming the *thesaurus ecclesiae* (*ibid.* and Quodlib., II, Q. viii, a. 16). The participants: the three parts of the Church (Expos. in symb., 9); consequently the faithful on earth exchanging merits and satisfactions (I-II, Q. exiii, a. 6, and Suppl., Q. xii, a. 2), the souls in purgatory profiting by the suffrages of the living and the intercession of the saints (Suppl., Q. lxxi), the saints themselves receiving honour and giving intercession (II-II, Q. lxxxiii, aa. 4, 11; III, Q. xxv, a. 6), and also the angels, as noted above. Later Scholastics and post-Reformation theologians have added little to the Thomistic presentation of the dogma. They worked rather around than into it, defending such points as were attacked by heretics, showing the religious, ethical, and social value of the Catholic conception; and they introduced the distinction between the body and the soul of the Church, between actual membership and membership in desire, completing the theory of the relations between church membership and the communion of saints which had already been outlined by

St. Optatus of Mileve and St. Augustine at the time of the Donatist controversy. (See CHURCH.) One may regret that the plan adopted by the Schoolmen afforded no comprehensive view of the whole dogma, but rather scattered the various components of it through a vast synthesis. This accounts for the fact that a compact exposition of the communion of saints is to be sought less in the works of our standard theologians than in our catechetical, apologetic, pastoral, and even ascetic literature. It may also partly explain, without excusing them, the gross misrepresentations noticed above.

IN THE ANGLO-SAXON CHURCH.—That the Anglo-Saxons held the doctrine of the communion of saints may be judged from the following account given by Lingard in his "History and Antiquities of the Anglo-Saxon Church". They received the practice of venerating the saints, he says, together with the rudiments of the Christian religion; and they manifested their devotion to them both in public and private worship: in public, by celebrating the anniversaries of individual saints, and keeping annually the feast of All-Hallows as a solemnity of the first class; and in their private devotions, by observing the instructions to worship God and then to "pray, first to Saint Mary, and the holy apostles, and the holy martyrs, and all God's saints, that they would intercede for them to God". In this way they learned to look up to the saints in heaven with feelings of confidence and affection, to consider them as friends and protectors, and to implore their aid in the hour of distress, with the hope that God would grant to the patron what he might otherwise refuse to the suppliant.

Like all other Christians, the Anglo-Saxons held in special veneration "the most holy mother of God, the perpetual virgin Saint Mary (Beatissima Dei genitrix et perpetua virgo.—Bede, Hom. in Purif.). Her praises were sung by the Saxon poets; hymns in her honour were chanted in the public service; churches and altars were placed under her patronage; miraculous cures were ascribed to her; and four annual feasts were observed commemorating the principal events of her mortal life: her nativity, the Annunciation, her purification, and assumption. Next to the Blessed Virgin in their devotion was Saint Peter, whom Christ had chosen for the leader of the Apostles and to whom he had given the keys of the Kingdom of Heaven, "with the chief exercise of judicial power in the Church; to the end that all might know that whosoever should separate himself from the unity of Peter's faith or of Peter's fellowship, that man could never attain absolution from the bonds of sin, nor admission through the gates of the heavenly kingdom" (Bede). These words of the Venerable Bede refer, it is true, to Peter's successors as well as to Peter himself, but they also evidence the veneration of the Anglo-Saxons for the Prince of the Apostles, a veneration which they manifested in the number of churches dedicated to his memory, in the pilgrimages made to his tomb, and by the presents sent to the church in which his remains rested and to the bishop who sat in his chair. Particular honours were paid also to Saints Gregory and Augustine, to whom they were chiefly indebted for their knowledge of Christianity. They called Gregory their "foster-father in Christ" and themselves "his foster-children in baptism"; and spoke of Augustine as "the first to bring to them the doctrine of faith, the sacrament of baptism, and the knowledge of their heavenly country". While these saints were honoured by the whole people, each separate nation revered the memory of its own apostle. Thus Saint Aidan in Northumbria, Saint Birinus in Wessex, and Saint Felix in East Anglia were venerated as the protectors of the countries which had been the scenes of their labours. All the saints so far mentioned were of foreign extraction; but the Anglo-Saxons soon extended their devotion

to men who had been born and educated among them and who by their virtues and zeal in propagating Christianity had merited the honours of sanctity.

This account of the devotion of the Anglo-Saxons to those whom they looked up to as their friends and protectors in heaven is necessarily brief, but it is amply sufficient to show that they believed and loved the doctrine of the communion of saints.

PROTESTANT VIEWS.—Sporadic errors against special points of the communion of saints are pointed out by the Synod of Gangra (Mansi, II, 1103), St. Cyril of Jerusalem (P. G., XXXIII, 1116), St. Epiphanius (ibid., XLII, 504), Asterius Amasensis (ibid., XL, 332), and St. Jerome (P. L., XXIII, 362). From the forty-second proposition condemned, and the twenty-ninth question asked, by Martin V at Constance (Denzinger, nos. 518 and 573), we also know that Wyclif and Hus had gone far towards denying the dogma itself. But the communion of saints became a direct issue only at the time of the Reformation. The Lutheran Churches, although commonly adopting the Apostles' Creed, still in their original confessions, either pass over in silence the communion of saints or explain it as the Church's "union with Jesus Christ in the one true faith" (Luther's Small Catechism in Schaff, "The Creeds of Christendom", III, 80), or as "the congregation of saints and true believers" (Augsburg Confession, ibid., III, 12); carefully excluding, if not the memory, at least the invocation of the saints, because Scripture "poundeth unto us one Christ, the Mediator, Propitiator, High-Priest, and Intercessor" (ibid., III, 26). The Reformed Churches generally maintain the Lutheran identification of the communion of saints with the body of believers but do not limit its meaning to that body. Calvin (Inst. chrét., IV, 1, 3) insists that the phrase of the Creed is more than a definition of the Church; it conveys the meaning of such a fellowship that whatever benefits God bestows upon the believers they should mutually communicate to one another. That view is followed in the Heidelberg Catechism (Schaff, op. cit., III, 325), and emphasized in the Gallican Confession, wherein communion is made to mean the efforts of believers to mutually strengthen themselves in the fear of God (ibid., III, 375). Zwingle in his articles admits an exchange of prayers between the faithful and hesitates to condemn prayers for the dead, rejecting only the saints' intercession as injurious to Christ (ibid., III, 200 and 206). Both the Scotch and Second Helvetic Confessions bring together the Militant and the Triumphant Church, but, whereas the former is silent on the signification of the fact, the latter says that they hold communion with each other: "nihilominus habent illæ inter sese communionem, vel conjunctionem" (ibid., III, 272 and 459).

The double and often conflicting influence of Luther and Calvin, with a lingering memory of Catholic orthodoxy, is felt in the Anglican Confessions. On this point the Thirty-nine Articles are decidedly Lutheran, rejecting as they do "the Romish Doctrine concerning Purgatory, Pardons, Worshipping and Adoration as well of Images as of Relics, and also Invocation of Saints", because they see in it "a fond thing, vainly invented, and grounded upon no warranty of Scripture, but rather repugnant to the Word of God" (Schaff, III, 501). On the other hand, the Westminster Confession, while ignoring the Suffering and the Triumphant Church, goes beyond the Calvinistic view and falls little short of the Catholic doctrine with regard to the faithful on earth, who, it says, "being united to one another in love, have communion in each other's gifts and graces" (ibid., III, 659). In the United States, the Methodist Articles of Religion, 1784 (ibid., III, 807), as well as the Reformed Episcopal Articles of Religion, 1875 (ibid., III, 814), follow the teachings of the Thirty-nine Articles, whereas the teaching of the Westminster Confession is adopted in the Phila-

delphia Baptist Confession, 1688, and in the Confession of the Cumberland Presbyterian Church, 1829 (ibid., III, 771). Protestant theologians, just as Protestant confessions, waver between the Lutheran and the Calvinistic view. There is, however, in the present instance a decided leaning towards the Catholic doctrine pure and simple in such English or American divines as Pearson (Exposition of the Creed, Oxford, 1843), Luckock (Intermediate State, New York, 1891), Mortimer (The Creeds, New York, 1902), Waudrey (The Meaning of the Doctrine of the Communion of Saints, London, 1904), etc.

The cause of the perversion by Protestants of the traditional concept of the communion of saints is not to be found in the alleged lack of Scriptural and early Christian evidence in favour of that concept; well-informed Protestant writers have long since ceased to press that argument. (See Lange and Martensen quoted by Hettinger, op. cit. below, p. 381.) Nor is there any force in the oft-repeated argument that the Catholic dogma detracts from Christ's mediatorship, for it is plain, as St. Thomas has already shown (Suppl., Q. lxxii, a. 2, ad 1), that the ministerial mediatorship of the saints does not detract from, but only enhances, the magisterial mediatorship of Christ. Some writers have traced that perversion to the Protestant concept of the Church as an aggregation of souls and a multitude of units bound together by a community of faith and pursuit and by the ties of Christian sympathy, but in no way organized or interdependent as members of the same body. This explanation is defective because the Protestant concept of the Church is a fact parallel to, but in no way causative of, their view of the communion of saints. The true cause must be found elsewhere. As early as 1519, Luther, the better to defend his condemned theses on the papacy, used the clause of the Creed to show that the communion of saints, and not the papacy, was the Church: "non, ut aliqui somniant, credo ecclesiam esse prelatum . . . sed . . . communionem sanctorum" (Werke, II, 190, Weimar, 1884). This was simply playing on the words of the Symbol. At that time Luther still held the traditional communion of saints, little dreaming that he would one day give it up. But he did give it up when he formulated his theory on justification. The substitution of the Protestant motto, "Christ for all and each one for himself", in place of the old axiom of Hugh of St. Victor, "Singula sint omnium et omnia singulorum" (each for all and all for each—P. L., CLXXV, 416), is a logical outcome of their concept of justification: not an interior renovation of the soul, nor a veritable regeneration from a common Father, the second Adam, nor yet an incorporation with Christ, the head of the mystical body, but an essentially individualistic act of fiducial faith. In such a theology there is obviously no room for that reciprocal action of the saints, that corporate circulation of spiritual blessings through the members of the same family, that domesticity and saintly citizenship which lie at the very core of the Catholic communion of saints. Justification and the communion of saints go hand in hand. The efforts which are being made towards reviving in Protestantism the old and still cherished dogma of the communion of saints must remain futile unless the true doctrine of justification be also restored. (See DEAD, PRAYERS FOR THE; JUSTIFICATION; SAINTS.)

Communion of the Sick.—This differs from ordinary Communion as to the class of persons to whom it is administered, as to the dispositions with which it may be received, and as to the place and ceremonies of administration. In her anxious solicitude for the spiritual welfare of her children the Church earnestly desires that those who are unable through illness to receive the Blessed Eucharist in the usual way at the altar, should not be deprived of the consolations of this sacrament, and, accordingly, she exhorts her pastors to satisfy always the pious desires, not only of all who are stricken with a dangerous sickness and require strength to prepare them for the final struggle, but also of those who may wish to comply with the paschal precept and cannot do so in church, and, in fine, of everyone who hungers after this life-giving bread even from mere devotion. When Communion is administered to persons in danger of death and likely to receive it for the last time it is called the Viaticum. With this form of Communion there is no need to deal at present, as everything concerning it will be treated afterwards in its own place (see VIATICUM). The present article is concerned with Communion which is given to persons in their own houses who, though not dangerously ill, yet are so physically indisposed that they cannot without very grave inconvenience go to church to receive in the ordinary way. In the first place, then, the pastor is bound to minister Communion in their homes to such as have to fulfil their paschal duty and cannot do so in church owing to illness. The pastor's obligation in the matter is not, of course, purely personal, and hence it can be discharged vicariously. Again he is bound, though not so strictly, to satisfy the reasonable desires of all sick persons who are confined to their homes by infirmity of any kind and who wish to receive the Blessed Eucharist. The Roman Ritual observes that these pious wishes should be especially gratified on the occasion of a solemn festival or other celebration of the kind (Tit. IV, cap. iv).

DISPOSITIONS.—The sick who desire to receive Communion out of mere devotion were hitherto bound to receive it before tasting any food or drink. Even those who had to fulfil their paschal duty and who could not fast up to a suitable hour in the morning would not be exempted from the obligation of fasting, according to many theologians. A recent Instruction of the Congregation of the Council, dated 7 December, 1906, has modified very considerably the regulations hitherto prevailing in regard to the obligation of observing the natural fast from the previous midnight, as far at least as the sick are concerned. In accordance with the provisions of this new decree all persons confined to their homes by reason of indisposition may be Communicated even though not fasting, provided (1) that they have been sick for a month; (2) that they have medical testimony as to their inability to fast; (3) that there is no certain hope of a speedy recovery; and (4) that only liquid food is taken. When these specified conditions are present Communion may be given once or twice a week to those who live in houses where Mass is celebrated daily, as in convents, and once or twice a month to others not so placed. It is unnecessary to observe that the same dispositions of soul are required in the sick as in all other persons for the fruitful reception of Holy Communion.

CEREMONIES.—The Roman Ritual (Tit. IV, c. iv) prescribes, in detail, all the ceremonies to be observed when Communion is given to the sick. The manner of carrying the Blessed Sacrament and of administering it is accurately described. The Consecrated Species should be borne with all due honour, reverence, and dignity, in solemn procession, with lights, and all the other customary formalities. This, however, is ac-

cording to the general law of the Church. Many countries, at the present day, in which this solemn and public conveyance of the Blessed Sacrament is not possible, have obtained an Apostolic indult in virtue of which the Sacred Species may be carried privately and without any pomp or external ceremonial (Second Plen. Counc. of Balt., n. 264), but it must always be enclosed in a silver box or pyx, which should be securely fastened around the person. Other cases of exception are also recognized (Ben. XIV, "Inter Unigenas"). Whilst carrying the Blessed Sacrament in this private manner, the priest need not wear any sacred vestment, but in the actual administration he should wear at least a stole, soutane, and surplice (Cong. of Rites, n. 2650). The sick chamber should be neatly and chastely arranged. Near the bed there ought to be a table covered with a white cloth, with a crucifix, two candles, small vessel of clean water, Holy Water and sprinkler, and communion-card. It only remains to say that the form used in giving Communion in private houses should be the usual one, the *Accipe frater* or *soror*, etc. being restricted to the administration of the Viaticum.

PATRICK MORRISROE.

Communion under Both Kinds.—Communion under one kind is the reception of the Sacrament of the Eucharist under the species or appearance of bread alone, or of wine alone; Communion under two or both kinds, the distinct reception under the two or both species, *sub utraque specie*, at the same time. In the present article we shall treat the subject under the following heads: I. Catholic Doctrine and Modern Discipline; II. History of Disciplinary Variations; III. Theological Speculation.

I. CATHOLIC DOCTRINE AND MODERN DISCIPLINE.—(1) Under this head the following points are to be noted: (a) In reference to the Eucharist as a sacrifice, the Communion, under both kinds, of the celebrating priest belongs at least to the integrity, and, according to some theologians, to the essence, of the sacrificial rite, and may not, therefore, be omitted without violating the sacrificial precept of Christ: "Do this for a commemoration of me" (Luke, xxii, 19). This is taught implicitly by the Council of Trent (Sess. XXI, c. i; XXII, c. i). (b) There is no Divine precept binding the laity or non-celebrating priests to receive the sacrament under both kinds (Trent, Sess. XXI, c. i). (c) By reason of the hypostatic union and of the indivisibility of His glorified humanity, Christ is really present and is received whole and entire, body and blood, soul and Divinity, under either species alone; nor, as regards the fruits of the sacrament, is the communicant under one kind deprived of any grace necessary for salvation (Trent, Sess. XXI, c. iii). (d) In reference to the sacraments generally, apart from their substance, *salvè eorum substantiâ*, i. e. apart from what has been strictly determined by Divine institution or precept, the Church has authority to determine or modify the rites and usages employed in their administration, according as she judges it expedient for the greater profit of the recipients or the better protection of the sacraments themselves against irreverence. Hence "although the usage of Communion under two kinds was not infrequent in the early ages [*ab initio*] of the Christian religion, yet, the custom in this respect having changed almost universally [*latissime*] in the course of time, holy mother the Church, mindful of her authority in the administration of the Sacraments, and influenced by weighty and just reasons, has approved the custom of com-

municating under one kind, and decreed it to have the force of a law, which may not be set aside or changed but by the Church's own authority" (Trent, Sess. XXI, c. ii). Not only, therefore, is Communion under both kinds not obligatory on the faithful, but the chalice is strictly forbidden by ecclesiastical law to any but the celebrating priest. These decrees of the Council of Trent were directed against the Reformers of the sixteenth century, who, on the strength of John, vi, 54, Matt., xxvi, 27, and Luke, xxii, 17, 19, enforced in most cases by a denial of the Real Presence and of the Sacrifice of the Mass, maintained the existence of a Divine precept obliging the faithful to receive under both kinds, and denounced the Catholic practice of withholding the cup from the laity as a sacrilegious mutilation of the sacrament. A century earlier the Hussites, particularly the party of the Calixtines, had asserted the same doctrine, without denying, however, the Real Presence or the Sacrifice of the Mass, and on the strength principally of John, vi, 54; and the Council of Constance in its thirteenth session (1415) had already condemned their position and affirmed the binding force of the existing discipline in terms practically identical with those of Trent (see decree approved by Martin V, 1418, in Denzinger, Enchiridion, n. 585). It is to be observed that neither council introduced any new legislation on the subject; both were content with declaring that the existing custom had already acquired the force of law. A few privileged exceptions to the law and a few instances of express dispensation, occurring later, will be noticed below (II).

(2) Regarding the merits of the Utraquist controversy, if we assume the doctrinal points involved—viz. the absence of a Divine precept imposing Communion under both kinds, the integral presence and reception of Christ under either species, and the discretionary power of the Church over everything connected with the sacraments that is not Divinely determined—the question of giving or refusing the chalice to the laity becomes purely practical and disciplinary, and is to be decided by a reference to the twofold purpose to be attained, of safeguarding the reverence due to this most august sacrament and of facilitating and encouraging its frequent and fervent reception. Nor can it be doubted that the modern Catholic discipline best secures these ends. The danger of spilling the Precious Blood and of other forms of irreverence; the inconvenience and delay in administering the chalice to large numbers; the difficulty of reservation for Communion outside of Mass; the not unreasonable objection, on hygienic and other grounds, to promiscuous drinking from the same chalice, which of itself alone would act as a strong deterrent to frequent Communion in the case of a great many otherwise well-disposed people; these and similar "weighty and just reasons" against the Utraquist practice are more than sufficient to justify the Church in forbidding it. Of the doctrinal points mentioned above, the only one that need be discussed here is the question of the existence or non-existence of a Divine precept imposing Communion *sub utraque*. Of the texts brought forward by Utraquists in proof of such a precept, the command, "Drink ye all of this" (Matt., xxvi, 27), and its equivalent in St. Luke (xxii, 17, i. e. supposing the reference here to be to the Eucharistic and not to the paschal cup), cannot fairly be held to apply to any but those present on the occasion, and to them only for that particular occasion. Were one to insist that Christ's action in administering Holy Communion under both kinds to the Apostles at the Last Supper was intended to lay down a law for all future recipients, he should for the same reason insist that several other temporary and accidental circumstances connected with the first celebration of the Eucharist (v. g. the preceding paschal rites, the use of unleavened bread, the taking of the Sacred Species by the

recipients themselves) were likewise intended to be obligatory for all future celebrations. The institution under both kinds, or the separate consecration of the bread and wine, belongs essentially, in Catholic opinion, to the sacrificial, as distinct from the sacramental, character of the Eucharist; and when Christ, in the words, "Do this for a commemoration of me" (Luke, xxii, 19), gave to the Apostles both the command and the power to offer the Eucharistic sacrifice, they understood Him merely to impose upon them and their successors in the priesthood the obligation of sacrificing *sub utraque*. This obligation the Church has rigorously observed.

In John, vi, 54, Christ says: "Except you eat the flesh of the Son of man, and drink his blood, you shall not have life in you"; but in verses 52 and 59 he attributes life eternal to the eating of "this bread" (which is "my flesh for the life of the world"), without mention of the drinking of His blood: "if anyone eat of this bread he shall live forever". Now the Utraquist interpretation would suppose that in verse 54 Christ meant to emphasize the distinction between the mode of reception "by eating" and the mode of reception "by drinking", and to include both modes distinctly in the precept He imposes. But such literalism, extravagant in any connexion, would result in this case in putting verse 54 in opposition to 52 and 59, interpreted in the same rigid way. From which we may infer that, whatever special significance attaches to the form of expression employed in verse 54, Christ did not have recourse to that form for the purpose of promulgating a law of Communion *sub utraque*. The twofold expression is employed by Christ in order to heighten the realism of the promise—to emphasize more vividly the reality of the Eucharistic presence, and to convey the idea that His Body and Blood were to be the perfect spiritual aliment, the food and drink, of the faithful. In the Catholic teaching on the Eucharist this meaning is fully verified. Christ is really and integrally present, and really and integrally received, under either kind; and from the sacramental point of view it is altogether immaterial whether this perfect reception takes place after the analogy in the natural order of solid or of liquid food alone, or after the analogy of both combined (cf. III below). In I Cor., xi, 28, to which Utraquists sometimes appeal, St. Paul is concerned with the preparation required for a worthy reception of the Eucharist. His mention of both species, "this bread and the chalice", is merely incidental, and implies nothing more than the bare fact that Communion under both kinds was the prevailing usage in Apostolic times. From the verse immediately preceding (27) a difficulty might be raised against the dogmatic presuppositions of the great majority of Utraquists, and an argument advanced in proof of the Catholic doctrine of the integral presence and reception of Christ under either species. "Whosoever", says the Apostle, "shall eat this bread, or drink the chalice of the Lord unworthily, shall be guilty of the body and of the blood of the Lord", i. e. whoever receives *either* unworthily is guilty of *both*. But it is unnecessary to insist on this argument in defence of the Catholic position. We are justified in concluding that the N. T. contains no proof of the existence of a Divine precept binding the faithful to Communicate under both kinds. It will appear, further, from the following historical survey, that the Church has never recognized the existence of such a precept.

II. HISTORY OF DISCIPLINARY VARIATIONS.—From the First to the Twelfth Century.—It may be stated as a general fact, that down to the twelfth century, in the West as well as in the East, public Communion in the churches was ordinarily administered and received under both kinds. That such was the practice in Apostolic times is implied in I Cor., xi, 28 (see above), nor does the abbreviated reference to the "breaking of bread" in the Acts of the Apostles (ii, 46) prove

anything to the contrary. The witnesses to the same effect for the sub-Apostolic and subsequent ages are too numerous, and the fact itself too clearly beyond dispute, to require that the evidence should be cited here. But side by side with the regular liturgical usage of Communion *sub utraque*, there existed from the earliest times the custom of communicating in certain cases under one kind alone. This custom is exemplified (1) in the not infrequent practice of private domestic Communion, portion of the Eucharistic bread being brought by the faithful to their homes and there reserved for this purpose; (2) in the Communion of the sick, which was usually administered under the species of bread alone; (3) in the Communion of children which was usually given, even in the churches, under the species of wine alone, but sometimes under the species of bread alone; (4) in the Communion under the species of bread alone at the Mass of the Presanctified, and, as an optional practice, in some churches on ordinary occasions. To these examples may be added (5) the practice of the *intinctio panis*, i. e. the dipping of the consecrated bread in the Precious Blood and its administration *per modum cibi*. We will notice briefly the history of each of these divergent practices.

(1) During the third century, in Africa at least, as we learn from Tertullian and St. Cyprian, the practice on the part of the faithful of bringing to their homes and reserving for private Communion a portion of the Eucharistic bread, would appear to have been universal. Tertullian refers to this private domestic Communion as a commonplace in Christian life, and makes it the basis of an argument, addressed to his wife, against second marriage with an infidel in case of his own death: "Non sciet maritus quid secreto ante omnem cibum guses, et si sciverit esse panem, non illum credet esse qui dicitur" (Ad Uxor., c. v, P. L., I, 1296). There can be question here only of the species of bread, and the same is true of the two stories told by St. Cyprian: the one of a man who, before Communion, had attended an idolatrous function, and on retiring from the altar and opening his hand, in which he had taken and carried the Sacred Species, found nothing in it but ashes; the other of a woman who "cum arcem suam, in qua Domini sanctum fuit, manibus indignis tentasset aperire, igne inde surgente deterrita est" (De Lapsis, 26, P. L., IV, 486). This custom owed its origin most probably to the dangers and uncertainties to which Christians were subject in times of persecution; but we have it on the authority of St. Basil (Ep. xciii, P. G., XXXII, 485) that in the fourth century, when the persecutions had ceased, it continued to be a general practice in Alexandria and Egypt; and on the authority of St. Jerome (Ep. xlviii, 15, P. L., XXII, 506) that it still existed at Rome towards the end of the same century. It is impossible to say at what precise period the practice disappeared. The many obvious objections against it would seem to have led to its abolition in the West without the need of formal legislation. The third canon attributed to the Council of Saragossa (380) and the fourteenth canon of the Council of Toledo (400), excommunicating those who do not consume in the church the Eucharist received from the priest (Hefele, Conciliengesch., I, 744; II, 79), were directed against the Priscillianists (who refused to consume any portion of the Eucharistic bread in the church), and do not seem to have been intended to prohibit the practice of reserving a portion for private Communion at home. In the East the practice continued long after its disappearance in the West, and in the eighth century the faithful were able to avail themselves of it as a means of avoiding association with the Iconoclastic heretics (Pargoire, L'Eglise byzantine, Paris, 1905, p. 339 sq.). It had already been adopted by the anchorites, as St. Basil (loc. cit.) tells us, and continued to be a feature of

anchoretic life as late as the ninth century (see Theodore Studita (d. 826), Ep. i, 57, ii, 209, in P. G., XCIX, 1115, 1661).

(2) That Communion of the sick under the species of bread alone was the ordinary usage at Alexandria in the middle of the third century is proved by the account of the death-benediction of the old man Serapion as told by Eusebius (H. E., VI, xlv, in P. G., XX, 629), on the authority of Dionysius of Alexandria (d. 264). It is recorded of St. Basil that he received Holy Communion several times on the day of his death, and under the species of bread alone, as may be inferred from the biographer's words (Vita Basilii, iv, P. G., XXIX, 315). We have it on the authority of Paulinus, secretary and biographer of St. Ambrose, that the saint on his death-bed received from St. Honoratus of Vercelli "Domini corpus, quo accepto, ubi glutivit, emisit spiritum, bonum viaticum secum ferens" (Vita Ambr., 47, P. L., XIV, 43). These testimonies are sufficient to establish the fact that, in the early centuries, reservation of the Eucharist for the sick and dying, of which the Council of Nicea (325) speaks (can. xiii) as "the ancient and canonical rule", was usual under one kind. The reservation of the species of wine for use as the Viaticum would have involved so many practical difficulties that, in the absence of clear evidence on the subject, we may feel sure that it was never the general practice. We are told by St. Justin Martyr (Apol., I, 67, P. G., VI, 429) that on Sundays, after the celebration of the Sacrifice, the Eucharistic elements were received by all present and carried by the deacons to those absent. But this would have been possible only in small and compact communities, and that it was not a general custom and did not long survive may be inferred from the fact that no subsequent mention of it is to be found. St. Jerome (Ep. ccxv, 20, P. L., XXII, 1085) speaks of St. Exuperius of Toulouse, "qui corpus Domini canistro vimineo, sanguinem portat in vitro", but this example of a private devotional practice, which is also exceptional in its way, throws no light on the usage of Communion for the sick. It is recorded in the life of St. Mary of Egypt (21 sq., P. L., LXXIII, 686) that the Abbot Zosimos brought Communion under both kinds to her solitary retreat in the desert, and in later times there are several examples of dying persons communicating *sub utraque*. But everything leads us to suppose that such Communions, as a rule, were administered in connexion with Mass, celebrated in the house of the sick person or in the immediate vicinity; and this supposition is strongly confirmed by the well-known fact that the sick were sometimes carried to the church for the purpose of receiving both the Eucharist and Extreme Unction (see Chardon, Hist. Du Sacrem. de l'Eucharistie, c. v, Migne, Theol. Cursus Completus, XX, 282). It is to be noted, finally, that the sick who could not consume the Host were allowed to receive under the species of wine alone (Council of Toledo, 675, can. ii, Mansi, XI, 143-4).

(3) It was the practice in the Early Church to give the Holy Eucharist to children even before they attained the use of reason. It is implied by St. Cyprian (De Lapsis, 25, P. L., IV, 484) that the chalice alone was offered to them; and St. Augustine, in his incidental references to child-Communion, speaks of it as administered under either species (Ep. ccxvii, 5, P. L., XXXIII, 984 sq.), or under the species of wine alone (Opus Imp., II, 30, P. L., XLV, 1154). St. Paulinus of Nola, speaking of newly-baptized children, states that the priest "cruda salutariter inbibit ora cibis" (Ep. xxxii, 5, P. L., LXI, 333), which is applicable only to the species of wine. In the East also, in some churches at least, children, especially suckling infants, communicated under the species of wine alone (see Dom Martène, De Antiq. Eccl. Ritibus, I, xiv; Gasparri, Tract. Canon. de SS. Eucharistia,

II, n. 1121). There are examples, on the other hand, both in the Western and Eastern Churches, of Communion administered to children under the species of bread alone. Thus the Council of Mâcon (586) decreed that the fragments of consecrated bread remaining over after the Sunday Communion were to be consumed by children (*innocentes*) brought to the church for that purpose on the following Wednesday or Friday (Labbe-Cossart, VI, 675); and Evagrius (d. 594) tells us that a similar custom existed at Constantinople from ancient times (Hist. Eccl., IV, 36, P. G., LXXXVI, 2769).

(4) The Mass of the Presanctified, in which the essence of the sacrifice as such is wanting, admits of Communion only under the species of bread. The custom of celebrating in this manner was introduced in the East by the Council of Laodicea in the fourth century (can. xlix) and confirmed by the Second Council in Trullo in 692 (Hefele, op. cit., I, 772). It was the rule for all fast days during Lent, and the faithful were in the habit of receiving at it (Pargoire, op. cit., p. 341 sq.). This custom is still maintained in the East (Gasparri, op. cit., I, n. 68). In the West the Mass of the Presanctified, celebrated only on Good Friday, is mentioned in the Gelasian Sacramentary (P. L., LXXIV, 1105) and in later sources; and in the beginning the faithful used to communicate at it. Apart from the Mass of the Presanctified the faithful were sometimes allowed to receive under the species of bread alone, even at the public Communion in the church. From an incident recorded by Sozomen (H. E., VIII, v, P. L., LXVII, 1528 sq.) as having occurred at Constantinople in the time of St. John Chrysostom, it would seem to follow that the reception of the consecrated bread alone was sufficient to satisfy the requirements of the then existing discipline. The point of the story is, that the unconverted wife of a converted Macedonian heretic, being compelled by her husband to communicate in the Catholic Church, secretly substituted at the moment of reception a piece of ordinary bread, which her servant had brought for the purpose, but was balked in her deceitful design by a miracle, which petrified the bread with the marks of her teeth upon it. In the West, as is clear from St. Leo the Great (Serm. xlii, 5, P. L., LIV, 279 sq.), the Manicheans at Rome, towards the middle of the fifth century, sometimes succeeded in communicating fraudulently in the Catholic Church: "ore indigno corpus Christi accipiunt, sanguinem autem redemptionis nostræ haurire omnino declinant". This *sacrilega simulatio* on the part of the heretics would have been impossible, unless it was customary at the time for at least some of the faithful to receive under one kind alone. That those detected in this *simulatio* are ordered by St. Leo to be excluded altogether from Communion, implies no reprobation on the merits of Communion under one kind; and the same is true of the decree attributed by Gratian to Pope Gelasius, "aut integra sacramenta percipiant, aut ab integris arceantur" (De Consec., D. II, c. xii, P. L., CLXXXVII, 1736). In the monastic rule attributed to St. Columbanus (d. 615) it is prescribed that novices and those not properly instructed "ad calicem non accedant" (P. L., LXXX, 220). This also seems to imply the usage in some cases of Communion under one kind; and, as a further instance of divergence in this direction from Communion strictly *sub utraque*, may be mentioned the practice, introduced about this time, of substituting for consecrated wine, in the Communion of the faithful, ordinary wine, into which a few drops of the consecrated wine had been poured. According to the "Ordo Romanus Primus", which in its present form dates from the ninth century, this usage was followed at the pontifical Mass in Rome (see Mabillon, P. L., LXXVIII, 875, 882, 903). It was adopted also in several other churches (Dom Martène, op. cit., I, ix). Some theolo-

gians of the period held with Amalarius of Metz (d. 837) (De Eccl. off., I, 15, P. L., CV, 1032) that in this case the common wine received a certain consecration by the infusion of the consecrated drops; but the majority, including St. Bernard (Ep. lxi, 2, P. L., CLXXXII, 181), denied that there was any consecration in the proper sense, or that the reception of this chalice was strictly speaking the reception of the Precious Blood.

(5) The practice of the *intinctio panis*, mentioned above, which is the last disciplinary variation to be noticed during this period, was already forbidden by the Council of Braga in 675 (Mansi, XI, 155), but, as appears from the "Micrologus" (xix, P. L., CLI, 989 sq.), was reintroduced in the eleventh century. It was condemned once more by the Council of Clermont (1095) under the presidency of Urban II, but with the limitation "nisi per necessitatem et per cautelam" (Mansi, XX, 818). The exception "per cautelam" allows the *intinctio* when it might be necessary as a precaution against the spilling of the Precious Blood, but the later prohibition of Paschal II (Ep. 535, P. L., CLXIII, 442) makes an exception only "in parvulis ac omnino infirmis qui panem absorbere non possunt". Notwithstanding these prohibitions the practice survived in many places, as we learn from Robert Pulleyn (d. 1146; Sent. VIII, iii, P. L., CLXXXVI, 964), who condemns it. Its prohibition is renewed as late as 1175 by a Council of London or Westminster (Hefele, op. cit., V, 688). There is no evidence of the *intinctio* in the East during the first ten centuries, but its existence in the eleventh century is one of the grounds of reproach advanced by Cardinal Humbert (d. 1061) against the Greeks (Adv. Græc. calumnias, 33, P. L., CXLIII, 957 sq.). According to Dom Martène (d. 1739) the practice still existed in the East in his own time (op. cit., I, 13); while the custom of pouring some drops of the Precious Blood on the consecrated bread, which was then dried by heating and reserved during a whole year for the Communion of the sick, may be considered as a kind of *intinctio*. This latter custom was prohibited by Benedict XIV for the Italo-Greeks in 1752, but the usage, where it existed among them, of receiving the Host on a spoon with some drops of the Precious Blood, was allowed to be retained (Gasparri, op. cit., II, 1177).

It is abundantly clear from this brief survey of disciplinary variations during the first twelve centuries that the Church never regarded Communion under both kinds as a matter of Divine precept.

Since the Twelfth Century.—The final suppression of the *intinctio* was followed in the thirteenth century by the gradual abolition for the laity of Communion under the species of wine. The desuetude of the chalice was not yet universal in St. Thomas' time (d. 1274): "provide in quibusdam ecclesiis observatur", he says, "ut populo sanguis sumendus non detur, sed solum a sacerdote sumatur" (Summa, III, Q. lxxx, a. 12). The Council of Lambeth (1281) directs that the consecrated wine is to be received by the priest alone, and non-consecrated wine distributed to the faithful (Mansi, XXIV, 405). It is impossible to say exactly when the new custom became universal, or when, by the Church's approval, it acquired the force of law. But such was already the case long before the outbreak of the Hussite disturbances, as is clear from the decree of the Council of Constance (see I above). The Council of Basle granted (1433) the use of the chalice to the Calixtines of Bohemia under certain conditions, the chief of which was the acknowledgment of Christ's integral presence under either kind. This concession, which had never been approved by any pope, was positively revoked in 1462 by the Nuncio Fantini on the order of Pius II. The Council of Trent while defining the points already mentioned, referred to the pope the decision of the question whether the urgent petition of the German

emperor to have the use of the chalice allowed in his dominions should be granted; and in 1564 Pius IV authorized some German bishops to permit it in their dioceses, provided certain conditions were fulfilled. But, owing to the inconveniences that were found to result, this concession was withdrawn in the following year. Benedict XIV states (De Missæ Sacrif., II, xxii, n. 32) that in his time the kings of France had the privilege of communicating *sub utraque* at their coronation and on their death-bed. In the eighteenth century the deacon and subdeacon officiating at High Mass in the Church of Saint-Denis, Paris, on Sundays and solemn feasts, and at Cluny on all feasts of obligation, were allowed to receive *sub utraque* (Benedict XIV, loc. cit.). The only surviving example of this privilege is in the case of the deacon and subdeacon officiating in the solemn Mass of the pope.

III. THEOLOGICAL SPECULATION.—The definition of the Council of Trent, to the effect that the communicant under one kind is deprived of no grace necessary for salvation (see I), was intended merely to negative the Utraquist contention, and is not to be understood as implying that Communion under one kind involves incompleteness of sacramental causality or a curtailment of sacramental grace. The council had no thought of deciding this point, which had been held to be an open question by theologians since the twelfth century and has continued to be treated as such down to our own day. Without attempting to sketch the history of the discussion, we will state here very briefly the ultimate form which the question has assumed and the opposing answers that have been given.

It is a recognized principle in sacramental theology that the sacraments cause what they signify, and the present discussion turns upon the interpretation of this principle in reference to the Holy Eucharist. Does the principle mean, not merely that the external rites are intended to signify, in a sufficiently distinctive way, the special graces they were instituted to confer, but that their efficacy in the production of grace is measured by the degree of clearness (where degrees are admissible) with which the sacramental signification is expressed? In the Eucharist grace is symbolized as a spiritual refection or aliment, after the analogy of corporal nourishment; and this signification is admittedly expressed with greater clearness in the distinct reception of both species than in Communion under one kind. Are we to hold, therefore, that Communion *sub utraque*, being a more perfect symbol of a complete refection, confers a fuller degree of sacramental grace than Communion under one kind, or in other words, that by Divine institution there is a twofold causality or two distinct lines of causality in the Eucharist, corresponding to the two modes of reception, and that both lines of causality are required for the complete production of its fruits? A minority of the great theologians have answered this question in the affirmative, e. g. Vasquez (in III, Q. lxxx, a. 12, disp. ccxv, c. ii), De Lugo (De Sac. Euch., disp. xii, iii, 68 sq.), the Salmanticenses (De Euch. Sac., disp. x, 52 sq.). Arguing on the lines indicated, these theologians hold that *per se* Communion under both kinds confers more grace than Communion under one kind, and admit that the modern discipline of the Church withdraws this opportunity of more abundant grace from the faithful. But in doing so it inflicts, they maintain, no notable spiritual privation, withholding no grace that is even remotely necessary for salvation; while, indirectly, the many advantages resulting from this discipline, particularly the increased reverence for the sacrament which it secures and the additional opportunities for frequent Communion which it provides, more than make up for whatever loss is involved.

The majority of theologians, however, rightly deny

that Communion under one kind involves *per se* any loss or curtailment of sacramental grace. St. Thomas (III, Q. lxxx, a. 12, ad 3) and St. Bonaventure (In Sent. IV, XI, punct. ii, a. 1, q. 2) may fairly be claimed for this view, which is defended by Cajetan (In III, q. lxxx, a. 12, II), Dominicus Soto (In Sent. IV, XII, q. i, a. 12), Bellarmine (De Sac. Euch., IV, 33), Suarez (In III, q. lxxix, a. 8, disp. lxxii, VI, 8, sq.), Sylvius (In III, q. lxxx, a. 12, q. 2), Gonet (De Sac. Euch., disp. viii, a. 4, n. 69), and a host of later writers. While admitting that the sacraments cause what they signify, these theologians deny that the extent of their causality is dependent on the mode or degree of perfection in which this signification is realized, or that there is any ground for distinguishing a twofold causality in the Eucharist depending on the twofold manner of reception. There is all the more reason for denying this in the case of the Holy Eucharist, since both the Body and Blood of Christ are really present, and the complete refection intended by Christ is really received, under either species alone; and since, moreover, in the production of whatever grace is given, in addition to the grace of mere presence, the more important cause is Christ Himself in His sacred humanity personally present in the recipient. Must we hold that Christ limited the grace-giving efficacy of His invisible presence so as to make it dependent on the accidental mode in which that presence is visibly symbolized rather than on the presence itself? Or that He curtailed the spiritually nutritive effects of what is *de facto* complete as an aliment and, as such, is sufficiently symbolized by either species, merely because the physical analogy in the manner of reception is not reproduced as literally and completely as it might be? Even in the natural order we do not always insist on the distinction between eating and drinking in reference to our bodily refection, and in the spiritual and supernatural sphere, where there is question of the soul's refection by Divine grace, it is surely an overstraining of the law of sacramental symbolism to urge that distinction as insistently as do theologians of the first opinion. Such briefly is the line of argument by which the common opinion is supported. It only remains to add that in this opinion the reception of the chalice may augment, *per accidens*, the grace of the sacrament, by securing a longer continuance of the species and thereby of the Real Presence, and by helping to prolong or renew the fervent dispositions of the recipient.

Among, and in addition to, the authors and works mentioned in the course of this article, the following are particularly noteworthy: HEDLEY, *The Holy Eucharist* (in the Westminster Library series, London, 1907), ch. vi, p. 84 sq.; DALGAIRNS, *The Holy Communion* (Dublin, 1861), vii; ST. THOMAS, *Sum. Theol.*, III, Q. lxxx, a. 12; ST. BONAVENTURE, *In Sent.* IV, XI, punct. ii, a. 1, q. ii (Quaracchi); CAJETAN, *In III, Q. lxxx, a. 12*, also De Comm. sub utraque specie, tr. XII *inter opuscula*; BELLARMIN, *De Sacram. Euch.*, IV, 30 sq.; BONA, *Rer. Liturg.*, II, xvii-xx; BOSSUET, *Trat   de la Comm. sous les deux esp  ces*; LA TRADITION D  FENSEE SUR LA MANI  RE DE LA COMM. SOUS UNE ESP  CE; BENEDICT, XIV, *De Sacrosancto Missae Sacrificio*, II, c. xxii, n. 18 sq.; CHARBON, *Histoire du Sacrement de l'Eucharistie* in MIGN  , *Theol. Cursus Completus*, XX; PROBST, *Sacramente und Sacramentalien in den drei ersten Jahrhunderten* (T  bingen, 1872); CORBLET, *Histoire du Sacrement de l'Eucharistie* (Paris, 1885); GASPARRI, *Tractatus Canonice de SS. Eucharistia* (Paris, 1897), I; HEUSER in *Kirchenlex.*, III, 723 sqq.; DUBLANCHY in *Dict. de th  ol. cath.*, III, 552 sqq.

P. J. TONER.

Communism (Lat. *communis*).—In its more general signification communism refers to any social system in which all property, or at least all productive property, is owned by the group, or community, instead of by individuals. Thus understood it comprises communistic anarchism, socialism, and communism in the strict sense. Communistic anarchism (as distinguished from the philosophic variety) would abolish not only private property, but political government. Socialism means the collective ownership and management not of all property, but only of the material agencies of production. Communism in the strict sense

demands that both production-goods, such as land, railways, and factories, and consumption-goods, such as dwellings, furniture, food, and clothing, should be the property of the whole community. Previous to the middle of the nineteenth century the term was used in its more general sense, even by socialists. Marx and Engels called the celebrated document in which they gave to socialism its first "scientific" expression, the "Communist Manifesto". They could scarcely do otherwise, since the word Socialism was used for the first time in the year 1833, in England. Before long, however, most of the followers of the new movement preferred to call their economic creed Socialism and themselves Socialists. To-day no socialist who believes that individuals should be allowed to retain ownership of consumption-goods would class himself as a communist. Hence the word is at present pretty generally employed in the narrower sense. Its use to designate merely common ownership of capital is for the most part confined to the unformed, and to those who seek to injure socialism by giving it a bad name.

Communism in the strict sense is also distinguished from socialism by the fact that it usually connotes a greater degree of common life. In the words of the Rev. W. D. P. Bliss, "socialism puts its emphasis on common *production and distribution*; communism, on *life in common*" ("Handbook of Socialism", p. 12). Communism aims, therefore, at a greater measure of equality than socialism. It would obtain more uniformity in the matter of marriage, education, food, clothing, dwellings, and the general life of the community. Hence the various attempts that have been made by small groups of persons living a common life to establish common ownership of industry and common enjoyment of its products, have generally been described as experiments in communism. In fact socialism, in its proper sense of ownership and operation of capital-instruments by the entire democratic State, has never been tried anywhere. This calls to mind the further distinction that communism, even as a present-day ideal, implies the organization of industry and life by small federated communities, rather than by a centralized State. William Morris thus distinguishes them, and hopes that socialism will finally develop into communism ("Modern Socialism", edited by R. C. K. Ensor, p. 88). Combining all these notes into a formal definition, we might say that complete communism means the common ownership of both industry and its products by small federated communities, living a common life.

HISTORY.—The earliest operation of the communistic principle of which we have any record, took place in Crete about 1300 B. C. All the citizens were educated by the State in a uniform way, and all ate at the public tables. According to tradition, it was this experiment that moved Lyeurgus to set up his celebrated regime in Sparta. Under his rule, Plutarch informs us, there was a common system of education, gymnastics, and military training for all the youth of both sexes. Public meals and public sleeping apartments were provided for all the citizens. The land was redistributed so that all had equal shares. Although marriage existed, it was modified by a certain degree of promiscuity in the interest of race-culture. The principles of equality and common life were also enforced in many other matters. As Plutarch says, "no man was at liberty to live as he pleased, the city being like one great camp where all had their stated allowance". In several other respects, however, the regime of Lyeurgus fell short of normal communism: though the land was equally distributed it was privately owned; the political system was not a democracy but a limited monarchy, and later an oligarchy; and the privileges of citizenship and equality were not enjoyed by the entire population. The Helots, who performed all the dis-

agreeable work, were slaves in the worst sense of that term. Indeed, the purpose of the whole organization was military and political rather than economic and social. As Lycurgus was inspired by the Cretan experiment, so Plato was impressed by the achievement of Lycurgus. His "Republic" describes an ideal commonwealth in which there was to be community of property, meals, and even of women. The State was to control education, marriage, births, the occupation of the citizens, and the distribution and enjoyment of goods. It would enforce perfect equality of conditions and careers for all citizens and for both sexes. Plato's motive in outlining this imaginary social order was individual welfare, not State aggrandizement. He wanted to call the attention of the world to a State which was unique in that it was not composed of two classes constantly at war with each other, the rich and the poor. But his model commonwealth was to have slaves.

The communistic principle governed for a time the lives of the first Christians of Jerusalem. In the fourth chapter of the Acts of the Apostles we learn that none of the brethren called anything that he possessed his own; that those who had houses and lands sold them and laid the price at the feet of the Apostles, who distributed "to everyone according as he had need". Inasmuch as they made no distinction between citizens and slaves, these primitive Christians were in advance of the communism of Plato. Their communism was, moreover, entirely voluntary and spontaneous. The words of St. Peter to Ananias prove that individual Christians were quite free to retain their private property. Finally, the arrangement did not long continue, nor was it adopted by any of the other Christian bodies outside of Jerusalem. Hence the assertion that Christianity was in the beginning communistic is a gross exaggeration. And the claim that certain Fathers of the Church, notably Ambrose, Augustine, Basil, Chrysostom, and Jerome, condemned all private property and advocated communism, is likewise unwarranted. Most of the religious, that is, ascetic and monastic orders and communities which have existed, both within and without the Christian fold, exhibit some of the features of communism. The Buddhist monks in India, the Essenes in Judea, and the Therapeutæ in Egypt, all excluded private ownership and led a common life. The religious communities of the Catholic Church have always practised common ownership of goods, both productive (whenever they possessed these) and non-productive. Their communism differs, however, from that of the economic communists in that its primary object is not and never has been social reform or a more just distribution of goods. The spiritual improvement of the individual member and the better fulfilment of their charitable mission, such as instructing the young or caring for the sick and infirm, are the ends that they have chiefly sought. These communities insist, moreover, that their mode of life is adapted only to the few. For these reasons we find them always apart from the world, making no attempt to bring in any considerable portion of those without, and observing celibacy. One important feature of economic communism is wanting to nearly all religious communities, namely, common ownership and management of the material agents of production from which they derive their sustenance. In this respect they are more akin to wage-earning bodies than to communistic organizations.

During the Middle Ages communism was held, and in various degrees practised, by several heretical sects. In this they professed to imitate the example of the primitive Christians. Their communism was, therefore, like that of the monastic orders, religious rather than economic. On the other hand, the motive of the religious orders was Christ's counsel to seek per-

fection. Chief among the communistic heretical sects were: the Catharists, the Apostolics, the Brothers and Sisters of the Free Spirit, the Hussites, the Moravians, and the Anabaptists. None of them presents facts of any great importance to the student of communism. The next notable event in the history of communism is the appearance of St. Thomas More's "Utopia" (1516). The purpose of this romantic account of an ideal commonwealth was economic, not military or religious. The withdrawal of large tracts of land from cultivation to be used for sheep-raising, the curtailment of the tenant's rights to the common, and the rise in rents had already begun to produce that insecurity, poverty, and pauperism which later on became so distressing in England, and which still constitute a most perplexing problem. By way of contrast to these conditions, More drew his ideal picture of the State of Utopia. In his conception of industrial conditions, needs, and tendencies, More was ages ahead of his time. "I can have", he says, "no other notion of all the other governments that I see or know than that they are a conspiracy of the rich, who on pretence of managing the public only pursue their private ends, and devise all the ways and arts they can find out: first, that they may without danger preserve all that they have so ill acquired, and then that they may engage the poor to toil and labour for them at as low rates as possible, and oppress them as much as they please." This reads more like an outburst from some radical reformer of the twentieth century than the testimony of a state chancellor of the early sixteenth. In "Utopia" all goods are held and enjoyed in common, and all meals are taken at the public tables. But there is no community of wives. The disagreeable work is done by slaves, but the slaves are all convicted criminals. Concerning both the family and the dignity and rights of the individual, "Utopia" is, therefore, on higher ground than the "Republic". There are several other descriptions of ideal States which owe their inspiration to "Utopia". The most important are: "Oceana" (1656) by James Harrington; "The City of the Sun" (1625) by Thomas Campanella (q. v.); and Francis Bacon's "New Atlantis" (1629). None of them has been nearly so widely read nor so influential as their prototype. Campanella, who was a Dominican monk, represents the authorities of "The City of the Sun" as compelling the best-developed women to mate with the best-developed men, in order that the children may be as perfect as possible. Children are to be trained by the State not by the parents, for they "are bred for the preservation of the species and not for individual pleasure".

The comprehensive criticism of, and revolt against social institutions carried on by French writers in the eighteenth century naturally included theories for the reconstruction of the economic order. Gabriel de Mably (*Doutes proposés aux philosophes économiques*, 1768) who seems to have borrowed partly from Plato and partly from Rousseau, declared that community of goods would secure equality of condition and the highest welfare of the race; but he shrank from advocating this as a practical remedy for the ills of his own time. Morelly (*Code de la nature*, 1755) agreed with Rousseau that all social evils were due to institutions, and urged the ownership and management of all property and industry by the State. Both de Mably and Morelly were apostate priests. Morelly's views were adopted by one of the French Revolutionists, F. N. Babeuf, who was the first modern to take practical steps toward the formation of a communistic society. His plans included compulsory labour on the part of all, and public distribution of the product according to individual needs. To convert his theories into reality, he founded the "Society of Equals" (1796) and projected an armed insurrection; but the conspirators were soon betrayed and their leader guillotined (1797). Count Henri de Saint-Simon,

whose theories received their final shape in his "Nouveau Christianisme" (1825), did not demand common ownership of all property. Hence he is looked upon as the first socialist rather than as a communist. He was the first to emphasize the division of modern society into employers and workingmen, and the first to advocate a reconstruction of the industrial and political order on the basis of labour and in the particular interest of the working classes. According to his view, the State should become the director of industry, assigning tasks in proportion to capacity and rewards in proportion to work. He is also a socialist rather than a communist in his desire that reforms should be brought about by the central Government, instead of by local authority or voluntary associations. Charles Fourier (*Traité de l'association domestique-agricole*, 1822) did not even ask for the abolition of all capital. Yet he was more of a communist than Saint-Simon because his plans were to be carried out by the local communities, to which he gave the name of "phalanxes", and because the members were to live a common life. All would dwell in one large building called the "phalansterie". Tasks were to be assigned with some regard to the preferences of the individual, but there were to be frequent changes of occupation. Every worker would get a minimum wage adequate to a comfortable livelihood. The surplus product would be divided among labour, capital, and talent, but in such a way that those doing the most disagreeable work would obtain the highest compensation. Marriage would be terminable by the parties themselves. An attempt to establish a phalanx at Versailles in 1832 resulted in complete failure.

Etienne Cabet drew up a communistic programme in his "Voyage en Icarie" (1840), which was modelled upon the work of Sir Thomas More. He would abolish private property and private education, but not marriage nor the family life. Goods were to be produced and distributed by the community as a whole, and there was to be complete equality among all its members. In 1848 he emigrated with a band of his disciples to America, and established the community of Icaria in Texas. In 1849 they moved to the abandoned Mormon settlement of Nauvoo, Illinois. Here the community prospered for several years, until the usual solvent appeared in the shape of internal dissension. In 1856 the small minority that sided with Cabet settled at Cheltenham, near St. Louis, while the greater number moved to Southern Iowa, where they established a new community to which they gave the old name of Icaria. The latter settlement flourished until 1878, when there began a final series of disruptions, secessions, and migrations. The last band of Icarians was dissolved in 1895. At that time the community numbered only twenty-one members; in Nauvoo there were five hundred. Icaria has been called "the most typical experiment ever made in democratic communism" and "more wonderful than any other similar colony, in that it endured so long without any dogmatic basis". The Icarians practised no religion. In his "Organisation du travail" (1840) Louis Blanc demanded that the State establish national workshops, with a view to ultimate State ownership and management of all production. After the Revolution of 1848 the French Government did introduce several national workshops, but it made no honest effort to conduct them according to the ideas of M. Blanc. They were all unsuccessful and short-lived. Like Saint-Simon, Louis Blanc was a socialist rather than a communist in his theories of social reorganization, property, and individual freedom. From his time forward all the important theories and movements concerning the reorganization of society, in the other countries of Europe as well as in France, fall properly under the head of socialism. The remainder of the history of communism describes events that occurred in the United States. In his "American

Communities" William A. Hinds enumerates some thirty-five different associations in which communistic principles were either partially or wholly put into operation.

COMMUNISTIC SOCIETIES IN THE UNITED STATES.—The Ephrata Community (Pennsylvania) was, with two unimportant exceptions, the earliest. It was founded in 1732 by Conrad Beissel, a German, who had for some years led the life of a religious hermit. Three men and two women who shared his views on the Sabbath were permitted to join him, and thus the six became a community. The members held property in common, laboured in common, lived in common, and observed complete equality of conditions. They regarded celibacy as preferable to the wedded state, and during the early years of the community the majority remained unmarried. Their primary aim, therefore, was religious and spiritual instead of social and economic. The community never had more than three hundred members; in 1900 it had only seventeen.

The most important communistic organization in the United States is that of the Shakers. Their first community was founded at Mt. Lebanon, N. Y., in 1787. At present there are thirty-five separate communities with a total membership of one thousand; once they aggregated five thousand. Like the Ephratans, the Shakers are a religious sect and live a community life for a religious purpose. The founders of their first American settlement were a band of English Quakers to whom the name Shakers was given because of their bodily agitations under the supposed influence of spiritual forces in their religious meetings. In the Shaker communities property is held in common (except in the case of members who have not reached the Third, or Senior Order), meals are taken in common, there is a common hour for rising, modes of dress are uniform, and there are minute rules governing manners and conduct generally. While all members are on a footing of equality, the government is hierarchical rather than democratic. They make confession of sin before entering, observe celibacy, abstain from alcoholic drinks, discourage the use of tobacco, and endeavour to avoid "all worldly usages, manners, customs, loves and affections, which interpose between the individual citizen of the heavenly kingdom and his duties and privileges therein". Owing to its principles and practices, Shaker communism is as little suited to the generality of men as monasticism. Their membership is recruited mostly through religious revivals and the reception of homeless children. Nevertheless the community has not been a complete failure as regards those who have remained faithful to its life. "For more than a hundred years", they maintain, "they have lived prosperous, contented, happy lives, making their land bloom like the fairest garden; and during all these years have never spent among themselves a penny for police, for lawyers, for judges, for poor-houses, for penal institutions or any like 'improvements' of the outside world."

Two communities that had a considerable resemblance to each other were the Harmonists, established in Pennsylvania in 1805 by George Rapp, and the Separatists of Zoar, founded in 1818 by Joseph Baumbler in Ohio. Both communities were German, were religious rather than economic, held the same religious views, and practised celibacy. Early in their history the Separatists abandoned celibacy, but continued to regard it as a higher state than marriage. The Harmonists had at one time one thousand members, but by the year 1900 dissensions had reduced them to nine. The Separatists never numbered more than five hundred. They ceased to exist as a community in 1898. The New Harmony Community was established in 1825 on land in Indiana that had once been occupied by the Harmonists. Its founder

was Robert Owen, a Welshman, who had managed with remarkable success the New Lanark mills in Scotland. He was the first to introduce the ten-hour day into factories and to refuse to employ very young children and pauper children. He also established the first infant schools in England. He made the village of New Lanark a model of good order, temperance, thrift, comfort, and contentment. He was a humanitarian and reformer who did not shrink from large sacrifices on behalf of his theories. Encouraged by the success of his efforts at New Lanark, and believing that men were good by nature and needed only the proper environment to become virtuous, strong, intelligent, and contented, he began to dream of a communism that should be world-wide. He would have all persons gathered into villages of between three hundred and two thousand souls, each of whom was to have from one-half to one and one-half acres of land. The dwellings of each village would be arranged in a parallelogram, with common kitchens, eating-houses, and schools in the centre. Individual property was to be abolished. Such were the plans that he intended to try for the first time in the community of New Harmony. Before the end of its first year this community had nine hundred souls and thirty thousand acres of land. Before two years had passed dissensions had arisen, two new communities had been formed by seceders, and the original community had been dissolved. Several other communistic settlements which owed their existence to the teaching and example of Owen, were established in different States, but none of them outlived New Harmony. Like the latter, they all expressly rejected any religious basis. This seems to have been one of the chief reasons for their early dissolution. Toward the end of his life Owen gave up his materialistic notions, and admitted the supreme importance of spiritual forces in the formation of sound character.

The Oneida Community of Oneida, N. Y., was founded in 1848 by J. H. Noyes. Its purpose was primarily religious; "the establishment of the kingdom of God". At one period it had five hundred members. For more than thirty years its members practised not only community of property and of life generally, but also of women, through their so-called "complex marriages". The rearing of children was partly a parental but chiefly a community function. In deference to public sentiment outside, the practice of "complex marriage" was in 1879 discontinued. They then divided themselves into two classes, "the married and the celibate, both legitimate but the last preferred". However, nearly all of them got married within a very short time. In 1881 the community was converted into a joint-stock company, the members owning individual shares. Financially, the new corporation has been a success, but most of its communistic features disappeared with "complex marriage".

Between 1840 and 1850 some thirty communities modelled upon the phalanxes of Fourier were established in different parts of the United States. Only one lasted longer than six years, and the great majority disappeared within three years. Their rise was due chiefly to the writings and efforts of an exceptionally able, cultured, and enthusiastic group of writers which included Horace Greeley, Albert Brisbane, George Ripley, Parke Goodwin, William Henry Channing, Charles A. Dana, Nathaniel Hawthorne, and Elizabeth Peabody. The most notable of these experiments was the one at Brook Farm. Although it took the form of a joint-stock company, paying five per cent interest, it exemplified the principles of communism in many particulars. The industries were managed by the community and all the members took turns at the various tasks; all received the same wages, all were guaranteed support for themselves and their dependents, and all enjoyed the same advantages in the matter of food, clothing, and dwell-

ings. For the first two years (1841-43) the life was charming; but the enterprise was not a success financially. In 1844 the organization was converted into a Fourieristic phalanx, which had an unsuccessful existence of a few brief months. Brook Farm failed thus early because it had too many philosophers and too few "hard-fisted toilers".

The Amana Community (Iowa) was begun in 1855 by a band of Germans who called themselves "True Inspirationists", on account of their belief that the inspiration of the Apostolic age is still vouchsafed to Christians. Their distinctive religious tenets reach back to the Pietists of the seventeenth century, but as an organization they began at Hesse, Germany, in 1714. They came to America to escape religious persecution, not to practise communism. According to their own testimony, the communistic feature was introduced solely as a means to a better Christian life. The community tolerates marriage but prefers celibacy. Those who marry suffer a decline in social standing, and are compelled to wait for some time before they can regain their former position. One of their "Rules for Daily Life" reads thus: "Fly from the society of woman-kind as much as possible, as a very highly dangerous magnet and magical fire." The families live separately, but eat in groups of from thirty-five to fifty. All property belongs to the community. In order the better to achieve their supreme purpose—self-denial and the imitation of Christ—their life is very simple, and barren not only of luxury but of any considerable enjoyment. The Amana Community has for a long time been the largest community in existence, numbering between seventeen and eighteen hundred members. During sixty years the members of this community have lived in peace, comfort, and contentment, having neither lawyers, sheriffs, nor beggars.

None of the other communistic settlements of America presents features worthy of special mention. Of all the experiments made only the Amana Community and the Shakers survive. Societies like the Co-operative Brotherhood and the Equality Commonwealth of the State of Washington are examples of co-operation, or at most of socialism. Besides, they are all very young and very small.

GENERALIZATIONS DRAWN FROM COMMUNISTIC EXPERIMENTS.—The history of communistic societies suggests some interesting and important generalizations. *First:* All but three of the American communities, namely those founded by Robert Owen, the Icarians, and the Fourieristic experiments, and absolutely all that enjoyed any measure of success, were organized primarily for religious ends under strong religious influences, and were maintained on a basis of definite religious convictions and practices. Many of their founders were looked upon as prophets. The religious bond seems to have been the one force capable of holding them together at critical moments of their history. Mr. Hinds, who is himself a firm believer in communism, admits that there must be unity of belief either for or against religion. The importance of the spiritual and ascetic elements is further shown by the fact that nearly all the more successful communities either enjoined, or at least preferred, celibacy. If communism needs the ascetic element to this extent it is evidently unsuited for general adoption.

Second: It would seem that where religion and asceticism are not among the primary ends, community of wives as well as of property easily suggests itself to communists as a normal and logical feature of their system. Even Campanella declared that "all private property is acquired and improved for the reason that each one of us by himself has his own home and wife and children". Speaking of the decline of the Oneida Community, Mr. Hinds says: "The first step out of communism was taken when

'mine and thine' were applied to husband and wife; then followed naturally an exclusive interest in children; then the desire to accumulate individual property for their present and future use." The founder of this community was of opinion that if the ordinary principles of marriage are maintained, communistic associations will present greater temptations to unlawful love than ordinary society. Communism therefore seems to face the Scylla of celibacy and the Charybdis of promiscuity.

Third: All the American communities except those founded by Owen, were composed of picked and select souls who were filled with enthusiasm and willing to make great sacrifices for their ideal. Owen admitted recruits indiscriminately, but keenly regretted it afterwards; for he recognized it as one of the chief causes of premature failure. Moreover, the other communities separated themselves from and discouraged contact with the outside world. Most of the deserters were members who had violated this injunction, and become enamoured of worldly ways.

Fourth: The success attained by the American communities was in a very large measure due to exceptionally able, enthusiastic, and magnetic leaders. As soon as these were removed from leadership their communities almost invariably began to decline rapidly. This fact and the facts mentioned in the last paragraph add weight to the conclusions drawn from the first two, namely that communism is utterly unsuited to the majority.

Fifth: It is possible for small groups of choice spirits, especially when actuated by motives of religion and asceticism, to maintain for more than a century a communistic organization in contentment and prosperity. The proportion of laziness is smaller and the problem of getting work done simpler than is commonly assumed. And the habit of common life does seem to root out a considerable amount of human selfishness.

Finally: The complete equality sought by communism is a well-meant but mistaken interpretation of the great moral truths, that, as persons and in the sight of God, all human beings are equal; and that all have essentially the same needs and the same ultimate destiny. In so far as they are embodied in the principle of common ownership, these truths have found varied expressions in various countries and civilizations. Many economic historians maintain that common ownership was everywhere the earliest form of land tenure. It still prevails after a fashion in the country districts of Russia. Within the last half-century, the sphere of common or public ownership has been greatly extended throughout almost all of the Western world, and it is certain to receive still wider expansion in the future. Nevertheless, the verdict of experience, the nature of man, and the attitude of the Church, all assure us that complete communism will never be adopted by any considerable section of any people. While the Church sanctions the principle of voluntary communism for the few who have a vocation to the religious life, she condemns universal, compulsory, or legally enforced communism, inasmuch as she maintains the natural right of every individual to possess private property. She has reprobated communism more specifically in the Encyclical "Rerum Novarum" of Pope Leo XIII. For the theories condemned in that document under the name of socialism certainly include communism as described in these pages. See COLLECTIVISM, SOCIALISM; PROPERTY.

Community. See MONASTICISM; RELIGIOUS ORDERS.

Como, DIOCESE OF (COMENSIS).—Como is an important town in the province of Lombardy (Northern Italy), picturesquely situated on Lake Como, the ancient *Lacus Larius*. The city is of Celtic origin and was called *Comum*. In 195 B. C. it became a Roman colony. Destroyed by the Rætian Gauls, it was reconstructed by Pompeius Strabo and called *Novocomum*. It shared the vicissitudes of the surrounding region. In the tenth century the Bishops of Como were also its temporal lords. In the eleventh century the city became a free commune. In 1153 Como was devastated by the Milanese on account of its attachment to Frederick Barbarossa, who rebuilt the city in 1158. Then followed the rule of the Rusca family. In 1355 Franchin Rusca freely ceded the town to the Visconti, from which time it shared the fortune of the Duchy of Milan. Como is now the centre of the silk industry in Italy, and according to the census of 1901 had a population of 38,902. It has been the birthplace of

CATHEDRAL, COMO

many famous men, among them the elder and the younger Pliny, the historian Paulus Jovius, Pope Innocent XI, and the physicist Volta. Local legend credits the conversion of Como to the apostolate of St. Hermagoras of Aquileia (died c. 70). Until 1528 Como was, indeed, a suffragan of Aquileia (later of Venice) and followed the Aquileian Rite. The first known bishop was St. Felix, ordained by St. Ambrose in 379, and it is not improbable that he was the first bishop. Many Bishops of Como are venerated as saints: St. Probinus (391); St. Amantius (420); St. Abundius (450), sent as legate to the Council of Chalcedon by St. Leo the Great; St. Consul (469); St. Exuperantius (495); St. Eusebius (512); St. Eutychius (525); St. Euplius (532); St. Flavianus (535); St.

Prosper (560); St. John Orcus (565); St. Agrippinus (568); St. Rubianus (586); St. Martinianus (615); St. Victorinus (628), opponent of Arianism as propagated by the Lombards; Alberico (1010), founder of the Abbey of Sant'Abondio; Rainaldo (1061), expelled by Henry IV for his loyalty to Gregory VII; Guglielmo della Torre (1204), builder of many churches and founder of a hospital; Benedetto Asinaga (1328), who fled from the persecution of the Rusca, Lords of Como; Lucchino Borsano (1396), who began the new cathedral; the learned reformer, Gian Antonio Volpi (1559). The cathedral of Como is a splendid monument of Christian art. It was begun in 1396, and was completed only in 1595; later the cupola and some small chapels were added (1730-44). In 1528 Como was placed under the jurisdiction of the Archbishop of Milan. The diocese has a population of 340,000, has 325 parishes, 3 religious houses of men and 12 of women.

Compagnie du Saint-Sacrement, a Catholic secret society which included among its members many Catholic celebrities of the seventeenth century. It was founded in March, 1630, at the Convent of the Capuchins in the Faubourg Saint-Honoré by Henri de Lévis, Duc de Ventadour, who had just escorted his wife to the Convent of Mont-Carmel; Henri de Pichery, officer of Louis XIII's household; Jacques Adhémar de Monteil de Grignan, a future bishop, and Philippe d'Angoumois, the Capuchin. Amongst those who soon joined it, should be mentioned Père Sufren, a Jesuit, confessor to Louis XIII and Marie de' Medici; the son and grandson of Coligny, the Protestant admiral, and Charles de Condre, General of the Oratorians. In 1631 this association was called the Company of the Most Blessed Sacrament. It was organized under the authority of a board composed of nine members, changed every three months, and which included a superior, usually a layman, and a spiritual director who was a priest. The associates met weekly and their organization was simultaneously a pious confraternity, a charitable society, and a militant association for the defence of the Church.

The company was an absolutely secret one. Louis XIII covertly encouraged it but it never wished to have the letters patent that would have rendered it legal. Archbishop Gondi of Paris refused his blessing to the company although, in 1631, Louis XIII wrote him a personal letter requesting him to confer it. The Brief obtained from the pope in 1633 by the Count de Brassan, one of the members, was of no importance and the company, eager to secure a new one, was granted only a few indulgences which it would not accept, as it did not wish to be treated as a simple confraternity. Guido Bagni, nuncio from 1645 to 1656, often attended the sessions of the company but its existence was never regularly acknowledged by an official document from Rome. The rule of secrecy obliged members "not to speak of the company to those who do not belong to it and never to make known the names of the individuals composing it". New members were elected by the board and it was soon decided that no *congréganiste*, i.e. member of a lay congregation directed by ecclesiastics, could be eligible. Matters of an especially delicate nature were not discussed at the weekly meetings, these being frequently attended by a hundred members, but were reserved for the investigation of the board. The company printed nothing and the keeping of written minutes was conducted with the utmost caution. There were fifty important branches outside of Paris, about thirty being unknown even to the bishops. Among other members were the Prince de Conti, the Maréchal de Schomberg, the Baron de Renty, Magistrates Lamoignon, de Mesnes, and Le Fèvre d'Ormesson;

Alain de Solminihac, Bishop of Cahors, now declared Venerable; St. Vincent de Paul, Olier, and Bossuet.

The association laboured zealously to correct abuses among the clergy and in monasteries, to insure good behaviour in the churches, to procure missions for country parishes, and it had the honour of urging the establishment of a Seminary of Foreign Missions for the evangelizing of infidels. It also endeavoured to reform the morals of the laity by encouraging the effective crusade of the Marquis de Salignac-Fénelon against duelling. Moreover, it was interested in the care of the poor, the improvement of hospitals, and the administration of galleys and prisons; and that the poor might have legal advice, it created what are today known as the *secrétariats du peuple*. It protected the fraternities of shoemakers and tailors organized by the Baron de Renty and assisted St. Vincent de Paul in most of his undertakings. In 1652 when Louis XIV, conqueror of the Fronde, re-entered Paris and the city was flooded with peasants, fugitive religious, and hungry priests, the members of the company multiplied their generous deeds, demanded alms from their fellow-members outside of Paris, sent priests to hear the confessions of the sick in districts that had been decimated by war, founded parish societies for the relief of the poor, and established at Paris a general storehouse stocked with provisions, clothing, and agricultural implements to be distributed among the impoverished peasants. At that time the company spent 300,000 livres (equal to 300,000 dollars) in charity each year. Finally, it was instrumental in bringing about the ordinance establishing the General Hospital where Christophe du Plessis, the magistrate, and St. Vincent de Paul organized the hospitals for mendicants.

Even those historians to whom the secret character of this association is obnoxious, give due credit to its admirable charities, but they attack its action in regard to Protestants. The company laboured diligently to increase conversions and organized the preaching of missions for Protestants in Lorraine, Dauphiné, and Limousin and founded establishments in Paris, Sedan, Metz, and Puy for young converts from Protestantism. Moreover, it strove to suppress the outrages perpetrated by Protestants against the Catholic religion and opposed the oppression of Catholics by Protestants in a Protestant city like La Rochelle. Finally, without seeking the revocation of the Edict of Nantes, the Company nevertheless remained constantly on the alert, lest any concession be made to Protestants beyond what the formal text of the edict demanded and its members sent documents to Jean Filleau, a Poitiers lawyer, who for twenty-five years issued "Catholic decisions" from a juridical point of view, on the interpretation of the Edict of Nantes. The protestation of the general assembly of the clergy in 1656 against the infringement of the edict by Protestants, was the outgrowth of a long documental work prepared by the members. In 1660, Lechassier who was *Maître des Comptes* and also one of the company, forwarded to all the country branches a *questionnaire*, i.e. a series of questions asked with a view to helping the inquiry, of thirty-one articles on the infringement of the Edict of Nantes by Protestants. The answers were collected by Forbin-Janson, Bishop of Digne, who took active part in the assembly of clergy, the result being that commissaries were sent into the provinces for the purpose of setting right these abuses. But, in its own turn, the company violated the Edict of Nantes (of which Art. 27 declared Huguenots wholly eligible to public office), and, by secret manoeuvring, one day prevented twenty-five young Protestants from being received as attorneys at the Parlement of Paris. "The members thought they were doing right", explained Père de la Brière, "nevertheless, if we consider not their intention, but the very nature of their act and of their procedure, it is

impossible to doubt that they were guilty of an iniquity". According to the testimony of Père Rapin and the Count d'Argenson, these proceedings of the Company were the starting-point of the policy that was to culminate in 1685 in the revocation of the Edict of Nantes.

The year 1660 witnessed the decline of the company. In consequence of incidents that had occurred at Caen, it was vigorously attacked in a libel by Charles du Four, Abbot of Aulnay, and denounced to Cardinal Mazarin by François Harlay de Champvallon, Archbishop of Rouen. On 13 December, 1660, the members held a last general meeting at which, amid expressions of regret and deep emotion, it was decided to suspend their Thursday-sessions and to add "ten or twelve elders" to the members of the board so that the company might continue to act provisionally; then these elders and the board selected eight individuals who were to correspond with the country branches, one of the eight being Bossuet. On 13 December, 1660, Parliament issued a decree prohibiting all illicit assemblies, confraternities, congregations, and communities but Lamoignon, a member of the company and the first president, succeeded in preventing it from being designated by name. It seems that the meetings of the board and the elders, held regularly enough in 1664 to be instrumental in obtaining the interdiction of "Tartuffe", ceased almost altogether in 1665. The General Hospital and the Seminary of Foreign Missions continued to exist as magnificent legacies of this association which Mazarin and many hostile historians who came after him, scornfully called the "Cabal of Devotees".

Compensation, as considered in the present article denotes the price paid for human exertion or labour. Wherever men have been free to sell their labour they have regarded its compensation as a matter that involved questions of right and wrong. This conviction has been shared by mankind generally, at least in Christian countries. At the beginning of the fourth century, the Emperor Diocletian issued an edict which fixed the maximum prices for the sale of all goods, and appointed a legal schedule of wages for nineteen different classes of workmen. In the preamble of the edict the emperor declares that his motive is to establish justice among his people (Levasseur, "Classes ouvrières avant 1789", I, 112-114). Throughout the Middle Ages and down almost to the beginning of the nineteenth century, there was considerable legal regulation of wages in most of the countries of Europe. This practice indicated a belief that the compensation of labour ought to be brought under the rule of law and fairness, as these legislators conceived fair dealing.

The Fathers of the Church implicitly asserted the right of the labourer to sufficient compensation for the maintenance of his life when they declared that God wished the earth to be the common heritage of all men, and when they denounced as robbers the rich who refused to share their surplus goods with the needy. The theologians and canonists of the Middle Ages held that all commodities should be sold at that

price which the social estimate regarded as just; but they insisted that in arriving at this estimate the community ought to take into account the utility, the scarcity, and the cost of production of the commodity. Inasmuch as the cost of production at that time was chiefly labour-cost, or wages, a just price for goods would necessarily include a just price for the labour that produced the goods. St. Thomas reflects the common view when he says that labour as well as goods should bring a just price (Summa Theologica, I-II, Q. cxiv, a. 1). Langenstein, in the fourteenth century, is more specific; for he declares that anyone can ascertain the just price of the wares that he has to sell by referring to the cost of living of one in his station in life (De Contractibus, Pt. I, cap. xii). Since the seller of the goods was generally the maker of them also, Langenstein's rule was equivalent to the doctrine that the compensation of the master-workman should be sufficient to furnish him a decent livelihood. And we know that his remuneration did not differ greatly from that of the journeyman. From the meagre accounts that have come down to us, we are probably justified in concluding, with Professor Brants, that these standards of compensation and the methods of enforcing them generally secured to the medieval labourer a livelihood which the notions of the time regarded as becoming (Théories économiques aux xiii^e et xiv^e siècles, p. 123). At the beginning of the seventeenth century we find such writers as Molina and Bonacina asserting that the customary compensation of a place is, generally speaking, just compensation, and assuming that the worker has a right to a living from his labour.

To-day Catholic teaching on compensation is quite precise as regards the just minimum. It may be summarized in these words of Pope Leo XIII in the famous Encyclical "Rerum Novarum" (15 May, 1891), on the condition of the working classes: "there is a dictate of nature more ancient and more imperious than any bargain between man and man, that the remuneration must be sufficient to support the wage-earner in reasonable and frugal comfort. If through necessity or fear of a worse evil the workman accepts harder conditions, because an employer or contractor will give him no better, he is the victim of fraud and injustice." Shortly after the Encyclical appeared, Cardinal Goossens, the Archbishop of Mechlin, asked the Holy See whether an employer would do wrong who should pay a wage sufficient for the sustenance of the labourer himself but not for that of his family. An unofficial response came through Cardinal Zigliara, saying that such conduct would not be contrary to justice, but that it might sometimes violate charity, or natural righteousness—i. e. reasonable gratitude. As a consequence of the teaching of Leo XIII, there has been widespread discussion, and there exists an immense literature among the Catholics of Europe and America concerning the minimum just wage. The present Catholic position may be summarized somewhat as follows: First, all writers of authority agree that the employer who can reasonably afford it is morally obliged to give all his employees compensation sufficient for decent individual maintenance, and his adult male employees the equivalent of a decent living not only for themselves but for their families; but not all place the latter part of the obligation under the head of strict justice. Second, some writers base this doctrine of a minimum just wage upon the principle of just price, according to which compensation should be equivalent to labour, while others declare that it is implicitly contained in the natural right of the labourer to obtain a decent livelihood in the only way that is open to him, namely, through his labour-contract and in the form of wages. The latter is undoubtedly the view of Leo XIII, as is evident from these words of the Encyclical: "It follows that each one has a right to procure what is required in order to

live; and the poor can procure it in no other way than by work and wages."

Authoritative Catholic teaching does not go beyond the ethical minimum, nor declare what is completely just compensation. It admits that full and exact justice will frequently award the worker more than the minimum equivalent of decent living, but it has made no attempt to define precisely this larger justice with regard to any class of wage-earners. And wisely so; for, owing to the many distinct factors of distribution involved, the matter is exceedingly complicated and difficult. Chief among these factors are, from the side of the employer, energy expended, risk undergone, and interest on his capital; from the side of the labourer, needs, productivity, efforts, sacrifices, and skill; and from the side of the consumer, fair prices. In any completely just system of compensation and distribution all these elements would be given weight; but in what proportion? Should the man who produces more than his fellow-worker always receive a larger reward, regardless of the effort that he has made? Should skill be more highly compensated than work that is degrading and disagreeable? Even if all men were agreed as to the different factors of distribution and their relative importance, from the side of capital and labour, there would remain the problem of justice to the consumer. For example, ought a part of the benefits arising from improvements in the productive processes to go to him? or should they all be appropriated by the agents of production? Pope Leo XIII showed his practical wisdom when, instead of dealing in detail with this question, he insisted strongly on the practice of arbitration. When wage-disputes are submitted to fair arbitration, all the criteria and factors of distribution above enumerated are usually taken into account, and accorded weight in conformity with practical justice. This is not, indeed, the same as ideal justice, but in most cases it will approximate that goal as closely as is feasible in a world that is not absolutely perfect.

JOHN A. RYAN.

Compensation, OCCULT.—An extra-legal manner of recovering from loss or damage; the taking, by stealth and on one's private authority, of the value or equivalent of one's goods from a person who refuses to meet the demands of justice.

Considered strictly from the standpoint of commutative justice, although this proceeding may have on the surface all the appearance of theft, it is in reality the farthest removed from such. As defined, it implies a debtor who is able, but unwilling, to restore what he holds unjustly and a creditor who has an opportunity to recover possession of what is his own certain due. Since the effect as well as the purpose is solely to make a wrong cease, the transfer brought about by this method of self-protection is manifestly in keeping with equity and right. Thus occult compensation is based on the right of self-defence. It is clear that such dealing-out of justice to oneself without the sanction of public authority may become a course gravely prejudicial to public and social order and open to all manner of abuses and dangers. But the evil is no less real and pernicious, if, while avoiding this extreme, one runs to the opposite, and denies principles which safeguard natural rights of the individual and protect the weak against the constant danger of oppression from the strong. Catholic moralists steer

clear of these two extremes and teach that it is licit, under certain conditions and with certain precautions, to have recourse to occult compensation.

In Doctor Bouquillon's scholarly article in^o the "Catholic University Bulletin" (1896), II, 50-61, it is proved not only that the doctrine is sound and reasonable, but that "it has been accepted by philosophers and jurists, as far, even, as the terminology in which it has been formulated by our theologians; that it has always been substantially the same since the days of St. Irenæus and Clement of Alexandria, though in the course of time it has gained in clearness, and that when writings capable of pernicious influence have appeared they have been carefully weeded out."

The requisite conditions may be reduced to three. First, the right of the creditor must be certain. Then, respect for law and order demands that the authority of the law should be invoked whenever it is possible and recourse to established justice does not involve difficulties and losses out of all proportion with the gain to be derived. When laws operating through the regular channels fail to protect and are helpless to remove the evil of injustice, respect for them should not prevent one from taking one's own by extraordinary means. Finally, provision should be made against the event of a later settlement by the debtor or his lawful heirs, which would necessitate restitution; and every reasonable effort should be made to avoid scandal or other evils of accusations, distrust, etc., to which cause may be given through ignorance of the moral value of such methods. When the danger to the community is thus minimized as far as it is humanly possible, legal justice honoured as far as it is entitled to honour, and the necessity of justice and right urgent, it is lawful in conscience, according to our accredited moralists, to avail oneself of the theory of occult compensation. It remains, however, that such cases are rare, that it is still more rarely within the competence of the ordinary individual to decide his own case without the advice of a prudent and disinterested counsellor, and that occult compensation should never be advised save in exceptional circumstances, on account of its potency for havoc in the hands of the ignorant or unscrupulous. But disregard for any or all of these precautions, while offending against legal, does not violate commutative justice, nor entail the duty of restitution, if the essential right is present.

Competency, PRIVILEGE OF (Lat. *Privilegium Competentia*).—(1). The competency of a cleric means his right to proper sustenance. When a parochial church has been incorporated with a collegiate institution or monastery and a vicar has been appointed to the cure of souls in the parish, the possessors of the benefice are obliged to give him the needful salary. Nor can the right to this competency be done away with by agreement. If a private contract be made by which a less sum is to be accepted, it will not bind the successor of the contracting vicar. Even if the contract be approved by public authority, it is not binding unless an amount sufficient for the proper support of the pastor be stipulated. The right to competency also has place when several simple benefices are united with a parish church. If the endowment is not sufficient for the necessary number of pastors, then recourse is to be had to firstfruits, tithes, and collections among the parishioners (Council of Trent, Sess. XXIV, c. xiii, de Ref.). It is the duty of the bishop to see that those who have the care of souls be provided with

proper support. By the privilege of competency, the goods of a cleric, burdened with debt, cannot be attached or sold without leaving him sufficient means of support (Cap. 3, x., III, 23). A cleric loses this privilege, however, if he fraudulently contracts unnecessary debts, in abuse of the privilege. The civil law in some countries recognizes this right of competency. In Austria, while the property of a benefice cannot be attached, the revenues can, but only to such an extent that at least 300 or 210 florins, according to the rank of the benefice, must remain intact. In Germany, whatever is necessary for exercising the ministry is free from attachment. The civil laws of the United States and Great Britain make no exception for clerics. (2) The term *competency* is also used for the sum total of the rights belonging to any ecclesiastical dignitary, as of the pope, bishops, etc. Objectively, such competency is determined by the various functions to which it extends, such as ordination, matrimony, and so forth.

Competentes. See CATECHUMEN.

Complin.—The term *Complin* is derived from the Latin *completorium*, complement, and has been given to this particular Hour because Complin is, as it were, the completion of all the Hours of the day: the close of the day. The word was first used in this sense about the beginning of the sixth century by St. Benedict in his Rule (cc. xvi, xvii, xviii, and xlii), and he even uses the verb *complere* to signify Complin: "Omnes ergo in unum positi compleantur"; "et exeuntes a completorio" (xlii). The Hour of Complin, such as it now appears in the Roman Breviary, may be divided into several parts, viz.: the beginning or introduction, the psalmody, with its usual accompaniment of anthems, the hymn, the capitulum, the response, the evangelical cantic, the prayer, and the benediction.

The origin of Complin has recently given rise to considerable discussion among liturgists. General opinion, which is also that of Bäumer and Batiffol, ascribes the origin of this Hour to St. Benedict, in the beginning of the sixth century. It was St. Benedict who first gave it this name; he decided also that this Hour should consist of three psalms (iv, xc, and cxxxiii) to be said without anthems, the hymn, the lesson, the versicle Kyrie eleison, the benediction, and the dismissal (ch. xvii and xviii). But Father Pargoire and, later still, A. Vandepitte oppose this opinion and seek a more ancient origin for this Hour. A text in Callinicus (between 447 and 450), first introduced in Father Pargoire's argument, informs us that between Vespers and the night Office there was celebrated in the East a canonical Hour called in this text *προπύρνια*, because it preceded the first sleep, being nothing but what the Greeks of to-day call *apodeipnon*, on account of the meal it follows. However, in the thirty-seventh question of his rules, St. Basil, also, speaks of an intermediate Hour between Vespers and the night Office. Father Pargoire therefore disputes the assertion that St. Benedict was the originator of Complin, being rather disposed to trace its source to St. Basil. In the article mentioned Father Vandepitte confirms these conclusions; nevertheless he states, in the clearest terms, that it was not in Cæsarea in 375, but in his retreat in Pontus, (358-362) that Basil established Complin, which Hour did not exist prior to his time, that is, until shortly after the middle of the fourth century. Dom Plaine also traced the source of Complin back to the fourth century, finding mention of it in a passage in Eusebius and in another in St. Ambrose, and also in Cassian. These passages have been critically examined, and Fathers Pargoire and Vandepitte have

proved that before St. Basil's time the custom of reciting Complin was unknown. At any rate, even if these texts do not express all that Dom Plaine says they do, at least they bear witness to the private custom of saying a prayer before retiring to rest. If this was not the canonical Hour of Complin, it was certainly a preliminary step towards it. The same writers reject the opinion of Ladeuze and Dom Besse, both of whom believe that Complin had a place in the Rule of St. Pachomius, which would mean that it originated still earlier in the fourth century. It is not necessary to enter into this discussion, but it might be possible to conciliate these different sentiments by stating that, if it be an established fact that St. Basil instituted and organized the Hour of Complin for the East, as St. Benedict did for the West, there existed as early as the days of St. Cyprian and Clement of Alexandria the custom of reciting a prayer before sleep, in which practice we find the most remote origin of our Complin. But let the result of this discussion be what it may, it cannot be denied that St. Benedict invested the Hour of Complin with its liturgical character and arrangement, which were preserved in the Benedictine Order and almost completely adopted by the Roman Church; it is hardly to be believed, as Dom Plaine maintains, that the Hour of Complin, at least such as it now exists in the Roman Breviary, antedated the Benedictine Office. In default of other proof, it may be noted that the Benedictine Office gives evidence of a less advanced liturgical condition, as we have seen that it consists of a few very simple elements. The Roman Office of Complin is richer and more complicated. To the simple Benedictine psalmody—modified, however, by the insertion of a fourth psalm (xxx), "In te Domine speravi"—it adds the solemn introduction of a benediction with a reading [perhaps the spiritual reading which, in St. Benedict, precedes Complin (ch. xlii of the Rule)], and the confession and absolution of faults. But what endows the Roman Complin with a distinctive character and greater solemnity is, to say nothing of the ending, the addition of the beautiful response, *In manus tuas, Domine*, with the evangelical cantic *Nunc Dimittis* and its anthem, which is very characteristic. It is really difficult to understand why St. Benedict, whose liturgical taste favoured solemnity in the Office, should have sacrificed these elements, especially the evangelical cantic. By way of liturgical variety the service of *initium noctis* may also be studied in the Celtic Liturgy (see CELTIC RITE), such as it is read in the Bangor Antiphonary, its plan being set forth by Warren and by Bishop. Under the title of *Apodeipnon* (after meals), the Greeks have an Hour that corresponds to our Latin Complin; it is very long and complicated, and its description may be seen in Father Pétrides' article, cited below. This *Apodeipnon*, or Grand *Apodeipnon*, appears in an abridged form, or Small *Apodeipnon*.

FERNAND CABROL.

Compluto, DIOCESE OF. See MADRID.

Compostela, a famous city of Spain, situated on an eminence between the Sar (the Sars of Pomponius Mela) and the Sarella. At a very remote period this

hill was crowned by a Celtic castle, known as *Liberum Donum*, according to the twelfth-century "*Historia Compostelana*" (cf. Welsh *llwybr*, "way", and *don*, "tower", "castle"). Compostela overlooks two Roman roads; the Celto-Roman name was probably *Liberodunum*). It has been an archiepiscopal see since 1120, but as the successor to the ancient See of Iria its episcopal rank dates certainly from the fourth, probably from the first, century of our era.

ETYMOLOGY.—The name *Compostela* does not appear before the tenth century. In a document of 912 it is said of the monastery of St. Martin, near the cathedral: *quod situm est in urbe Compostellâ*. King Ferdinand I in a privilege of 10 March, 1063, apropos of St. James the Great, says: *cujus corpus requiescit Gallecia in urbe Compostellâ*. Three years previous a council held in the cathedral is called *Compostellanum*. From this the name is in frequent use and gradually usurps the names familiar to previous centuries; *locus sanctus*, *arcis marmoreis*, *ecclesia*, or *civitas sancti Jacobi*. The name seems to be a diminutive of *composita*, "established", in reference to the stronghold (*civitatella*) of the city. Similar diminutives abound in the Middle Ages. The *cité* of Paris, the *city* of London, the *Tolétula* of Toledo, the *Almudena*, diminutive of Almedina, in Madrid and in Palma (Majorca), recall the former distinction between the territory without the walls and the city (*civitas*) properly so called. The episcopal city of the Island of Minorca (in Romano-Punic, *Iamo*) yet retains its medieval name *Ciudadilla*.

THE SEE OF COMPOSTELA.—Its history may be divided into two periods, before and after its elevation (1120) to the metropolitan dignity.—*The Bishopric.*—The Sar swollen by the Sarela flows onward from Compostela some fifteen or sixteen miles until it joins the Ulla, and empties into the sea at Padrón (Patronus), a hamlet which has borne that name since the ninth century in memory of the fact that it was the landing-place of the galley which bore to Galicia the body of the Apostle St. James the Great. Here stood in those days the city of Iria, capital of the Gallician Caporos, as may be seen from its Roman ruins, especially the inscriptions, some of which are contemporary with the beginning of the Christian Era. Pomponius Mela, who lived in the reign of Emperor Claudius, i. e. at the time of St. James's martyrdom, says that the Sar enters the ocean near the Tower of Augustus (*Turris Augusti*); the foundations of the latter are still recognizable in the outer harbour of Iria. In the reign of Vespasian the cognomen *Flavia* was added; as *Iria Flavia* it appears in the Geography of Ptolemy. According to a very probable tradition, it was here that the Apostle St. James the Great preached the Christian religion and founded an episcopal see. This tradition was already widespread in the year 700, when St. Aldhelm, Abbot of Malmesbury, later Bishop of Sherborne, wrote as follows (P. L., LXXXIX, 293):—

Hic quoque Jacobus, cretus genitore vetusto
Delubrum sancto defendit teginne celsum;
Qui, clamante pio ponti de margine Christo,
Linquebat proprium panda cum puppe parentem.
Primitus Hispanas convertit dogmate gentes,
Barbara divinis convertens agmina dictis,
Quæ priscos dudum ritus et lurida fana,
Dæmonis horrendi deceptæ fraude, colebant;
Plurima hic præsul patravit signa stupendum
Quæ nunc in chartis scribuntur rite quadratis.

(Here also James, born of an ancient sire, protects the lofty shrine with a holy roof—he who, when dear Christ called him from the seashore, left his own father with the curved ship. He, at the first did convert the Spanish peoples by his teaching, turning towards God's word the barbarous hordes that had long practised primitive rites and worshipped at the shrines of darkness, being deceived by the craft of the evil one. Here did the wonderful bishop per-

form many portents, which are now set down in order upon our fourfold chart.)

The list of the bishops of Iria known to us from their presence at councils and from other authentic sources begins with the year 400. They are: Ortigius, . . . , Andreas (572), Dominicus, Samuel, . . . , Gotumarus (646), Vincibilis, Ildulfus Felix (683), Selva, Leosindus, . . . , Theudemirus (808?), Adaulfus I (843), and Adaulfus II (851-79). Under the last-named the city was destroyed by Norman pirates, on which occasion both bishop and chapter took refuge behind the strong walls of Compostela. Soon they petitioned King Ordoño II and Pope Nicholas I to permit them to transfer the see from Iria to Compostela, near the sepulchre and church of St. James. Both pope and king consented, on condition, however, that the honour of the see should be divided between the two places. From the second half of the ninth century therefore, the bishops of this see are known indiscriminately as *Irienses* or *Sancti Jacobi*, even as *ecclesie apostolice sancti Jacobi*, finally as *Compostellani*. At the end of the eleventh century, through reverence for the body and the sepulchre of St. James, Urban II withdrew from Iria its episcopal rank and transferred the see in its entirety to Compostela. At the same time he exempted it from the authority of the metropolitan and made it immediately subject to the Holy See. This is evident from the Bull of 5 Dec., 1095, in favour of the Cluniac bishop, Dalmatius, present at the famous Council of Clermont.

The Metropolitan See.—Thenceforth the see grew in importance, likewise its magnificent Romanesque church, modelled on that of Puy in France, and frequented by pilgrims from all parts of Christendom. Like the cathedral of Toledo after the reconquest (1085), it became the principal centre of the political renaissance of Catholic Spain and its self-assertion against the Moslem power. Pope Callistus II recognized the great merits of Diego Gelmírez, Bishop of Compostela, and in view of the reconquest of much Portuguese territory, and the near recovery of its freedom by Mérida, the ancient metropolis of Lusitania (Portugal), confided to him the perpetual administration of that archdiocese, whereby Compostela became a metropolitan see. Since then it has been occupied by many illustrious men, not a few of whom were raised to the cardinalial dignity (Gams, "*Series episcoporum ecclesie Catholice*", Ratisbon, 1873; Eubel, "*Hierarchia catholica medii ævi*", Münster, 1898). The Bull of Callistus II (26 Feb., 1120) clothed the metropolitan of Compostela with authority over the following dioceses of the ancient *Provincia Lusitana*: Salamanca, Avila, Coria, Ciudad Rodrigo, Plasencia, Badajoz—(in Spain); Idanha (Guarda), Lamego, Lisbon, Evora, Osonova (Silves)—in Portugal beyond the Duero. Though Compostela lost the Portuguese dioceses, 10 Nov., 1399, when Lisbon was made an archbishopric, it acquired in return Astorga, Lugo, Mondoñedo, Orense, Tuy, and Zamora. The Concordat of 1851 left it with only five: Lugo, Mondoñedo, Orense, Oviedo, and Tuy. The list of the councils of Compostela may be seen in the aforementioned work of Gams, and their text in Mansi or Aguirre. One of the most important is the provincial council which asserted the innocence of the Templars within its jurisdiction; another, held 29 Oct., 1310, anticipated in its fourth canon the action of the Council of London (29 Oct., 1329) under Simon of Mepham, Archbishop of Canterbury in decreeing the yearly celebration of the feast of the Conception of the Blessed Virgin throughout the province of Compostela on the eighth of December. Among those who have occupied the See of Compostela may be mentioned: St. Rosendus (970-77); St. Peter de Mosonico (986-1000), probably the author of the *Salve Regina*; Diego Peláez (1070-88), who began the reconstruction of the cathedral; Diego Gelmírez (1100-42?), the first Archbishop of Com-

postela, and who continued the work of Bishop Peláez; Pedro Muñoz (1207-11), who finished the cathedral; Cardinal Miguel Payá y Rico (1874-85), who had the honour of discovering in a crypt behind the high altar of the cathedral the sepulchre and the relics of the Apostle St. James.

The sepulchre of St. James and questions relating thereto are treated in the article JAMES THE GREATER, SAINT. It will suffice to mention here the document which confirms better than any other the history and the authenticity of this sacred relic of the primitive Christian life of Spain, i. e. the solemn Bull of Leo XIII (1 Nov., 1884) in which he confirms the declaration of Cardinal Payá, Archbishop of Compostela, concerning the identity of the bodies of the Apostle St. James the Greater and his disciples Athanasius and Theodorus.

Compromise (IN CANON LAW), in a general sense, is a mutual promise or contract of two parties in controversy to refer their differences to the decision of arbitrators. Compromise (Lat. *Compromissum*) may take place either in elections or in other matters in which dispute arises. In the latter case it may be effected either by law or by option. If the arbiter holds his position by prescription of law, *ex jure*, the compromise is by law or necessary; if by agreement of the parties, the compromise is by option or voluntary (*arbiter compromissarius*). In compromise by law the *arbiter juris* is compelled to take the office; his sentence can be appealed from; but he has coercive power over all and can examine and punish. Whereas in compromise by option the voluntary arbiter is free to undertake the office; there is no appeal from his decision, for the parties freely bind themselves to abide by it; he can only take cognizance of the case; and his duties and powers are defined, conferred and imposed by the parties who have freely chosen him. According to Roman law, and also the old canon law (*jus vetus*), there was no appeal from the decision of the voluntary arbiter. Later canon law, however, admits of an extrajudicial appeal (*provocatio ad causam*), especially if there be manifest injustice in the decision. If more than one arbiter be appointed, the number should be an odd one. The subject of compromise can only be such matter as lies within the disposition of the contesting parties. Hence causes beyond the disposal of private parties cannot be made the subject of compromise, as, e. g., criminal causes, matrimonial causes properly so called, causes reserved by law to the supreme courts.

Compromise in elections consists in a commission given by the body of electors to one or several persons to designate the elected person in the place of all. This compromise, in order to be valid, must be the act of all the electors, unless it results from a pontifical declaration. It is not necessary that the *compromissarii* thus chosen belong to the chapter (q. v.) or to the body of electors; they must, however, be clerics,

as laymen cannot exercise ecclesiastical jurisdiction and are expressly excluded from elections by law. The electors can posit conditions which must be fulfilled by the arbiters, if they are not against the general canon law. If such conditions are legitimate, they must be fulfilled under penalty of nullity of the compromise or of the election thus performed. In an absolute and unconditioned compromise the arbiters are bound only by the general laws of procedure to be observed in elections. If the person thus designated by the *compromissarii* be qualified and worthy, and the form and the limits of the compromise be observed, the electors must abide by the result of this decision.

LEO GANS.

Comte, AUGUSTE. See POSITIVISM.

Conal (or CONALL), SAINT, an Irish bishop who flourished in the second half of the fifth century and ruled over the church of Drum, County Roscommon, the place being subsequently named Drumconnell, after St. Conal. Colgan and his copyists inaccurately locate his church at Kilconnell in County Galway, but it is now certain that the church of which St. Conal was bishop was south of Boyle, and, as a matter of fact, the saint is known as "Blessed Conal of Drum". The error of ascribing Kilconnell and Aughrim, County Galway, as foundations of St. Conal can also be dissipated by a reference to the life of St. Attracta, wherein it is recorded that she came to the neighbourhood of Boyle in order to build a cell near the church of her uterine brother, St. Conal, but was dissuaded from her project by St. Dachonna of Eas Dachonna, now Assylin, at the bidding of the saint. We read that St. Attracta prophesied that the episcopal churches of St. Conal (Drumconnell) and St. Dachonna (Eas Dachonna) would in after days be reduced to poverty, owing to the fame of a new monastic establishment. This prophecy was strikingly fulfilled, inasmuch as Drum and Assylin soon after ceased to be episcopal sees, while in 1148 the great Cistercian Abbey of Boyle (q. v.) was founded. St. Conal died about the year 500, and his feast is celebrated on 18 March, though some assign 9 February as the date.

Hib.*; *Acta SS.*, II; O'HANLON, *Lives of the Irish Saints*, III, 837 sq.; KELLY, *Martyrology of Tallaght* (Dublin, 1857); TODD and REEVE, *Martyrology of Donegal* (Dublin, 1864); O'RORKE, *History of Sligo* (Dublin, 1886); KELLY, *Patron Saints of the Diocese of Elphin* (Dublin, 1904).

W. H. GRATTAN-FLOOD.

Conan, SAINT, Bishop of the Isle of Man, d. January, 684; an Irish missionary, also known as Mochonna. He is not to be confounded with St. Conindrius, who is said to have been a disciple of St. Patrick, and to have lived to a very advanced age (17 November, 560). The Bollandists place St. Conan amongst the early bishops of Man, and Colgan gives an account of his life and labours. Unfortunately the history of the Isle of Man in the fifth and sixth centuries is very obscure, and it is difficult to get at definite facts, yet St. Conan, or Mochonna, who is also described as "Bishop of Inis-Patrick" left a distinct impress of his zeal for souls in Manxland. Some authorities give the date of his death as 26 January, but Colgan, quoting from the ancient Irish martyrologies, gives 13 January, on which day St. Conan's feast is observed. There are also several minor Irish saints of the same name, including St. Conan of Assaroe (8 March), and St. Conan of Ballinamore (26 April).

W. H. GRATTAN-FLOOD.

Concannen, RICHARD LUKE. See NEW YORK, ARCHDIOCESE OF.

Concelebration is the rite by which several priests say Mass together, all consecrating the same bread and wine. It was once common in both East and West. As late as the ninth century priests stood around their bishop and "consented to his sacrifice" (Corp. Jur. Can., Decr. Grat., Pars III, dist. I, cap. 59). The rite of Concelebration was modified at Rome (perhaps in the time of Pope Zephyrinus, 202-218) so that each priest should consecrate a separate host (the deacons holding these in patens or corporals); but they all consecrated the same chalice ("Ordo Rom. I", 48; see also Duchesne, "Liber Pont.", I, 139 and 246). In the sixth century this rite was observed on all station days; by the eighth century it remained only for the greatest feasts, Easter, Christmas, Whitsunday, and St. Peter ("Ordo Rom. I", 48; Duchesne, "Origines", 167). On other days the priests assisted but did not concelebrate. Innocent III (1198-1216) says that in his time the cardinals concelebrate with the pope on certain feasts (De Sac. Altar. Myst. in Migne, P. L., CCXVII, IV, 25). Durandus, who denied the possibility of such a rite (Rationale Div. Off., IV, d. xiii, q. 3) is refuted by Cardinal Bona (Rer. Liturg., I, xviii, 9). St. Thomas defends its theological correctness (Summa Theol., III, Q. lxxxii, a. 2). Concelebration is still common in all the Eastern Churches both Uniat and schismatic. In these, on any greater feast day, the bishop says the holy liturgy surrounded by his priests, who consecrate with him and receive Holy Communion from him, of course under both kinds. So also, at any time, if several priests wish to celebrate on the same day, they may do so together.

In the Latin Church the rite survives only at the ordination of priests and bishops. The newly-ordained priests say the Offertory prayers and the whole Canon, including the words of consecration, aloud with the bishop, kneeling around him. The words of consecration especially must be said "slowly and rather loud" and "at the same moment with the pontiff" (Pont. Rom., de Ord. Presb., rubric). They must say the words *significative*, that is with the intention of consecrating (Benedict XIV, de SS. Missæ Sacr., III, xvi, 6), and must be careful not to say them before, but exactly with, the bishop (op. cit., loc. cit., 7). They receive Holy Communion under one kind. The same rite is used at a bishop's consecration, except that in this case the new bishop communicates with the consecrator under both kinds (Pont. Rom., de Cons. Electi in Episc., rubric in the text).

ADRIAN FORTESCUE.

Concepción, DIOCESE OF (SANCTISSIME CONCEPTIONIS DE CHILE), in the Republic of Chile, suffragan to Santiago de Chile. The diocese embraces the provinces of Aranco, Bio-Bio, Concepción, Nuble, Maule, Linares, and Malleco, comprising an area of 27,901 square miles. The Bull of erection was issued by Pius IV, 22 May, 1563, since which time, with the exception of the period between 1818-32 when the see was vacant, a bishop has always had his seat at Concepción. Among the institutions of the diocese may be mentioned an orphan asylum and a missionary college under the Capuchins.

In the diocese there are represented ten religious congregations of men and seven of women, among the latter the Sisters of Providence, Sisters of Mercy, Sisters of Christian Charity, who have a novitiate and college, Sisters of the Good Shepherd, and Sisters of the Sacred Heart; they number in all 393. The diocese has a Catholic population of 835,790, with 52

parishes, 190 priests, 91 secular and 99 regular, 135 churches and chapels. In addition to the college and seminary there are nine Catholic schools with an attendance of 2550 pupils. (See CHILE.)

F. M. RUDGE

Conceptionists, a branch of the Order of Saint Clare, founded by Beatriz de Silva. Isabel, the daughter of Edward, King of Portugal, having married John II (1406-1454) of Castile, took her kinswoman, Beatriz de Silva, sister of James I, Count of Portalegre, with her. The beautiful Beatriz, however, aroused the suspicion and jealousy of the queen, and was imprisoned. Escaping, she fled to the Sisters of St. Dominic at Toledo, where she lived about forty years. Her veneration for the Immaculate Conception of Mary inspired her to found, with twelve companions, a special order in honour of Mary's privilege. Queen Isabella gave her the castle of Galliana in 1484. The sisters followed the Cistercian rule, reciting the Office of the Blessed Virgin in addition. Beatriz died 1 Sept., 1490, at the age of sixty-six.

Through the influence of Ximenes de Cisneros, the famous Archbishop of Toledo, the Conceptionists were subordinated to the Franciscans, and in 1501 they adopted the rules of the Order of Saint Clare, modified with the authorization of Alexander VI. Julius II sanctioned them anew in 1506; Quiñones, provincial of the Franciscans of Castile, and later general of the entire order, drew up their constitution in 1516. The second convent was founded at Torrigio, another at Madrid in 1512, and one at Assisi in the same year. Maria Theresa of Austria, daughter of Philip IV of Spain, summoned them to the Faubourg Saint-Germain at Paris, where the Sisters of Saint Clare adopted their rules, which were again modified by a Brief of Clement X. The Conceptionists wear a white habit and scapular with a blue cloak, and an image of the Blessed Virgin on their habit. The celebrated Maria de Agreda (q. v.), author of "The Mystical City of God" was a Conceptionist. The Conceptionist congregation is at present spread widely throughout Spain and Belgium.

MICHAEL BIHL.

Conceptualism. See NOMINALISM AND REALISM.

Conciliation, INDUSTRIAL, is the discussion and adjustment of mutual differences by employers and employees or their representatives. Arbitration (q. v.) implies the submission of such differences to a body in which the authoritative decision is rendered by a disinterested person. In mediation a disinterested person strives either to bring the parties together for conciliation or to induce them to make such mutual concessions as will lead to an agreement. The term, "boards of conciliation", describes not merely committees of employers and employees, but also those appointed by the civil authority, and by private associations. The two latter are primarily concerned with the work of mediation.

In France conciliation has been practised since 1806 by the *conseils de prudhommes*, or committees of experts. These are composed of equal numbers of employers and employees, and are legally authorized to interpret existing labour contracts and adjust minor grievances. Within this limited field they have been quite successful. Five-sixths of the strikes that were settled by the French Conciliation and Arbitration

Act of 1892, during the first ten years of its existence, were disposed of by the method of conciliation. For the last thirty-five years conciliation has practically eliminated strikes from the manufactured iron and steel trade in the north of England. Recourse was had to conciliation in 506 of the 788 disputes that were adjusted by boards of conciliation and arbitration throughout England in the year 1903. In the United States about half the States have boards of conciliation and arbitration, while the chairman of the Interstate Commerce Commission and the Commissioner of Labour are directed by the federal law of 1898 to endeavour to bring about conciliation or arbitration whenever they are appealed to by one of the parties to any dispute which threatens seriously to interfere with interstate commerce. Only five of the State boards have accomplished anything worthy of notice, and these five have settled relatively few disputes—mostly by conciliation. The national board has recently given promise of a considerable measure of usefulness. Boards of conciliation composed jointly of employers and employees have adjusted a large number of important differences in many industries—for example, in the shoe industry, the building trades, and the coal mines of the East and the Middle West. Conciliation has also had considerable success through the mediation of prominent citizens, and of bodies like the Civic Federation.

The importance of conciliation finds recognition in the recommendation of Pope Leo XIII (Encyclical on the Condition of Labour, "*Rerum Novarum*", 15 May, 1891) that masters and workmen should unite in joint associations, and select capable committees for the decision of disputes. This method is highly consonant with Christian peace and Christian charity. Its chief advantages over arbitration are that it brings the two parties together in friendly and informal discussion, teaches each to appreciate the position and rights of the other, and results in a decision that is more willingly accepted and more faithfully observed. There are, however, two important situations in which conciliation can have but slight success: first, where compulsory arbitration is in vogue; second, where the employees have not sufficient economic strength to inflict considerable damage upon their employer through the alternative of a strike. The experience of Western Australia and New Zealand seems to prove the first contention (cf. Clark, *The Labour Movement in Australasia*, p. 161), while the second seems established by the fact that conciliation was practically unknown before the era of labour unions, and that it has still very little application in unorganized trades. On the other hand, the first step towards conciliation, namely, discussion of differences on an equal plane, becomes quite feasible as soon as each side realizes the strength of the other. When they treat each other as equals and as reasonable men, they easily reach an agreement. Conciliation then becomes much more frequent than voluntary arbitration; indeed, it renders the latter method almost superfluous. The labour unions are committed to it, and seem to prefer it to arbitration. John Mitchell sees in the trade agreement, which is essentially the method of conciliation, the greatest hope for industrial peace in America (*Organized Labour*, p. 354), and Professor T. S. Adams thinks that America will follow the same line of development as England, where conciliation has already produced conditions of industrial peace which are almost entirely satisfactory (*Labour Problems*, pp. 312, 314, 319). Not the least of the influences making for the extension of conciliation in the United States is public sentiment, which threatens to establish the alternative of compulsory arbitration.

JOHN A. RYAN.

Concina, DANIELLO, Dominican preacher, controversialist and theologian; b. at Clauzetto or San Daniele, small places in the Italian province of Friuli, 2 October, 1687; d. at Venice, 21 February, 1756. On the completion of his early studies at the Jesuit college at Görz, Austria, he entered the Dominican Order, making his religious profession in March, 1708, in the convent of Sts. Martin and Rose. After studying philosophy three years, he was sent to study theology in the convent of the Holy Rosary at Venice, where he spent eight years under the direction of the fathers of his order, Andruisio and Zanchio. In 1717 he was appointed to the chair of philosophy, and later to that of theology, in the convent of Forlì. About this time he began to attract attention as a preacher. He confined himself at first to the smaller places, but his success soon brought him to the pulpits of the chief cities of Italy; and he preached the Lenten sermons seven times in the principal churches of Rome.

Concina's literary activity was confined chiefly to moral topics. His career as a theologian and controversialist began with the publication of his first book, "*Commentarius historico-apologeticus*", etc. (Venice, 1736, 1745), in which he refuted the opinion, then recently adopted by the Bollandists, that St. Dominic had borrowed his ideas and form of religious poverty from St. Francis. While engaged in the sharp controversy aroused by this work, he entered into another concerning the Lenten fast, which was not closed until Benedict XIV issued (30 May, 1741) the Encyclical "*Non ambigimus*" which was favourable to Concina's contention. Shortly afterwards he published his "*Storia del probabilismo e rigorismo*" (Venice, 1743), a work composed of theological, moral, and critical dissertations. Being directed against the Jesuits, it naturally gave rise to a large controversial literature. The work was highly praised by some, notably by Benedict XIV, but among others it met with a very unfavourable reception. The Fathers of the Society of Jesus, the recognized champions of probable opinions in matters of conscience, were not slow in defending their position. The controversy reached a climax when Concina published under the auspices of Benedict XIV, his "*Theologia christiana dogmatico-moralis*" (12 vols. in 4to, Rome and Venice, 1749-51). The Jesuits appealed to the pope to have it condemned on the ground that it contained errors and was very injurious to the Society. A commission of theologians was then appointed to examine the work, with the result that Concina was requested to prefix to the subsequent edition a declaration dictated by the pope. This declaration, which was practically a summary of the petition of condemnation made by his opponents, appeared in the edition of 1752, but that work itself showed no changes of importance, except the addition of one chapter to the preface in which the author protested that he had always entertained the sincerest regard for the Society of Jesus, that as private theologian he refuted opinions which he considered lax, regardless of authorship, and that if he had erred in any way or done any wrong, he was ready to make a full retraction (cf. *Theol. Christ.*, ch. xiii, in pref. t. 1, p. cxxiv).

In his "*Theologia christiana*" Concina found occasion to pay to the Society as a whole a glowing tribute. Many of its writers are spoken of by him in terms of high esteem. In Italy he promoted the publication of a moral theology by the French Jesuit Gabriel Antoine, which Benedict XIV ordered to be taught in the College of the Propaganda. The truth is, he was an ardent probabilist, and from his point of view

many of the opinions of the probabilists were lax and pernicious. In refuting them he at times undoubtedly censured their authors too severely and spoke with an excessive asperity. It must be admitted, however, that he placed a salutary, if disagreeable, restraint upon the new thought of the time. To-day it is readily seen that some of the authors whom he attacked favoured a dangerous laxism. On the other hand, it cannot be denied that many of his views are now considered severe, some classing him among the rigorists. That Concina was a theologian of no mean order is evidenced by the fact that Benedict XIV appointed him consultor of several Congregations. Moreover, in his work "*De Synodo Diocesana*", as also in his Encyclical "*Libentissime*" of 10 June, 1745, the pope refers to Concina as an authority on the question of the Lenten fast. Concina is the author of about forty works, several of which are believed to be still in Italian libraries awaiting an editor.

JOSEPH SCHROEDER.

Conclave (Lat. *cum*, with, and *clavis*, key; a place that may be securely closed), the closed room or hall specially set aside and prepared for the cardinals when electing a pope; also the assembly of the cardinals for the canonical execution of this purpose. In its present form the conclave dates from the end of the thirteenth century. Earlier methods of filling the See of Peter are treated in the article PAPAL ELECTIONS. In this article will be considered: (I) the history of the actual method of papal election; (II) the ceremonial itself.

I. HISTORY OF THE CONCLAVE.—In 1271 the election that ended with the choice of Gregory X at Viterbo had lasted over two years and nine months when the local authorities, weary of the delay, shut up the cardinals within narrow limits and thus hastened the desired election (Raynald, *Ann. Eccl.*, ad an. 1271). The new pope endeavoured to obviate for the future such scandalous delay by the law of the conclave, which, almost in spite of the cardinals, he promulgated at the fifth session of the Second Council of Lyons in 1274 (Hefele, *Hist. des Conciles*, IX, 29). It is the first occasion on which we meet with the word *conclave* in connexion with papal elections. (For its use in English literature see Murray's "*Oxford Dictionary*", s. v., and for its mediæval use Du Cange, *Glossar. med. et infimæ Latinitatis*, s. v.) The provisions of his Constitution "*Ubi Periculum*" were stringent. When a pope died, the cardinals with him were to wait ten days for their absent brethren. Then, each with a single servant, lay or cleric, they were to assemble in the palace where the pope was at his death, or, if that were impossible, the nearest city not under interdict, in the bishop's house or some other suitable place. All were to assemble in one room (*conclave*), without partition or hanging, and live in common. This room and another retired chamber, to which they might go freely, were to be so closed in that no one could go in or out unobserved, nor anyone from without speak secretly with any cardinal. And if anyone from without had aught to say, it must be on the business of the election and with the knowledge of all the cardinals present. No cardinal might send out any message, whether verbal or written, under pain of excommunication. There was to be a window through which food could be admitted. If after three days the cardinals did not arrive at a decision, they were to receive for the next five days only one dish at their noon and evening meals. If these five days elapsed without an election, only bread, wine, and water should be their fare. During the election they

might receive nothing from the papal treasury, nor introduce any other business unless some urgent necessity arose imperilling the Church or its possessions. If any cardinal neglected to enter, or left the enclosure for any reason other than sickness, the election was to go on without him. But his health restored, he might re-enter the conclave and take up the business where he found it. The rulers of the city where the conclave was held should see to it that all the papal prescriptions concerning enclosure of the cardinals were observed. Those who disregarded the laws of the conclave or tampered with its liberty, besides incurring other punishments, were *ipso facto* excommunicated.

The stringency of these regulations at once aroused opposition; yet the first elections held in conclave proved that the principle was right. The first conclave lasted only a day and the next but seven days. Unfortunately there were three popes in the very year succeeding the death of Gregory X (1276). The second, Adrian V, did not live long enough to incorporate in an authoritative act his openly expressed opinion of the conclave. Pope John XX lived only long enough to suspend officially the "*Ubi Periculum*". Immediately the protracted elections recommenced. In the eighteen years intervening between the suspension of the law of the conclave in 1276 and its resumption in 1294 there were several vacancies of from six to nine months; that which preceded the election of Celestine V lasted two years and nine months. About the only notable act of the latter pope was to restore the conclave. Boniface VIII confirmed the action of his predecessor and ordered the "*Ubi Periculum*" of Gregory X to be incorporated in the canon law (c. 3, in VI°, I, 6), since which time all papal elections have taken place in conclave. Pope Gregory XI in 1378 empowered the cardinals (for that occasion only) to proceed to an election outside of conclave, but they did not do so. The Council of Constance (1417) modified the rules of the conclave to such an extent that the cardinals of the three "obediences" took part in it as well as six prelates from each of the five nations. This precedent (which however resulted happily in the election of the Roman, Martin V) is perhaps the reason why Julius II (1512), Paul III (1542), Pius IV (1561), and Pius IX (1870) provided that in case of their death during an œcumenical council the election of the new pope should be in the hands of the cardinals, not in those of the council. Pius IV by the Bull "*In Eligendis*" (1562) provided that the election might take place either in or out of the conclave, but this was revoked by Gregory XIII. This liberty of action is found again in the legislation (1798) of Pius VI (*Quum nos superiore anno*) which leaves it in the power of the cardinals to modify the rules of the conclave touching enclosure, etc. Again Pius IX by the Bull "*In hac sublimi*" (23 August, 1871) allowed a majority of the cardinals to dispense with the traditional enclosure. Other important documents of Pius IX dealing with the conclave are his Constitutions "*Licet per Apostolicas Litteras*" (8 September, 1874) and "*Consulturi*" (10 October, 1877), also his "*Regolamento da osservarsi dal S. Collegio in occasione della vacanza dell'Apostolica Sede*" (10 January, 1878).

As a matter of fact these precautions, taken in view of the danger of interference by secular governments, have so far been unnecessary, and elections of popes take place as they always did since the law of the conclave became finally effective. Many popes have legislated on this subject, either to confirm the actions of their predecessors or to define (or add to) previous legislation. Clement V decreed that the conclave must take place in the diocese in which the pope dies (Ne Romani, 1310) and also that all cardinals, whether excommunicated or interdicted, provided they were not deposed, should have the right to vote. Clement VI (1351) permitted a slight amelioration in the fare

and in the strict practice of common life. In the sixteenth century Julius II (1505) by the Bull "Cum tam divino" declared invalid any simoniacal election of a pope. Following the example of Pope Symmachus (499), Paul IV, by the Bull "Cum Secundum" (1558), denounced and forbade all cabals and intrigues during the lifetime of a pope. The aforesaid Constitution of Pius IV "In Eligendis" (1562) is a codification and re-enactment of all the laws pertaining to the conclave since the time of Gregory X. In it he insists forcibly on the enclosure, which had come to be rather carelessly observed. The finally directive legislation on the conclave is that of Gregory XV. In his short reign (1621-1623) he published two Bulls, "Æterni Patris" (1621), and "Decet Romanum Pontificem" (1622), followed by a *Caeremoniale* for the papal election (Bullar. Luxemb., III, 444 sqq.). Every detail of the conclave is described in these documents. Subsequent legislation has either confirmed these measures, e. g. the "Romani Pontificis" of Urban VIII (1625), or regulated the expenditure of money on the papal obsequies, e. g. the Brief of Alexander VIII (1690), or determined their order, e. g. the "Chirografo" of Clement XII (1732). The more recent legislation of Pius VI, Pius VII, and Pius IX provides for all contingencies of interference by secular powers. Pius VI (who designated a Catholic country in which the majority of the cardinals happened to be) and Pius IX (who left the matter to the judgment of the Sacred College) allowed the widest liberty as to the place of the conclave.

II. CEREMONIAL OF THE CONCLAVE.—Immediately on the death of a pope the cardinal camerlengo who, as representative of the Sacred College, assumes charge of the papal household, verifies by a judicial act the death of the pontiff. In the presence of the household he strikes the forehead of the dead pope three times with a silver mallet, calling him by his baptismal name. The fisherman's ring and the papal seals are then broken. A notary draws up the act which is the legal evidence of the pope's death. The obsequies last nine days. Meanwhile the cardinals have been notified of the impending election and those resident in Rome (*in Curia*) await their absent brethren, assisting in the meantime at the functions for the deceased pontiff. All cardinals, and they alone, have the right to vote in the conclave; they must, however, be legitimately appointed, have the use of reason, and be present in person, not through a procurator or by letter. This right is acknowledged even if they are subject to ecclesiastical censures (e. g. excommunication), or if the solemn ceremonies of their "creation" have yet to be performed. During the aforesaid nine days, and until the election of a successor, all cardinals appear with uncovered rochets, just as all have canopies over their seats at the conclave, to show that the supreme authority is in the hands of the whole College. The cardinal camerlengo is assisted by the heads of the three cardinalitial orders, known as the "Capita Ordinum" (cardinal-bishops, priests, deacons). There are frequent meetings, or "congregations", of these four cardinals to determine every detail both of the obsequies of the pope and of the preparations for the conclave. All matters of importance are referred to the general congregations, which since 1870 are held in the Vatican. The cardinal dean (always the Bishop of Ostia) presides over these congregations, in which the cardinals take rank and precedence from the date of their elevation to the purple. Formerly they had also to provide for the government of the Papal States and to repress frequent disorders during the interregnum. In the first of these congregations the various Constitutions which govern the conclave are read and the cardinals take an oath to observe them. Then, in the following days, the various officers of the conclave, the conclavists, confessors, and physicians, servants of

various kinds, are examined or appointed by a special commission. Each cardinal has a right to take into the conclave a secretary and a servant, the secretary being usually an ecclesiastic. In case of illness a third conclavist may be allowed, with agreement of the general congregation. All are equally sworn to secrecy and also not to hinder the election. After the conclave certain honorary distinctions and pecuniary emoluments are awarded to the conclavists.

Meanwhile a *conclave*, formerly a large room, now a large part of the Vatican palace, including two or three floors, is walled off, and the space divided into apartments, each with three or four small rooms or cells, in each of which are a crucifix, a bed, a table and a few chairs. Access to the conclave is free through one door only, locked from without by the Marshal of the Conclave (formerly a member of the Savelli, since 1721 of the Chigi, family), and from within by the cardinal camerlengo. There are four openings provided for the passage of food and other necessities, guarded from within and without, on the exterior by the authority of the marshal and majordomo, on the interior by the prelate assigned to this duty by the three cardinals mentioned above, representative of the three cardinalitial orders. Once the conclave begins the door is not again opened until the election is announced, except to admit a cardinal who is late in arriving. All communication with the outside is strictly forbidden under pain of loss of office and *ipso facto* excommunication. A cardinal may leave the conclave in case of sickness (certified under oath by a physician) and return; not so a conclavist. It may be noted at once, with Wernz, that a papal election held outside of a properly organized conclave is canonically null and void.

Within, the cardinals live with their conclavists in the cells. Formerly every cardinal had to provide his own food, which was carried in state by his men-in-waiting to one of the four openings nearest the cell of the prelate. Since 1878 the kitchen is a part of the conclave. Though all meals are taken in private they are served from a common quarter, but great care is taken to prevent written communication by this way. The cells of the cardinals are covered with cloth, purple if they are of the last pope's "creation", green if not. When they wish to be undisturbed they close the door of their cell, the frame-work of which is in the shape of a St. Andrew's cross. The conclave opens officially on the evening of the tenth day after the pope's decease, unless another day has been assigned. Every precaution is observed to exclude those who have no right within the enclosure, and also unnecessary communication with the outside. Papal legislation has long since forbidden the once customary "capitulations", or ante-election agreements binding on the new pope; it is also forbidden the cardinals to treat of the papal succession among themselves during the pope's lifetime; the pope may, however, treat of the matter with the cardinals. Absolutely necessary modifications of the conclave legislation, during the conclave itself, are temporary only. All true cardinals, as stated, may enter the conclave, but those only who have received deacon's orders have a right to vote, unless they have received a special indult from the late pope. Cardinals who have been preconized, but not yet elevated to the purple, are entitled by a decision of St. Pius V (1571) both to be present and to vote.

Including the cardinals, prelates, and conclavists, there are perhaps two hundred and fifty persons in the enclosure. The government of the conclave is in the hands of the cardinal camerlengo and of the three representative cardinals who succeed one another in order of seniority every three days. About seven or eight o'clock on the morning of the eleventh day the cardinals assemble in the Pauline Chapel and assist at the Mass of the cardinal dean. Formerly they

wore the special garment of the conclave, called the *crocea*. They receive Communion from the hands of the cardinal dean, and listen to a Latin allocution on their obligations to select the most worthy person for the Chair of Peter. After Mass they retire for a few moments, and then assemble in the Sistine Chapel, where the actual voting takes place. There six candles are lighted on the altar on which rest the paten and chalice to be used in voting. Over the chair of each cardinal is a baldachinum. The papal throne is removed. Before each chair is also a small writing desk. When ready to vote they enter the Sistine Chapel accompanied by their conclavists bearing their portfolios and writing materials. Prayers are said by the bishop sacristan; the ballots are distributed and then all are excluded except the cardinals, one of whom bolts the door.

Though since Urban VI (1378-89) none but a cardinal has been elected pope, no law reserves to the cardinals alone this right. Strictly speaking, any male Christian who has reached the use of reason can be chosen, not, however, a heretic, a schismatic, or a notorious simonist. Since 14 January, 1505 (Julius II, "Cum tam divino") a simoniacal election is canonically invalid, as being a true and indisputable act of heresy (Wernz, "Jus Decret.", II, 658, 662; see "Hist. Pol. Blätter", 1898, 1900, and Sägmüller, "Lehrbuch d. Kirchenrechts", 1900, I, 215). There are four possible forms of election: *scrutinium*, *compromissum*, *accessus*, *quasi-inspiratio*. The usual form is that of *scrutinium*, or secret ballot, and in it the successful candidate requires a two-thirds vote exclusive of his own. When there is a close vote, and only then, the ballot of the pope-elect, which, like all the others, is distinguishable by a text of Scripture written on one of its outside folds, is opened to make sure that he did not vote for himself. Each cardinal deposits his vote in the chalice on the altar and at the same time takes the prescribed oath: "Testor Christum Dominum qui me iudicaturus est me eligere quem secundum Deum iudico eligi debere et quod idem in accessu præstabo"—"I call to witness the Lord Christ, Who will be my judge, that I am electing the one whom according to God I think ought to be elected", etc. (For the form of the oath see Lucius Lector, "Le Conclave", 615, 618.) The ballot reads: "Ego, Cardinalis N., eligo in summum Pontificem R.D. meum D. Card. N."

For this election by secret ballot three cardinals (*scrutatores*) are chosen by lot each time to preside over the operation of voting, three others (*revisores*) to control the count of their colleagues, and still three others (*infirmarii*) to collect the ballots of the sick and absent cardinals. If the sick cardinals cannot attend the balloting, then the three *infirmarii* go to their cells and bring back their votes in a box to the three cardinals presiding, who count them and put them in the chalice with the others. Then, all the ballots having been shaken up and counted, if the number agrees with the number of electors, the chalice is brought to the table and the ballots, on the outside of which appear the names of the candidates, are passed from hand to hand to the third cardinal who reads the names aloud. All present are provided with lists on which the names of all the cardinals appear, and it is customary for the cardinals to check off the votes as they are read. Then the three cardinal revisors verify the result which is proclaimed as definite.

If, upon the first ballot, no candidate receives the necessary two-thirds vote, recourse is often had to the form of voting known as *accessus*. At the election of Pius X (Rev. des Deux Mondes, 15 March, 1904, p. 275) the cardinal dean did not allow the *accessus*, though it is a recognized usage of conclaves, regulated by Gregory XI, designed primarily to hasten elections, and usually considered to favour the chances of the candidate who has the most votes. It consists practically of a second ballot. All

use the ordinary blanks again, with this difference, that if the elector wishes his vote to count for his first choice he writes *Accedo nemini*; if he changes his vote he introduces the name of his latest choice. Then the two series of ballots have to be compared and identified by the text on the reverse face of the ballot, so as to prevent a double vote for the same candidate by any elector. When the required two-thirds are not obtained, the ballots are consumed in a stove whose chimney extends through a window of the Sistine Chapel. When there is no election, straw is mixed with the ballots to show by its thick smoke (*sfumata*) to those waiting outside that there has been no election. There are always two votes taken every day, in the morning and in the evening; they occupy from two to three hours each. When the voting is over one of the cardinals opens the door outside of which are gathered the conclavists, and all retire to their cells. Other forms of election, made almost impossible by the legislation of Gregory XV, are known as quasi-inspiration and compromise. The former supposes that before a given session there had been no agreement among the cardinals and that then one of the cardinals, addressing the assembly, proposes the name of a candidate with the words *Ego eligo* (I elect, etc.), whereupon all the cardinals, as though moved by the Holy Spirit, proclaim aloud the same candidate, saying *Ego eligo*, etc. An election by compromise supposes that after a long and hopeless contest the cardinals unanimously delegate a certain number of their body to make a choice. It has not been employed since the fourteenth century.

When a candidate has obtained the required two-thirds vote in a scrutiny or ballot (the choice, since Adrian VI, 1522, falling on one present and invariably on an Italian cardinal), the cardinal dean proceeds to ask him whether he will accept the election and by what name he wishes to be known. Since the time of John XII (955-64; Sägmüller says Sergius IV, 1009-1012) each pope takes a new name in imitation of St. Peter's change of name (see Knöpfler, "Die Namensänderung der Päpste" in "Compte rendu du congrès internat. cath. à Fribourg", 1897, sect. v, 158 sqq.). The doors have previously been opened by the secretary of the conclave; the masters of ceremonies are present, and formal cognizance is taken of the pope's answers. Immediately the masters of ceremonies lower the canopies of all the cardinals' chairs save that of the pope-elect, and he is conducted to a neighbouring room where he is clothed in the papal garments (*immantatio*). The cardinals then advance and pay him the first "obedience", or homage (*adoratio*). The pope then either confirms or appoints the cardinal camerlengo, who puts upon his finger the Fisherman's Ring. Then follows the proclamation to the people made by the senior cardinal-deacon, formerly from the central balcony of St. Peter's overlooking the great Piazza, but since 1870 in St. Peter's itself. The conclave then usually terminates, the masons remove the temporary walls, and the cardinals retire to their various lodgings in the city, awaiting a reassembling for the second and third *adoratio* and for the solemn enthroning. If the pope happens not to be a bishop, he must be consecrated at once and, according to immemorial tradition, by the Cardinal-Bishop of Ostia. If already a bishop, there takes place only the solemn *benedictio* or blessing. However, he enjoys full jurisdiction from the moment of his election. On the following Sunday or Holy Day takes place, at the hands of the senior cardinal-deacon, the papal "coronation" from which day the new pope dates the years of his pontificate. The last act is the formal taking possession (*possessio*) of the Lateran Church, omitted since 1870. For the so-called Veto, occasionally exercised in the past by the Catholic Powers (Spain, Austria, France), see EXCLUSION, RIGHT OF.

The actually valid legislation concerning the conclave is

found in all manuals of canon law, e. g. WERNZ, *Jus Decret.* (Rome, 1899), II, 653-665; SAGMÜLLER, *Lehrbuch des Kirchenrechts* (Freiburg, 1900), 313-19; HERGENROTHER-HOLWECK, *Lehrbuch des kath. Kirchenrechts* (Freiburg, 1903), 268-73; LAURENRIUS, *Instit. jur. eccl.* (Freiburg, 1903), nos. 99-103; cf. BOUX, *De Curia Romand.*, 120, and *De Papa*, III, 341-44.—The history of the conclave and its ceremonial are fully described in the (illustrated) work of LUCIUS LECTOR (Mgr. Guthlin), *Le Conclave* (Paris, 1894). It replaces advantageously the earlier work of VANEL on the history of the conclaves (Paris, 1689; 3rd ed., Cologne, 1703). English descriptions like those of TROLLOPE (London, 1876) and CARTWRIGHT (Edinburgh, 1868) are generally unreliable, being largely inspired by the anti-papal histories of conclaves written by the mendacious and inexact GREGORIO LETI (s. l., 1667, 1716), and the inaccurate and maliciously gossipy PETRUCELLI DELLA GATTINA (Brussels, 1865). See *Dublin Review* (1868), XI, 374-91, and *Civiltà Cattolica* (1877), I, 574-85; also CREIGHTON in *Academy* (1877), XI, 66. See *La nouvelle législation du conclave in Université cath.* (Lyons, 1892), 5-47, and TEELING, *The Development of the Conclave in The Dolphin* (Philadelphia, 1908). For a catalogue of studies (often documentary) on special conclaves, see CERSONI, *Bibliografia di Roma papale e medievale* (Rome, 1893). The conclave that elected Pius X is described by an eyewitness (Un Témoin), said to be Cardinal Mathieu, in *Revue des Deux Mondes*, 15 March, 1904. AUSTIN DOWLING.

Concordances of the Bible are verbal indexes to the Bible, or lists of Biblical words arranged alphabetically with indications to enable the inquirer to find the passages of the Bible where the words occur. Some simply indicate the passages; but a really good concordance quotes enough of a passage to recall it to the memory of one familiar with it. Sometimes *concordance* is used in reference to alphabetical indexes of Biblical subjects, which guide one to all the passages of the Bible referring to the subject in question; but as commonly employed in English the word denotes a purely verbal concordance, a text-finder. Such a work is a useful and, in fact, indispensable, help to every student of the Bible. Its principal use is to enable him to locate any text he remembers, or to locate and get accurately any text vaguely remembered, if but one important word of it be recalled. Concordances in the original tongues are ever in the hand of the expert student in his exegetical and critical studies, aiding him indirectly by their indications to ascertain the various shades of meaning which the same or cognate words may take on, and thus, for example, to prove helpful in the construction of the theology of a writer or an epoch; to trace the history of words and thus obtain a clue to the development of the doctrines connected with them, or the changes of thought and feeling that have taken place; to collate the vocabulary of a writer or a document, and thus to gather evidence for determining the authorship or date of disputed writings; to trace the history of a character, a race, a town, etc.; and for various other purposes which each student discovers for himself in the course of his studies. This article aims to be historical, but also, in part, practical, by indicating the best helps of this kind.

I. LATIN.—Verbal concordances of the Bible are the invention of the Dominican friars. The text which served as basis of their work was naturally that of the Vulgate, the Bible of the Middle Ages. The first concordance, completed in 1230, was undertaken under the guidance of Hugo, or Hugues, de Saint-Cher (Hugo de Sancto Charo), afterwards a cardinal, assisted, it is said, by 500 fellow-Dominicans. It contained no quotations, and was purely an index to passages where a word was found. These were indicated by book and chapter (the division into chapters had recently been invented by Stephen Langton, Archbishop of Canterbury) but not by verses, which were only introduced by Robert Estienne in 1545. In lieu of verses, Hugo divided the chapters into seven almost equal parts, indicated by the letters of the alphabet, a, b, c, etc. This beginning of concordances was very imperfect, as it gave merely a list of passages, and no idea of what the passages contained.

It was of little service to preachers, therefore; accordingly, in order to make it valuable for them, three English Dominicans added (1250-1252) the complete quotations of the passages indicated. This completeness of quotation is not aimed at in the present concordances, for lack of space; it is likely, therefore, that the passages indicated were far fewer than those found in a complete concordance of to-day. The work was somewhat abridged, by retaining only the essential words of a quotation, in the concordance of Conrad of Halberstadt, a Dominican (1310), which obtained great success on account of its more convenient form. The first concordance to be printed, it appeared in 1470 at Strasburg, and reached a second edition in 1475. The larger work from which it was abridged was printed at Nuremberg in 1485. Another Dominican, John Stoicowic, or John of Ragusa, finding it necessary in his controversies to show the Biblical usage of *nisi*, *et*, and *per*, which were omitted from the previous concordances, began (c. 1435) the compilation of nearly all the indeclinable words of Scripture; the task was completed and perfected by others and finally added as an appendix to the concordance of Conrad of Halberstadt in the work of Sebastian Brant published at Basle in 1496. Brant's work was frequently republished and in various cities. It served as the basis of the concordance published in 1555 by Robert Estienne (Stephens), the distinguished French Protestant scholar and printer. Estienne added proper names, supplied omissions, mingled the indeclinable words with the others in alphabetical order, and gave the indications to all passages by verse as well as by chapter, in all these respects bringing his work much closer to the present model. Since then many different Latin concordances have been published, of which it will suffice to mention Plantinus' "Concordantiæ Bibliorum juxta recognitionem Clementinam" (Antwerp, 1599), which was the first made according to the authorized Latin text; "Repertorium Biblicum . . . studio . . . Patrum Ordinis S. Benedicti, Monasterii Wessofontani" (Augsburg, 1751); "Concordantiæ Script. Sac.", by Dutrignon, in two immense volumes, the most useful of all Latin concordances, which gives enough of every text to make complete sense (Paris, 1838; seventh ed. 1880; an edition of the same by G. Tonini, at Prado, 1861, recognized as nearly complete); Coornaert's, intended for the use of preachers (Bruges, 1892); the "Concordantiarum S. Scripturæ Manuale", by H. de Raze, Ed. de Lachaud, and J.-B. Flandrin (13th ed., Paris, 1895), which, however, gives rather a choice of texts than a complete concordance; "Concordantiarum Universæ Scripturæ Sacre Thesaurus", by Fathers Peultier, Etienne, and Gantois (Paris, 1902). No Latin concordance gives the Hebrew or Greek equivalent of the Latin words; but Peter Mintert's "Lexicon Græco-Latinum" of the N. T. is a concordance as well as a lexicon, giving the Latin equivalent of the Greek and, in the case of Septuagint words, the Hebrew equivalent also (Frankfort, 1728).

II. HEBREW.—The first Hebrew concordance was the work of a Jew, Mordecai or Isaac Nathan, begun in 1438 and finished in 1448. It was inspired by the Latin concordances to aid in defence of Judaism, and was printed in Venice in 1523. An improved edition of it by a Franciscan monk, Marius de Calasio, was published in 1621 and 1622 in four volumes. Both these works were several times reprinted, while another Hebrew concordance of the sixteenth century, by Elias Levita, said to surpass Nathan's in many respects, remained in manuscript. Nathan and Calasio arranged the words according to the Hebrew roots, the derivatives following simply according to the order in which they occur in the Hebrew books; the Buxtorfs, father and son, introduced order into the derivatives by a grammatical classification of the verbs and nouns. Their work (Basle, 1632) also con-

tained many new words and passages previously omitted, and an appendix of all the Chaldaic words in the O. T.; Baer's edition of Buxtorf (1847) added certain particles. Fürst's concordance (Leipzig, 1840) was for a long time the standard. It corrected Buxtorf and brought it nearer to completeness, printed all Hebrew words with the vowel-points, and perfected the order of the derivatives. Every word is explained in Hebrew and Latin. Fürst excludes, however, the proper nouns, the pronouns, and most of the indeclinable particles, and makes many involuntary omissions and errors; his classification of roots is sometimes fanciful. "The Englishman's Hebrew and Chaldaic Concordance" (London, 1843; third edition, 1866) is still very useful. The most comprehensive Hebrew concordance ever published is that of Mandelkern (Leipzig, 1896), who rectified the errors of his predecessors and supplied omitted references. Though his own work has been shown to be frequently imperfect, still it is almost complete, and by far the best of Hebrew concordances. An abridged edition of it was published in 1900.

III. GREEK SEPTUAGINT.—The first was that of Conrad Kircher (Frankfort, 1607; Tromm's, published at Amsterdam, 1718, had reference not only to the Sept., but also to the versions of Aquila, Symmachus, and Theodotion; it remained the standard till our own day, when it gave way to Hatch and Redpath's "Concordance to the Septuagint and other Greek Versions of the Old Testament" (Oxford, 1892-97). This is a beautiful work and is commonly considered about as perfect as present scholarship permits. It includes a concordance to the deuterocanonical books and the O. T. Apocrypha, and to the remains of the versions which form part of Origen's Hexapla. The Hebrew equivalents of the Greek, when known, are also given. References to proper names are omitted, which, however, are added in a supplement published in 1900. We must await a truly critical edition of the Sept., nevertheless, before we can have the final, perfect concordance. Bagster's "Handy Concordance to the Septuagint" (London, 1887) gives simply the references, without quotations.

IV. GREEK NEW TESTAMENT.—The earliest concordances to the Greek New Testament are those of Birken or Betulius (Basle, 1546), Henry Estienne (Paris, 1594), and Erasmus Schmid (Wittenberg, 1638), whose work was twice revised and republished. During the latter half of the nineteenth century the standard N. T. concordance was that of Bruder (Leipzig, 1842; 4th ed., 1888). Its main defect is that it was practically based on the *textus receptus*, though it aims, in its latest editions, to give also the chief variants. The best, beyond doubt, is Moulton and Geden's "Concordance to the Greek Testament", according to the text of Westcott and Hort, Tischendorf, and the English Revisers (Edinburgh and New York, 1897). This includes all the marginal readings. In the case of a reading being in dispute among these authorities, the fact is pointed out. The Hebrew equivalents of all quotations in the N. T. are given; the relation of the Greek N. T. words to the Septuagint and other O. T. Greek versions, as well as to classical usage, is indicated. Two other useful concordances, especially for those not very familiar with the Greek, are "Englishman's Greek Concordance to the New Testament", by G. V. Wigram (London, 1839, 2d ed. 1844), and Hudson's "Critical Greek and English Concordance of the N. T." (Boston, 1875), which contains references to the chief variant readings.

V. SYRIAC.—Charles Schaaf's "Lexicon Syriacum" (Leyden, 1709) practically serves the purpose of a concordance to the Peshito version.

VI. ENGLISH.—The earliest concordances in English were published in the middle of the sixteenth cen-

tury, the first by T. Gygson in 1535 (for N. T. only), and the second in 1550 by John Marbeck. The most famous belongs to the eighteenth century and is the work of Alexander Cruden. First published in 1738, it reached several editions in his own lifetime and has been re-edited and reprinted repeatedly till the present day. Abridgments have been published which sometimes endeavour to pass for the complete work. Cruden's work is not really a complete concordance, and omits especially many references to proper names, but his last edition had one virtue, lacking in the best concordances of our day, which commends it to Catholics especially, namely, its concordance to the deuterocanonical, or so-called apocryphal, books of the Old Testament, which, however, is usually not reprinted. With this exception, it is far surpassed by the three great concordances of our own day, those of Young, Strong, and Walker. R. Young's "Analytical Concordance to the Bible" (Edinburgh, 1879-84), an almost complete concordance, has the great virtue of indicating the Hebrew, Chaldaic, or Greek original of the English word, and distinguishing the various meanings that may underlie the same word. Strong's "Exhaustive Concordance of the Bible" (New York, 1894) has reference only to the English text; for that it can hardly be improved, as it is extremely rare to find a text missing from Strong. As a text-finder, it is unsurpassed; but it lacks the special advantages of Young's signalized above. It contains also a comparative concordance between the Authorized and Revised English versions, useful for a study of the changes introduced. Its great bulk and weight, however, render it a rather formidable book to handle. Walker's "Comprehensive Concordance to the Holy Scriptures" (Boston, 1894) is a volume of convenient size, and almost as complete as Strong's. An excellent "Complete Concordance to the Revised Version of the New Testament", by J. A. Thoms, was published in London, 1884. The works of Wigram and Hudson on the Greek N. T. are also very useful to the English reader.

No concordance to the English Catholic Bible has been published, and it can hardly be said that one is much needed, except for the deuterocanonical books; the late concordances in English suffice, with the exception noted, for the needs of any intelligent reader. For concordances in other modern languages, consult the articles of Mangenot and Kaulen.

MANGENOT in VIGOUROUX, *Diet. de la Bible* (Paris, 1897), s. v. *Concordances de la Bible*; KAULEN in *Kirchenlex.*, s. v. *Bibelconcordanzen*, prints specimens of many concordances. To these two articles we are indebted for most of our facts regarding the earlier concordances. HAZARD, *Introduction to WALKER, Comprehensive Concordance* (Boston, 1894); BACHER in *Jewish Encyclopedia* (New York, 1903), s. v. *Concordances*.

JOHN F. FENLON.

Concordat.—*Definition.*—Canonists and publicists do not agree about the nature of a concordat and, consequently, vary much in the definition they give. The various theories will be explained later, but for the sake of orderly discussion at least a nominal definition will be premised. In general, a concordat means an agreement, or union of wills, on some matter. But as soon as we attempt to define this general notion more clearly a difficulty arises. Agreement of wills may be had in many ways: in friendship, in regard to privileges, in a bilateral contract, etc. Prescinding for the present from the exact nature of a concordat, and without giving an exact definition, we may say that a concordat is a law, ecclesiastical and civil, made for a certain country in regard to matters which in some way concern both Church and State, a law, moreover, possessing the force of a treaty entered into by both the ecclesiastical and civil power and to a certain extent binding upon both. The full meaning of the terms employed will be explained below.

Purpose.—The purpose of a concordat is to terminate, or to avert, dissension between the Church and

the civil powers. This is evident from history. During the first three centuries, when the civil authority was bent upon the total ruin and destruction of the Church, concordats were out of the question. After the era of persecution was over, and, with the exception of some temporary usurpations and outrages, the Christian Emperors of Rome generally recognized and defended the rights of the Church, concordats were unnecessary. This state of affairs continued until the end of the eleventh century, when there arose the strife about investitures which was settled in 1122 by the Concordat of Worms, or *Pactum Callixtinum*, between Callistus II (q. v.) and Henry V. This may be called the first concordat, unless the agreement of London (1107) is reckoned, as it may be, among the number of concordats. The contest between Boniface VIII and Philip the Fair, at the end of the thirteenth century, opened the way for still further disagreements between the Church, which strove to preserve its rights inviolate, and those civil powers which sought to usurp them. These disagreements gave rise to various concordats. Before the eighteenth century there were six (or seven if the London agreement of 1107 be counted); during the eighteenth century there were fifteen, and in the nineteenth century a much larger number (see SUMMARY OF PRINCIPAL CONCORDATS, below).

It is to be noted that De Angelis, who is followed by Giobbio and in part by Cavagnis, does not consider the *Pactum Callixtinum* a concordat, because in it Callistus II made no concession of any importance to the emperor. This reason, however, as Wernz well observes, is false. For, according to the best authorities on the *Pactum Callixtinum*, the pope granted to Henry V several important concessions, permitting the emperor to assist at episcopal elections and to exact from bishops-elect in Germany and from consecrated bishops in other parts of the empire (i. e. in Burgundy and Italy) not merely the oath of simple loyalty but even that of vassalage, by which the rights and liberties of the Church were considerably restricted. Cavagnis likewise remarks about the first concordat with Portugal, in 1288, that it is rather a decree of the pope in which, after hearing the bishops and the royal plenipotentiaries, he decided what should be allowed, what denied, out of the powers which the King claimed on the ground either of privilege or of custom. Granting all this, it does not seem to follow that such an act could not be called a concordat; for it is by no means evident that mutual concessions are essential to the very nature of a concordat. An agreement may very well exist without mutual concessions—a principle especially in accord with the view of those authorities (including Cavagnis) who see in every concordat a strictly bilateral contract; for the due rights of either party can properly be recognized and established by any contract properly so called. Hence it is plain that concordats have in general been made in order to end a disagreement and restore harmony. Not always, however; for concordats have at times been made when there was no actual disagreement to be settled—solely for the purpose of preventing disagreements in the future and of rendering more secure and permanent the welfare of the Church in some State. This was done between Pius IX and Garcia Morena, President of Ecuador in 1862.

With regard to the necessity of concordats two extreme opinions are to be avoided. Concordats are not absolutely necessary; neither are they harmful to the Church or civil society. Assuredly it were to be desired that the Church should never need concordats, and should always find in civil rulers devoted children, or at least such as would use all diligence in caring for the spiritual welfare of their Catholic subjects, and would religiously respect their rights. But, unfortunately, the contrary too often occurs. Hence the Church, to avoid a greater evil, has often had to prom-

ise to forego this or that natural right of her own in order to secure from the State a promise to refrain from further encroachment upon ecclesiastical rights.

Matter or Object of a Concordat.—The matter, or the objects, treated of in a concordat may be spiritual, mixed, or temporal.

Spiritual matters are those that belong purely to the spiritual order, or are connected with it: for example, matters pertaining to the liturgy. Thus, in some concordats there has been question of inserting the name of the emperor in the Canon (q. v.) and of singing after the Divine Office the formula: "Domine, salvam fac rempublicam", or "Domine, salvos fac consules", or "Domine, salvos fac præsides eius" (cf. art. 8, of the Concordat of 1801; arts. 23, 24 of the Concordat with Costa Rica and Guatemala, 1853; arts. 15, with Haiti, 1860; art. 21, with Ecuador, 1862; arts. 22, 23, with Nicaragua and San Salvador, 1863). In like manner there is frequent mention of nominating bishops, of the establishment and bestowal of parishes, or of prescribing special regulations for the promotion of clerics to Holy orders or to ecclesiastical dignities, so as to prevent, for example, the number of clerics from becoming too large (cf. art. 5, Concordat with Spain, 1737; C. iv, Concordat with Sicily, 1741), and so on.

Mixed matters are those which belong, though under different aspects, both to the temporal and spiritual orders, and are subject to both authorities, such as public education, marriage, etc.

Temporal matters are such as of their own nature do not belong to the spiritual order. In some concordats the Church has allowed rulers to impose taxes not only on the private possessions of clerics, but also on ecclesiastical property; so the Roman Pontiff has at times given up his claims on account of certain ecclesiastical properties damaged in the course of civil or religious turmoil. Examples of each of these occur in the Concordat with Columbia, in 1887. It is to be noted that, when the pope absolutely surrenders temporal possessions of the Church, as in art. 29 of this concordat, such possessions no longer remain under the ownership or jurisdiction of the Church or subject to it. When, however, he merely permits such property to be taxed (as in art. 6 of the Colombian Concordat, art. 18 or art. 19 of that with Costa Rica, in 1853) then the property remains in the ownership of the Church, which does not acknowledge in the State any inherent right to impose taxes of this kind, but rather implies the contrary by the very concession.

The Contracting Parties.—It is clear that only those persons in Church or State are competent to enter into a concordat who in their respective spheres have the right of making treaties, and indeed of enacting laws. Hence, absolutely speaking, bishops, as true rulers of the Church vested with authority to make laws strictly so called, can also make concordats on all matters falling within their jurisdiction. In past ages they have often exercised this right; a concordat was made between the bishops of Portugal and King Diniz in 1288, and confirmed by Nicholas IV in 1289. In 1273 one was made between the bishops of Norway and Magnus VI (IV), by which the bishops renounced the right of electing the king as long as there were legitimate heirs of the blood, and the king on his part bound himself to prevent the royal officials from interfering with the free exercise of ecclesiastical authority. This concordat was confirmed in the following year by Gregory X in the Second Council of Lyons. Many other concordats made by bishops might be mentioned; for example, between the bishops of Portugal and King Manuel, confirmed by Leo X in 1516. Candido Mendes de Almeida, in his "*Jus Civile Ecclesiasticum Brasiliæ Vetus et Recens*", enumerates eighteen concordats made between the thirteenth and fourteenth centuries by the Kings of Portugal with the clergy of the kingdom, for the settlement of serious controversies. At the pres-

ent time bishops do not possess the power of making concordats; it is reserved to the pope. The reason for this reservation is that concordats deal not with one question only, but with the settlement of all ecclesiastical matters in a particular country; such a wide field of affairs manifestly constitutes a *causa major*, and as such is reserved exclusively for the judgment of the Roman Pontiff. Moreover, in recent concordats concessions have almost always been made contrary to the ordinary canon law, and such concessions can be made only by the pope. It should also be noted that governments desirous of entering into a concordat with the Church prefer to deal with the pope, so as to have a regulation by which all the bishops will be bound. The Roman Pontiff in making a concordat acts in his capacity as pontiff, and not as a civil ruler; and this was the case even before he was despoiled of his temporal sovereignty. Hence, in making a concordat, he acts as pope and, as Supreme Ruler and Pastor of the Universal Church, exercises the supreme and full authority of his primacy.

On the part of the State those competent to make concordats are supreme legislators or chief magistrates—an emperor, king, or president, acting alone, where the supreme authority is plenary and unrestricted; acting with the consent of the representative body, where such consent is constitutionally necessary for legislation. Wernz (*Jus Decret.*, I, 166) remarks: "The Apostolic See, to avoid the risk of open mockery, usually enters into solemn undertakings only where a civil government is under no obligation to seek the consent of a representative body, or where there can be no reasonable doubt that such consent will be granted." It is also to be remembered that the Roman Pontiff makes concordats with governments only in their civil capacity, even when such governments are non-Catholic. Hence it cannot be supposed that a concordat with the Tsar of Russia or the King of Prussia is made with either of these potentates as with the supreme spiritual head of a schismatic or Protestant sect.

Nature of Concordats.—To explain the nature of concordats three theories have been proposed: (a) The legal theory, that advanced by the legalists; (b) The compact theory, which regards a concordat as a bilateral contract; (c) The privilege theory, according to which a concordat has the force of a privilege on the part of the Roman Pontiff, but of an obligation on the part of the civil ruler.

Before explaining and examining these theories in detail, it is well to note first of all that the name given to each theory should not be understood as if the authors of the various opinions considered all the articles of a concordat as possessing equal force. Those who defend the privilege theory do not maintain that no article in any concordat ever imposed an obligation of justice on the Roman Pontiff. On the other hand, those who defend the compact theory do not assert that the Roman Pontiff is bound in the same way by all the articles of every concordat. These theories have been named, as Wernz points out, from the feature most prominent in each. It is clear, then, that authors who defend the privilege theory maintain, in the last resort, no more than this: that, in respect to the greater part of their matter, concordats must be classed as privileges granted by the Roman Pontiff. Nevertheless, as this subject matter of a concordat is not necessarily homogeneous (the unity of a concordat being merely extrinsic and accidental) it follows that although the term *privilege* may be applied to a concordat taken as a whole, it cannot necessarily be used of every clause in the same.

(a) The Legalist Theory does not admit that concordats have the force of a bilateral contract, because the State is above the Church and, being the supreme society, cannot make such an agreement with an inferior or subordinate body. Concordats are valid,

however, because they are civil laws passed by the State in regard to the Church. It follows from this view that concordats may always be revoked by the State, but not by the Pontiff; as far as the Church is concerned they are mere privileges revocable at the will of the civil ruler. This theory is held in our days more or less strictly by various governments and many writers, chief of whom is Hinschius.

(b) The Compact Theory, as we have said, makes of the concordat a bilateral compact. It must be observed, however, that the advocates of this view are divided among themselves. Some hold strenuously that the Roman Pontiff can make no change whatsoever, not even validly, in regard to anything which he has conceded in a concordat. The chief writer of this school is Schulte, an ex-Catholic, who openly bases his views of concordats on his assumption of the perfect co-ordination and equality of Church and State, just as the legalist theory is founded on the subordination of the ecclesiastical and the civil power. Others, among whom we may enumerate De Angelis, Cavagnis, and Fink, while upholding the compact theory, so explain it as to fully accord with strict Catholic teaching on the constitution of the Church. A concordat, in their opinion, is a bilateral compact, but not in the strict sense of the term. Indeed they so limit and weaken the force of a contract as applied to a concordat that at times they seem to be maintaining the view of those who hold that a concordat is to be considered as a privilege rather than a real contract.

(c) The Privilege Theory, according to which concordats, if we regard their general character and the bulk of their contents, lack for the most part the force of a true contract, and are to be considered as imposing an obligation on the civil power alone, while on the part of the Church they are merely privileges or concessions granted by the Roman Pontiffs. This view, which counts among its recent staunch defenders Cardinal Tarquini, seems to rest upon surer grounds than the others. Before advancing the arguments in its favour, it would be well to examine the position of its opponents. It is evident that the advocates of the first, or legalist, theory build all their arguments upon the supposition that the Church is subject to the State, of which it forms but a department, just as any other body is subject to the whole of which it is a part and from which, consequently, it depends. This view we find expressly maintained by Hinschius, who says: "The theory that asserts that a concordat possesses the force of a contract seems untenable, notwithstanding the vast numbers of its followers. According to the modern civil law the authority of the State over all matters falling within its sphere is omnipotent, and Christian Churches which exist within the territory of any State are subject to that State in just the same manner as are private corporations or individuals." Hammerstein, in his clever refutation of these errors (*De Ecclesiâ et Statu juridice consideratis*, Trier, p. 211) says that this "sphere", within which the State is said to be omnipotent, may be understood in a juridical or a geographical sense, i. e. as signifying the limits either of the State's rights or of its geographical possessions. If taken in the first sense, the grandiose words of Hinschius become puerile, if in the second sense, then Hinschius is advocating a legal enormity. For if the word *sphere* be taken to signify "extent of authority", the assertion of Hinschius means nothing more than that the State can, within the limits of its own rights and authority, do what it will. And it needed no philosopher to proclaim this, since it is abundantly evident that anyone can do all whatsoever he can do. If, on the other hand, *sphere* be taken in the sense of "geographical extension", Hinschius is maintaining that the State may, within the bounds of its own territory, perpetrate any crime it chooses. To quote Hammerstein, "We have said that the phrase,

'the State's sphere', can be understood to mean geographical extension. In this case, the teaching of the Prussian canonist, Hinschius, when taken in the concrete, practically comes to this,—that within the territory of the Kingdom of Prussia the Prussian government can, without any injustice whatever, behead, burn alive, or spoil of their property all whomsoever it pleases and because it pleases; and why? Because the Prussian government is—omnipotent! Surely a wonderful system of jurisprudence!" Moreover, it is noteworthy that the very principle which this school of writers assume as the basis of their argument, namely that no true compact can exist between a sovereign power and its subordinates (whence they argue that between the civil and the ecclesiastical authorities no compact can exist entailing strict obligations upon the former), this fundamental principle is not only false in itself but is contradicted by their own theories. For they maintain that a strict compact can be made between ruler and ruled, whereby the authority of the former may be diminished, or even partially or wholly abolished.

Those who claim that concordats are to be considered as bilateral contracts in the strictest sense of the word experience in trying to maintain their assertion the same difficulty as the followers of the legalist theory. They, too, have recourse to a false principle, that of the perfect co-ordination and equality of Church and State. It does not fall within the scope of this article to show the falsity of this assumption; suffice to say in passing, that the co-ordination or subordination of societies among themselves is to be determined by the co-ordination or subordination of the ends for the attainment of which said societies were instituted; now the end the Church has to attain is superior to that of any other society.

The arguments of those who hold that concordats are bilateral contracts, though only in the broad sense of the term, are based upon their language and diplomatic form. For they argue that these clearly show that the popes themselves regarded concordats as concessions to which were annexed the binding force of a compact, and that in making them they intended to bind themselves by them sometimes to the extent of declaring null and void whatever they themselves or their successors should do in contravention of anything contained in their concordats. An example in point is the concordat between Leo X and Francis I of France. Furthermore, it is claimed that the popes often have referred to concordats, directly or equivalently, as bilateral contracts, or agreements carrying with them a strict obligation. Thus Fink, in his work "De Concordatis" (Louvain, 1879), when summing up his argument says: "In the estimation of the Holy See, concordats are solemn agreements with regard to the management of ecclesiastical affairs, entered into by the supreme authorities, ecclesiastical and civil, of the respective countries; they are possessed of the full efficacy of a strict obligation, and have the force of a compact binding both contracting parties, after the manner of international treaties. Besides the obligation of justice, the binding force of a concordat is strengthened by a solemn promise made by each party for himself and his successors to observe forever faithfully and inviolably all that has been agreed upon. Unless, then, by mutual consent, no concordat can be broken without violating every principle of justice and jeopardizing all other private and public contracts." Other arguments are drawn from expressions occurring in the diplomatic correspondence of the Papal Secretary of State. As a matter of fact, much of what we have just given from Fink is to be found not in papal documents themselves, but in the correspondence of the Secretariate of State. Lastly, the advocates of this form of the compact theory assert that the common opinion among canonists is also in their favour. But, with all due respect to the

learned scholars who hold and defend the opinion, the argument drawn from the form of the concordat has but little weight. For it is not at all rare for an act to be clothed with a form which, though, perhaps, less adapted to the nature of the act itself, yet in no way changes that nature. For example, the formula of absolution in the Greek Church is deprecatory, yet this form of entreaty in no way changes the judicial nature of the pronouncement. So, too, Gregory VII deposed Henry IV by a form of deprecation, yet it cannot be denied that the judgment passed was truly condemnatory. So also a religious before his solemn profession may renounce all his possessions under the form of a will, which form endures even after his profession, while the nature of the act is essentially changed, since there no longer exists that *voluntas ambulatoria* which a last will and testament of its nature requires. Nor are the arguments drawn now and then from solemn promises any stronger. For the pope often calls certain concessions mentioned in concordats "privileges", "indults", etc., etc., and at times speaks even more precisely, asserting that he will in no way interfere in the doing of this or that. If at times the stricter formulae are employed, as in the concordat between Leo X and Francis I (a formula which seems to be the strictest of all and decrees as null and void whatever to the contrary is attempted by subsequent pontiffs), they are employed, as Palmieri notes in the first edition of his treatise "De Romano Pontifice", first, that the pope may testify to his firm purpose of observing, in as far as he may, the points mentioned in the concordat; secondly, because of the scope of the instrument itself, which is similar to an agreement entered into by a father and his disobedient children. In such reconciliations it often happens that a formula is used between a father and a child still under his jurisdiction which verbally signifies a bilateral contract, but which in point of fact is employed for the sole purpose of manifesting the leniency and liberality of the father. Thirdly, very often such formulae are employed because of the unity of the act itself. That this is true, is evident because at times there are articles which bind the pope in justice, and also because by a concordat a civil ruler (i. e. in the case of a concordat drawn up with a Catholic prince) is really and truly bound by obedience to the Roman Pontiff. Hence, although the latter is bound to his promise only through fidelity to his word, it was deemed advisable to use a common form which, as in the case of bilateral contracts, implies a mutual obligation, the nature and interpretation of which is sufficiently evident from the nature and tenor of the concordat itself. It is also to be noted that emphatic phrases such as those above mentioned, employed with a view to express the firm determination of the legislator, are not at all rare; so, for instance, there is sometimes attached to a code of laws a clause derogatory of all future laws, v. g. "by virtue of this unchangeable constitution which is to endure forever". Yet no one claims that a subsequent legislator is bound by such a clause, nor that he cannot abrogate the constitution in whole or in part. That the popes admit that concordats are identical with bilateral contracts, is not wholly true. For they are rarely called such, the ordinary expression being that they have the force of a bilateral contract—something entirely different. For (as Baldi notes in his excellent work on concordats, "De Naturâ et Indole Concordatorum") all such technical phrases as, "to have the same binding force as a treaty", "to be a species of contract", "to partake of the nature of a privilege", "to resemble a gift"—all these signify nothing else than participation in, and not identity with, the nature of all of these. Just as when the law declares, "The admission of postulation has the force of confirmation", it is legitimate to conclude, "therefore admission of postulation is not confirmation but participates in and

approaches to, as far as its nature allows, the nature of confirmation. Again, it argues nothing against the opinion held in the article that concordats are sometimes expressly designated bilateral agreements or contracts (perhaps once: to wit, in the letter of Leo XIII, dated 16 Feb., 1892, to the bishops and faithful of France), since in such cases it is evident that the pope wished only to observe all the conventionalities of concordats—in so far at least as duty permitted. It was not the pope's intention to define and determine the exact essence of a concordat, but rather to manifest his mind on the matter in question, and give assurance that he, on his part, would not violate the articles agreed upon. Relative to this matter Wernz says: "Pius X praised Bonald because he brought to his notice the nature and peculiar characteristic of these agreements or indults." Then, too, Leo XIII earnestly recommended that the question of concordats be seriously and thoroughly looked into. Surely the praise of Pius and the recommendation of Leo would have been utterly foolish if the theory of bilateral contracts had been evidently and unquestionably adopted by the Apostolic See.

Of less value is the argument drawn from individual phrases occurring occasionally in diplomatic correspondence. For, apart from the fact that never, perhaps, in these diplomatic notes is a concordat said to be identical with a bilateral contract, it must also be granted, and that without evasion, that the weakest kind of argument is that drawn from one or another phrase used by some Cardinal Secretary of State, or some Apostolic Nuncio in a single diplomatic note. For the admission is not forced upon us that these phrases are the best that under the circumstances could be chosen. It is also false that the treaty theory is more commonly held by theologians and canonists. For neither is this true of the modern canonists, while it is absolutely false of those of earlier date, very many of whom (as Baldi clearly proves in his erudite commentary on concordats already cited) held the opinion advanced in this paper. This opinion, it must be noted, is based on two principles: first, that ecclesiastical and civil society are not co-ordinate; secondly, that the power of the Roman Pontiff can be neither alienated nor diminished. On this point Wernz wisely remarks: "If the co-ordination of Church and State be urged as an argument, then the treaty theory is founded either on an error, or on a pure fiction lacking all objective reality." (Cf. Sägmüller, "Lehrbuch des kath. Kirchenrechts", 89 sqq.) Hence it follows that it is utterly impossible to call a concordat an international treaty in the real and true sense of the word (cf. a pamphlet anonymously edited in Rome, 1872, under the title: "*Della Natura e carattere essenziale dei Concordati*", whose author was Cardinal Cagiano de Azevedo). Neither can the concordat be classed with international treaties, since the latter are entered upon by two societies each perfect in itself and both equal. The Church, on the other hand, is neither subordinate to, nor equal to, the State, but is in a true sense its superior. Hence, also, it follows that concordats are not bilateral contracts; since for such a contract three things are essentially required: (a) the consent of two parties to the same thing; (b) which imposes upon each an obligation of commutative justice; (c) so that the obligation of one party is the cause of a right in the other, and one obligation is to the other as effect to cause. But a strict right arising from commutative justice is altogether independent not only of the other contracting party, but also, generally speaking, of public authority. Hence, no one can lawfully or validly take such a right away from me against my will. Moreover, it cannot be said that concordats impose on the pontiff an obligation which is the cause of a right in the other party, and of such a right as can be neither lawfully nor validly recalled. For certainly, in this hypothesis, a

succeeding pontiff could not do as much as his predecessor; he would receive a lessened power, not, that which Peter received from Christ to be transmitted to his successors for the government of the church. And this surely cannot be, since each succeeding pontiff receives his power not from his dead predecessor, but from God himself, who always gives the selfsame, as he has said once for all to Peter and his successors: "Thou art Peter and upon this rock I will build my church . . . Feed my lambs . . . I will give to thee the keys". Therefore a succeeding pontiff is not bound by the compacts of his predecessor as by a bilateral contract giving such a strict right of commutative justice that if he violate the agreement without cause his act is invalid. And neither is the pontiff who has made such compacts so bound by them, for he is not the master of that fullness of power which is the primacy, but only its administrator, so that he cannot alienate or lessen it. Nor can you argue that by concordats, which are bilateral contracts, not the power of the supreme pontiff, but only its exercise, is diminished. For what is that power which can never be exercised, or which, if exercised, remains without effect? And such would be the case, for even if the pontiff wished he could not act validly, and therefore his power would be lessened. And hence the Roman pontiff must retain the fullness of power and jurisdiction over those questions which are settled in a concordat. This is what Cardinal Antonelli, Secretary of State, maintained in his diplomatic correspondence, when the Kingdom of Portugal complained that the pontiff had violated the concordat.

Does the pontiff then contract no obligation in concordats? Assuredly he contracts an obligation; and they do an injury to Cardinal Tarquini who think that he held the opposite. For, although he does not mention this obligation in his definition of concordats, he certainly admits it when explaining his meaning. But this obligation is one of fidelity, not of justice, an obligation which makes a violation of the concordat without just cause an unlawful act, but not an invalid act. His Eminence Cardinal Francis Satolli explains with his usual depth and clearness the nature of the obligation which a pontiff is under of observing a concordat. His little work, of great authority, bears the title, "*Prima principia de Concordatis*". The learned author begins his investigation with the following reasoning from St. Thomas, I, xxi, 1, ad 3. The Angelic Doctor, asking whether justice exists in God, puts this objection to himself: The act of justice consists in the payment of a debt; but God is a debtor to no one, therefore it would seem that justice does not exist in God. To solve this difficulty the Holy Doctor first lays down the principle: to every one is due what is his own. He then inquires what one may call his own, and establishes that one's own is that which is for him, as a slave is his master's, precisely because, inasmuch as he is a slave, he is for his master. In the name *debt*, therefore, concludes the Angelic Doctor, is simplified a relation of exigency or necessity in a thing referring it to that for which it exists. Considering this relation more thoroughly, you will see that it is twofold: a relation by which a creature is for another creature and all creatures for God. Since this relation is twofold, there is also a twofold debt in the Divine plan; one by which a thing is due to God, the other by which a thing is due to the creature, and in both ways, says St. Thomas, God can make payment. For it is due to God that what the wisdom of his will has decreed should be fulfilled in creatures, as it is due to the creature that what has been ordained for it it should possess. Thus it is due to man that other animals should supply his needs. But this second debt depends on the first, since a thing is due to creatures because it is ordained for them through the relations established by the Divine wisdom. Wherefore, since God pays a debt to his creatures in this way only, he

does not become his creatures' debtor, but the justice of God always looks to His own propriety, and by it he renders to himself what is His due. The author then passes to the Church and applies to her this argument. For to the Church also is due that the mission of her infallible and holy teaching power and manifestation of the saving quality of Christ's religion be accomplished in every State throughout the world. It is likewise due to the various States and their rulers that they have what is properly theirs. But this debt depends on the first in every relation between the Church, or Holy See, and a State; for it would be absurd were not all things ordered according to the relations established by the Divine wisdom, that is, to maintain religion, and to further the last end of all human life. The debt which the Church pays in tending to her supernatural end is one of justice, but of a justice which looks to the propriety of the Church herself, that is of the Holy See, a justice which renders to itself what is its due. In purely temporal matters the Church must observe the debt of justice such as temporal matters require, for in these she is not a superior nor is her spiritual end in question. But in all matters which pertain to the supernatural end of the Church, she can be under no obligation of strict debt to the State, but rather her obligation is to herself and to the spiritual purpose of her existence. And thus, generally speaking, she will be a debtor to States, through compact, since she owes to herself what her wisdom and never-failing desire for the spiritual good of mankind has shown her to be necessary.

But to present briefly what can certainly be said about concordats; concordats, as they have in fact often been agreed upon, often impose upon the Roman Pontiff a true obligation of commutative justice towards the state. This happens when a concordat is concluded about purely temporal matters, for instance, when the Church cedes some of her temporal possessions, or when she renounces some temporal or historical right. Such was the case in the concordat concluded between Urban VIII and the emperor, Ferdinand II, King of Bohemia; for in this instance the pope ceded some ecclesiastical possessions upon receiving others from Ferdinand in compensation; such, too, was the concordat with Colombia, in 1887, art. 29. But we must bear in mind that in such concordats the pope follows the common laws of contracts; therefore, if a contract be extorted from him by fraud or intimidation, or if the matter of the concordat be illicit, he or his successor can annul that contract, and such action is quite licit and valid. Moreover, if the matter of the concordat is illicit, the pope is evidently obliged to rescind the contract. Thus when Henry V had, by means of fear and fraud, urged Paschal II into certain points of agreement, this pope recalled those concessions in the First Council of the Lateran, on the 18th of March of the year 1112, because the entire council proclaimed that the concessions made to Henry were illicit—not a *privilegium*, but a *pravilegium*, as the council expressed it. Thus, too, if a pope should make over to someone temporal possessions without a just cause, his successor can evidently cancel such a contract validly, because a pope is only the administrator, and not the owner, of ecclesiastical possessions.

In concordats the Roman pontiff often grants secular rulers real privileges and indults; for the pontiff expressly declares that he is granting an indult, a privilege—that he is conceding this or that particular point, that he is making such or such a concession, or granting a favour. Instances of this kind may be found in the concordat with the Two Sicilies, of the year 1741, c. viii, art. 1, in another with the Two Sicilies of 1818, art. 28, in a concordat with Costa Rica, of 1853, art. 7; in a concordat with Haiti, of 1860, art. 4; in a concordat with Austria, of 1855, art. 25; with Ecuador, of 1863, art. 13, etc. Now if, as the "Corpus Juris Canonici", *regula juris* 16 in Sexto, has it, it is

becoming that no favour granted by a sovereign should be recalled, it is fully evident from what we said above that this rule should hold good all the more when a privilege is granted in a form so solemn as that used in concordats; nor is it merely becoming for the pope not to recall such concessions, but he has an obligation of observing those very articles which contain the privileges. This follows from what we said already, and this the popes themselves affirm, sometimes, indeed, in rather stringent terms. Nevertheless, from the explanations given above it is evident that these terms of affirmation must be understood to signify merely that the pope is binding himself in so far as he is capable of binding himself; but whilst, in such concordats, he can bind himself in fidelity, he cannot bind himself in commutative justice; therefore, in those terms in which he affirms his obligation he binds himself in fidelity, but not in justice. And in fact, the popes have been much more scrupulously faithful in keeping these promises than the civil rulers themselves were, although the latter had taken upon themselves a real obligation of justice.

In the second edition of his celebrated work "De Romano Pontifice" (Prato, 1891), Palmieri maintains that, even if concordats were strictly bilateral contracts, nevertheless the power of the pope over them would not be lessened on that account. But although Palmieri is quite justly acknowledged as easily the foremost authority on ecclesiastical matters, both on account of his universal experience and his intellectual acumen, nevertheless, in this case his position seems to be untenable. In the first edition of the same work (Rome, 1877) he maintained that concordats are not bilateral contracts in the strict sense of the term; and he bases his argument for the opinion laid down in the second edition on the supposition that the obligation of a bilateral contract impedes, or renders illicit, any action of the pope against the provisions of the contract, but that, nevertheless, such action would still be valid. But this supposition is not true, unless we use the term *bilateral contract* in its widest sense; but this would be a question about the meaning of words, and would not touch the point at issue. But if we really mean to use the term, *bilateral contract*, in its obvious meaning, we must certainly hold that such a contract renders any action against its provisions null and void. The learned author adduces two instances, taken from the contract of buying and selling and from the engagement to marry, to prove his assertion; but neither of these two cases is to the point. For the engagement to marry, as Palmieri himself admits, is a bilateral contract, consisting in the mutual promise of future marriage; and yet, if, for instance, the bridegroom marries some other woman, his action is merely illicit, but not invalid. A sale of goods is likewise a bilateral contract, and it is completed only by handing over the article in question to the buyer; and yet, if the seller hands over to someone else the article that was already sold, the transfer of the article in question remains valid, even though the seller is bound to make good the damages caused to the first buyer. Therefore the two cases adduced by Palmieri prove nothing; for a bilateral contract renders invalid those actions merely which have the same subject-matter, and in so far only as they have the same subject-matter, as the contract itself. Thus it is evident that the engagement to marry, being a bilateral contract, renders null and void any new espousals, because the subject-matter is the same; but it does not render invalid a marriage with some other person, because marriage is quite another kind of contract. The case is similar in the contract of buying and selling; even if the buyer and seller have agreed and concluded the sale, so long as no transfer has taken place, that contract does certainly not render the seller incapable of making a valid transfer of the goods in question to some other buyer; but it undoubtedly

deprives the seller of the power of selling the goods validly a second time, unless the transfer of the goods follows the sale. (Cf. De Lugo, "De iustitiâ et iure", disp. xxvi, 163 sqq.)

So far we have been considering concordats in their relation to the pope; the secular rulers on their part are bound in commutative justice by many articles of a concordat, unless an exception be proved. But on Christian rulers all the articles of a concordat impose an additional obligation of obedience; for, as Tarquini testifies, a concordat may be rightly defined as "a particular ecclesiastical law for a certain country, enacted by the authority of the sovereign pontiff at the request of the ruler of that country, and strengthened by the special obligation, which that ruler takes upon himself, to observe its provisions forever."

Effect of Concordats.—From all this it follows naturally that, since an obligation devolves upon the contracting parties, the terms of the concordat should be faithfully carried out and rigidly adhered to. Neither party, then, may without consulting the other refuse, except for grave reasons, to abide by the terms agreed upon. Moreover, in view of the fact that concordats have the force of ecclesiastical laws, they at once annul all laws and special customs that make for the contrary. All other laws, however, i. e. those which do not clash with the letter or spirit of the particular concordats, still hold; for concordats, barring of course those provisions which are especially mentioned, so far from making the *jus commune* inoperative, re-establish its validity. This is clear from the fact that the intention of the Sovereign Pontiff, when at the urgent request of a civil ruler he yields a point, or waives in certain cases the claims of the law of the Church, is obviously to insist on the duty of respecting and observing the ecclesiastical laws in all other details. Further, just as all other laws when properly promulgated bind the people, so concordats, inasmuch as they take on the form of civil laws are binding on the citizens of the country, and particularly the state officials; so much so that any infringement of them is equivalent to a violation of the civil laws. And rightly so, for concordats are promulgated as laws emanating from the power vested in the State as well as that in the Church. The Sovereign Pontiff gives publicity to the terms through his cardinals assembled in consistory, and through a special Bull; the civil authority through the customary channels, i. e. in the legal way in which other state laws should and usually are promulgated.

Interpretation and Annulment of Concordats.—Since it may very easily happen that from time to time a dispute or a disagreement may arise between the contracting parties as to the meaning that should be assigned to the articles agreed upon in the concordat, it seems advisable to determine how the controversy should be settled in the event of such a difficulty.

In the first place there can be no question that every effort should be made to settle the dispute amicably, a precaution that is founded upon the motives that lead to the formation of a concordat—namely, that of terminating if not forestalling all disputes. Consequently, it would be in direct opposition to the nature of the concordat if it should itself prove a fresh reason for misunderstandings. Its very nature, then, makes it imperative that in the event of a disagreement arising touching the meaning to be attached to the concordat, the question should as far as possible be settled without any rupture of friendly relations; and assuredly the Church has never been found wanting in her efforts to further this end. This precaution, it should be added, has often been taken in framing the concordats themselves. For example, in the concordat drawn up by Pius IX with the Emperor Francis Joseph I of Austria, in the year 1855, the following words were appended to art. 35: "Should, however, any difficulty arise in the future, His Holiness and His

Imperial Majesty shall consult with each other that the question may be amicably decided." The very same words occur in the 13th art. of the concordat drawn up by the same pope with William I of Württemberg, in the year 1857; so, too, in the 24th art. of that entered into by the same pope with Frederick I, Grand Duke of Baden, in 1859; and again in the 24th art. of the concordat ratified with the President of Ecuador. Other instances of a similar nature could be cited. Since this clause, once it is subjoined to a concordat, becomes a part of the agreement and consequently assumes the nature of a papal as well as a civil law, it must be kept to the letter, so long, of course, as it is normally possible to do so.

True as all this is, it would be erroneous to maintain that both parties must concur in determining the meaning of a given clause or article. For he is the lawful interpreter who in the matter in question is the authoritative lawgiver. Now the pope always retains his jurisdiction and legislative power over matters that are wholly or partially of a spiritual nature, nor can he transmit the power to another. Consequently, the Sovereign Pontiff always remains the authoritative interpreter. It is plain, then, that should a discussion arise, and the civil authorities refuse their consent to a reasonable adjustment, the Church, in virtue of her higher judicial power, may exercise this right of annulling the concordat. It is clear, too, that, should the Church at any time pledge herself in the event of some future misunderstanding to discuss the situation with the civil authorities in order to bring about an amicable settlement, such an act must be looked upon as supererogatory; for when the Church waives any of her claims she makes a concession to the State, seeing that the highest community enjoys the right of settling a discussion even though the inferior body withholds its consent.

It may be well to subjoin a few canons that shall serve as guides in interpreting the various articles of a concordat. Evidently, the meaning of those articles which import a bilateral or unilateral contract must be judged by the laws that determine the exact scope of contracts, while the meaning of clauses that bear upon the granting of a privilege must be decided by an appeal to the laws for the interpretation of privileges. In its workings, however, the competent judge of a concordat is nowadays the Sacred Congregation of Extraordinary Ecclesiastical Affairs. Far less, of course, is the State justified in rescinding concessions granted at the time the concordat was drawn up. For it frequently happens that the State promises to do only what it is already bound to by some pre-existing obligation; or at times the discussion turns on certain matters which the Church, by virtue of the indirect power she has over the State, enjoins, or again on temporal affairs of which the State had handed over to the Church full and absolute dominion. In the last case this forfeiture of dominion cannot be revoked, and for two reasons: first, because these gifts are usually compensatory for confiscated property—e. g., governments which had seized upon a considerable amount of ecclesiastical property have time and again promised in the concordats to endow seminaries, church fabrics, etc.—and secondly, because any gift once bestowed on an equal or a superior, even though it be purely gratuitous, may not be revoked, as such an act would be an exercise of jurisdiction which it cannot employ except against a subject. All, however, acknowledge that the Church may lawfully and justly refuse to abide by a concordat in all those circumstances which would permit or even oblige one to break a contract. Should there be question of privileges or indulgences granted by the pope in a concordat, it follows logically from what we have said that, given a just and adequate reason, they may validly and licitly be rescinded; if there be no reason, then such an action would still be valid, though not licit. It

must be remembered, though, that the popes exercise their authority only for the gravest reasons, and after all the solemn formalities of the Roman Curia have been duly observed. Yet, should the pope rescind these privileges, he would not ordinarily be bound to make any compensation to the State, as compensation is strictly obligatory only where the privileges revoked are those technically called *onerosa* (see *PRIVILEGE*). Concordats, however, are not of this nature. All this applies with greater force to concessions wrung from the pope through chicanery, threats, or open violence, or which exceed the papal prerogative. Again, if it is a question of dominion over temporal goods that has passed from the Church to the State, the Church, it is clear, may not revoke this concession, although a spontaneous grant may be withdrawn.

BENEDETTO OJETTI.

SUMMARY OF PRINCIPAL CONCORDATS.—Before the Eighteenth Century.—(1) The Concordat of Worms, or *Pactum Calixtinum*, 23 September, 1122, between Pope Callistus II and the Emperor Henry V, confirmed by the First Lateran Council, terminated the long investiture quarrel. The following were its chief provisions: (a) The elections of bishops and abbots should take place in the presence of the emperor. (b) Contested elections, according to one opinion, should be decided by the emperor, who had only to ask the advice of the metropolitan and his suffragans; according to another opinion, the decision rested with the provincial synod, the emperor merely assuring the execution of the synod's judgment. (c) The emperor renounced the right of spiritual investiture with ring and crosier and received instead the right of lay investiture with the sceptre, a sign of temporal, but not of spiritual, authority. In Germany the prelate should receive investiture with the sceptre before consecration, but in other countries after consecration. (d) The emperor promised to protect the Roman Church and restore the possessions of the Holy See. (e) The pope agreed not to disturb those who had been on the side of the emperor during the controversy.

(2) Concordats with Portugal: one in 1288 between the bishops of Portugal and King Diniz after a violent persecution of the Church in that country, and ratified by Nicholas IV in 1289; another in 1516, between the Portuguese bishops and King Manuel the Fortunate, afterwards confirmed by Pope Leo X.

(3) The Concordat of 1516 between Leo X and Francis I of France, confirmed by the Fifth Lateran Council, was a result of the long controversy between the Holy See and the French Government over the Pragmatic Sanction of Bourges. Besides abolishing the Pragmatic Sanction, the terms of this concordat (a) gave to the king the right of presentation to bishoprics, abbeys, and priories; (b) the concordat, however, maintained the pope's right of confirmation, devolution (i. e. the right to appoint of his own choice, if the king did not present a candidate within the required time), and the reservation of bishoprics made vacant by the death of the incumbents while at the papal

court. (c) It contained also stipulations concerning the annates and other matters.

(4) The Concordat of Vienna was the outcome of the efforts on the part of the princes of the German Empire to put an end, at least in Germany, to the conflict between Eugene IV and the Council of Basle. After some negotiations Eugene issued four Bulls (Feb., 1447) which together constitute the so-called Concordat of the Princes. The first was a promise of a new council; the second contained a provisional acceptance of certain decrees of the Council of Basle; and the third and fourth dealt with the details of the agreement. Eugene IV died shortly after this and Nicholas V, his successor, confirmed the four Bulls. But a certain number of the princes being still unsatisfied, Frederick III thought it time to intervene. At a diet held at Aschaffenburg, he ordered the universal recognition of Nicholas V as lawful pope, and on 17 February, 1448, the Concordat of Vienna was agreed upon by the emperor and the papal legate, Carvajal. It was confirmed by Nicholas V on 19 March of the same year, and was subsequently recognized as the ecclesiastical code for Germany. Its principal terms were the following: (a) The election of bishops was to be free from all interference, though the pope should have the right of confirmation; and for good reasons and with the advice of the cardinals he could appoint a more worthy and suitable person than the one elected. (b) In the six odd months of the year vacant canopies and non-elective benefices were at the disposal of the pope; at other times these vacancies should be filled by the ordinary. (c) The concordat also treated of the amount and payment of the annates.

(5) The Concordat with Bohemia in 1630 was negotiated for that country between Urban VIII and the Emperor Ferdinand II; it followed on the re-establishment of the Catholic religion in Bohemia after the campaign directed by Ferdinand against the heretics. By its terms the Church renounced the goods that had been alienated during the progress of the heresy and received compensation from the revenues derived from a tax on salt which was levied for her benefit.

Eighteenth Century.—Twelve concordats were made during the eighteenth century. Five of these with Sardinia: the first, in 1727, between Pope Benedict XIII and Victor Amadeus II confirmed the right possessed by the House of Savoy of immediate nomination to ecclesiastical offices; three between Benedict XIV and King Charles Emmanuel III (1741, 1742, 1750); the fifth in 1770 between Clement XIV and Charles Emmanuel III. Two were made with Spain, one in 1737 between Clement XII and Philip V, another in 1753 between Benedict XIV and King Ferdinand VI; one with the Two Sicilies in 1741, between Benedict XIV and Charles III; one with the Duchy of Milan in 1757, between Benedict XIV and the Empress Maria Teresa; one with Milan and Mantua in 1784, between Pius VI and the Emperor Joseph II; one in 1778 with Portugal; and one with Poland in 1736 between Clement XII and King Augustus III.

Nineteenth Century.—The following were the most important concordats of the nineteenth century: (1) The Concordat of 1801, to which a special article is devoted. (2) The concordat between Louis XVIII and Pius VII in 1817, intended to re-establish the Concordat of 1516, abrogate the Organic Articles, and re-erect the suppressed bishoprics, but never carried out. (3) The Concordat of Bavaria in 1817, concluded for Pius VII and Maximilian Joseph by Cardinal Consalvi and Baron von Höffelin. It dealt with the administration of church property, a new circumscription of dioceses, the erection of chapters, and especially nominations to ecclesiastical offices. An addition made by the State, and bearing a relation to the Bavarian concordat similar to that of the Organic Articles to the Concordat of 1801, gave rise to much dispute. In 1871 the Liberals tried in vain to have this concordat re-

jected. (4) The Concordat with Sardinia in 1817, between Pope Pius VII and King Victor Emmanuel I. It reduced the number of bishoprics to three (Turin, Genoa, Vercelli), and contained regulations concerning the establishment of seminaries and chapters, etc. (5) The Concordat with Prussia in 1821, concluded with the Holy See through Prince von Hardenberg, the chancellor. King Frederick William III on 23 August, 1821, recognized it as a law binding on Prussian Catholics. It contains the circumscription of the archbishoprics and bishoprics, and regulations concerning the erection of dioceses and chapters, the qualities of candidates, the taxation of episcopal and archiepiscopal churches by the Apostolic Camera, etc.

(6) The Concordat of the Upper Rhine Provinces in 1821, consisting of a papal Bull issued by Pius VII and accepted by the King of Württemberg, the Grand Duke of Baden, the Elector of Hesse, the Grand Duke of Hesse, the Duke of Nassau, the free city of Frankfurt, the Grand Duke of Mainz, the Dukes of Saxony and Oldenburg, the Prince of Waldeck, and the Hanseatic cities, Bremen and Lübeck. By this concordat the bishoprics were divided among the provinces as follows: Freiburg im Breisgau, the metropolis, was the see for Baden; Rottenburg for Württemberg; Mainz for Hesse-Darmstadt; Fulda for Kurhessen and Saxe-Weimar; Limburg for Nassau; and Frankfurt. (7) The Concordat with Belgium in 1827. It extended the provisions of the Concordat of 1801 (q. v.) to Belgium. (8) The Concordat with the Upper Rhine Provinces in 1827 between Leo XII and the above-mentioned provinces. It contained agreements on the election of bishops, the *processus informativus*, the holding of a second election when the first had not been canonical or the person elected had not the necessary qualities, the institution of chapters, the establishment of seminaries, etc. (9) The Concordat of Hanover, agreed upon between Pius VII and George IV, King of England and of Hanover, but published 26 August, 1824, by Leo XII in the Bull "Impensa Romanorum Pontificum sollicitudo". It contained decisions concerning the erection and support of the bishopric and chapter of Hildesheim, and the suspension of the state support of the Bishopric of Osnabrück. Both of these dioceses were placed directly under the Holy See; the concordat dealt also with the election and consecration of the bishop, the *processus informativus*, the institution of the cathedral chapter, and taxation by the Apostolic Camera.

(10) The Concordat of Oldenburg, arranged 5 January, 1830, between the Prince-Bishop of Ermeland as executor of the papal Bull "De salute animarum" and von Brandenstein, the Minister of State. It dealt with the distribution of parishes, the founding of certain canonries by the grand duke, and the establishment of a special ecclesiastical court in the Diocese of Münster. (11) A concordat with Austria, concluded 18 August, 1855, by Cardinal Viale Prola and the Prince-Bishop Joseph Othmar von Rauscher. It was ratified by the emperor 25 September and by the pope 3 November, but in 1870 was rejected by the Government. (12) A concordat with Austria, 8 July, 1881, concerning the establishment of the hierarchy in Bosnia-Herzegovina. (13) A concordat with Russia, concluded 3 August, 1847, published by Pius IX on 3 July, 1848. It was concerned with the dioceses of Russia and Poland and the episcopal rights. (14) A concordat with Spain, 16 March, 1851, on the support of the Catholic religion, protection of episcopal rights, circumscription of dioceses, abolishment of exempt dioceses, constitution of chapters, establishment of seminaries, the right of the monarch to appoint to ecclesiastical offices, and the right of the Church to acquire property. (15) A concordat with Spain, 25 November, 1859, supplementary to the Concordat of 1851. (16) Concordat with Switzerland, 26 March, 1828. The episcopal see was transferred from Basle to Soleure. (17) Concordat

with Switzerland, 7 November, 1845, relative to the Diocese of St. Gall. (18) Concordat with the Two Sicilies, 1834, between Pope Gregory XVI and King Ferdinand II, on the personal immunity of clerics. (19) Concordat with Sardinia 1841, also on the immunity of clerics. (20) Concordat with Tuscany, 1851, on ecclesiastical jurisdiction and the administration of church property.

(21) Concordat with San Salvador, 22 April, 1862. Among other provisions, the Catholic religion was declared the State religion, but other cults permitted; education was placed under the supervision of the bishops; the censorship of books by the bishop was recognized and upheld by the State; unrestricted communication with the pope was guaranteed to clergy and laity; tithes were abolished, the expenses of worship to be defrayed by the State; the president was given the right of patronage and of nominating to all bishoprics, and of appointing to six canonries; new dioceses should be erected by the pope and new parishes by the bishop. The bishop might introduce religious orders and communities; the vicar capitular should be chosen by the chapter according to the provisions of the Council of Trent; the ecclesiastical courts were recognized only for purely spiritual matters, temporal matters to be subject to the civil jurisdiction; the right to acquire and possess property was guaranteed to the Church; the confiscation of church property and the arbitrary union or suppression of benefices by the State was forbidden; the right to tax church property was ceded to the State; the prayer for the republic was granted, also the so-called *privilegia castrensis*. In matters not mentioned in the concordat the ordinary discipline of the Church should be observed. (22) The concordat with Guatemala, 7 Oct., 1852, that with Honduras, 22 April, 1862, that with Nicaragua, 2 November, 1861, were similar to the concordat with San Salvador. (23) Concordat with Venezuela, 26 July, 1862. (24) Concordat with Ecuador, 29 May, 1851, similar to the Concordat with San Salvador. (25) Concordat with Hayti and the West Indies, 28 March, 1860. (26) Concordat with Colombia, 1887.

LEO A. KELLY.

Concordat of 1801, THE FRENCH.—This name is given to the convention of the 26th Messidor, year IX (July 16, 1802), whereby Pope Pius VII and Bonaparte, First Consul, re-established the Catholic Church in France. Bonaparte understood that the restoration of religious peace was above all things necessary for the peace of the country. The hostility of the Vendéans to the new state of affairs which resulted from the Revolution was due chiefly to the fact that their Catholic consciences were outraged by the Revolutionary laws. Of the 136 sees of ancient France a certain number had lost their titulars by death; the titulars of many others had been forced to emigrate. In Paris the Cathedral of Notre-Dame and the church of St-Sulpice were in the possession of "constitutional" clergy; Royer, a "constitutional" bishop, had taken the place of Mgr. de Juigné, the lawful Archbishop of Paris, an *émigré*; even in the churches which the Catholics had recovered, the rites of the "Theophilanthropists" and those of the "Decadi" (see THEOPHILANTHROPISM, DECADE) were also celebrated. The nation suffered from this religious anarchy, and the wishes of the people coincided with Bonaparte's projected policy to restore the Catholic Church and protect worship to their normal condition in France.

I. THE FIRST ADVANCES.—On the 25th of June,

1800, Bonaparte, after his victory at Marengo, passed through Vercelli, where he paid a visit to Cardinal Martiniana, bishop of that city. He asked that prelate to go to Rome and inform Pius VII that Bonaparte wished to make him a present of thirty million French Catholics; that the first consul desired to reorganize the French dioceses, while lessening their number; that the *émigré* bishops should be induced to resign their sees; that France should have a new clergy untrammelled by past political conditions; that the pope's spiritual jurisdiction in France should be restored. Martiniana faithfully reported these words to Pius VII. It was only a few months before that Pius VII had died at Valence, a prisoner of revolutionary France. Pius VII, when elected at Venice, had announced his accession to the legitimate government of Louis XVIII, not to that of the Republic; and now Bonaparte, the representative of this *de facto* government, was making overtures of peace to the Holy See on the very morrow of his great victory. His action naturally caused the greatest surprise at Rome. The difficulties in the way, however, were very serious. They arose, chiefly (1) from the susceptibilities of the *émigré* bishops, from the future Louis XVIII, and from Cardinal Maury, who was suspicious of any attempt at reconciliation between the Roman Church and the new France; (2) from the susceptibilities of the former revolutionaries, now the courtiers of Napoleon, but still imbued with the irreligious philosophy of the eighteenth century. The distinctive mark of the negotiations, taken as a whole, is the fact that the French bishops, whether still abroad or returned to their own country, had no heart whatever in them. The concordat as finally arranged practically ignored their existence.

II. THE THREE PHASES OF THE NEGOTIATIONS.—*First Phase* (5 November, 1800—10 March, 1801). Spina, titular Archbishop of Corinth, accompanied by Caselli, General of the Servites, arrived in Paris, on 5 November, 1800. Bernier, who had been parish priest of Saint-Laud, at Angers, and famous for the part he had played in the wars of La Vendée, was instructed by Bonaparte to confer with Spina. Four proposals for a concordat were submitted in turn to the pope's representative, who felt that he had no right to sign them without referring them to the Holy See. Finally, after numerous delays, for which Talleyrand was responsible, a fifth proposal, written by Napoleon himself, was brought to Rome, on 10 March, by the courier Palmoni.

Second Phase (10 March, 1801—6 June, 1801). Cacaault, member of the *Corps Legislatif*, appointed as minister plenipotentiary to the Holy See, reached Rome on 8 April, 1801. He had received instructions from Napoleon to treat the pope as if he had 200,000 men. He was a good Christian, and anxious to bring the work of the concordat to a successful issue. What Bonaparte wished, however, was the immediate acceptance by Rome of his plan of the concordat; on the other hand, the cardinals to whom Pius VII had submitted it took two months to study it. On 12 May, 1801, the very day on which Napoleon, at Malmaison, was complaining to Spina of the slowness of the Holy See, the cardinals to whom the proposed concordat had been submitted sent yet another proposal to Paris. But, before this last proposal had reached its destination, Cacaault received an ultimatum from Talleyrand, to the effect that he must leave Rome if, after an interval of five days, the concordat proposed by Bonaparte had not been signed by Pius VII. All might, even then, have been broken off, had the situation not been saved by Cacaault. He left Rome, leaving his secretary Artaud there, but suggested to the Holy See the idea of sending Consalvi himself, Secretary of State to Pius VII, to treat with Bonaparte. On 6 June, 1801, Artaud and Consalvi left Rome in the same carriage.

Third Phase (6 June, 1801—15 July, 1801). Consalvi, after an audience with Bonaparte, discussed the various points of the proposed concordat with Bernier, and on 12 July they had reached an agreement. Bonaparte thereupon instructed his brother Joseph, Cretet, councillor of state, and Bernier to sign the concordat with Consalvi, Spina, and Caselli. During the day of the 13th, Bernier sent Consalvi a minute, adding: "Here is what they will propose to you at first; read it well, examine everything, despair of nothing." Between this minute and the proposal concerning which Consalvi and Bernier had come to the agreement of the day before, there were certain remarkable differences with regard to the publicity of worship; a clause relative to married priests, and always rejected by Consalvi, was inserted; the clauses relating to seminaries, to chapters, and that of the profession of the Catholic Faith by the consuls, to which the Holy See attached great importance were suppressed. Consalvi received the impression—he expresses it in his "Memoirs", written in 1812—that the French Government intended to deceive him by substituting a fresh text for the text he had accepted; and d'Haussonville, in his book, "The Roman Church and the First Empire", has formally impugned the good faith of Bonaparte's representatives. Bernier's aforementioned note of 13 July, recently discovered by Cardinal Mathieu, asking Consalvi to "read" and "examine" carefully, proves that the French Government did not intend any deception; nevertheless, the presentation of this new draft reopened the whole question. Talleyrand had taken the initiative in this matter; for twenty consecutive hours Bonaparte's three plenipotentiaries and those of the Holy See carried on their discussion. The plan on which they finally agreed was thrown into the fire by Bonaparte, who that evening, at dinner, gave way to a violent fit of anger against Consalvi. Finally, on 15 July, a conference of twelve hours ended in a definite agreement; on the 16th Bonaparte approved of it. Pius VII, on his part, after consultation with the cardinals, sanctioned this arrangement, 11 August; on 10 September the signatures were exchanged, and on 18 April, 1802, Bonaparte caused the publication of the concordat and the reconciliation of France with the Church to be solemnly celebrated in the cathedral of Notre-Dame at Paris.

III. THE STIPULATIONS OF THE CONCORDAT.—The French Government by the concordat recognized the Catholic religion as the religion of the great majority of Frenchmen. The phrase was no longer as in former times, the religion of the State. But it was a question of a personal profession of Catholicism on the part of the Consuls of the Republic. The Holy See had insisted on this mention, and it was only on this condition that the pope agreed to grant to the State police power in the matter of public worship. This question had been one of the most troublesome that arose during the course of the deliberations. In the matter of these police powers it had been agreed after many difficulties that the following should stand as Article 1 of the concordat: "The Catholic, Apostolic and Roman Religion shall be freely exercised in France. Its worship shall be public while conforming to such police regulations as the government shall consider necessary to public tranquillity." The pope agreed to a fresh circumscription of the French dioceses. When this subsequently took place, of the 136 sees only 60 were retained. The pope promised to inform the actual titulars of the dioceses that he should expect from them every sacrifice, even that of their sees.

According to Articles 4 and 5 the French Government was to present the new bishops, but the pope was to give them canonical institution. (See PRESENTATION; INSTITUTION, CANONICAL; NOMINATION.) The bishops were to appoint as parish priests such persons only as were acceptable to the Govern-

ment (Art. 9); the latter, in turn, stipulated that such churches as had not been alienated, and were necessary for worship, would be placed "at the disposition" of the bishops (Art. 12).

The Church agreed not to trouble the consciences of those citizens who, during the Revolution, had become possessed of ecclesiastical property (Art. 13); on the other hand the Government promised the bishops and parish priests a fitting maintenance (*sustentationem*, Art. 14).

Such were the principal stipulations of the concordat. Certain of its articles have been fully discussed, particularly by canonists and jurists, notably Articles 5, 12, and 14, relating to the nomination of bishops, the use of churches, and the maintenance of the clergy. Moreover, the law known as "The Organic Articles" (see ARTICLES, THE ORGANIC), promulgated in April, 1802, and always upheld by later French governments in spite of the protest of the pope, made immediately after its publication, has in various ways infringed on the spirit of the concordat and given rise during the nineteenth century to frequent disputes between Church and State in France.

IV. RESULT OF THE CONCORDAT.—The concordat, notwithstanding the addition of the Organic Articles, must be credited with having restored peace to the consciences of the French people on the very morrow of the Revolution. To it also was due the reorganization of Catholicism in France, under the protection of the Holy See. It was also of great moment in the history of the Church. Only a few years after Josephinism and Febronianism (q. v.) had disputed the pope's rights to govern the Church, the Papacy and the Revolution, in the persons of Pius VII and Napoleon, came to an understanding which gave France a new episcopate and marked the final defeat of Gallicanism.

V. FATE OF THE CONCORDAT.—The French law of 9 December, 1905, on the Separation of Church and State, against which Pius X protested in his Allocution of 11 December, 1905, was based on the principle that the State of France should no longer recognize the Catholic Church, but only distinct *associations cultuelles*, i. e. associations formed in each parish for the purpose of worship "in accordance with the rules governing the organization of worship in general". In case of the non-formation of such associations destined to take over the property, real and personal, of the churches or *fabriques* (see BUILDINGS, ECCLESIASTICAL; FABRICA ECCLESIAE), this property was to be forever lost to the Church and to be turned over by decree to the charitable establishments of the respective communes. By the Encyclical "Gravissimo Officii", of 10 August, 1906, the pope forbade the formation of these *associations cultuelles* or associations for worship. Rome feared that they would furnish the State with a pretext for interfering with the internal life of the Church, and would offer to the laity a constant temptation to control the religious life of the parish. Thereupon, the State applied strictly the aforementioned law, considered the *fabriques*, i. e. the hitherto legally-recognized churches, as no longer existing, and, in the absence of *associations cultuelles* to take up their inheritance, gave over all their property to charitable establishments (*établissements de bienfaisance*). Exception was made for the church edifices actually used for worship; at the same time nothing was done concerning the numberless legal questions that arise apropos of these edifices, e. g. right of ownership, right of use, repairs, etc. At the present writing, therefore (end of 1906), the Church of France, stripped of all her property, is barely tolerated in her religious edifices, and has only a precarious enjoyment of them. On the other hand, since ecclesiastical authority has forbidden the only kind of corporations (*associations cultuelles*) which the State recognizes as authorized to

collect funds for purposes of worship, the Church has no means of putting together in a legal and regular way such funds or capital as may be required for the ordinary needs of public worship. Thus the churches of France live from day to day; neither the parish nor the diocese can own any fund, however small, which the parish priest or the bishop is free to hand down to his successors; all this because the State stubbornly insists that only the above-described *associations cultuelles* (which it knows are impossible for French Catholics) shall be clothed with the right of ownership for purposes of worship. Though the present condition is necessarily a transitory one, it appears, unfortunately, to offer one permanent element, i. e. the certain loss of all the property once belonging to the *fabriques*. The worst enemies of the French clergy must admit that, in order to safeguard its principles, the Church which they accuse of avarice has sacrificed without hesitation all its temporal goods. (See CONCORDAT; FRANCE; CONSALVI, ERCOLE; PIUS VII; NAPOLEON BONAPARTE.)

GEORGES GOYAU.

Concordia (CONCORDIA VENETA, or JULIA), DIOCESE OF (CONCORDIENSIS), suffragan of Venice. Concordia is an ancient Venetian city, called by the Romans Colonia Concordia, and is situated between the Rivers Tagliamento and Livenza, not far from the Adriatic. To-day there remain of the city only ruins and the ancient cathedral. During the fifth century the city was destroyed by Attila and again in 606 by the Lombards, after which it was never rebuilt. The eighty-nine martyrs of Concordia, who were put to death under Diocletian, are held in great veneration. Its first known bishop is Clarissimus, who, at a provincial synod of Aquileia in 579, helped to prolong the Schism of the Three Chapters; this council was attended by Augustinus, later Bishop of Concordia, who in 590 signed the petition presented by the schismatics to Emperor Mauricius. Bishop Johannes transferred the episcopal residence to Caorle (606), retaining, however, the title of Concordia. The medieval bishops seem to have resided near the ancient cathedral, and to have wielded temporal power, which, however, they were unable to retain. In 1587, during the episcopate of Matteo Sanudo, the episcopal residence was definitely transferred to Portogruaro. The diocese has a population of 258,315, with 129 parishes, 231 churches and chapels, 264 secular and 2 regular priests, 9 religious houses of women, and a Collegio di Pio X for African missions.

U. BENIGNI.

Concordia, DIOCESE OF (CONCORDIENSIS IN AMERICA), erected 2 August, 1887, is situated in the north-

western part of Kansas, U. S. A. It is bounded on the west by Colorado; on the north, by Nebraska; east, by the east lines of Washington, Riley, Geary, Dickinson; on the south, by the south lines of Dickinson, Saline, Ellsworth, Russell, Ellis, Trego, Gove, Logan, and Wallace Counties. Area, 26,685 sq. m.

In 1886 the Diocese of Leavenworth, Kansas, was divided into three new sees, Leavenworth, Wichita, and Concordia. On 9 August, 1887, the Rev. Richard Scannell of Nashville, Tennessee, was nominated first Bishop of Concordia; and governed the see until 30 January, 1891, when he was transferred to Omaha. The Bishop of Wichita, Kansas, then became administrator of Concordia, and it was not until 1897 that a bishop was again appointed in the person of the Rev. T. J. Butler of Chicago, who died in Rome, however, 17 July, 1897, before receiving episcopal consecration. On 21 September, 1898, the Very Rev. John F. Cunningham, Vicar-General of the Diocese of Leavenworth, was consecrated in that city, Bishop of Concordia. Born in 1842, in the County Kerry, Ireland, he made his studies at St. Benedict's College, Atchison, Kansas, and at St. Francis' Seminary, Milwaukee, Wisconsin, and was ordained priest at Leavenworth, 8 August, 1865. After his consecration he devoted himself to the multiplication of schools and institutions of learning and charity. The cathedral of Concordia, a stone structure of Gothic architecture, dedicated in 1902, took the place of a modest little church erected by the Rev. Louis Mollier in 1874.

In 1884 a boarding-school for young ladies under the supervision of the Sisters of St. Joseph was established near the cathedral. It has since moved to the imposing edifice known as the Nazareth Academy. It is the mother-house and novitiate of these sisters, who have branch houses, missions, and schools in Kansas, Illinois, Nebraska, Michigan, and Missouri. The old academy has been turned into a hospital. The Capuchin Fathers, who settled early in the western part of the diocese in and about Victoria, have built many churches and schools and have monasteries at Hays City, Munjor, and Victoria. They have also worked efficiently among the Russian immigrants of that portion of the diocese, aided by the Sisters of St. Agnes.

From 1898 to 1907 45 churches and 20 schools were built, exclusive of the opening of many new missions and stations. There are 51 secular and 15 religious priests, attending 91 churches, 30 stations, and 4 chapels. The children in the parochial schools number about 2482. Two academies, at Concordia and Abilene, have about 135 pupils. The Catholic population of the diocese is 26,125.

A. T. ENNIS.

Concubinage, at the present day, the state, more or less permanent, of a man and woman living together in illicit intercourse. In its strict sense it is used of those unions only in which the man and the woman are free from any obligation arising from a vow, the state of matrimony or Holy orders, or the fact of relationship or affinity; it is immaterial whether the parties dwell together or not, the repetition or continuance of illicit relations between the same persons being the essential element. However, the meaning conveyed by the term has not always been the same; in the Old Testament, for instance, a legitimate spouse, if of an inferior social grade, or a bondwoman, is often given the appellation of concubine, not to call in question the validity of her marriage, but to indicate that she did not share in her husband's rank or property nor in the administration of the household to the same extent as the principal wife. From Genesis, xxi, 9-14, we see that her dismissal and that of her children was permissible. But in those Scriptural times, when polygamy was permitted or at least tolerated, such a concubine was not

the only marriage partner. Thus Lia and Rachel, the first two spouses of Jacob, had the full social standing of wives, while Bala and Zelpha, both bondwomen, were his concubines, married for the purpose of bearing children for Rachel and Lia (Gen., xxx, 3, 9, 13). Here, therefore, the main difference between the state of legitimate marriage properly so called and that of legitimate concubinage is to be found in the disparity of rank which characterized the latter.

The meaning of the term in Roman law, and consequently in early ecclesiastical records and writings, was much the same; a concubine was a quasi-wife, recognized by law if there was no legal wife. She was usually of a lower social grade than her husband, and her children, though not considered the equals of those of the legal wife (*uxor*) were nevertheless termed natural (*naturales*) to distinguish them from spurious offsprings (*spurii*). For this legitimate concubinage the Roman law did not require the intention of the two parties to remain together until death as man and wife; the *Lex Julia* and the *Papia Poppæa* allowing both temporary and permanent concubinage. The former was always condemned as immoral by the Church, who excluded from the ranks of her catechumens all who adopted this mode of living, unless they abandoned their illicit temporal, or converted it into lawful permanent, wedlock. Permanent concubinage, though it lacked the ordinary legal forms and was not recognized by the civil law as a legal marriage, had in it no element of immorality. It was a real marriage, including the intention and consent of both parties to form a lifelong union. This the Church allowed from the beginning, while Pope Callistus I broke through the barrier of state law, and raised to the dignity of Christian marriage permanent unions between slave and free, and even those between slave and slave (*contubernium*).

The Council of Toledo, held in 400, in its seventeenth canon legislates as follows for laymen (for ecclesiastical regulations on this head with regard to clerics see **Celibacy**): after pronouncing sentence of excommunication against any who in addition to a wife keep a concubine, it says: "But if a man has no wife, but a concubine instead of a wife, let him not be refused communion; only let him be content to be united with one woman, whether wife or concubine" (Can. "Is qui", dist. xxxiv; Mansi, III, col. 1001). The refractory are to be excommunicated until such time as they shall obey and do penance.

With the destruction of the Roman Empire and the consequent decline of knowledge of the Roman law, its institution of legitimate concubinage fell into disuse, and concubinage came more and more to have only the modern significance, that of a permanent illicit union, and as such was variously proceeded against by the Church. The clandestine marriages which gradually came to be tolerated in the Middle Ages, as they lacked the formality of a public sanction by the Church, can be considered as a species of legitimate concubinage. The Council of Trent (1545-1563), Sess. XXIV, chap. i, not only renewed the old ecclesiastical penalties against concubinage, but added fresh ones, also forbade and rendered null and void all clandestine unions, thus forever doing away with even the appearance of legitimate concubinage. From that time the modern invidious idea of the term alone obtains. The decrees of Trent, however, were in force only in countries strictly Catholic; the new marriage law (Ne temere) of Pius X (1908) extends the prohibition against clandestine marriages to Catholics the world over.

H. A. GAYNOR.

Concupiscence in its widest acceptation is any yearning of the soul for good; in its strict and specific acceptation, a desire of the lower appetite contrary to reason. To understand how the sensuous and the rational appetite can be opposed, it should be borne in mind that their natural objects are altogether different. The object of the former is the gratification of the senses; the object of the latter is the good of the entire human nature and consists in the subordination of the lower to the rational faculties, and again in the subordination of reason to God, its supreme good and ultimate end. But the lower appetite is of itself unrestrained, so as to pursue sensuous gratifications independently of the understanding and without regard to the good of the higher faculties. Hence desires contrary to the real good and order of reason may, and often do, rise in it, previous to the attention of the mind, and once risen, dispose the bodily organs to their pursuit and solicit the will to consent, while they more or less hinder reason from considering their lawfulness or unlawfulness. This is concupiscence in its strict and specific sense. As long, however, as deliberation is not completely impeded, the rational will is able to resist such desires and withhold consent, though it be not capable of crushing the effects they produce in the body, and though its freedom and dominion be to some extent diminished. If, in fact, the will resists, a struggle ensues, the sensuous appetite rebelliously demanding its gratification, reason, on the contrary, clinging to its own spiritual interests and asserting its control. "The flesh lusteth against the spirit, and the spirit against the flesh."

From the explanation given, it is plain that the opposition between appetite and reason is natural in man, and that, though it be an imperfection, it is not a corruption of human nature. Nor have the inordinate desires (actual concupiscence) or the proneness to them (habitual concupiscence) the nature of sin; for sin, being the free and deliberate transgression of the law of God, can be only in the rational will; though it be true that they are temptations to sin, becoming the stronger and the more frequent the oftener they have been indulged. As thus far considered they are only sinful objects and antecedent causes of sinful transgressions; they contract the malice of sin only when consent is given by the will; not as though their nature were changed, but because they are adopted and completed by the will and so share its malice. Hence the distinction of concupiscence antecedent and concupiscence consequent to the consent of the will; the latter is sinful, the former is not.

The first parents were free from concupiscence, so that their sensuous appetite was perfectly subject to reason; and this freedom they were to transmit to posterity provided they observed the commandment of God. A short but important statement of the Catholic doctrine on this point may be quoted from Peter the Deacon, a Greek, who was sent to Rome to bear witness to the Faith of the East: "Our belief is that Adam came from the hands of his Creator good and free from the assaults of the flesh" (Lib. de Incarn., c. vi). In our first parents, however, this complete dominion of reason over appetite was no natural perfection or acquirement, but a preternatural gift of God, that is, a gift not due to human nature; nor was it, on the other hand, the essence of their original justice, which consisted in sanctifying grace; it was but a complement added to the latter by the Divine bounty. By the sin of Adam freedom from concupiscence was forfeited not only for himself, but also for all his posterity with the exception of the Blessed Virgin by special privilege. Human nature was deprived of both its preternatural and supernatural gifts and graces, the lower appetite began to lust against the spirit, and evil habits, contracted by personal sins, wrought disorder in the body, obscured the mind, and

weakened the power of the will, without, however, destroying its freedom. Hence that lamentable condition of which St. Paul complains when he writes: "I find then a law, that when I have a will to do good, evil is present with me. For I am delighted with the law of God, according to the inward man: but I see another law in my members, fighting against the law of my mind, and captivating me in the law of sin, that is in my members. Unhappy man that I am, who shall deliver me from the body of this death?" (Rom., vii, 21-25). Christ by His death redeemed mankind from sin and its bondage. In baptism the guilt of original sin is wiped out and the soul is cleansed and justified again by the infusion of sanctifying grace. But freedom from concupiscence is not restored to man, any more than immortality; abundant grace, however, is given him, by which he may obtain the victory over rebellious sense and deserve life everlasting.

The Reformers of the sixteenth century, especially Luther, proposed new views respecting concupiscence. They adopted as fundamental to their theology the following propositions: (1) Original justice with all its gifts and graces was due to man as an integral part of his nature; (2) concupiscence is of itself sinful, and, being the sinful corruption of human nature caused by Adam's transgression and inherited by all his descendants, is the very essence of original sin; (3) baptism, since it does not extinguish concupiscence, does not really remit the guilt of original sin, but only effects that it is no longer imputed to man and no longer draws down condemnation on him. This position is held also by the Anglican Church in its Thirty-nine Articles and its Book of Common Prayer.

The Catholic Church condemns these doctrines as erroneous or heretical. The Council of Trent (Sess. V, c. v) defines that by the grace of baptism the guilt of original sin is completely remitted and does not merely cease to be imputed to man. As to concupiscence the council declares that it remains in those that are baptized in order that they may struggle for the victory, but does no harm to those who resist it by the grace of God, and that it is called sin by St. Paul, not because it is sin formally and in the proper sense, but because it sprang from sin and incites to sin. Later on Pius V, by the Bull "Ex omnibus afflictionibus" (1 Oct., 1567), Gregory XIII, by the Bull "Provisionis Nostræ" (29 Jan., 1579), Urban VIII, by the Bull "In eminenti" (6 March, 1641), condemned the propositions of Bajus (21, 23, 24, 26), Clement XI, by the Constitution "Unigenitus", those of Quesnel (34, 35); and finally Pius VI, by the Bull "Auctorem fidei" (28 Aug., 1794), those of the Synod of Pistoja (16), which maintained that the gifts and graces bestowed on Adam and constituting his original justice were not supernatural but due to human nature. (See GRACE, JUSTIFICATION, SIN.)

JOHN J. MING.

Concurrents. See DOMINICAL LETTER.

Concursus, a special competitive examination prescribed in canon law for all aspirants to certain ecclesiastical offices to which is attached the cure of souls. There were no parish priests, properly speaking, during the first three hundred years of the Christian Era. A single church erected in the residential city of the bishop was the centre to which people living in city and country repaired on Sundays and festivals to hear Mass, receive instruction, and approach the Sacraments. Gradual growth in church-membership called for the erection of additional churches to accommo-

date the faithful. In these churches sacred functions were conducted by priests residing at the cathedrals. Consequently, the cathedral was the only parish in each diocese and the bishop, as chief pastor, exercised the care of souls throughout the diocese. A similar reason led to the organization of rural parishes during the course of the fourth century. With one or two exceptions, parishes were not organized in cities before the year 1000. The first step towards the establishment of city parishes, was taken in the Council of Limoges (1032). The amicable settlement of disputes involving a departure from the old regime paved the way for the organization of city parishes in France. Italy was not slow in following the example of France. (Lupi, "De parochis ante annum Christi millesimum", Bergamo, 1788; Muratori, "Dissert. de parœciis et plebibus" in "Antiq. Ital.", VI, 359; Nardi, "Dei parrochi, opera di antichità sacra", Pesaro, 1829-30; Drouyn, "L'histoire paroissiale" in "Rev. Cath. de Bordeaux", 1881, III, 233, and "Bull. hist.-arch. du dioc. Dijon", 1887, V, 225; Zorell, "Die Entwicklung des Parochialsystems" in "Archiv für kath. Kirchenrecht", 1902-3.) Departures from traditional methods gradually took place in other countries until the organization of city and country parishes became general throughout the Church (see PARISH).

The new regime paved the way for the admission of a general principle whereby ecclesiastical benefices, especially those of major importance, with cure of souls or parochial responsibility attached, were conferred on none save those duly qualified to hold them (see BENEFICE). Conscientious recognition of this principle was repeatedly inculcated, e. g. by Alexander III, Innocent III, and Gregory X. So long as ecclesiastics were not ordained absolutely, but for some specific office in each diocese, the canonical examinations for orders served naturally as a criterion to determine appointments to benefices. In time, however, this ancient method of ordination fell into decay, and under Innocent III (1198-1216) separate examinations were inaugurated as the most satisfactory method of making appointments to benefices that carried with them the cure of souls (*beneficia curata*). In order to attain greater security in providing for the salvation of souls, the Council of Trent (Sess. XXIV, ch. xviii) obliged bishops to assign to each parish a permanent parish priest who would know his parishioners. The better to realize this design, the same council instituted the concursus, a competitive examination given to candidates seeking appointment as pastors of (canonical) parishes. According to the Tridentine legislation, bishops must designate a day for this examination. At the specified time, such as have signified their intention of undergoing this test are examined by the bishop or his vicar-general and by no less than three synodal examiners (q. v.). The bishop is required to appoint the one he judges most worthy among those passing a satisfactory examination.

Though the Tridentine regulations are quite clear, some canonists claimed that failure to observe them rendered appointments illicit, not invalid, while others held that bishops were not bound to appoint the most worthy candidate, but merely one passing a creditable examination. To dissipate such errors Pius V issued the Constitution "In conferendis" (18 May, 1567). Later on, to forestall the possibility of groundless appeals on the part of dissatisfied competitors, as well as to ensure strict justice to candidates, Clement XI issued (18 Jan., 1721) a decree regarding the manner of conducting examinations, and the manner of dealing with those entering appeals against the decision of the examiners or the appointment of the bishop. However, Clement XI's regulations occasioned various complaints, and to remedy these difficulties, as well as to complete ecclesiastical legislation concerning the concursus, Benedict XIV issued the important Con-

stitution, "Cum illud" (14 Dec., 1742). A survey of the various stages of ecclesiastical legislation on this question will naturally exhibit a fair summary of its leading points.

In the first place, appointments to canonically erected parishes are null when no concursus has been held, unless the Tridentine legislation has been abrogated by long usage or special permission of the Holy See. Questions and answers pertaining to a concursus must be committed to writing. The matter of the examination is taken from theology (moral and dogmatic), liturgy, and ecclesiastical law, and is chiefly of a practical character. A lesson in catechism and a brief sermon may be prepared by the candidates. All competitors are examined in the same place and at the same time. The bishop is not justified in appointing simply a worthy competitor, but is obliged to choose the candidate he deems the most worthy among those approved by the examiners, whose office is exhausted when they have attested the worthiness (*idoneitas*) of the various competitors. The examiners, however, are bound to consider, not only the learning, but also the age, prudence, integrity, past services, and other qualifications of competitors. Candidates not appointed are at liberty to enter an appeal to the metropolitan, and then to the Holy See, but this does not suspend meanwhile the execution of the episcopal decision. The judge to whom such an appeal is made must base his decision on the proceedings of the concursus already held; this precludes a second concursus or the introduction of additional evidence. While this is the general ecclesiastical law, certain exceptions must be noted. This law does not cover appointments to parishes where the incumbent is not permanently installed nor to parishes whose revenues are not sufficient to justify such proceedings as a concursus involves. Nor, according to the common law, is a concursus advisable when the bishop, after hearing the advice of the synodal examiners, apprehends serious disorders in case a concursus were to take place.

The Third Plenary Council of Baltimore (1884) decreed that in the United States one in every ten parishes of a diocese should become a permanent rectorship. To inaugurate this plan, the council ruled that the establishment of such rectorships, and the appointment of incumbents thereunto should take place no later than three years after the promulgation of its decrees. Bishops were allowed to name permanent rectors for the first time without a concursus, though they were required to seek the advice of their consultors. Thereafter the appointments of such rectors are null unless a concursus takes place. In a special case the bishop may waive the concursus in favour of an ecclesiastic whose learning is well known or whose services to religion are noteworthy, provided the advice of the synodal or pro-synodal examiners is taken. (Conc. Plen. Balt. III, ch. vi, nos. 40 sqq.) The method of conducting a concursus in this country is substantially the same as that prescribed by the general law of the Church. Candidates for admission to a concursus must have creditably exercised the ministry in a diocese no less than ten years, and, during that time, must have given evidence of ability to direct the temporal and spiritual affairs of a parish. Bishops are obliged to appoint the most worthy of the competitors. Examiners should approve all worthy candidates. The right of determining the most worthy of those approved is vested in the bishop. Appeals (q. v.) and the method of treating them are subject to the general ecclesiastical law. Finally, where circumstances militate against the feasibility of a concursus as often as a permanent rectorship is to be filled, the Holy See has tolerated or allowed the holding, under the conditions already specified, of general annual examinations, to determine the standing of candidates in ecclesiastical science, while judgment concerning the other necessary qualifications is given whenever

a permanent rectorship is vacated. Those passing the examination once are counted worthy, in point of learning, for appointment to any permanent rectorship falling vacant within a given period, usually not more than six years, after such an examination. Should they wish to enjoy a like title after that period, success in another examination is required.

Canada has no permanent rectorships. As a consequence, the manner of appointing rectors of parishes is subject to the discretion of the bishops. (Gignac, *Comp. Juris eccl. ad usum cleri Canadensis*, Quebec, 1901, De Personis, p. 355.) In England no concursus is held to determine appointments to permanent rectorships (Taunton, *The Law of the Church*, London, 1906, p. 231). According to the decree of the Synod of Maynooth held in 1900, legislation similar to that of the Third Plenary Council of Baltimore was adopted for determining appointments to parishes in the various dioceses of Ireland. Since 1895 the law of the concursus obtains also in the Commonwealth of Australia (Second Plen. Council of Australia, No. 47 sqq.). The acts of diocesan and provincial councils, sessions of Roman Congregations, and papal conclaves testify that the Tridentine legislation concerning the concursus has long prevailed in Italy. The same regulations were introduced into Spain and Portugal in the sixteenth century; they obtain also in South America. While the observance of the law was general throughout France before the middle of the seventeenth century, changed conditions long since led to its abrogation in that country (Duballet, *Journal de droit canon.*, 1891, 452-74). In Belgium the Synod of Mechlin (1570) adopted the Tridentine regulations, but since then, save for Liège, the earlier freedom of episcopal collation has returned (Vering, 471). At present, German, Austrian, Hungarian, and Prussian bishops base their appreciation of a candidate's learning on the results of general examinations at regular intervals. Exception being made for minor differences, the above-described regulations govern the examinations in those countries. The consideration of other necessary qualifications is made whenever a vacancy occurs and an appointment follows. While in other places bishops may use their own discretion in appointing rectors, the Holy See bespeaks even in such places all possible conformity to the spirit of the Tridentine law. It may be added that in Austria, since Joseph II, the State has insisted on the parochial concursus, and has embodied it in art. 24 of the Concordat.

Condamine, CHARLES-MARIE DE LA, explorer and physicist, b. at Paris, 28 January, 1701; d. there 4 February, 1774. After a brief military career he turned to scientific pursuits and explored the coasts of Africa and Asia Minor on the Mediterranean. In 1735, he was selected to direct an expedition to the equatorial regions of South America in order to determine the form of the earth by measuring a meridian and thus establishing the flattening of our globe towards the poles. His companions were Pierre Bouguer and Louis Godin des Odonais. Two officers of the Spanish marine, Jorge Juan and Antonio de Ulloa, represented the Government of Spain on the voyage and also made independent observations in the interior. Condamine went to Ecuador and there began his labours, making a fairly accurate triangulation of the mountainous parts and the western sections of Ecuador. On this occasion he discovered that tall mountains deflect the

pendulum by their attraction. He remained eight years in South America, then returned to France, where he was chosen member of the Academy of Sciences and of the French Academy and received the cross of Saint Lazarus. While Condamine on account of his ambition and inclination to controversy was a disagreeable character, as an explorer and physicist he stands very high. The topographical work performed by him or under his direction suffered from the relative imperfections of the instruments in use in his time, but the results obtained were astonishing. Not only in physiography and physical geography, but in other branches also his expedition opened a new perspective to investigation. It was the starting point for more extensive explorations of tropical America. The countries he visited became and remained thereafter, classical ground in the annals of natural science. It is claimed that he introduced caoutchouc into Europe, and he also tried to introduce inoculation for smallpox into France.

Interest in Condamine centring in his South American work, books on that expedition become the prominent source of information regarding the most important period of his life; especially his own writings, chief of which were: *Journal du voyage fait par ordre du Roi à l'équateur* (Paris, 1751); *Relation abrégée d'un voyage dans l'intérieur de l'Amérique méridionale* (Paris, 1745; 2d ed., 1778); *Histoire des pyramides de Quito* (Paris, 1751). Frequent references are found in the works of HUMBOLDT, also, DE ULLOA AND JUAN, *Relación histórica del viaje á la América Meridional hecho de orden de S. Mag. para medir algunos grados de meridiano terrestre* (Madrid, 1748).

AD. F. BANDELIER.

Condillac, ETIENNE BONNOT DE, a French philosopher, b. at Grenoble, 30 September, 1715; d. near Beaugency (Loiret), 3 August, 1780. He was the brother of the Abbé de Mably and was himself Abbé de Mureaux. Thanks to the resources of his benefice, he was able to follow his natural inclinations and devote himself wholly to study, for which purpose he retired into solitude. About 1755 he was chosen preceptor of the Duke of Parma, the grandson of Louis XV, for whom he wrote his "Cours d'études". The education of the prince being completed, Condillac was elected in 1768 to succeed the Abbé d'Olivet as a member of the French Academy. He was present but once at the sessions—on the day of his reception—and then retired to his estate of Flux near Beaugency where he spent the remainder of his days.

From an intellectual point of view, Condillac's life may be divided into two periods. During the first he simply developed the theories of Locke. He published in 1746 his "Essai sur l'origine des connaissances humaines" which is a summary of Locke's "Essay concerning Human Understanding", and in 1749 his "Traité des systèmes" wherein he attacks the innate ideas and abstract systems of Descartes, Malebranche, Leibniz, Spinoza, and Boursier. The latter period, devoted to more original work, begins with the "Traité des sensations" in 1754, the central idea of which is to renew the human understanding by a fundamental analysis of the first data of mental experience in man's conscious life. In 1755 he published his "Traité des animaux", a sequel to the "Traité des sensations"; and then his "Cours d'études" which includes "Grammaire", "L'Art d'écrire", "L'Art de raisonner", "L'Art de penser", "L'Histoire générale des hommes et des empires", edited in 13 vols., Parma, 1769-1773. This was placed on the Index in 1836. In 1776 appeared his book on "Le commerce et le gouvernement considérés relativement l'un à l'autre" in which he exposes his principles of the right to property and his theory of economics. In 1780, a few months before his death, he published his "Logique", an elementary treatise composed at the request of the council of public instruction of Poland. His "Langue des calculs" was published unfinished only after his death in the first complete edition of his works (23 vols., Paris, 1798).

Condillac starts with Locke's empiricism, but Locke,

he thinks, did not go deeply enough into the problem of the origin of human knowledge. According to Locke our knowledge has a two-fold source, sensation and reflection; according to Condillac, not only all our ideas, but even all our mental operations and faculties spring from sensation alone as their ultimate source; all are merely different stages or forms in the development of sensation (*sensations transformées*). He illustrates his theory by the hypothesis of a statue, which, inert at the beginning, is supposed to acquire, one by one, the senses, from the most elementary, smell, to the most perfect, touch. With this last sense and its impression of resistance, the statue which had been previously mere odour, taste, colour, etc., now acquires the distinction between self and non-self. When it has all the senses, it has also the whole mental life. From sensation considered as representative spring all the faculties of the understanding. Attention is nothing but an exclusive sensation. When the object is present the impression is called actual sensation; the impression which remains after the disappearance of the object is called memory. Comparison is nothing more than a double attention; we cannot compare two objects or perceive two sensations without remarking that they are similar or dissimilar; to perceive similarities or differences is to judge; to reason is to draw a judgment from another judgment wherein it was contained. Moreover, all sensation is essentially affective, that is, painful or pleasant; under this aspect it is the source of all our active faculties. Need is the pain which results from the privation of an object whose presence is demanded by nature or habit; need directs all our energies towards this object; this very direction is what we call desire; desire as a dominant habit is passion; will is nothing but absolute desire, a desire made more energetic and more permanent through hope. What we call substance is simply the collection of sensations. What we call the *ego* is simply the collection of our sensations. Is there behind these sensations a something which supports them? We do not know. We express and summarize our sensations by means of words; we give the same name to all the individual objects which we judge to be similar; this name is what we call a general idea. Through general ideas or names we bring order into our knowledge; and this is precisely the purpose of reasoning and it is what constitutes science. Good reasoning, therefore, consists essentially in speaking well. Ultimately the work of human thought is to pass from the confused and complex content of the primitive sensations to clear and simple concepts; the essential and the unique method is analysis based on the principle of identity, and the perfect analytical method is the mathematical method. To reason is to calculate; what we call progress in ideas is only progress in expression. A science is only a well-constructed language, *une langue bien faite*, that is, simple, with signs precisely determined according to the laws of analogy. The primitive form of language is the language of action which is innate in us, synthetical and confused. Under pressure of the need of communication between men, these actions are interpreted as signs, decomposed, analyzed, and the spoken language takes the place of the language of action.

Condillac's theory of education is based on the idea that the child in its development must repeat the various states through which the race has passed—an idea which, with certain modifications, still survives. Another of his principles, more widely received at present, is that the educative process must be shaped in accordance with natural development. He also insists on the necessity of establishing a connexion between the various items of knowledge, and of training the judgment rather than burdening the memory. The study of history holds a large place in his system, and religion is of paramount importance. He insists that the prince, for whom the "Cours d'études" was written,

shall be more thoroughly instructed in matters of religion than the subjects whom he is later to govern. On the other hand, Condillac has been justly criticized for his attempt to make the child a logician and psychologist, even a metaphysician, before he has mastered the elements of grammar—a mistake which is obviously due to his error concerning the origin of ideas. The system of Condillac ends, therefore, in sensualistic empiricism, nominalism, and agnosticism.

If Condillac's works evince a certain precision of thought and vigour of reasoning they clearly betray a lack of observation and of the sense of reality. Most of the time he is blinded by the tendency to reduce all processes of thought to a single method, all ideas and principles to a single source. This tendency is well exemplified in his hypothesis of the statue. He supposes it to be mere passivity; and by this very supposition, instead of a man he makes it a machine or, as Cousin says, a sensible corpse. He attempts to reduce everything to mere sensation or impression, and in reality every step in what he calls a transformation is made under the influence of an activity and a principle which dominate and interpret this sensation, but which Condillac confounds with it. It is the operation of this activity and principle essentially distinct from sensation, that enables him to speak of attention, comparison, judgment, and personality. An attempt has been made to show that Condillac was the forerunner, in psychology, ethics, and sociology of the English school represented by Mill, Bain, and Spencer (Dewaule, Condillac et la psychologie anglaise contemporaine, Paris, 1892); but this view seems to overlook the influence of Locke upon his successors in England and the traditional tendency of English philosophical thought (cf. Picavet in *Revue philosophique*, XXXIX, p. 215).

G. M. SAUVAGE.

Condition (Lat. *conditio*, from *condo*, to bring, or put, together; sometimes, on account of a somewhat similar derivative from *condicere*, confused with this) is that which is necessary or at least conducive to the actual operation of a cause, though in itself, with respect to the particular effect of which it is the condition, possessing in no sense the nature of causality. Thus the notion of a condition is not that of a real principle such as actually gives existence to the effect produced (which is the case in the notion of cause); but rather of a circumstance, or set of circumstances, in which the cause readily acts, or in which alone it can act. Thus a sufficient light is a condition of my writing, though it in no sense is, as I myself am, the cause of the act of writing. The writing is the effect of the writer, and not of the light by which it was performed. A condition is also to be distinguished from an occasion, which latter imports no more than an event, or thing, by reason of the presence of which any other event, or thing, takes place—as, for example, the passage of the king in state is the occasion of my removing my hat—while the action, or actual operation, of the cause is absolutely dependent upon the presence of this particular one, or of some condition. Condition is, for this reason, distinguished, with respect to the operation of any particular cause, (1) as the condition *sine quâ non*, or condition without the presence of which this cause is wholly inoperative, and (2) as the condition simply such—when some one of several possible ones is necessary to the actual operation of the cause. To the former class belong such conditions as can be supplied by no others, such as, for example, that of the combustion of wood. A

fire will not burn wood unless applied to it. The application of the fire to the wood is said to be a condition *sine quâ non* of the burning of the wood by the fire. A condition may further be considered in one of two different forms, either as preparing, disposing, or applying the causality of a cause towards its exercise in the production of an effect, or as removing some obstacle that hinders the action of the cause. This latter form of condition is sometimes known as the *causa removens prohibens*. The blinds of a room must be drawn up in order that the sunlight may enter and illuminate the objects in it. It is to be noted that this is really a condition, and not a cause, of the event considered. The illumination of the objects in the room is the effect of the sunlight entering it. This same distinction appears in the "necessary" or "sufficient" conditions, much employed in mathematical science. A sufficient condition is one in which, when the antecedent is present, it is always followed by the consequent. A necessary condition is one in which the consequent never exists unless this particular antecedent be given.

Some modern systems of philosophy regard condition in the sense of what in the Scholastic view would be called accidental modification. Thus Kant upholds the assertion that time and space condition, or are the conditions of, our experience, as *a priori* forms. In this sense also, Hegel makes the conditioned entity equivalent to the finite entity; as it would indeed also be considered in Scholastic thought. That which has accidents, or is conditioned in the sense of limitations or definition, is necessarily, as contingent, in sharp distinction to the absolute. John Stuart Mill would have the framework, or complete setting in which anything exists accounted as its conditions; and all the necessary antecedents, or conditions, the cause of the thing. Thus it would be conditioned by its complex relationships—again an accidental modification in the Scholastic sense. We consequently find, in modern philosophical usage generally, and especially since Hamilton's theory of the Unconditioned was formulated, that the "conditioned" and the "unconditioned" are used as equivalents of the "necessary" and "contingent" of the Schoolmen, in the sense that the "necessary" entity is conceived of as absolute of all determination other than its own *aseity*, while all "contingent" entity is defined and limited by a composition in which one of the factors is potentiality. Hamilton's philosophy of the Unconditioned works out curiously in the department of ontology. His views were first given to the world in the form of an article in the *Edinburgh Review* (October, 1829), in which he criticized the philosophy of Cousin with regard to the knowledge of the Absolute. Victor Cousin maintained that we possess an immediate knowledge of the Unconditioned, Absolute, or Infinite in consciousness. According to Hamilton, the Unconditioned is either the unconditionally limited or the unconditionally unlimited. In either case the Unconditioned is unthinkable. For all human knowledge is relative, in that, "of existence, absolutely and in itself, we know nothing" (*Met.*, Lect. viii). As a consequence of this doctrine of the relativity of knowledge, it follows that we are incapable of knowing that which is unconditioned by relativity. "The mind can conceive, and consequently can know only the limited, and the conditionally limited". "Conditional limitation", he says again (*Logic*, Lect. v) "is the fundamental law of the possibility of thought." Hence, while the Unconditioned may exist, we cannot know it by experience, intuition, or reasoning. Hamilton undertakes to explain his doctrine by the illustration of the whole and the part. It is impossible to conceive a whole to which addition may not be made, a part from which something may not be taken away. Hence the two extreme unconditionates are such, that neither can be conceived as possible, but

one of them must be admitted as necessary. Of this, the Unconditioned, we have no notion either negative or positive. It is not an object of thought. From such considerations it follows that we cannot conclude either as to the existence or non-existence of the Absolute. On the other hand, while our knowledge is of the limited, related, and finite, our belief may go out to that which has none of these characteristics. Though we cannot know, we may believe—and, by reason of a supernatural revelation, if such be given, must believe—in the existence of the Unconditioned as above and beyond all that which is conceivable by us. Mill very carefully examines Hamilton's use of the word *inconceivable*, and finds that it is applied in three senses, in one of which all that is inexplicable, including the first principles, is held to be inconceivable. The same doctrine was advanced, in a slightly modified form, by Dean Mansel, in the Bampton Lecture of 1858. Whatever knowledge we are capable of acquiring of the Unconditioned is negative. As we can rationally, therefore, form no positive notion or concept of God, our reason must be helped and supplemented by our faith in revelation. Both Mansel's and Hamilton's expositions of the doctrine of relativity are in reality assertions of rational, or philosophical, agnosticism.

Thus, while professing to be theists, writers of this stamp are not properly to be accounted such in the strictly philosophical sense. The rational agnosticism that lies at the base of their theistic system, necessitating, as it does, an appeal to faith and revelation, vitiates it as a philosophy. The thesis advanced by them may, however, be criticized and amended in the following manner. It is true that the entire content of the Universe must be regarded, in comparison with its Creator, as limited or conditioned. It does not therefore follow that no rational inference can be drawn from the conditioned to the Absolute. On the contrary, the nerve of the theistic inference, tacitly, if not expressly, presupposed in all forms of the theistic argument, lies in the Thomistic distinction between the Necessary and the possible (or contingent). The existence of contingent beings, limited or conditioned things, postulates the existence of the Necessary Being, the one Unlimited and Unconditioned Thing. The argument in its developed form may be seen in the article *THEISM*. But it may be here pointed out that the inference from the contingent to the Necessary—necessitated, as it is, by the normal psychological action of the discursive reason—presupposes certain principles which are not always kept clearly in view. The Scholastic synthesis recognizes the reality of the contingent. It asserts that the human intelligence can rise above the phenomena of sense-perception to the actual substance that provides a basis and offers a rational explanation, at the same time psychological and ontological, of and for these. And it is in the changes and alterations of "substance" (see *HYLOMORPHISM*) that it perceives the essential contingency of all created things. From this perception it rises, by a strictly argumentative process, to the assertion of the Necessary or Unconditioned—and this with no appeal either to revelation or to faith. The knowledge of the Unconditioned thus reached is of two kinds; firstly, that the Unconditioned *is*, and that its existence is necessarily to be inferred from the existence of the possible or contingent (conditioned); secondly, that, as Unconditioned, or Necessary, the conceptions that we possess of it are to be found principally by the way of the negation of imperfections. Thus the Unconditioned, with regard to time, is Eternal; with regard to space, Unlimited, Infinite, Omnipresent; with regard to power, Omnipotent; and so on through the categories, removing the imperfections and asserting the plenitude of perfection. The argument may be found stated in the "*Summa Theologica*" of St.

Thomas (I, Q. ii, a. 3), where it is given as the *third way of knowing Utrum Deus sit*.

Conditional Baptism. See BAPTISM.

Conecte, THOMAS, Carmelite reformer, b. at Rennes towards the end of the fourteenth century; d. at Rome, 1433. He joined the Carmelites and distinguished himself by indiscreet zeal. He preached with much success at Cambrai, Tournai, Arras, etc., in his sermons vehemently denouncing the prevailing fashions in female headgear, with the result that those who dressed thus at his sermons despoiled themselves forthwith of their ornaments; gamblers also burned their playing cards and dice. Having intervened against the discrediting life of certain priests, he had to seek safety in flight. He now strove to reform his own order, for which purpose he went to Italy, where with some others he introduced a strict observance in the convent near Florence, which gradually developed into the Congregation of Mantua. He visited this latter convent in 1432 and thence proceeded to Venice, and finally to Rome, where the manners of the Curia provoked anew his violent language and occasioned a charge of conspiracy against the pope. Apprehended at the instigation of the procurator and of Cardinal de la Roche-Taille, protector of the order, he was condemned as a heretic and publicly burned. It was said that Eugene IV was afterwards sorry for this sentence, which, if not unjust, was certainly too severe; but this does not justify certain Carmelite authors considering him a saint, as several whom Bale quotes have done.

Conecte is supposed to have written *De Reformatione quædam Monita*, alluded to by NICHOLAS KENTON; cf. ARGENTREUS, *Histor. Britannicæ minoris*, II, cap. xliii; de S. ETIENNE, *Bibliotheca Carmel.*, s.v.

Conference of Catholic Colleges. See EDUCATIONAL ASSOCIATION, CATHOLIC.

Conferences, ECCLESIASTICAL, are meetings of clerics for the purpose of discussing, in general, matters pertaining to their state of life, and, in particular, questions of moral theology and liturgy.

HISTORICAL SKETCH.—The origin of ecclesiastical conferences has been sought in the assemblies of hermits of the Egyptian deserts. As early as the third century, it was customary for these anchorites to meet together to discuss matters relating to asceticism and the eremitical life. When, later on, monasteries were instituted, somewhat similar conferences were held among the monks. There seems, however, to be little in common between these monastic assemblies and the pastoral collations, or conferences, of the present time. The more direct source of the latter are the quasi-synodal meetings of the clergy ordained by various decrees of the ninth century, such as those of Hincmar of Reims and Riculfus of Sion in Switzerland, and the Capitularies of Charlemagne. Such assemblies were looked upon as supplements of, or pendants to, the diocesan synods, and were intended principally for those of the clergy who found it difficult or impossible to assist at the regular synods. These clerics were ordered to meet at a convenient place, in their various districts, under the presidency of the dean or archdeacon, and their assemblies were

called *Calendæ*, because held on the first of the month. Other terms applied to such meetings were *consistories*, *sessions*, and *capitular conferences*. We find them prescribed in England by the Council of Exeter in 1131 and the Council of London in 1237. In the sixteenth century ecclesiastical conferences received a new impulse. St. Ignatius Loyola prescribed them in his constitution (1540) for members of his order. Later, Clement VIII and Urban VIII commanded that all houses of the regular clergy have conferences twice a week on matters pertaining to moral theology and Holy Scripture. The main promoter of conferences among the secular clergy was St. Charles Borromeo, Archbishop of Milan, who treated of them specifically in a synod at Milan in 1565, when introducing the reforms decreed by the Council of Trent. Cardinal Borromeo ordered that the conferences be held monthly, and that they be presided over by the vicar forane or dean. Gradually the custom spread through the various ecclesiastical provinces; and at present these meetings are held in accordance with laws promulgated in plenary or provincial councils or synods. Many of the popes have strongly urged on the bishops of various countries the necessity and utility of the conferences, and Innocent XIII commanded that when bishops make their visit to Rome (*ad limina*) they should report, among other things, whether clergy conferences are held in their dioceses. There seems, however, to be no general law of the Church which makes these ecclesiastical meetings obligatory.

DIOCESAN LAWS.—The holding of conferences has been introduced among the clergy of all English-speaking countries, in virtue of ordinances promulgated at councils or synods. Thus the Second Plenary Council of Baltimore (1866) declares: "As an adjunct to diocesan synods and in lieu of their frequent celebration, let there be theological conferences of the priests, which will preserve the rudiments of the sacred science in the minds of all, promote a healthy and uniform method for the direction of souls, dispel mental inertia, and afford an opportunity for eliminating abuses. We greatly desire that these conferences be held four times a year by priests who can conveniently meet; and in the rural districts at least twice a year. All who have care of souls, whether seculars or regulars, should attend them" (No. 68). The Third Plenary Council (1884) treats in title v of the education of the clergy and devotes the fifth chapter to theological collations or conferences. It quotes the words of Pope Benedict XIV: "Some priests who are at first admirable directors of souls later lose their previous knowledge of moral theology, by neglect of study, so that from being masters of the science they can scarcely be called novices in it, since they retain only confused and imperfect recollections of its first rudiments." In consequence, the Fathers of Baltimore renew the decree of the previous plenary council as to the frequency of these conferences, and, after declaring them obligatory on all having care of souls, they add: "Nor can those confessors consider themselves exempt, who, although not attached to any certain church, hear the confessions of religious women in their convents or of laymen in public churches. Those who frequently absent themselves without legitimate cause and the permission of the Ordinary should be punished." The Second Council of Quebec (1854) declares (Decr. 14): "Ecclesiastical conferences will promote zeal and love for study. Every one knows how useful they are for increasing mutual charity among priests and for instructing and confirming them in sacred doctrine. We desire all, especially those who have pastoral duties, to assist at them faithfully according to the method and time prescribed by their bishops."

For Ireland, the National Synod of Thurles (1850) ordained: "Since what the pastors have learnt as

scholars can easily be forgotten, unless it be called to memory by use, we recommend that theological conferences be held according to custom, at least four times a year. In them such questions as pertain to practice should be especially treated." We find the following decree (No. 6) emanating from the First Provincial Council of Australia (1844): "We ordain that theological conferences be held in every deanery, at least three times a year, where it can be done without great inconvenience." In 1852, the First Provincial Council of Westminster (Decr. 24) made the following rules for England: "We desire most earnestly that conferences on moral questions or on other theological or liturgical matters be held in all dioceses at certain stated times. According to locality, let the bishops determine, whether the whole clergy of the diocese should convene together under the bishop's presidency, or whether a number of conferences be held in different vicariates under the presidency of the vicars forane. The obligation to attend these conferences and take part in them is binding on all secular priests and on all regulars (saving their rights) having cure of souls." As to regulars, we have the following provision in the "Romanos Pontifices" of Leo XIII: "We declare that all rectors of missions, by reason of their office, must assist at the conferences of the clergy; and we also decree and command that there be present likewise the vicars and other regulars, having the usual missionary faculties, who reside in small communities." It will be noticed that the pope simply "declares" religious rectors to have an obligation to assist at the conferences, for this is in accordance with common law; but as he derogates from that law in prescribing that other regular missionaries who dwell in small communities should also attend, he uses the words *decree and command*. The pope gives the reason why he makes the distinction between regulars inhabiting large and small communities; the former have their own domestic conferences, the latter either do not have them at all, or they are not likely to be fruitful.

SUBJECT MATTER OF CONFERENCES.—Among the questions to be answered by bishops at the visit *ad limina* is: "Are conferences held on moral theology or cases of conscience, and also on sacred rites? How often are they held, who attend them, and what results are obtained from them?" It is evident from this question that the main matters to be discussed are those pertaining to moral theology and liturgy. If these be given proper consideration, other subjects may also be considered, such as questions of dogmatic theology, canon law, Biblical science, and similar things. According to the prescriptions of St. Charles Borromeo, a case of conscience should be proposed at these meetings and each one present should, in turn, be asked his opinion. After this, the presiding officer makes a short summary and gives his decision. The Third Council of Baltimore wishes that questions be proposed by the bishops on matters of discipline and doctrine. Cases of conscience are to be solved in writing by all who attend; but only two, chosen by lot, are to read their solutions. Questions on Sacred Scripture, dogmatic theology, canon law, and sacred liturgy are to be answered by those who have been appointed for the purpose at the previous conference. The Provincial Council of Tuam, Ireland (1817), obliges all who cannot attend the meeting to send their solution of the cases in writing. The First Council of Quebec made a similar decree. The Council of Westminster requires that all who come should be prepared to respond to questions concerning the matters proposed. The Provincial Council of the English, Dutch, and Danish colonies (1854) prescribes that the dean send the solution of the cases either to the bishop or to some priest whom the latter shall designate. Among the decrees of the First Council of Westminster (No. 24) is the following: "The con-

ferences are obliged to send to the bishop the solutions of the cases or the conclusions reached, to be examined and corrected by him. Each bishop in his own diocese is to determine the method to be observed and the matters to be considered in the conferences." Pius IX wrote as follows to the bishops of Austria in 1856: "Let conferences, especially concerning moral theology and sacred rites, be instituted by you, which all the priests should attend and bring in writing the explanation of a question proposed by you. They should also discuss, for such length of time as you may prescribe, matters connected with moral theology and ritual practice, after some one of the priests has delivered a discourse on the particular obligations of the sacerdotal order."

Confession (Lat. *confessio*).—Originally used to designate the burial-place of a confessor or martyr (known also as a *memoria* or *μαρτύριον*), this term gradually came to have a variety of applications: the altar erected over the grave; the underground *cubiculum* which contained the tomb; the high altar of the basilica erected over the confession; later on in the Middle Ages the basilica itself (Joan. Bar., *De invent. s. Sabini*); and finally the new resting-place to which the remains of a martyr had been transferred (Ruinar, II, 35). In case of translation the relics of a martyr were deposited in a crypt below the high altar, or in a hollow space beneath the altar, behind a *transenna* or pierced marble screen such as were used in the catacombs. Thus the tomb was left accessible to the faithful who wished to touch the shrine with cloths (*brandea*) to be venerated in their turn as "relics". In the Roman church of S. Clemente the urn containing the remains of St. Clement and St. Ignatius of Antioch is visible behind such a *transenna*. Later still the term *confession* was adopted for the hollow reliquary in an altar (*Ordo Rom. de dedic. altaris*). The oil from the numerous lamps kept lighted in a confession was considered as a relic. Among the most famous subterranean confessions of Rome are those in the churches of S. Martino ai Monti; S. Lorenzo fuori le Mura, containing the bodies of St. Laurence and St. Stephen; S. Prassede containing the bodies of the two sisters Sts. Praxedes and Pudentiana. The most celebrated confession is that of St. Peter. Over the tomb of the Apostle Pope St. Anacletus built a *memoria*, which Constantine when building his basilica replaced with the Confession of St. Peter. Behind the brass statues of Sts. Peter and Paul is the niche over the grated floor which covers the tomb. In this niche is the gold coffer, the work of Benvenuto Cellini which contains the palliums to be sent to archbishops *de corpore b. Petri* according to the Constitution "Reverendissimum ecclesiasticarum" of Benedict XIV (12 Aug., 1748). All through the Middle Ages the palliums after being blessed were let down through the grating on to the tomb of the Apostle, where they remained for a whole night (Phillips, *Kirchenrecht*, V, 624, n. 61). During the restoration of the present basilica in 1594 the floor gave way, revealing the tomb of St. Peter and on it the golden cross weighing 150 pounds placed there by Constantine, and inscribed with his own and his mother's names.

Confessional. See PENANCE.

Confession Books. See PENITENTIALS.

Confessions of Faith. See FAITH, CONFESSIONS OF.

Confessor.—(1) *Etymology and primitive meaning.*—The word *confessor* is derived from the Latin *confiteri*, to confess, to profess, but it is not found in writers of the classical period, having been first used by the Christians. With them it was a title of honour to designate those brave champions of the Faith who had confessed Christ publicly in time of persecution and had been punished with imprisonment, torture, exile, or labour in the mines, remaining faithful in their confession until the end of their lives. The title thus distinguished them from the martyrs, who were so called because they underwent death for the Faith. The first clear evidence of the distinction just spoken of is found in an epitaph which is recorded by De Rossi (*Bullettino di archeologia cristiana*, 1864, p. 30): "A Domino coronati sunt beati confessores comites martyrum Aurelius Diogenes confessor et Valeria Felicissima vivi in Deo fecerunt" [The blessed confessors, companions of the martyrs, have been crowned by the Lord. Aurelius Diogenes, confessor, and Valeria Felicissima, put up (this monument) during their lifetime]. Among writers St. Cyprian is the first in whose works it occurs (*Ep.* xxxvii): "Is demum confessor illustris et verus est de quo postmodum non erubescit Ecclesia sed gloriatur" (That confessor, indeed, is illustrious and true for whom the Church does not afterwards blush, but of whom she boasts); he shows in the passage that suffering alone for the Faith did not merit the title of confessor unless perseverance to the end had followed. In this meaning the title is of more frequent occurrence in the Christian writers of the fourth century. Sidonius Apollinaris (*Carmen* xvii), to quote one instance, writes, "Sed confessorem virtutum signa sequuntur" (But signs of power follow the confessor). A similar use may be verified in Lactantius, "De morte persecut.", xxxv; St. Jerome, *Ep.* lxxxii, 7; Prudentius, *Peri stroph.*, 55, etc.

(2) *Later meaning.*—After the middle of the fourth century we find *confessor* used to designate those men of remarkable virtue and knowledge who confessed the Faith of Christ before the world by the practice of the most heroic virtue, by their writings and preachings, and in consequence began to be objects of veneration, and had chapels (*martyria*) erected in their honour, which in the previous centuries had been the especial privilege of the martyrs. In the Eastern Church the first confessors who received a public cultus were the abbots St. Anthony and St. Hilarion, also St. Philogonus and St. Athanasius. In the West Pope St. Silvester was so venerated even before St. Martin of Tours, as can be shown from the "Kalendarium" published by Fouteau—a document which is certainly of the time of Pope Liberius (cf. "Prænotata" in the aforesaid "Kalendarium", iv).

(3) *Modern meaning.*—Since the time when the Roman pontiffs reserved to themselves definite decision in causes of canonization and beatification, the title of confessor (pontiff, non-pontiff, doctor) belongs only to those men who have distinguished themselves by heroic virtue which God has approved by miracles, and who have been solemnly adjudged this title by the Church and proposed by her to the faithful as objects of their veneration. (See MARTYRS; PERSECUTIONS; BEATIFICATION AND CANONIZATION.) For the office of confessor in the Sacrament of Penance see PENANCE, SACRAMENT OF.

CAMILLUS BECCARI.

Confirmation, a sacrament in which the Holy Ghost is given to those already baptized in order to make them strong and perfect Christians and soldiers of Jesus Christ. It has been variously designated: *βε-*

βαλωσις or *confirmatio*, a making fast or sure; *τελειωσις* or *consummatio*, a perfecting or completing, as expressing its relation to baptism. With reference to its effect it is the "Sacrament of the Holy Ghost", the "Sacrament of the Seal" (*signaculum, sigillum, σφραγίς*). From the external rite it is known as the "imposition of hands" (*ἐπιθεσις χειρῶν*), or as "anointing with chrism" (*unctio, chrismatio, χρίσμα, μύρον*). The names at present in use are, for the Western Church, *confirmatio*, and for the Greek, *τὸ μύρον*.

I. PRESENT PRACTICE AND DOCTRINE.—*Rite.*—In the Western Church the sacrament is usually administered by the bishop. At the beginning of the ceremony there is a general imposition of hands, the bishop meantime praying that the Holy Ghost may come down upon those who have already been regenerated: "send forth upon them thy sevenfold Spirit, the Holy Paraclete." He then anoints the forehead of each with chrism, saying: "I sign thee with the sign of the cross and confirm thee with the chrism of salvation, in the name of the Father and of the Son and of the Holy Ghost." Finally he gives each a slight blow on the cheek saying: "peace be with thee". A prayer is added that the Holy Spirit may dwell in the hearts of those who have been confirmed, and the rite closes with the bishop's blessing.

The Eastern Church omits the imposition of hands and the prayer at the beginning, and accompanies the anointing with the words: "the sign [or seal] of the gift of the Holy Ghost." These several actions symbolize the nature and purpose of the sacrament: the anointing signifies the strength given for the spiritual conflict; the balsam contained in the chrism, the fragrance of virtue and the good odour of Christ; the sign of the cross on the forehead, the courage to confess Christ, before all men; the imposition of hands and the blow on the cheek, enrolment in the service of Christ which brings true peace to the soul. (Cf. St. Thomas, "Summa Theol.", III, q. lxxii, a. 4. For interesting details regarding the blow on the cheek, see "Am. Ecl. Review", I, 161.)

Minister.—The bishop alone is the *ordinary* minister of confirmation. This is expressly declared by the Council of Trent (Sess. VII, De Conf., C. iii). A bishop confirms validly even those who are not his own subjects; but to confirm licitly in another diocese he must secure the permission of the bishop of that diocese. Simple priests may be the *extraordinary* ministers of the sacrament provided they obtain special delegation from the pope. This has often been granted to missionaries. In such cases, however, the priest cannot wear pontifical vestments. He is obliged to use chrism blessed by a Catholic bishop and to observe what is prescribed in the Instruction issued by the Propaganda, 21 March, 1774 (appendix to Roman Ritual). In the Greek Church, confirmation is given by simple priests without special delegation, and their ministration is accepted by the Western Church as valid. They must, however, use chrism blessed by a patriarch.

Matter and Form.—There has been much discussion among theologians as to what constitutes the essential matter of this sacrament. Some, e. g. Aureolus and Petavius, held that it consists in the imposition of hands. Others, with St. Thomas, Bellarmine, and Maldonatus, maintain that it is the anointing with chrism. According to a third opinion (Morinus, Tapper) either anointing or imposition of hands suffices. Finally, the most generally accepted view is that the anointing and the imposition of hands conjointly are the matter. The "imposition", however, is not that with which the rite begins but the laying on of hands which takes place in the act of anointing. As Peter the Lombard declares: *Pontifex per impositionem manus confirmandos ungit in fronte* (IV Sent., dist. xxxiii, n. 1; cf. De Augustinis, "De re sacramentaria", 2d ed., Rome, 1889), 1. The chrism employed must be a mixture of

olive-oil and balsam consecrated by a bishop. (For the manner of this consecration and for other details, historical and liturgical, see *CHRISM*.) The difference regarding the form of the sacrament, i. e. the words essential for confirmation, has been indicated above in the description of the rite. The validity of both the Latin and the Greek form is unquestionable. Additional details are given below in the historical outline.

Recipient.—Confirmation can be conferred only on those who have already been baptized and have not yet been confirmed. As St. Thomas says: "Confirmation is to baptism what growth is to generation. Now it is clear that a man cannot advance to a perfect age unless he has first been born; in like manner, unless he has first been baptized he cannot receive the Sacrament of Confirmation" (Summ. Th., III, Q. lxxii, a. 6). They should also be in the state of grace; for the Holy Ghost is not given for the purpose of taking away sin but of conferring additional grace. This condition, however, refers only to lawful reception; the sacrament is validly received even by those in mortal sin. In the early ages of the Church, confirmation was part of the rite of initiation, and consequently was administered immediately after baptism. When, however, baptism came to be conferred by simple priests, the two ceremonies were separated in the Western Church. Further, when infant baptism became customary, confirmation was not administered until the child had attained the use of reason. This is the present practice, though there is considerable latitude as to the precise age. The Catechism of the Council of Trent says that the sacrament can be administered to all persons after baptism, but that this is not expedient before the use of reason; and adds that it is most fitting that the sacrament be deferred until the child is seven years old, "for Confirmation has not been instituted as necessary for salvation, but that by virtue thereof we might be found well armed and prepared when called upon to fight for the faith of Christ, and for this kind of conflict no one will consider children, who are still without the use of reason, to be qualified." (Pt. II, ch. iii, 18.) Such, in fact, is the general usage in the Western Church. Under certain circumstances, however, as, for instance, danger of death, or when the opportunity of receiving the sacrament is but rarely offered, even younger children may be confirmed. In the Greek Church and in Spain, infants are now, as in earlier times, confirmed immediately after baptism. Leo XIII, writing 22 June, 1897, to the Bishop of Marseilles, commends most heartily the practice of confirming children before their first communion as being more in accord with the ancient usage of the Church.

Effects.—Confirmation imparts (1) an increase of sanctifying grace which makes the recipient a "perfect Christian"; (2) a special sacramental grace consisting in the seven gifts of the Holy Ghost and notably in the strength and courage to confess boldly the name of Christ; (3) an indelible character by reason of which the sacrament cannot be received again by the same person. (See *CHARACTER*.) A further consequence is the spiritual relationship (see *RELATIONSHIP, SPIRITUAL*) which the person confirming and the sponsor contract with the recipient and with the recipient's parents. This relationship constitutes a diriment impediment (see *IMPEDIMENTS*) to marriage. It does not arise between the minister of the sacrament and the sponsor nor between the sponsors themselves.

Necessity.—Regarding the obligation of receiving the sacrament, it is admitted that confirmation is not necessary as an indispensable means of salvation (*necessitate medii*). On the other hand, its reception is obligatory (*necessitate precepti*) "for all those who are able to understand and fulfil the Commandments of God and of the Church. This is especially true of those who suffer persecution on account of their religion or are exposed to grievous temptations against faith or are in danger of death. The more serious the

danger so much greater is the need of protecting oneself". (Conc. Plen. Balt. II, n. 250.) As to the gravity of the obligation, opinions differ, some theologians holding that an unconfirmed person would commit mortal sin if he refused the sacrament, others that the sin would be at most venial unless the refusal implied contempt for the sacrament. Apart, however, from such controversies the importance of confirmation as a means of grace is so obvious that no earnest Christian will neglect it, and in particular that Christian parents will not fail to see that their children are confirmed.

Sponsors.—The Church prescribes under pain of grievous sin that a sponsor, or godparent, shall stand for the person confirmed. The sponsor should be at least fourteen years of age, of the same sex as the candidate, should have already received the Sacrament of Confirmation, and be well instructed in the Catholic Faith. From this office are excluded the father and mother of the candidate, members of a religious order (unless the candidate be a religious), public sinners, and those who are under public ban of interdict or excommunication. Except in case of necessity the baptismal godparent cannot serve as sponsor for the same person in confirmation. Where the opposite practice obtains, it should, according to a decree of the Sacred Congregation of the Council, 16 Feb., 1884, be gradually done away with. The Second Plenary Council of Baltimore (1866) declared that each candidate should have a sponsor, or that at least two godfathers should stand for the boys and two godmothers for the girls (n. 253). See also prescriptions of the First Council of Westminster. Formerly it was customary for the sponsor to place his or her right foot upon the foot of the candidate during the administration of the sacrament; the present usage is that the sponsor's right hand should be placed upon the right shoulder of the candidate. The Holy Office decreed, 16 June, 1884, that no sponsor could stand for more than two candidates except in case of necessity. The custom of giving a new name to the candidate is not obligatory; but it has the sanction of several synodal decrees during the fifteenth and sixteenth centuries. The Fifth Council of Milan, under St. Charles Borromeo, insisted that a candidate whose name was "vile, ridiculous, or quite unbecoming for a Christian" should receive another at Confirmation" (cf. Martène).

It is clear from the diversity of practice at the present day, that there is much uncertainty as to the doctrine concerning confirmation. It is certain that the sacrament is validly and lawfully administered in the Church; but this does not solve the theological questions regarding its institution, matter, form, and minister. At the time of the Council of Trent the difficulty was felt to be so great that the assembled Fathers contented themselves with only a few canons on the subject. They defined that confirmation was not "a vain ceremony but a true and proper sacrament"; and that it was not "in olden days nothing but a sort of catechism in which those who were entering upon youth gave an account of their faith in the face of the Church" (can. i). They did not define anything specific about the institution by Christ; though in treating of the sacraments in general they had already defined that "all the sacraments of the New Law were instituted by Christ our Lord" (Sess. VII, can. i). Nothing whatever was said about the form of words to be used; and regarding the matter they merely condemned any one who should maintain "that they who ascribe any virtue to the sacred chrism of confirmation offer an outrage to the Holy Ghost" (can. ii). The third and last canon defined that the "ordinary" minister of the sacrament is a bishop only, and not any simple priest. This guarded language, so different from the definite canons on some of the other sacraments, shows that the council had no intention of deciding the questions at issue among theologians regard-

ing the time and manner of the institution by Christ (direct or indirect institution), the matter (imposition of hands or anointing, or both), the form ("I sign thee", etc., or "the seal", etc.), and the minister (bishop or priest). Elsewhere (Sess. VII, can. ix) the council defined that "in confirmation a character is imprinted in the soul, that is, a certain spiritual and indelible sign on account of which the sacrament cannot be repeated"; and again (Sess. XXIII) the council declared that "bishops are superior to priests; they administer the Sacrament of Confirmation; they ordain the ministers of the Church; and they can perform many other things over which functions others of an inferior rank have no power". Concerning the administration of the sacrament from the earliest times of the Church, the decree of the Inquisition (Lamentabili sane, 3 July, 1907) condemns the proposition (44): "There is no proof that the rite of the Sacrament of Confirmation was employed by the Apostles; the formal distinction, therefore, between the two sacraments, Baptism and Confirmation, does not belong to the history of Christianity". The institution of the sacrament has also been the subject of much discussion as will appear from the following account.

II. HISTORY.—The Sacrament of Confirmation is a striking instance of the development of doctrine and ritual in the Church. We can, indeed, detect much more than the mere germs of it in Holy Scripture; but we must not expect to find there an exact description of the ceremony as at present performed, or a complete solution of the various theological questions which have since arisen. It is only from the Fathers and the Schoolmen that we can gather information on these heads.

(1) We read in the Acts of the Apostles (viii, 14-17) that after the Samaritan converts had been baptized by Philip the deacon, the Apostles "sent unto them Peter and John, who, when they were come, prayed for them, that they might receive the Holy Ghost; for he was not yet come upon any of them, but they were only baptized in the name of the Lord Jesus; then they laid their hands upon them, and they received the Holy Ghost". Again (xix, 1-6): St. Paul "came to Ephesus, and found certain disciples; and he said to them: Have you received the Holy Ghost since ye believed? But they said to him: We have not so much as heard whether there be a Holy Ghost. And he said: In what then were you baptized? Who said: In John's baptism. Then Paul said: John baptized the people with the baptism of penance. . . . Having heard these things, they were baptized in the name of the Lord Jesus. And when Paul had imposed his hands on them, the Holy Ghost came upon them, and they spoke with tongues and prophesied". From these two passages we learn that in the earliest ages of the Church there was a rite, distinct from baptism, in which the Holy Ghost was conferred by the imposition of hands (*διὰ τῆς ἐπιθέσεως τῶν χειρῶν τῶν Ἀποστόλων*), and that the power to perform this ceremony was not implied in the power to baptize. No distinct mention is made as to the origin of this rite; but Christ promised the gift of the Holy Ghost and conferred it. Again, no express mention is made of anointing with chrism; but we note that the idea of unction is commonly associated with the giving of the Holy Ghost. Christ (Luke, iv, 18) applies to Himself the words of Isaiah (lxi, 1): "The Spirit of the Lord is upon me, wherefore he hath anointed me to preach the gospel". St. Peter (Acts, x, 38) speaks of "Jesus of Nazareth: how God anointed him with the Holy Ghost". St. John tells the faithful: "You have the unction (*χρίσμα*) from the Holy One, and know all things"; and again: "Let the unction [*χρίσμα*], which you have received from him, abide in you" (I Ep., ii, 20, 27). A striking passage, which was made much use of by the Fathers and the Schoolmen, is that of St. Paul: "He that confirmeth [*ὁ δὲ βεβαιῶν*] us with you in Christ,

and hath anointed us, is God, who also hath sealed [*σφραγισάμενος*] us, and given us the pledge [*ἀρραβώνα*] of the Spirit in our hearts" (II Cor., i, 20, 21). No mention is made of any particular words accompanying the imposition of hands on either of the occasions on which the ceremony is described; but as the act of imposing hands was performed for various purposes, some prayer indicating the special purpose may have been used: "Peter and John . . . prayed for them, that they might receive the Holy Ghost". Further, such expressions as "signing" and "sealing" may be taken as referring to the character impressed by the sacrament: "You were signed [*ἐσφραγίσθητε*] with the holy Spirit of promise"; "Grieve not the holy Spirit of God, whereby you are sealed [*ἐσφραγίσθητε*] unto the day of redemption" (Eph., i, 13; iv, 30). See also the passage from II Cor. quoted above. Again, in the Epistle to the Hebrews (vi, 1-4) the writer reproaches those whom he addresses for falling back into their primitive imperfect knowledge of Christian truth; "whereas for the time you ought to be masters, you have need to be taught again what are the first elements of the words of God" (Heb., v, 12). He exhorts them: "leaving the word of the beginning of Christ, let us go on to things more perfect, not laying again the foundation . . . of the doctrine of baptisms, and imposition of hands", and speaks of them as those who have been "once illuminated, have tasted also the heavenly gift, and were made partakers of the Holy Ghost". It is clear that reference is made here to the ceremony of Christian initiation: baptism and the imposition of hands whereby the Holy Ghost was conferred, just as in Acts, ii, 38. The ceremony is considered to be so well known to the faithful that no further description is necessary. This account of the practice and teaching of the Apostles proves that the ceremony was no mere examination of those already baptized, no mere profession of faith or renewal of baptismal vows. Nor was it something specially conferred upon the Samaritans and Ephesians. What was done to them was an instance of what was generally bestowed. Nor was it a mere bestowal of charismata; the Holy Ghost sometimes produced extraordinary effects (speaking with divers tongues, etc.), but these were not necessarily the result of His being given. The practice and teaching of the Church at the present day preserve the primitive type: the imposition of hands, the gift of the Holy Ghost, the privileges of the episcopate. What further elements were handed down by tradition will be seen presently.

(2) In passing from Holy Scripture to the Fathers we naturally expect to find more definite answers to the various questions regarding the sacrament. From both their practice and their teaching we learn that the Church made use of a rite distinct from baptism; that this consisted of imposition of hands, anointing, and accompanying words; that by this rite the Holy Ghost was conferred upon those already baptized, and a mark or seal impressed upon their souls; that, as a rule, in the West the minister was a bishop, whereas in the East he might be a simple priest. The Fathers considered that the rites of initiation (baptism, confirmation, and the Holy Eucharist) were instituted by Christ, but they did not enter into any minute discussion as to the time, place, and manner of the institution, at least of the second of these rites. In examining the testimonies of the Fathers we should note that the word *confirmation* is not used to designate this sacrament during the first four centuries; but we meet with various other terms and phrases which quite clearly refer to it. Thus, it is styled "imposition of hands" (*manuum impositio*, *χειροθεσία*), "unction", "chrism", "sealing", etc. Before the time of Tertullian the Fathers do not make any explicit mention of confirmation as distinct from baptism. The fact that the two sacraments were conferred together may account for this silence. Tertullian (*De Bapt.*, vi) is

the first to distinguish clearly the three acts of initiation: "After having come out of the laver, we are anointed thoroughly with a blessed unction [*perungimur benedictâ unctione*] according to the ancient rule. . . . The unction runs bodily over us, but profits spiritually. . . . Next to this, the hand is laid upon us through the blessing, calling upon and inviting the Holy Spirit [*dehinc manus imponitur per benedictionem advocans et invitans Spiritum Sanctum*]." Again (De resurr. carnis, n. 8): "The flesh is washed that the soul may be made stainless. The flesh is anointed [*ungitur*] that the soul may be consecrated. The flesh is sealed [*signatur*] that the soul may be fortified. The flesh is overshadowed by the imposition of hands that the soul may be illuminated by the Spirit. The flesh is fed by the Body and Blood of Christ that the soul may be fattened of God." And (Adv. Marcion., i, n. 14): "But He [Christ], indeed even at the present time, neither rejected the water of the Creator with which He washes clean His own, nor the oil with which He anoints His own; . . . nor the bread with which He makes present [*repræsentat*] His own very body, needing even in His own sacraments the beggarly elements of the Creator." Tertullian also tells how the devil, imitating the rites of Christian initiation, sprinkles some and signs them as his soldiers on the forehead (*signat illic in frontibus milites suos*—De Præscript., xl).

Another great African Father speaks with equal clearness of confirmation. "Two sacraments," says St. Cyprian, "preside over the perfect birth of a Christian, the one regenerating the man, which is baptism, the other communicating to him the Holy Spirit" (Epist. lxxii). "Anointed also must he be who is baptized, in order that having received the chrism, that is the unction, he may be anointed of God" (Epist. lxx). "It was not fitting that [the Samaritans] should be baptized again, but only what was wanting, that was done by Peter and John; that prayer being made for them and hands imposed, the Holy Ghost should be invoked and poured forth upon them. Which also is now done among us; so that they who are baptized in the Church are presented to the bishops [prelates] of the Church, and by our prayer and imposition of hands, they receive the Holy Ghost and are perfected with the seal [*signaculo*] of the Lord" (Epist. lxxiii). "Moreover, a person is not born by the imposition of hands, when he receives the Holy Ghost, but in baptism; that being already born he may receive the Spirit, as was done in the first man Adam. For God first formed him and breathed into his face the breath of life. For the Spirit cannot be received except there is first one to receive it. But the birth of Christians is in baptism" (Epist. lxxiv). Pope St. Cornelius complains that Novatus, after having been baptized on his sickbed, "did not receive the other things which ought to be partaken of according to the rule of the Church—to be sealed, that is, by the bishop [*σφραγισθῆναι ὑπὸ τοῦ ἐπισκόπου*] and not having received this, how did he receive the Holy Ghost?" (Euseb., H. E., vi, xliii). In the fourth and fifth centuries the testimonies are naturally more frequent and clear. St. Hilary speaks of "the sacraments of baptism and of the Spirit"; and he says that "the favour and gift of the Holy Spirit were, when the work of the Law ceased, to be given by the imposition of hands and prayer" (In Matt., c. iv, c. xiv). St. Cyril of Jerusalem is the great Eastern authority on the subject, and his testimony is all the more important because he devoted several of his "Catecheses" to the instruction of catechumens in the three sacraments which they were to receive on being initiated into the Christian mysteries. Nothing could be clearer than his language: "To you also after you had come up from the pool of the sacred streams, was given the chrism [unction], the emblem of that wherewith Christ was anointed; and this is the Holy Ghost. . . . This holy ointment is no longer plain ointment nor so to say common, after the invocation, but

Christ's gift; and by the presence of His Godhead, it causes in us the Holy Ghost. This symbolically anoints thy forehead, and thy other senses; and the body indeed is anointed with visible ointment, but the soul is sanctified by the Holy and life-giving Spirit. . . . To you not in figure but in truth, because ye were in truth anointed by the Spirit" (Cat. Myst., iii). And in the seventeenth catechesis on the Holy Ghost, he speaks of the visit of Peter and John to communicate to the Samaritans the gift of the Holy Ghost by prayer and the imposition of hands. "Forget not the Holy Ghost", he says to the catechumens, "at the moment of your enlightenment; He is ready to mark your soul with His seal [*σφραγισαί*] . . . He will give you the heavenly and divine seal [*σφραγίς*] which makes the devils tremble; He will arm you for the fight; He will give you strength." Christ, says St. Optatus of Mileve, "went down into the water, not that there was what could be cleansed in God, but the water ought to go before the oil that was to supervene, in order to initiate and in order to fill up the mysteries of baptism; having been washed whilst He was held in John's hands, the order of the mystery is followed. . . . Heaven is opened whilst the Father anoints; the spiritual oil in the image of the Dove immediately descended and rested on His head, and poured on it oil, whence He took the name of Christ, when He was anointed by God the Father; to whom that the imposition of hands might not seem to have been wanting, the voice of God is heard from a cloud, saying, This is my Son, of whom I have thought well; hear ye him" (De schism. Donat., I, iv, n. 7).

St. Ephraem Syrus speaks of "the Sacraments of Chrism and Baptism" (Serm. xxvii); "oil also for a most sweet unguent, wherewith they who already have been initiated by baptism are sealed, and put on the armour of the Holy Spirit" (In Joel.) St. Ambrose addressing the catechumens who had already been baptized and anointed, says: "Thou hast received the spiritual seal, the Spirit of wisdom and of understanding. . . . Keep what thou hast received. God the Father has sealed thee; Christ the Lord has confirmed thee; and the Spirit has given the pledge in thy heart, as thou hast learned from what is read in the Apostle" (De myst., c. vii, n. 42). The writer of the "De Sacramentis" (Inter Op. Ambros., lib. III, c. ii, n. 8) says that after the baptismal immersion "the spiritual seal [*signaculum*] follows . . . when at the invocation of the bishop [*sacerdotis*] the Holy Ghost is infused". The Council of Elvira decreed that those who had been baptized privately in case of necessity should afterwards be taken to the bishop "to be made perfect by the imposition of hands" (can. xxxviii, Labbe, I, 974). And the Council of Laodicea: "Those who have been converted from the heresies . . . are not to be received before they anathematize every heresy . . . and then after that, those who were called faithful among them, having learned the creeds of the faith, and having been anointed with the holy chrism, shall so communicate of the holy mystery" (can. vii). "Those who are enlightened must after baptism be anointed with the heavenly chrism, and be partakers of the kingdom of Christ" (can. xlviii, Labbe, I, col. 1497). The Council of Constantinople (381): "We receive the Arians, and Macedonians . . . upon their giving in written statements and anathematizing every heresy. . . . Having first sealed them with the holy ointment upon the forehead, and eyes, and nostrils, and mouth, and ears, and sealing them we say, 'The seal of the gift of the Holy Ghost'" (can. vii, Labbe, II, col. 952). St. Augustine explains how the coming of the Holy Ghost was accompanied with the gift of tongues in the first ages of the Church. "These were miracles suited to the times. . . . Is it now expected that they upon whom hands are laid, should speak with tongues? Or when we imposed our hand upon these children, did each of you wait to see whether they would speak with ton-

gues? and when he saw that they did not speak with tongues, was any of you so perverse of heart as to say "These have not received the Holy Ghost?" (In Ep. Joan., tr. vi). He also speaks in the same way about anointing: the sacrament of chrism "is in the genus of visible signs, sacrosanct like baptism" (Contra litt. Petil., II, cap. civ. in P. L., XLI, col. 342; see Serm. cccxvii, Ad Infantes in P. L., XXXVII, col. 1100; De Trin., XV, n. 46 in P. L., XL, col. 1093); "Of Christ it is written in the Acts of the Apostles, how God anointed Him with the Holy Ghost, not indeed with visible oil, but with the gift of grace, which is signified by that visible unction wherewith the Church anoints the baptized". The most explicit passage is in the letter of Pope Innocent I to Decentius: "As regards the sealing of infants, it is clear that it is not lawful for it to be done by anyone but a bishop [non ab aliis quam ab episcopo fieri licere]. For presbyters, though they be priests of the second rank (second priests), have not attained to the summit of the pontificate. That this pontificate is the right of bishops only—to wit: that they may seal or deliver the Spirit, the Paraclete—is demonstrated not merely by ecclesiastical usage, but also by that portion of the Acts of the Apostles wherein it is declared that Peter and John were sent to give the Holy Ghost to those who had already been baptized. For when presbyters baptize, whether with or without the presence of the bishop, they may anoint the baptized with chrism, provided it be previously consecrated by a bishop, but not sign the forehead with that oil, which is a right reserved to bishops [episcopis] only, when they give the Spirit, the Paraclete. The words, however, I cannot name, for fear of seeming to betray rather than to reply to the point on which you have consulted me." Saint Leo in his fourth sermon on Christ's Nativity says to the faithful: "Having been regenerated by water and the Holy Ghost, you have received the chrism of salvation and the seal of eternal life" (*chrisma salutis et signaculum vite eternae*.—P. L., LIV, col. 207). The Blessed Theodoret commenting on the first chapter of the Canticle of Canticles says: "Bring to thy recollection the holy rite of initiation, in which they who are perfected after the renunciation of the tyrant and the acknowledgment of the King, receive as a kind of royal seal the chrism of the spiritual unction (*σφραγιστά τινα βασιλικήν . . . τοῦ πνευματικοῦ μύρου τὸ χρίσμα*) as made partakers in that typical ointment of the invisible grace of the Holy Spirit" (P. G., LXXXI, 60).

Among the homilies formerly attributed to Eusebius of Emesa, but now admitted to be the work of some bishop of Southern Gaul in the fifth century, is a long homily for Whitsunday: "The Holy Ghost who comes down with a life-giving descent upon the waters of baptism, in the font bestows beauty unto innocence, in confirmation grants an increase unto grace. Because we have to walk during our whole life in the midst of invisible enemies and dangers, we are in baptism regenerated unto life, after baptism we are confirmed for the battle; in baptism we are cleansed, after baptism we are strengthened . . . confirmation arms and furnishes weapons to those who are reserved for the wrestlings and contests of this world" (Bib. Max., SS. PP., VI, p. 649). These passages suffice to show the doctrine and practice of the Church during the patristic age. For further information see "Diet. de théol. cath.", s. v. "Confirmation", coll. 1026–1058.

(3) After the great Trinitarian and Christological controversies had been decided, and the doctrine of Divine grace had been defined, the Church was able to devote attention to questions regarding the sacraments, the means of grace. At the same time, the sacramentaries were being drawn up, fixing the various rites in use. With precision of practice came greater precision and completeness of doctrine. "Chrisma", says St. Isidore of Seville, "is in Latin called 'unctio', and from it Christ receives His name,

and man is sanctified after the laver [*lavacrum*]; for as in baptism remission of sins is given, so by anointing [*unctio*] the sanctification of the Spirit is conferred. The imposition of hands takes place in order that the Holy Spirit, being called by the blessing, may be invited [*per benedictionem advocatus involetur Spiritus Sanctus*]; for after the bodies have been cleansed and blessed, then does the Paraclete willingly come down from the Father" (Etym., VI, c. cix in P. L., LXXXII, col. 256). The great Anglo-Saxon lights of the early Middle Ages are equally explicit. "The confirmation of the newly baptized", says Lingard (Anglo-Saxon Church, I, p. 296), "was made an important part of the bishop's duty. We repeatedly read of journeys undertaken by St. Cuthbert chiefly with this object. . . . Children were brought to him for confirmation from the secluded parts of the country; and he ministered to those who had been recently born again in Christ the grace of the Holy Spirit by the imposition of hands, 'placing his hand on the head of each, and anointing them with the chrism which he had blessed (*manum imponens super caput singulorum, linens unctione consecratam quam benedixerat*; Beda, "Vita Cuth.", c. xxix, xxxii in P. L., XCIV, Oper. Min., p. 277)". Alcuin also in his letter to Odwin describes how the neophyte, after the reception of baptism and the Eucharist, prepares to receive the Holy Spirit by the imposition of hands. "Last of all by the imposition of the hands by the chief priest [*summo sacerdote*] he receives the Spirit of the seven-fold grace to be strengthened by the Holy Spirit to fight against others" (De bapt. cærimon. in P. L., CI, col. 614). It will be observed that in all these passages imposition of hands is mentioned; St. Isidore and St. Bede mention anointing also. These may be taken as typical examples; the best authorities of this age combine the two ceremonies. As to the form of words used the greatest variety prevailed. The words accompanying the imposition of hands were generally a prayer calling upon God to send down the Holy Ghost and confer upon the neophytes the seven gifts. In the Gregorian Sacramentary no words at all are assigned to the anointing; but it is clear that the anointing must be taken in connexion with the words belonging to the imposition of hands. Where special words are assigned they sometimes resemble the Greek formula (*signum Christi in vitam eternam*, etc.), or are indicative, like the present formula (*signo, consigno, confirmo*), or imperative (*accipe signum*, etc.), or deprecatory (*confirmet vos Pater et Filius et Spiritus Sanctus*, etc.). St. Isidore is clearly in favour of a prayer: "We can receive the Holy Ghost, but we cannot give Him: that He may be given, we call upon God" (De Off. Eccl., II, c. xxvi in P. L., LXXXIII, col. 823). In contrast with this diversity as to the form there is complete agreement that the sole minister is a bishop. Of course this refers only to the Western Church. The writers appeal to the Acts of the Apostles (e. g. St. Isidore, "De Off. Eccl.", II, c. xxvi; St. Bede, "In Act. Apost." in P. L., XCII, col. 961; "Vit. Cuth.", c. xxix); but they do not examine the reason why the power is reserved to the bishops, nor do they discuss the question of the time and mode of the institution of the sacrament.

(4) The teaching of the Schoolmen shows a marked advance upon that of the early Middle Ages. The decision as to the number of the sacraments involved the clear distinction of confirmation from baptism; and at the same time the more exact definition of what constitutes a sacrament led to the discussion of the institution of confirmation, its matter and form, minister, and effects, especially the character impressed. We can follow the development through the labours of Lanfranc, Archbishop of Canterbury, St. Anselm his successor, Abelard, Hugh of St. Victor, Peter Lombard (Sent., IV, dist. vii); then branching out into the two distinct schools of Dominicans (Albertus Magnus

and St. Thomas) and Franciscans (Alexander of Hales, St. Bonaventure, and Duns Scotus). As we shall see, the clearness with which the various questions were set forth by no means produced unanimity; rather it served to bring out the uncertainty with regard to them all. The writers start from the fact that there was in the Church a ceremony of anointing with chrism accompanied with the words: "I sign thee with the sign of the cross", etc.; this ceremony was performed by a bishop only, and could not be repeated. When they came to examine the doctrine underlying this practice they all admitted that it was a sacrament, though in the earlier writers the word *sacrament* had not yet acquired a distinct technical meaning. So strongly did they insist upon the principle *Lex orandi, lex credendi*, that they took for granted that the anointing must be the matter, and the words "I sign thee", etc., the form, and that no one but a bishop could be the valid minister. But when they came to justify this doctrine by the authority of Scripture they encountered the difficulty that no mention is made there either of the anointing or of the words; indeed nothing is said of the institution of the sacrament at all. What could be the meaning of this silence? How could it be explained?

(a) Regarding the institution there were three opinions. The Dominican School taught that Christ Himself was the immediate author of confirmation. Earlier writers (e. g. Hugh of St. Victor, "De Sacram.", ii, and Peter Lombard, "Sent.", IV, dist. vii) held that it was instituted by the Holy Ghost through the instrumentality of the Apostles. The Franciscans also maintained that the Holy Ghost was the author, but that He acted either through the Apostles or through the Church after the death of the Apostles. "Concerning the institution of this sacrament", says St. Thomas, "there are two opinions: some say that it was instituted neither by Christ nor by His Apostles, but later on in the course of time at a certain council [Meaux, 845; this was the opinion of Alexander of Hales, Summ., iv, q. 9, m.], whereas others said that it was instituted by the Apostles. But this cannot be the case, because the institution of a sacrament belongs to the power of excellence which is proper to Christ alone. And therefore we must hold that Christ instituted this sacrament, not by showing it [*exhibendo*] but by promising it, according to the text (John, xvi, 7), 'If I go not, the Paraclete will not come to you; but if I go, I will send Him to you'. And this because in this sacrament the fullness of the Holy Ghost is given, which was not to be given before Christ's resurrection and ascension, according to the text (John, vii, 39), 'As yet the Spirit was not given, because Jesus was not yet glorified'" (Summ. III, Q. lxxii, a. 1, ad 1). It will be noticed that the Angelic Doctor hesitates a little about the direct institution by Christ (*non exhibendo, sed promittendo*). In his earlier work (In Sent., IV, dist. vii, q. 1) he had said plainly that Christ had instituted the sacrament and had Himself administered it (Matt., xix). In this opinion the saint was still under the influence of his master, Albert, who went so far as to hold that Christ had specified the chrism and the words, "I sign thee", etc. (In Sent., IV, dist. vii, a. 2). The opinion of Alexander of Hales, referred to by St. Thomas, was as follows: the Apostles conferred the Holy Ghost by mere imposition of hands; this rite, which was not properly a sacrament, was continued until the ninth century, when the Holy Ghost inspired the Fathers of the Council of Meaux in the choice of the matter and form, and endowed these with sacramental efficacy (*Spiritu Sancto instigante et virtutem sanctificandi præstante*). He was led to this extraordinary view (which he states as merely personal) by the fact that no mention is made in Holy Scripture either of the chrism or of the words; and as these were undoubtedly the matter and the form they could only have been introduced by Divine authority. His dis-

ciple, St. Bonaventure, agreed in rejecting the institution by Christ or His Apostles, and in attributing it to the Holy Ghost; but he set back the time to the age of "the successors of the Apostles" (In Sent., IV, dist. vii, art. 1). However, like his friendly rival St. Thomas, he also modified his view in a later work (Breviloquium, p. vi. c. 4) where he says that Christ instituted all the sacraments, though in different ways; "some by hinting at them and initiating them [*insinuando et initiando*], as confirmation and extreme unction". Scotus seems to have felt the weight of the authority of the Dominican opinion, for he does not express himself clearly in favour of the views of his own order. He says that the rite was instituted by God (Jesus Christ? the Holy Ghost?); that it was instituted when Christ pronounced the words, "Receive ye the Holy Ghost", or on the day of Pentecost, but this may refer not to the rite but to the thing signified, viz. the gift of the Holy Ghost (In Sent., IV, dist. vii, q. 1; dist. ii, q. 1). The Fathers of the Council of Trent, as said above, did not expressly decide the question, but as they defined that all the sacraments were instituted by Christ, the Dominican teaching has prevailed. We shall see, however, that this is capable of many different meanings.

(b) The question of the institution of the sacrament is intimately bound up with the determination of the matter and form. All agreed that these consisted of the anointing (including the act of placing the hand upon the candidate) and the words, "I sign thee", or "I confirm thee", etc. Were this action and these words of Divine, or of Apostolic, or of merely ecclesiastical origin? Blessed Albertus held that both were ordained by Christ Himself; others that they were the work of the Church; but the common opinion was that they were of Apostolic origin. St. Thomas was of opinion that the Apostles actually made use of chrism and the words, *Consigno te*, etc., and that they did so by Christ's command. The silence of Scripture need not surprise us, he says, "for the Apostles observed many things in the administration of the sacraments which are not handed down by the Scriptures" (S. Theol., III, Q. lxxii, a. 3 and 4).

(c) In proof of the reservation of the rite to bishops the Schoolmen appeal to the example of Acts, viii; and they go on to explain that as the sacrament is a sort of completion of baptism it is fitting that it should be conferred by "one who has the highest power [*summam potestatem*] in the Church" (St. Thomas, *ibid.*, art. 11). They were aware, however, that in the primitive Church simple priests sometimes administered the sacrament. This they accounted for by the fewness of bishops, and they recognized that the validity of such administration (unlike the case of Holy orders) is a mere matter of ecclesiastical jurisdiction. "The pope holds the fullness of power in the Church, whence he can confer upon certain of the inferior orders things which belong to the higher orders. . . . And out of the fullness of this power the blessed pope Gregory granted that simple priests conferred this sacrament" (St. Thomas, *ibid.*).

(5) The Council of Trent did not decide the questions discussed by the Schoolmen. But the definition that "all the sacraments were instituted by Christ" (Sess. VII, can. i), excluded the opinion that the Holy Ghost was the author of confirmation. Still, nothing was said about the mode of institution—whether immediate or mediate, generic or specific. The post-Tridentine theologians have almost unanimously taught that Christ Himself was the immediate author of all the sacraments, and so of confirmation (cf. De Lugo, "De Sacram. in Gen." disp. vii, sect. 1; Tournely, "De Sacram. in Gen.", q. v, a. 1). "But the historical studies of the seventeenth century obliged authors to restrict the action of Christ in the institution of the sacraments to the determination of the spiritual effect, leaving the choice of the rite to the Apostles and

the Church." (Pourrat, *La théologie sacramentaire*, p. 313.) That is to say, in the case of confirmation, Christ bestowed upon the Apostles the power of giving the Holy Ghost, but He did not specify the ceremony by which this gift should be conferred; the Apostles and the Church, acting under Divine guidance, fixed upon the imposition of hands, the anointing, and the appropriate words. Further information on this important and difficult question will be found in the article SACRAMENTS.

III. CONFIRMATION IN THE BRITISH AND IRISH CHURCHES.—In his famous "Confession" (ed. Whitley Stokes, *Vita Tripartita*, II, 372, 368; cf. p. clxxxiv) St. Patrick refers to himself as the first to administer confirmation in Ireland. The term here used (*populi consummatio*; cf. St. Cyprian, *ut signaculo dominico consummentur*, Ep. lxxiii, no. 9, ed. Hartel, p. 785) is rendered by *nocosmad*, *cosmail* (*confirmabat, confirmatio*) in a very ancient Irish homily on St. Patrick found in the fourteenth century, "Leabar Breac" (op. cit., II, 484). In the same work (II, 550-51) a Latin preface to an ancient Irish chronological tract says: *Debemus scire quo tempore Patricius sanctus episcopus atque preceptor maximus Scottorum inchoavit . . . sanctificare et consecrare . . . et consummare*, i. e. "we ought to know at what time Patrick, the holy bishop and greatest teacher of the Irish, began to come to Ireland . . . to sanctify and ordain and confirm". From the same "Leabar Breac" Sylvester Malone quotes the following account of confirmation which exhibits an accurate belief on the part of the Irish Church: "Confirmation or chrism is the perfection of baptism, not that they are not distinct and different. Confirmation could not be given in the absence of baptism; nor do the effects of baptism depend on confirmation, nor are they lost till death. Just as the natural birth takes place at once so does the spiritual regeneration in like manner, but it finds, however, its perfection in confirmation" (Church History of Ireland, Dublin, 1880, I, p. 149). It is in the light of these venerable texts, which quite probably antedate the year 1000, that we must interpret the well-known reference of St. Bernard to the temporary disuse of confirmation in Ireland (*Vita Malachie*), c. iv, in *Acta SS.*, Nov., II, 145). He relates that St. Malachy (b. about 1095) introduced the practices of the Holy Roman Church into all the churches of Ireland, and mentions especially "the most wholesome usage of confession, the sacrament of confirmation and the contract of marriage, all of which were either unknown or neglected". These Malachy restored (*de novo instituit*). The Welsh laws of Hywel Dda suppose for children of seven years and upwards a religious ceremony of laying on of hands that can hardly be anything else than confirmation. Moreover, the Welsh term for this sacrament, *Bedydd Esgob*, i. e. bishop's baptism, implies that it was always performed by a bishop and was a complement (*consummatio*) of baptism (J. Williams, *Ecclesiastical Antiquities of the Cymry*, London, 1844, p. 281). This writer also quotes (*ibid.*) his countryman Gerald Barry for the fact that the whole people of Wales were more eager than any other nation to obtain episcopal confirmation and the chrism by which the Spirit was given.

The practice in England has already been illustrated by facts from the life of St. Cuthbert. One of the oldest *ordines*, or prescriptions for administering the sacrament, is found in the Pontifical of Egbert, Archbishop of York (d. 766). The rite is practically the same as that used at present; the form, however, is: "receive the sign of the holy cross with the chrism of salvation in Christ Jesus unto life everlasting." Among the rubrics are: *modo ligandi sunt*, i. e. the head of the person confirmed is to be bound with a fillet; and *modo communicandi sunt de sacrificio*, i. e. they are to receive Holy Communion (Martène). It was especially during the thirteenth century that vigorous

measures were taken to secure the proper administration of the sacrament. In general, the councils and synods direct the priests to admonish the people regarding the confirmation of their children. The age-limit, however, varies considerably. Thus the Synod of Worcester (1240) decreed that parents who neglected to have their child confirmed within a year after birth should be forbidden to enter the church. The Synod of Exeter (1287) enacted that children should be confirmed within three years from birth, otherwise the parents were to fast on bread and water until they complied with the law. At the Synod of Durham (1217? Cf. Wilkins, loc. cit. below) the time was extended to the seventh year. Other statutes were: that no one should be admitted to Holy Communion who had not been confirmed (Council of Lambeth, 1281); that neither father nor mother nor step-parent should act as sponsor (London, 1200); that children to be confirmed must bring "fillets or bands of sufficient length and width", and that they must be brought to the church the third day after confirmation to have their foreheads washed by the priest out of reverence for the holy chrism (Oxford, 1222); that a male sponsor should stand for the boys and a female sponsor for the girls (Provincial Synod of Scotland, 1225); that adults must confess before being confirmed (Constitution of St. Edmund of Canterbury, about 1236). Several of the above-named synods emphasize the fact that confirmation produces spiritual cognation and that the sacrament cannot be received more than once. The legislation of the Synod of Exeter is especially full and detailed (see Wilkins, *Concilia Magnæ Britanniae et Hiberniae*, London, 1734). Among the decrees issued in Ireland after the Reformation may be cited: no one other than a bishop should administer confirmation; the Holy See had not delegated this episcopal function to any one (Synod of Armagh, 1614); the faithful should be taught that confirmation cannot be reiterated and that its reception should be preceded by sacramental confession (Synod of Tuam, 1632).

IV. IN THE AMERICAN COLONIES.—Previous to the establishment of the hierarchy, many Catholics in North America died without having received confirmation. In some portions of what is now the United States the sacrament was administered by bishops from the neighbouring French and Spanish possessions; in others, by missionary priests with delegation from the Holy See. Bishop Cabezas de Altamirano of Santiago de Cuba, on his visitation of Florida, confirmed (25 March, 1606) a large number, probably the first administration of the sacrament in the United States territory (Shea, *The Catholic Church in Colonial Days*, New York, 1866). In 1655, Don Diego de Rebolledo, Governor of Florida, urged the King of Spain to ask the pope to make St. Augustine an episcopal see, or to make Florida a vicariate Apostolic so that there might be a local superior and that the faithful might receive the Sacrament of Confirmation; but nothing came of the petition. Bishop Calderon of Santiago visited Florida in 1647 and confirmed 13,152 persons, including Indians and whites. Other instances are the visitations of Bishop de Velasco (1735-6) and Bishop Morel (1763). Subsequently, Dr. Peter Camps, missionary Apostolic, received from Rome special faculties for confirmation. In New Mexico, during the seventeenth century, the custos of the Franciscans confirmed by delegation from Leo X and Adrian VI. In 1760, Bishop Tamaron of Durango visited the missions of New Mexico and confirmed 11,271 persons. Bishop Tejada of Guadalajara administered (1759) confirmation at San Fernando, now San Antonio, Texas, and Bishop de Pontbriand at Ft. Presentation (Ogdenburg, N. Y.) in 1752. The need of a bishop to administer the sacrament in Maryland and Pennsylvania was urged by Bishop Challoner in a report to the Propaganda, 2 Aug., 1763. Writing to his

agent at Rome, Rev. Dr. Stonor, 12 Sept., 1766, he says: "there be so many thousands there that live and die without Confirmation"; and in another letter, 4 June, 1771: "It is a lamentable thing that such a multitude have to live and die always deprived of the Sacrament of Confirmation." Cardinal Castelli wrote, 7 Sept., 1771, to Bishop Briand of Quebec asking him to supply the need of the Catholics in Maryland and Pennsylvania. In 1783 the clergy petitioned Rome for the appointment of a superior with the necessary faculties "that our faithful living in many dangers, may be no longer deprived of the Sacrament of Confirmation. . . ." On 6 June, 1784, Pius VI appointed Rev. John Carroll as superior of the mission and empowered him to administer confirmation (Shea, *Life and Times of Archbishop Carroll*, New York, 1888; cf. Hughes in *Am. Eccl. Review*, XXVIII, 23).

V. CONFIRMATION AMONG NON-CATHOLICS.—The Protestant Reformers, influenced by their rejection of all that could not be clearly proved from Scripture and by their doctrine of justification by faith only, refused to admit that confirmation was a sacrament (Luther, *De Capt. Babyl.*, VII, p. 501). According to the Confession of Augsburg, it was instituted by the Church, and it has not the promise of the grace of God. Melancthon (*Loci Comm.*, p. 48) taught that it was a vain ceremony, and was formerly nothing but a catechism in which those who were approaching adolescence gave an account of their faith before the Church; and that the minister was not a bishop only, but any priest whatsoever (*Lib. Ref. ad Colonien.*). These four points were condemned by the Council of Trent (*supra* I; cf. A. Theiner, *Acta Genuina SS. Œcum. Conc. Trid.*, I, p. 383 sqq.). Nevertheless the Lutheran Churches retain some sort of confirmation to the present day. It consists of the examination of the candidate in Christian doctrine by the pastors or members of the consistory, and the renewal by the candidate of the profession of faith made for him at the time of his baptism by his godparents. How the pastors properly ordained can alone be said to "give" confirmation does not appear. The Anglican Church holds that "Confirmation is not to be counted for a sacrament of the Gospel . . . for it has not the like nature of sacraments [*sacramentorum eandem rationem*] with Baptism and the Lord's Supper, for it has not any visible sign or ceremony ordained of God" (*Art. xxv*). But, like the Lutheran Churches, it retains "the Confirmation of children, by examining them of their knowledge in their articles of faith and joining thereto the prayers of the Church for them" (*Homily on Common Prayer and Sacraments*, p. 300). The rite of confirmation has undergone various changes in the different prayer books (see *BOOK OF COMMON PRAYER*). From these it can be seen how the Anglican Church has varied between the complete rejection of the Catholic doctrine and practice, and a near approach to these. Testimonies could easily be quoted for either of these opinions. The wording of *Art. xxv* left a loophole which the Ritualistic party has made good use of. Even some Catholics, as stated above, have admitted that confirmation "has not any visible sign or ceremony ordained of God"; the imposition of hands, the anointing, and the words used being all of them "ordained of" the Apostles of the Church.

Confiteor.—The Confiteor (so called from the first word, *confiteor*, I confess) is a general confession of sins; it is used in the Roman Rite at the beginning of Mass and on various other occasions as a preparation for the reception of some grace.

HISTORY OF THE CONFITEOR.—It is first heard of as the preparation for sacramental confession and as part of the preparation for Mass. Both the original Eastern liturgies begin with a confession of sin made by the celebrant (for the Antiochene Rite see Brightman, *Eastern Liturgies*, p. 31, and for the Alexandrine Rite, *ibid.*, 116). The first Roman sacramentaries and ordos tell us nothing about this preparation; they all describe the Mass as beginning at the Introit. The Confiteor in some form was probably from an early date one of the private prayers said by the celebrant in the sacristy before he began Mass. But the "Sixth Roman Ordo" (Mabillon, *Museum Italicum*, II, 70-76), written apparently in the tenth or eleventh century, tells us that at the beginning of Mass the pontiff "bowing down prays to God for forgiveness of his sins" (*ibid.*, p. 71). So by the eleventh century the preparation is already made at the altar. In the "Canonical Rule" of Chrodegang of Metz (d. 743) the questions put by the priest to the penitent before confession contain a form that suggests our Confiteor: "First of all prostrate yourself humbly in the sight of God . . . and pray Blessed Mary with the holy Apostles and Martyrs and Confessors to pray to the Lord for you (Chrodeg. Met., "Reg. Canon.", cap. xxxii, in P. L., LXXXIX, 1072). So also Egbert of York (d. 766) gives a short form that is the germ of our present prayer: "Say to him to whom you wish to confess your sins: through my fault that I have sinned exceedingly in thought, word, and deed." In answer the confessor says almost exactly our *Misereatur* (Bona, "Rerum liturg.", Bk. II, ii, v). But it is in Micrologus (Bernold of Constance, d. 1100) that we first find the Confiteor quoted as part of the introduction of the Mass. The form here is: "Confiteor Deo omnipotenti, istis Sanctis et omnibus Sanctis et tibi frater, quia peccavi in cogitatione, in locutione, in opere, in pollutione mentis et corporis. Ideo precor te, ora pro me." The *Misereatur* and *Indulgentiam* follow, the former slightly different, but the latter exactly as we have it now (*De eccl. observ.*, xxiii, in P. L., CLI, 992).

In the "Ordo Romanus XIV" (by Cardinal James Cajetan in the fourteenth century, Mabillon, op. cit., II, 246-443) we find our Confiteor exactly, but for the slight modification: "Quia peccavi nimis cogitatione, delectatione, consensu, verbo et opere" (*ib.*, p. 329). The Third Council of Ravenna (1314, Hardouin, *Coll. Conc.*, VII, 1389) orders in its Rubric xv our Confiteor, word for word, to be used throughout that province. The form, and especially the list of saints invoked, varies considerably in the Middle Ages. Cardinal Bona (*Rerum liturg. libri duo*, II, 5-7) quotes a number of such forms. In many Missals it is shorter than ours: "Confiteor Deo, beatæ Mariæ, omnibus sanctis et vobis" (so the Sarum Missal, ed. Dickinson, Burntisland, 1861-1883). In the Missal of Paul III (1534-1549) it is: "Confiteor Deo omnipotenti, B. Mariæ semper Virgini, B. Petro et omnibus Sanctis et vobis Fratres, quia peccavi, meâ culpâ: precor vos orare pro me" (Bona, loc. cit.). Since the edition of Pius V (1566-1572) our present form is the only one to be used throughout the Roman Rite, with the exceptions of the Carthusian, Carmelite, and Dominican

Offices, whose Missals, having been proved to have existed for more than 200 years, are still allowed. These three forms are quite short, and contain only one "meâ culpa"; the Dominicans invoke, besides the Blessed Virgin, St. Dominic. Moreover, some other orders have the privilege of adding the name of their founder after that of St. Paul (the Franciscans for instance), and the local patron is inserted at the same place in a few local uses. Otherwise the Confiteor must always be said exactly as it is in the Roman Missal (S. R. C., 13 February, 1666, Benedict XIV, De SS. Missæ Sacr., II, iii, 11, 12).

USE OF THE CONFITEOR.—The prayer is said sometimes as a double form of mutual confession, first by the celebrant to the people and then by the people to him, and sometimes only once, as a single form. As a double form it is used: (1) as part of the introductory prayers of Mass said before the priest goes up to the altar, after the Psalm "Judica me" (Ritus celebrandi, III, 7-9); (2) in the public recital of the Divine Office as part of the *Preces* at Prime (so that it is omitted on doubles and in octaves), and always in the beginning of Complin (Rubr. Gen. Brev., XV, 2, and XVIII, 1). As a single form it occurs: (1) during Mass, a second time, if anyone receives Holy Communion besides the celebrant; (2) when Holy Communion is given outside of Mass (Rituale Rom., Tit. I, ch. ii, 1); (3) before the administration of extreme unction (when it may be said in Latin or in the vulgar tongue.—Rituale Rom., Tit. V, ch. ii, 6); (4) before the Apostolic blessing is given to a dying person (ibid., Tit. V, ch. vi, 6); (5) the Ritual further directs that penitents should begin their confession by saying the Confiteor either in Latin or in their own language, or at least begin with these words: "Confiteor Deo omnipotenti et tibi pater" (Tit. III, ch. i, 14); (6) lastly the "Cæremoniale Episcoporum" ordains that when a bishop sings high Mass, the deacon should sing the Confiteor after the sermon; the preacher then reads out the Indulgence given by the bishop, and the bishop adds a modified form of the *Misereatur* (in which he again invokes the saints named in the Confiteor), the Indulgentiam, and finally his blessing. This is the normal ceremony for the publication of Indulgences (Cær. Episc., I, ch. xxii, 4; II, ch. xxxix, 1-4).

RITE OF THE CONFITEOR.—The form of words is too well known to need quotation. When it is used as a double form, the celebrant first makes his confession, using the words *vobis fratres* and *vos fratres*, the servers or ministers say the *Misereatur* in the singular (*tui, peccatis tuis*), and then make their confession addressed to the priest (*tibi pater, te pater*). He says the *Misereatur* in the plural (*Misereatur vestri*, etc.), and finally, making the sign of the cross, adds the short prayer Indulgentiam. Both the *Misereatur* and the Indulgentiam are answered with "Amen". When used as a single form the priest's confession is left out, the deacon, or server, says the Confiteor (*tibi pater*, etc.), the celebrant responds with the *Misereatur* and Indulgentiam. A person saying the prayer alone (for instance, in the private recital of the Divine Office) says the Confiteor leaving out the clauses *tibi pater* or *vobis fratres*, etc., altogether, and changes the answer to *Misereatur nostri* and *peccatis nostris*. Before Communion at high Mass and before the promulgation of Indulgences the Confiteor is sung by the deacon to the tone given in the "Cæremoniale Episcoporum" (II, ch. xxxix, 1). The *Misereatur* and Indulgentiam are never sung.

Roman Missal, Breviary, Ritual, Cæremoniale Episcoporum, loc. cit.; MABILON, *Museum Italicum* (Paris, 1689), loc. cit.; BONA, *Rerum Liturgicarum Libri Duo* (Rome, 1671), Bk. II, ch. ii, pp. 288-292; BENEDICT XIV, De SS. Missæ Sacrificio, Bk. II, ch. iii, 4-11; GIER, *Das heilige Messopfer* (Freiburg im Br., 1897), II, § 34, pp. 326-334, tr. *The Holy Sacrifice of the Mass* (St. Louis, 1902).

Conformists. See DISSENTERS.

Confraternity (Lat. *confraternitas, confratria*), or sodality, a voluntary association of the faithful, established and guided by competent ecclesiastical authority for the promotion of special works of Christian charity or piety. The name is sometimes applied to pious unions (see ASSOCIATIONS, PIOUS), but the latter differ from confraternities inasmuch as they need not be canonically erected and they regard rather the good of the neighbour than the personal sanctification of the members. Confraternities are divided into those properly so called and those to which the name has been extended. Both are erected by canonical authority, but the former have a more precise organization, with rights and duties regulated by ecclesiastical law, and their members often wear a peculiar costume and recite the Office in common. When a confraternity has received the authority to aggregate to itself sodalities erected in other localities and to communicate its advantages to them, it is called an archconfraternity (q. v.).

Pious associations of laymen existed in very ancient times at Constantinople and Alexandria. In France, in the eighth and ninth centuries, the laws of the Carolingians mention confraternities and guilds. But the first confraternity in the modern and proper sense of the word is said to have been founded at Paris by Bishop Odo who died in 1208. It was under the invocation of the Blessed Virgin Mary. Various other congregations, as of the Gonfalon, of the Holy Trinity, of the Scapular, etc., were founded between the thirteenth and sixteenth centuries. From the latter century onwards, these pious associations have multiplied greatly. Indulgences are communicated to confraternities either directly by the pope or through the bishops, unless the association be aggregated to an archconfraternity (it may not be aggregated to more than one) through which it participates in the latter's privileges. If the aggregation be not made according to the prescribed formula, the Indulgences are not communicated. The directors of confraternities are appointed or approved by the bishop, or in the churches of regulars by the regular superior. Only after such appointment can the director apply the Indulgences to the objects which he blesses, and he cannot subdelegate this power without special faculty. The reception of members must be carried out by the appointed person. The observance of the rules is not binding in conscience nor does their neglect deprive a person of membership, though in the latter case the Indulgences would not be obtained. The loss of all its members for a short time does not dissolve a confraternity, and by the reception of new members the Indulgences may again be gained. The dissolution, translation, and visitation of confraternities belong to the ordinary. The canon law governing these associations is found in the Constitution of Clement VIII (7 Dec., 1604) with some modification made later by the Sacred Congregation of Indulgences.

WILLIAM H. W. FANNING.

Confucianism—By Confucianism is meant the complex system of moral, social, political, and religious teaching built up by Confucius on the ancient Chinese traditions, and perpetuated as the State religion down to the present day. Confucianism aims at making not simply the man of virtue, but the man of learning and of good manners. The perfect man must combine the qualities of saint, scholar, and gentleman. Confucianism is a religion without positive revelation, with a minimum of dogmatic teaching, whose popular worship is centred in offerings to the dead, in which the notion of duty is extended beyond the sphere of morals proper so as to embrace almost every detail of daily life.

I. THE TEACHER, CONFUCIUS.—The chief exponent

of this remarkable religion was K'ung-tze, or K'ung-fu-tze, latinized by the early Jesuit missionaries into *Confucius*. Confucius was born in 551 B. C., in what was then the feudal state of Lu, now included in the modern province of Shan-tung. His parents, while not wealthy, belonged to the superior class. His father was a warrior, distinguished no less for his deeds of valour than for his noble ancestry. Confucius was a mere boy when his father died. From childhood he showed a great aptitude for study, and though, in order to support himself and his mother, he had to labour in his early years as a hired servant in a noble family, he managed to find time to pursue his favourite studies. He made such progress that at the age of twenty-two years he opened a school to which many were attracted by the fame of his learning. His ability and faithful service merited for him promotion to the office of minister of justice. Under his wise administration the State attained to a degree of prosperity and moral order that it had never seen before. But through the intrigues of rival states the Marquis of Lu was led to prefer ignoble pleasures to the preservation of good government. Confucius tried by sound advice to bring his liege lord back to the path of duty, but in vain. He thereupon resigned his high position at the cost of personal ease and comfort, and left the state. For thirteen years, accompanied by faithful disciples, he went about from one state to another, seeking a ruler who would give heed to his counsels. Many were the privations he suffered. More than once he ran imminent risk of being waylaid and killed by his enemies, but his courage and confidence in the providential character of his mission never deserted him. At last he returned to Lu, where he spent the last five years of his long life encouraging others to the study and practice of virtue, and edifying all by his noble example. He died in the year 478 B. C., in the seventy-fourth year of his age. His lifetime almost exactly coincided with that of Buddha, who died two years earlier at the age of eighty.

That Confucius possessed a noble, commanding personality, there can be little doubt. It is shown by his recorded traits of character, by his lofty moral teachings, by the high-minded men that he trained to continue his life-work. In their enthusiastic love and admiration, they declared him the greatest of men, the sage without flaw, the perfect man. That he himself did not make any pretension to possess virtue and wisdom in their fullness is shown by his own recorded sayings. He was conscious of his shortcomings, and this consciousness he made no attempt to keep concealed. But of his love of virtue and wisdom there can be no question. He is described in "Analects", VII, 18, as one "who in the eager pursuit of knowledge, forgot his food, and in the joy of attaining to it forgot his sorrow". Whatever in the traditional records of the past, whether history, lyric poems, or rites and ceremonies, was edifying and conducive to virtue, he sought out with untiring zeal and made known to his disciples. He was a man of affectionate nature, sympathetic, and most considerate towards others. He loved his worthy disciples dearly, and won in turn their undying devotion. He was modest and unaffected in his bearing, inclined to gravity, yet possessing a natural cheerfulness that rarely deserted him. Schooled to adversity from childhood, he learned to find contentment and serenity of mind even where ordinary comforts were lacking. He was very fond of vocal and instrumental music, and often sang, accompanying his voice with the lute. His sense of humour is revealed in a criticism he once made of some boisterous singing. "Why use an ox-knife," he said, "to kill a fowl?"

Confucius is often held up as the type of the virtuous man without religion. His teachings, it is alleged, were chiefly ethical, in which one looks in vain for retribution in the next life as a sanction of right con-

duct. Now an acquaintance with the ancient religion of China and with Confucian texts reveals the emptiness of the assertion that Confucius was devoid of religious thought and feeling. He was religious after the manner of religious men of his age and land. In not appealing to rewards and punishments in the life to come, he was simply following the example of his illustrious Chinese predecessors, whose religious belief did not include this element of future retribution. The Chinese classics that were ancient even in the time of Confucius have nothing to say of hell, but have much to say of the rewards and punishments meted out in the present life by the all-seeing Heaven. There are numbers of texts that show plainly that he did not depart from the traditional belief in the supreme Heaven-god and subordinate spirits, in Divine providence and retribution, and in the conscious existence of souls after death. These religious convictions on his part found expression in many recorded acts of piety and worship.

II. THE CONFUCIAN TEXTS.—As Confucianism in its broad sense embraces not only the immediate teaching of Confucius, but also the traditional records, customs, and rites to which he gave the sanction of his approval, and which to-day rest largely upon his authority, there are reckoned among the Confucian texts several that even in his day were venerated as sacred heirlooms of the past. The texts are divided into two categories, known as the "King" (Classics), and the "Shuh" (Books). The texts of the "King", which stand first in importance, are commonly reckoned as five, but sometimes as six. The first of these is the "Shao-king" (Book of History), a religious and moral work, tracing the hand of Providence in a series of great events of past history, and inculcating the lesson that the Heaven-god gives prosperity and length of days only to the virtuous ruler who has the true welfare of the people at heart. Its unity of composition may well bring its time of publication down to the sixth century B. C., though the sources on which the earlier chapters are based may be almost contemporaneous with the events related. The second "King" is the so-called "She-king" (Book of Songs), often spoken of as the "Odes". Of its 305 short lyric poems some belong to the time of the Shang dynasty (1766-1123 B. C.), the remaining, and perhaps larger, part to the first five centuries of the dynasty of Chow, that is, down to about 600 B. C. The third "King" is the so-called "Y-king" (Book of Changes), an enigmatic treatise on the art of divining with the stalks of a native plant, which after being thrown give different indications according as they conform to one or another of the sixty-four hexagrams made up of three broken and three unbroken lines. The short explanations which accompany them, in large measure arbitrary and fantastic, are assigned to the time of Wan and his illustrious son Wu, founders of the Chow dynasty (1122 B. C.). Since the time of Confucius, the work has been more than doubled by a series of appendixes, ten in number, of which eight are attributed to Confucius. Only a small portion of these, however, are probably authentic. The fourth "King" is the "Li-ki" (Book of Rites). In its present form it dates from the second century of our era, being a compilation from a vast number of documents, most of which date from the earlier part of the Chow dynasty. It gives rules of conduct down to the minute details for religious acts of worship, court functions, social and family relations, dress—in short, for every sphere of human action. It remains to-day the authoritative guide of correct conduct for every cultivated Chinese. In the "Li-ki" are many of Confucius's reputed sayings and two long treatises composed by disciples, which may be said to reflect with substantial accuracy the sayings and teachings of the master. One of these is the treatise known as the "Chung-yung" (Doctrine of the Mean). It forms

Book XXVIII of the "Li-ki", and is one of its most valuable treatises. It consists of a collection of sayings of Confucius characterizing the man of perfect virtue. The other treatise, forming Book XXXIX of the "Li-ki", is the so-called "Ta-hio" (Great Learning). It purports to be descriptions of the virtuous ruler by the disciple Tsang-tze, based on the teachings of the master. The fifth "King" is the short historical treatise known as the "Ch'un-ts'ew" (Spring and Autumn), said to have been written by the hand of Confucius himself. It consists of a connected series of bare annals of the state of Lu for the years 722-484 B. C. To these five "Kings" belongs a sixth, the so-called "Hiao-king" (Book of Filial Piety). The Chinese attribute its composition to Confucius, but in the opinion of critical scholars, it is the product of the school of his disciple, Tsang-tze.

Mention has just been made of the two treatises, the "Doctrine of the Mean" and the "Great Learning", embodied in the "Li-ki". In the eleventh century of our era, these two works were united with other Confucian texts, constituting what is known as the "Sze-shuh" (Four Books). First of these is the "Lun-yü" (Analects). It is a work in twenty short chapters, showing what manner of man Confucius was in his daily life, and recording many of his striking sayings on moral and historical topics. It seems to embody the authentic testimony of his disciples written by one of the next generation.

The second place in the "Shuh" is given to the "Book of Mencius". Mencius (Meng-tze), was not an immediate disciple of the master. He lived a century later. He acquired great fame as an exponent of Confucian teaching. His sayings, chiefly on moral topics, were treasured up by disciples, and published in his name. Third and fourth in order of the "Shuh" come the "Great Learning" and the "Doctrine of the Mean".

For our earliest knowledge of the contents of these Confucian texts, we are indebted to the painstaking researches of the Jesuit missionaries in China during the seventeenth and eighteenth centuries, who, with an heroic zeal for the spread of Christ's kingdom united a diligence and proficiency in the study of Chinese customs, literature, and history that have laid succeeding scholars under lasting obligation. Among these we may mention Fathers Prémare, Régis, Lacharme, Gaubil, Noël, Ignacio da Costa, by whom most of the Confucian texts were translated and elucidated with great erudition. It was but natural that their pioneer studies in so difficult a field should be destined to give place to the more accurate and complete monuments of modern scholarship. But even here they have worthy representatives in such scholars as Father Zottoli and Henri Cordier, whose Chinese studies give evidence of vast erudition. The Confucian texts have been made available to English readers by Professor Legge. Besides his monumental work in seven volumes, entitled "The Chinese Classics" and his version of the "Ch'un ts'ew", he has given the revised translations of the "Shuh", "She", "Ta-hio", "Yü", and "Li-Ki" in Volumes III, XVI, XXVII, and XXVIII of "The Sacred Books of the East".

III. THE DOCTRINE.—(a) *Religious Groundwork.*—The religion of ancient China, to which Confucius gave his reverent adhesion was a form of nature-worship very closely approaching to monotheism. While numerous spirits associated with natural phenomena were recognized—spirits of mountains and rivers, of land and grain, of the four quarters of the heavens, the sun, moon, and stars—they were all subordinated to the supreme Heaven-god, *T'ien* (Heaven) also called *Ti* (Lord), or *Shang-ti* (Supreme Lord). All other spirits were but his ministers, acting in obedience to his will. *T'ien* was the upholder of the moral

law, exercising a benign providence over men. Nothing done in secret could escape his all-seeing eye. His punishment for evil deeds took the form either of calamities and early death, or of misfortune laid up for the children of the evil-doer. In numerous passages of the "Shao-" and "She-king", we find this belief asserting itself as a motive to right conduct. That it was not ignored by Confucius himself is shown by his recorded saying, that "he who offends against Heaven has no one to whom he can pray". Another quasi-religious motive to the practice of virtue was the belief that the souls of the departed relatives were largely dependent for their happiness on the conduct of their living descendants. It was taught that children owed it as a duty to their dead parents to contribute to their glory and happiness by lives of virtue. To judge from the sayings of Confucius that have been preserved, he did not disregard these motives to right conduct, but he laid chief stress on the love of virtue for its own sake. The principles of morality and their concrete application to the varied relations of life were embodied in the sacred texts, which in turn represented the teachings of the great sages of the past raised up by Heaven to instruct mankind. These teachings were not inspired, nor were they revealed, yet they were infallible. The sages were born with wisdom meant by Heaven to enlighten the children of men. It was thus a wisdom that was providential, rather than supernatural. The notion of Divine positive revelation is absent from the Chinese texts. To follow the path of duty as laid down in the authoritative rules of conduct was within the reach of all men, provided that their nature, good at birth, was not hopelessly spoiled by vicious influences. Confucius held the traditional view that all men are born good. Of anything like original sin there is not a trace in his teaching. He seems to have failed to recognize even the existence of vicious hereditary tendencies. In his view, what spoiled men was bad environment, evil example, an inexcusable yielding to evil appetites that everyone by right use of his natural powers could and ought to control. Moral downfall caused by suggestions of evil spirits had no place in his system. Nor is there any notion of Divine grace to strengthen the will and enlighten the mind in the struggle with evil. There are one or two allusions to prayer, but nothing to show that daily prayer was recommended to the aspirant after perfection.

(b) *Helps to Virtue.*—In Confucianism the helps to the cultivation of virtue are natural and providential, nothing more. But in this development of moral perfection Confucius sought to enkindle in others the enthusiastic love of virtue that he felt himself. To make oneself as good as possible, this was with him the main business of life. Everything that was conducive to the practice of goodness was to be eagerly sought and made use of. To this end right knowledge was to be held indispensable. Like Socrates, Confucius taught that vice sprang from ignorance and that knowledge led unfailingly to virtue. The knowledge on which he insisted was not purely scientific learning, but an edifying acquaintance with the sacred texts and the rules of virtue and propriety. Another factor on which he laid great stress was the influence of good example. He loved to hold up to the admiration of his disciples the heroes and sages of the past, an acquaintance with whose noble deeds and sayings he sought to promote by insisting on the study of the ancient classics. Many of his recorded sayings are eulogies of these valiant men of virtue. Nor did he fail to recognize the value of good, high-minded companions. His motto was, to associate with the truly great and to make friends of the most virtuous. Besides association with the good, Confucius urged on his disciples the importance of always welcoming the fraternal correction of one's faults. Then, too, the daily examination of conscience was inculcated. As

a further aid to the formation of a virtuous character, he valued highly a certain amount of self-discipline. He recognized the danger, especially in the young, of falling into habits of softness and love of ease. Hence he insisted on a virile indifference to effeminate comforts. In the art of music he also recognized a powerful aid to enkindle enthusiasm for the practice of virtue. He taught his pupils the "Odes" and other edifying songs, which they sang together to the accompaniment of lutes and harps. This together with the magnetism of his personal influence lent a strong emotional quality to his teaching.

(c) *Fundamental Virtues*.—As a foundation for the life of perfect goodness, Confucius insisted chiefly on the four virtues of sincerity, benevolence, filial piety, and propriety. Sincerity was with him a cardinal virtue. As used by him it meant more than a mere social relation. To be truthful and straightforward in speech, faithful to one's promises, conscientious in the discharge of one's duties to others—this was included in sincerity and something more. The sincere man in Confucius's eyes was the man whose conduct was always based on the love of virtue, and who in consequence sought to observe the rules of right conduct in his heart as well as in outward actions, when alone as well as in the presence of others. Benevolence, showing itself in a kindly regard for the welfare of others and in a readiness to help them in times of need, was also a fundamental element in Confucius's teaching. It was viewed as the characteristic trait of the good man. Mencius, the illustrious exponent of Confucianism, has the remarkable statement: "Benevolence is man" (VII, 16). In the sayings of Confucius we find the Golden Rule in its negative form enunciated several times. In "Analects", XV, 13, we read that when a disciple asked him for a guiding principle for all conduct, the master answered: "Is not mutual goodwill such a principle? What you do not want done to yourself, do not do to others." This is strikingly like the form of the Golden Rule found in the first chapter of the "Teaching of the Apostles"—"All things soever that you would not have done to yourself, do not do to another"; also in Tobias, iv, 16, where it appears for the first time in Sacred Scripture. He did not approve the principle held by Lao-tze that injury should be repaid with kindness. His motto was "Requite injury with justice, and kindness with kindness" (Analects, XIV, 36). He seems to have viewed the question from the practical and legal standpoint of social order. "To repay kindness with kindness", he says elsewhere, "acts as an encouragement to the people. To requite injury with injury acts as a warning" (Li-ki, XXIX, 11). The third fundamental virtue in the Confucian system is filial piety. In the "Hiao-king", Confucius is recorded as saying: "Filial piety is the root of all virtue."—"Of all the actions of man there are none greater than those of filial piety." To the Chinese then as now, filial piety prompted the son to love and respect his parents, contribute to their comfort, bring happiness and honour to their name, by honourable success in life. But at the same time it carried that devotion to a degree that was excessive and faulty. In consequence of the patriarchal system there prevailing, filial piety included the obligation of sons to live after marriage under the same roof with the father and to give him a childlike obedience as long as he lived. The will of the parents was declared to be supreme even to the extent that if the son's wife failed to please them he was obliged to divorce her, though it cut him to the heart. If a dutiful son found himself compelled to admonish a wayward father he was taught to give the correction with the utmost meekness; though the parent might beat him till the blood flowed he was not to show any resentment. The father did not forfeit his right to filial respect, no matter how great his wickedness. Another virtue of

primary importance in the Confucian system is "propriety". It embraces the whole sphere of human conduct, prompting the superior man always to do the right thing in the right place. It finds expression in the so-called rules of ceremony, which are not confined to religious rites and rules of moral conduct, but extend to the bewildering mass of conventional customs and usages by which Chinese etiquette is regulated. They were distinguished even in Confucius's day by the three hundred greater, and the three thousand lesser, rules of ceremony, all of which had to be carefully learned as a guide to right conduct. The conventional usages as well as the rules of moral conduct brought with them the sense of obligation resting primarily on the authority of the sage-kings and in the last analysis on the will of Heaven. To neglect or deviate from them was equivalent to an act of impiety.

(d) *Rites*.—In the "Li-ki", the chief ceremonial observances are declared to be six: capping, marriage, mourning rites, sacrifices, feasts, and interviews. It will be enough to treat briefly of the first four. They have persisted with little change down to the present day. Capping was a joyous ceremony, wherein the son was honoured on reaching his twentieth year. In the presence of relatives and invited guests, the father conferred on his son a special name and a square cornered cap as distinguishing marks of his mature manhood. It was accompanied with a feast. The marriage ceremony was of great importance. To marry with the view of having male children was a grave duty on the part of every son. This was necessary to keep up the patriarchal system and to provide for ancestral worship in after years. The rule as laid down in the "Li-ki" was, that a young man should marry at the age of thirty and a young woman at twenty. The proposal and acceptance pertained not to the young parties directly interested, but to their parents. The preliminary arrangements were made by a go-between after it was ascertained by divination that the signs of the proposed union were auspicious. The parties could not be of the same surname, nor related within the fifth degree of kindred. On the day of the wedding the young groom in his best attire came to the house of the bride and led her out to his carriage, in which she rode to his father's home. There he received her, surrounded by the joyous guests. Cups improvised by cutting a melon in halves were filled with sweet spirits and handed to the bride and groom. By taking a sip from each, they signified that they were united in wedlock. The bride thus became a member of the family of her parents-in-law, subject, like her husband, to their authority. Monogamy was encouraged as the ideal condition, but the maintenance of secondary wives known as concubines was not forbidden. It was recommended when the true wife failed to bear male children and was too much loved to be divorced. There were seven causes justifying the repudiation of a wife besides infidelity, and one of these was the absence of male offspring. The mourning rites were likewise of supreme importance. Their exposition takes up the greater part of the "Li-ki". They were most elaborate, varying greatly in details and length of observance, according to the rank and relationship of the deceased. The mourning rites for the father were the most impressive of all. For the first three days, the son, clad in sack-cloth of coarse white hemp, fasted, and leaped, and wailed. After the burial, for which there were minute prescriptions, the son had to wear the mourning sack-cloth for twenty-seven months, emaciating his body with scanty food, and living in a rude hut erected for the purpose near the grave. In the "Analects", Confucius is said to have condemned with indignation the suggestion of a disciple that the period of the mourning rites might well be shortened to one year. Another class of rites of supreme importance were the

sacrifices. They are repeatedly mentioned in the Confucian texts, where instructions are given for their proper celebration. From the Chinese notion of sacrifice the idea of propitiation through blood is entirely absent. It is nothing more than a food-offering expressing the reverent homage of the worshippers, a solemn feast to do honour to the spirit guests, who are invited and are thought to enjoy the entertainment. Meat and drink of great variety are provided. There is also vocal and instrumental music, and pantomimic dancing. The officiating ministers are not priests, but heads of families, the feudal lords, and above all, the king. There is no priesthood in Confucianism.

The worship of the people at large is practically confined to the so-called ancestor-worship. Some think it is hardly proper to call it worship, consisting as it does of feasts in honour of dead relatives. In the days of Confucius, as at present, there was in every family home, from the palace of the king himself down to the humble cabin of the peasant, a chamber or closet called the ancestral shrine, where wooden tablets were reverently kept, inscribed with the names of deceased parents, grandparents, and more remote ancestors. At stated intervals offerings of fruit, wine, and cooked meats were set before these tablets, which the ancestral spirits were fancied to make their temporary resting-place. There was, besides, a public honouring by each local clan of the common ancestors twice a year, in spring and autumn. This was an elaborate banquet with music and solemn dances, to which the dead ancestors were summoned, and in which they were believed to participate along with the living members of the clan. More elaborate and magnificent still were the great triennial and quinquennial feasts given by the king to his ghostly ancestors. This feasting of the dead by families and clans was restricted to such as were united with the living by ties of relationship. There were, however, a few public benefactors whose memory was revered by all the people and to whom offerings of food were made. Confucius himself came to be honoured after death, being regarded as the greatest of public benefactors. Even to-day in China this religious veneration of the master is faithfully maintained. In the Imperial College in Peking there is a shrine where the tablets of Confucius and his principal disciples are preserved. Twice a year, in spring and autumn, the emperor goes there in state and solemnly presents food-offerings with a prayerful address expressing his gratitude and devotion.

In the fourth book of the "Li-ki" reference is made to the sacrifices which the people were accustomed to offer to the "spirits of the ground", that is to the spirits presiding over the local fields. In the worship of spirits of higher rank, however, the people seem to have taken no active part. This was the concern of their highest representatives, the feudal lords and the king. Each feudal lord offered sacrifice for himself and his subjects to the subordinate spirits supposed to have especial care of his territory. It was the prerogative of the king alone to sacrifice to the spirits, both great and small, of the whole realm, particularly to Heaven and Earth. Several sacrifices of this kind were offered every year. The most important were those at the winter and summer solstice in which Heaven and Earth were respectively worshipped. To account for this anomaly we must bear in mind that sacrifice, as viewed by the Chinese, is a feast to the spirit guests, and that according to their notion of propriety the highest deities should be fêted only by the highest representatives of the living. They saw a fitness in the custom that only the king, the Son of Heaven, should, in his own behalf and in behalf of his people, make solemn offering to Heaven. And so it is to-day. The sacrificial worship of Heaven and Earth is celebrated only by the emperor, with the assistance, indeed, of a small army of attendants, and with a

magnificence of ceremonial that is astonishing to behold. To pray privately to Heaven and burn incense to him was a legitimate way for the individual to show his piety to the highest deity, and this is still practised, generally at the full moon.

(e) *Politics*.—Confucius knew but one form of government, the traditional monarchy of his native land. It was the extension of the patriarchal system to the entire nation. The king exercised an absolute authority over his subjects, as the father over his children. He ruled by right Divine. He was providentially set up by Heaven to enlighten the people by wise laws and to lead them to goodness by his example and authority. Hence his title, the "Son of Heaven". To merit this title he should reflect the virtue of Heaven. It was only the high-minded king that won Heaven's favour and was rewarded with prosperity. The unworthy king lost Divine assistance and came to naught. The Confucian texts abound in lessons and warnings on this subject of right government. The value of good example in the ruler is emphasized most strongly. The principle is asserted again and again, that the people cannot fail to practise virtue and to prosper when the ruler sets the high example of right conduct. On the other hand the implication is conveyed in more than one place that when crime and misery abound, the cause is to be sought in the unworthy king and his unprincipled ministers.

IV. HISTORY OF CONFUCIANISM.—It is doubtless this uncompromising attitude of Confucianism towards vicious self-seeking rulers of the people that all but caused its extinction towards the end of the third century B. C. In the year 213 B. C., the subverter of the Chow dynasty, Shi Hwang-ti, promulgated the decree that all Confucian books, excepting the "Y-king", should be destroyed. The penalty of death was threatened against all scholars who should be found possessing the proscribed books or teaching them to others. Hundreds of Confucian scholars would not comply with the edict, and were buried alive. When the repeal came under the Han dynasty, in 191 B. C., the work of extermination was wellnigh complete. Gradually, however, copies more or less damaged were brought to light, and the Confucian texts were restored to their place of honour. Generations of scholars have devoted their best years to the elucidation of the "King" and "Shuh", with the result that an enormous literature has clustered around them. As the State religion of China, Confucianism has exercised a profound influence on the life of the nation. This influence has been little affected by the lower classes of Taoism and Buddhism, both of which, as popular cults, began to flourish in China towards the end of the first century of our era. In the gross idolatry of these cults the ignorant found a satisfaction for their religious cravings that was not afforded by the religion of the State. But in thus embracing Taoism and Buddhism they did not cease to be Confucianists. These cults were and are nothing more than accretions on the Confucian beliefs and customs of the lower classes, forms of popular devotion clinging like parasites to the ancestral religion. The educated Chinese despises both Buddhist and Taoist superstitions. But while nominally professing Confucianism pure and simple, not a few hold rationalistic views regarding the spirit world. In number the Confucianists amount to about three hundred millions.

V. CONFUCIANISM VERSUS CHRISTIAN CIVILIZATION.—In Confucianism there is much to admire. It has taught a noble conception of the supreme Heaven-god. It has inculcated a remarkably high standard of morality. It has prompted, as far as it knew how, the refining influence of literary education and of polite conduct. But it stands to-day encumbered with the serious defects that characterize the imperfect civilization of its early development. The association of T'ien with innumerable nature-spirits, spirits

of sun, moon, and stars, of hills and fields and rivers, the superstitious use of divination by means of stalks and tortoise shells, and the crude notion that the higher spirits, together with the souls of the dead, are regaled by splendid banquets and food-offerings, cannot stand the test of intelligent modern criticism. Nor can a religion answer fully to the religious needs of the heart which withdraws from the active participation of the people the solemn worship of the deity, which has little use of prayer, which recognizes no such thing as grace, which has no definite teaching in regard to the future life. As a social system it has lifted the Chinese to an intermediate grade of culture, but has blocked for ages all further progress. In its rigid insistence on rites and customs that tend to perpetuate the patriarchal system with its attendant evils of polygamy and divorce, of excessive seclusion and repression of women, of an undue hampering of individual freedom, Confucianism stands in painful contrast with progressive Christian civilization.

Congo Independent State and Congo Missions.

[EDITOR'S NOTE:—The following account of the Congo Independent State was written before the annexation of the State by the Belgian Government. Belgium's right to take over the Congo and the successive steps which have led up to the annexation will be found treated under sections II and VII. On 20 August, 1908, the Chamber of Deputies approved the treaty of annexation, and on 9 September following the treaty was adopted by the Belgian Senate. By this agreement the Belgian Government took over the Independent State, including the *Domaine de la Couronne*, with all its rights and obligations. Among other trusts the Government guaranteed certain allowances to Prince Albert and Princess Clementine and created two funds, one of \$9,100,000 to be expended in Belgium for public works, and another of \$10,000,000 to be paid to the king and his successors in fifteen annuities and used for objects connected with the Congo.

The present article deals with the Independent State—both in its interior organization and international position—as it was down to the time of annexation.]

I. EXPLORATION; FOUNDING OF THE STATE.—America has not been without a share in the discovery of the Congo Free State. It was James Gordon Bennett, the proprietor of the "New York Herald," who (October, 1879) engaged (Sir) Henry Morton Stanley to undertake his voyage through Africa to find the lost explorer, David Livingstone. Americans, therefore, may claim a part in the honour of a discovery which has changed our geographical notions and opened a new country to civilization. Congo had been considered an arid, uninhabited desert; Stanley found there rich forests, an immense river, vast lakes, and millions of human beings to be civilized. Further, the United States was the first Power (22 April, 1884) that recognized the

flag of the International Association as that of a friendly state. There are (1908) in Africa four Congo States: the French, German, Portuguese, and the Independent, or Free, State. It is this last which, more than the others, deserves particular attention. It was here that the plenipotentiaries, gathered at Berlin (24 Feb., 1885), hoped to see realized their ideal of generous freedom and civilizing humanity. Leopold II ascended the throne of Belgium in 1865. A man of undoubted genius and erudition, of large ideas and tenacious will, he was also inspired with great ambitions. Even before becoming king, in his speeches to the Senate (9 Apr., 1853, 7 Feb., 1860, 21 March, 1861) he expressed the desire to see his country rely on her own resources and extend her empire beyond the seas. Ascending the throne, he found himself ruler of a country so small that it was scarcely visible on the map of the world, and it was but natural that he should conceive the hope of one day ruling over a more extended dominion. He therefore set his heart on obtaining possession of the Congo for his people; nor was this his first effort to realize his ambition; it was perhaps the seventh or eighth attempt he had made at Belgian colonization.

Briefly, the successive stages in the foundation of the Congo Free State were as follows: As a consequence of the expeditions (1840; 1 May, 1873) of Livingstone and Stanley, public attention began to be drawn to Central Africa, and Leopold II divined the great possibilities of the newly-discovered country. On 12 Sept., 1876, he called a *Conférence Géographique* at Brussels, which gave birth to the association for the exploration and civilization of Central Africa commonly called the International African Association. This was divided into different national committees each charged with the task of promoting the common cause. The Belgian committee was founded on 6 Nov., 1876; King Leopold assisted at its foundation and delivered a remarkable speech. The Belgian was the only committee which displayed any serious activity. It collected a sum of 100,000 dollars, five times as great as the united collections of all the others, and took the leading part in the organization of the first expedition. The expedition naturally followed the route which had already been traced by Livingstone, i. e. it moved from east to west. It was a failure, however, and many lives were sacrificed in vain. In January, 1878, the news came that Stanley had crossed right through Central Africa, from the Zanzibar Coast to the mouth of the Congo River, whose upper course he was the first to discover during this journey. It was then that Leopold conceived the idea of sending out an expedition which should start from the western coast and explore the country. While others were content to applaud Stanley or to listen to his interesting narratives, the King of the Belgians resolved to employ the explorer to further his designs, which were not merely commercial or political, but sincerely humanitarian as well. At the very moment Stanley set foot on European ground envoys were waiting for him at Marseilles. The king succeeded in gaining him for his purpose, and then proceeded to found (Nov., 1878) a society afterwards called the International Congo Association. In the name of this association, in which Leopold was the principal though hidden agent, Stanley's little party, counting only thirteen white men, set out. It was not the only expedition intent on planting a European flag on this virgin soil; at the same time a French and a Portuguese mission were also on their way.

Towards the end of 1879 Stanley reached a non-Portuguese territory on the right bank of the Congo River and founded there the post of Vivi. Moving slowly up the river he came at last to the Pool. The Brazza mission was already there, and the French flag was planted on the right bank. The French had not crossed the river, however, and the Portuguese expedi-

tion had stopped at the Upper Kwango, thus leaving the country to the interior open to the future colony. During this journey Stanley concluded many treaties with the native chiefs, by which they were to submit to the suzerainty of the Association, founded a certain number of posts in the North near the Equator and in the South in the Kassai district, and actually set up a government which was soon semi-officially recognized. In Oct., 1882, France tacitly acknowledged the capacity of the Association to enjoy international rights (see letter of M. Duclerc, President of the Council, to Leopold II). The United States (22 April, 1884) and Germany (8 Nov., of the same year) recognized in a more explicit manner the flag of the Association as that of a friendly State. A week later (15 Nov., 1884) the famous Berlin Conference was opened. The object of this conference, which included delegates from fourteen nations, is stated clearly in the heading which serves as preamble to the act containing the collection of decisions and called "l'Acte Général de Berlin". It runs as follows:—

"Wishing to regulate, in a spirit of mutual good understanding, the conditions most favourable to the development of commerce and civilization in certain parts of Africa, and to assure to all nations the advantages of free navigation on the two principal African rivers [Congo and Niger] which flow into the Atlantic; desirous, on the other hand, of forestalling any misunderstandings and disputes which new acts of occupation on the African coast might cause in the future; concerned also with the measures to be taken for increasing the welfare both material and moral of the native races . . ." During the intervals between the meetings of the conference M. Strauch worked hard to win for the flag of the International Association official recognition by all the powers represented; his efforts were successful, and Leopold, as founder of the Association, was able to officially communicate the fact to the conference at its second last meeting (23 Feb., 1885). The plenipotentiaries then expressed their high appreciation of the work done by the Belgian king; at the same time they welcomed the birth of the new State, thus founded. At the final meeting of the conference the Berlin Act was accepted by the Association, which was then hailed by Bismarck as "one of the principal guardians of the work which they had in view".

The moment had now arrived for Leopold to show himself. Hitherto he had worked through various societies which finally developed into the International Association; he was the moving spirit of them all. He now came forward in the name of this Association, and receiving from the Belgian Chambers (vote of Chamber of Representatives, 28 April, 1885; vote of Senate, 30 April, 1885) the necessary authorization he announced to the various Powers on 1 August, 1885, and the days following "that the possessions of the International Association would henceforth form and be called the Independent State of Congo". He further declared himself sovereign of this State. It was understood that the only constitutional bond of union between Belgium and the Independent State of Congo was the person of the king. Thus was founded the Independent State. Leopold can justly regard it as his own creation. Nevertheless it is only fair to recognize the part taken in the work by some Belgian statesmen. Without the recognition of the Powers the Independent Congo State could not have won a secure position, and this recognition was obtained through the brilliant diplomacy of Mr. E. Banning and of Baron Lambertmont at Berlin. Without the authorization of the Belgian Chambers Leopold could not have occupied a new throne; it was M. Beernaert, then prime minister, who obtained this authorization, and he is therefore justly regarded as "one of the statesmen who have contributed most to unite the destinies of the Congo

and of Belgium" (Leroy-Beaulieu, "De la colonisation", 352).

II. INTERNATIONAL AND POLITICAL SITUATION.—*Recognition by the Powers.*—The international position held by the Independent State results directly from the friendly recognition of the Powers accorded by treaty to the International Association, from which sprang the Independent State. Following, in chronological order, are the names of the contracting Powers and the dates of the treaties: United States of America (22 April, 1884); German Empire (8 Nov., 1884); Great Britain (16 Dec., 1884); Italy (19 Dec., 1884); Austria-Hungary (24 Dec., 1884); The Netherlands (27 Dec., 1884); Spain (7 Jan., 1885); France and Russia (5 Feb., 1885); Sweden and Norway (10 Feb., 1885); Portugal (14 Feb., 1885); Belgium and Denmark (28 Feb., 1885); Turkey (25 June, 1885); Switzerland (19 Nov., 1889); Republic of Liberia (15 Dec., 1891); Japan (9 July, 1900).

Neutrality of the Congo.—By the General Act of Berlin (ch. iii) the Powers had agreed to respect a politi-

NATIVE CARPENTERS, MISSION OF NEW ANTWERP

cal neutrality in the Congo Basin. They allowed all Powers having possessions there to put their territories under the protection of this neutrality. Availing itself of this privilege, the Independent State, 1 Aug., 1885, declared its perpetual neutrality. This declaration was afterwards repeated, 18 Dec., 1894, on the occasion of certain changes of frontier.

Obligations Imposed by the Act of Berlin.—In declaring its adhesion to the Act of Berlin (24 Feb., 1885) the Independent State contracted certain commercial, political, and other obligations which we shall briefly describe.—(a) Freedom of Commerce.—All nations were to have perfect freedom in commercial enterprise; the subjects of all flags were to be treated with perfect equality and be at liberty to engage in all kinds of transport; there was to be freedom of traffic on the coasts, rivers, and lakes of the Congo, and the harbours were to be open; free import and free transit were to be allowed to merchandise, save only such taxes or duties as might be required to defray the expenses entailed in the interests of commerce (subsequently, by an agreement made at Brussels on 2 July, 1890, an import duty of ten per cent maximum might be imposed); finally no monopoly or privilege of a commercial nature might be granted.—(b) Protection of Natives, Missionaries, Travellers.—The Powers signing the Act bound themselves to care for the native peoples, their moral and material welfare, and to co-operate in suppressing slavery and espe-

cially the slave trade. They bound themselves to protect and assist, "without regard to distinctions of nationality or of creed, all religious, scientific and philanthropic establishments or enterprises, formed or organized for such ends, or calculated to instruct the inhabitants and to make them understand and appreciate the advantages of civilization". In particular, Christian missionaries, men with scientific ends in view, and explorers, together with their escorts, were to be the objects of special protection (Art. 6). (c) Freedom of Religious Worship.—"Liberty of conscience and religious toleration are expressly guaranteed to natives as well as to other subjects and to foreigners. The free and public exercise of all forms of worship, the right of erecting religious edifices, and of organizing missions belonging to all creeds, shall not be submitted to any restriction or restraint" (ibidem).—(d) Postal Conventions.—The terms of the Universal Postal Union, revised at Paris, 1 June, 1878 (Art. 7), were to be observed in the Congo Basin; these were officially accepted by the Independent State, 17 Sept., 1885. In like manner, 13 Sept., 1886, the additional Postal Act of Lisbon was adopted, on 19 June, 1892, the Universal Postal Convention of Washington, and on 26 May, 1906, that of Rome.—(e) Mediation and Arbitration.—In case serious disagreements should occur over the territories where commercial freedom was allowed, the Powers signing the Act bound themselves "before having recourse to arms, to seek the intervention of one or several friendly Powers". In such a case the Powers reserved to themselves the right of having recourse to arbitration (Art. 12).

Conditions of the Act of Brussels.—The Slave Trade and Traffic in Spirits.—On 2 July, 1890, on the proposal of England, an international conference met at Brussels. A general act was passed and signed by all the Powers that had formerly signed the Berlin Act, and also by the Independent State. By this the signatory Powers bound themselves to take measures to prevent the slave trade and to restrict the traffic in spirits in the zone lying between 20° N. lat. and 22° S. lat. Within this territory the distillation of liquor or importation thereof was forbidden in regions where the use of such liquor was not yet common. In the other parts where it was already in use a heavy import duty was imposed. This duty was fixed by the Convention of 8 June, 1899, at seventy francs per hectolitre, fifty per cent alcohol (about \$1.57 a gallon), for a period of six years; an equivalent excise duty was laid on the manufacture of such liquors.

Right of Preference of France.—Apart from the general provisions which govern its dealings with the Powers, the Independent State, owing to certain conventions, has special relations with France and Belgium. We shall treat first of those concerning France, comprised in the famous, but often badly explained, "Right of Preference". On 23 April, 1884, Colonel Strauch, President of the International Association, declared in a letter to Jules Ferry that if, owing to unforeseen circumstances and contrary to its intention, the Association was compelled in the future to sell its possessions, it would consider itself obliged to give the preference of purchase to France. On the following day the French minister officially acknowledged the letter and added that in the name of the French Government he bound himself to respect the established relations and the free territories of the Association. Thus the right was constituted. Writing, however, on 22 April, 1887, to Bourée, minister of France at Brussels, Baron Van Eetvelde declared that the Association had never meant or intended that this right accorded to France should be to the prejudice of Belgium of which Leopold II was king. In his letter of 29 April, M. Bourée replied that this interpretation had come to his notice, but said nothing more. When in 1895 the question of the cession of the Independent

State to Belgium was raised, it seemed prudent to negotiate with France. As a consequence the convention of 5 Feb., 1895, was made between France and Belgium; France, on the one hand, agreed not to oppose the cession, and on the other secured a favourable determination of frontiers in Congo. On the same date, by another convention, the Belgian Government, already acting as successor of the Independent State, recognized the right of preference of France in the purchase of these territories, in case of a complete or partial exchange, concession, or lease to another Power. It declared besides that it would never give up gratuitously either the whole or a part of these said possessions. It is quite clear, therefore, (1) that the right of preference is simply one of pre-emption, i. e. in case of alienation on terms of sale, negotiations must first be entered into with France; (2) that France recognized in 1895 the priority of Belgium in this respect, or at least consented not to deny Belgium the right of preference.

Belgium's Right to Take Over the Congo.—The Belgian Act of 28 April, 1885, had declared: "The union between Belgium and the new State of the Congo will be exclusively personal". This could not, however, prevent the subsequent gift on the part of the king, nor could it take from Belgium the right of accepting such a donation. By his will, dated 2 August, 1889, which was placed in the hands of M. Beernaert, who communicated it to the Chambers, Leopold II was to leave as a legacy to his country all sovereign rights over the Independent State of the Congo. He added, besides, that should the Belgian Government wish to take over the Congo before this time, he would be happy to see it accomplished during his lifetime. An agreement was next entered into, 3 July, 1890, by which Belgium was to advance to the Congo twenty-five million francs, five millions at once and the remaining twenty at the rate of two millions a year. Six months after the expiration of the ten years (18 Feb., 1901) Belgium might, if it wished, annex the Independent State, with all the possessions, rights, and emoluments belonging to this sovereignty, provided it assumed the outstanding obligations of the State to third parties, "the king expressly refusing all indemnification for the personal sacrifices he had made". On 5 Aug., 1894, the king-sovereign announced that he was prepared to put at the immediate disposal of Belgium his possessions in the Congo. Following this announcement a treaty of annexation was concluded, 8 Jan., 1895, between the Belgian Government and the Independent State, subject to the approval of the Chambers. This was given, 12 Feb., 1895, but was withdrawn, 19 June, and the treaty annulled by mutual consent, 12 Sept., 1895. However, a new loan confirmed Belgium's option for 1901.

When this date arrived, Baron Van Eetvelde, minister of the State of Congo, addressed (28 March, 1901) a dispatch to the chief minister of the Belgian cabinet, Count de Smet de Naeyer, to the effect that possibly the moment had not yet arrived for Belgium to take over the Congo State; and that if this were so, in view of the letter of 5 August, 1889, and the existing ties between Belgium and the Congo, it would, perhaps, be neither politic nor useful to fix a new term for the right of option. A further communication, 22 May, 1901, emphasized the right held by Belgium, in virtue of the above-mentioned letter and the legacy of the king. It added that in case the right of annexation were unexercised, but not relinquished, Belgium ought to renounce, during such extension of her option, the payment of interest and the repayment of capital due to her. At the same time the Independent State declared its readiness to submit to annexation. M. Beernaert now proposed to annex the Congo, thus opposing the Government project of 28 March, 1901, namely, to suspend the repayment of the capital lent, and the payment of the interest

thereon. The king, by a letter addressed 11 June, 1901, to M. Woeste, member of the Chamber, personally took part in the question. Only three items of this letter are public: the first clearly pointed out that the moment was inopportune for annexation; the second stated that in relation to the Congo Belgium should remain in the position she held in consequence of the Convention of 1890; the third enumerated the proofs of the attachment which the king had for his country. Thus came about the Belgian law of 14 Aug., 1901, which renounced the repayment of the loans and the interest thereon until such time as Belgium should surrender the right of annexation—a right which she declared she wished to preserve. From an examination of these acts it seems certain that Belgium has an incontestable right to take over the Congo during the lifetime of the king. That certain prominent politicians, in a preliminary discussion in 1906, seem to have ignored this right, was doubtless only the effect of a surprise. When, however, as on 3 June, 1906, the king-sovereign in a letter to the secretaries-general of the Independent State, added to his will a codicil which seemed to impose on Belgium the obligation of respecting (besides the engagements entered into with third parties) certain royal foundations, the amendment was not acceptable to the Chambers. The minister then stated that these wishes on the part of the king were not imposed as conditions, but were only earnest recommendations. On 14 Dec., 1906, the House moved that while it desired for the Congo the advantages of civilization it was not unmindful of Belgium's rights; furthermore, that the question of taking over the Congo should be settled with the least possible delay.

The Territory.—The declarations of neutrality, together with the friendly treaties by which the united Powers of Germany, France, Portugal, etc., recognized the State, determined roughly its frontiers. Greater precision resulted from the treaty with England of 12 May, 1894. With France, owing to some difficulties which arose, five treaties were made, the last being signed 25 Feb., 1895. Treaties have still to be made with Germany to settle the Lake Kivu question and with Portugal about the Lake Dilolo region. With the exception of a narrow border-zone to the east near Lake Albert Edward, situated in the Nile Basin, nearly all the territory of the State belongs to the Congo Basin, which is about 1,158,300 sq. m. in extent. The State is the largest portion of this basin, and has an area of 945,945 sq. m., which is equivalent to a square having a side of three hundred leagues, or to seventy-five times the area of Belgium, or five times that of France. It is bounded on the north and north-west by French Congo and the Anglo-Egyptian Sudan; on the east by British East Africa (Uganda Protectorate) and German East Africa; on the south-east and south by Rhodesia and Portuguese Angola; and on the west by the Atlantic Ocean (which gives it about twenty-two miles of coastline) and the Portuguese territory of Cabinda. The State stretches from a little above 5° N. lat. to below 13° S. lat., and from 12° to between 31°-32° E. long., the most easterly point being on the Upper Nile.

III. DESCRIPTION OF THE INDEPENDENT STATE.—*Physical Geography.*—The general aspect of the State has often been compared to a huge cup. To the west lie the Crystal Mountains; to the south-east, the long chain of the Mitumba bordering on the plateaux of Ka-Tanga, from which descend the streams Lualaba, Luapula, etc., whose waters unite to form the Congo River. This vast central depression, divided into several terraces, rests on alternate strata of granite and gneiss. Lacustral settings (grit and clayey schists) are often found, as well as laterite. The innumerable rivers of the Congo are rocky in their upper courses and cut their way by rapids from one terrace to another, until, on the great alluvial plains of the

centre, they form an immense network of from 9000 to 11,000 miles of navigable water-ways and spread out fan-like from Leopoldville. The principal tributaries of the Congo are the Ubanghi and Welle to the north; the Kassai-Sankuru, Lomami, etc., to the south. Beyond Stanley Pool are the famous falls which, by preventing continuous river-traffic, necessitated the railroad (about 270 miles, a journey of two days) binding Leopoldville to the seaport of Matadi (the highest point of the Congo Estuary reached by steamers). The falls of the Upper River will likewise be doubled by railroads. In fact, a trunk line to Stanley Falls has been completed, and another to the "Gates of Hell" commenced. Others in the direction of the Nile, of the Katanga, and of the English and Portuguese railways have been determined upon.

There are two seasons in the Lower Congo, the dry

and the rainy. In the centre the climate, always warm and rainy, has produced a vast equatorial forest of giant trees and jungle. In these regions much cocoa, coffee, copal, nut- and palm-oil, and, above all, caoutchouc are produced. Besides the elephant, hunted to excess, the fauna of the country includes the antelope, monkey, zebra (which it is hoped to domesticate), okapi, hippopotamus, and crocodile. There also are found termites, ants, mosquitoes, and the terrible tsé-tsé which causes the sleeping sickness. With regard to mineral wealth,

Katanga gives promise of an immense amount of malachite copper (2 million tons, valued at \$800,000,000, according to the official report of Jan., 1908), much tin (20 million tons, valued at \$16,000,000 along the Lualaba); also iron magnetite and oligist. Gold also has been found in the mines of Kambobe, while those of Kilo (Aruwimi) produced 8841.25 oz. Troy (\$170,000) in 1905.

Ethnography and Population.—Three indigenous races are found in the Congo Basin. The Azandé, who seem to belong to the Nigrition races, inhabit the north-east frontier. The aboriginal Pygmies are found in the centre, mingled with the rest, but especially in the region of the great forest. The larger part of the peoples belong to the Bantu family. The population is probably about twenty millions, although other estimates of from twelve to thirty millions have been given.

Language.—The language of the Blacks is, radically, the agglutinative speech of the Bantu peoples, i. e. it forms its words without fusion or alteration. It is divided into over forty very different dialects. The language is rich, rational, philosophic, and betokens a much higher level of civilization than do the morals and customs of this wretched race. In Lower Congo contact with the Portuguese has influenced the ideas and habits of the Blacks; it has taught them the commercial value of certain products, such as caoutchouc,

MAYOMBÉ IDOL

and brought them under the enervating influence of alcohol; here the race has degenerated. In Upper Congo the Arab influence has introduced by violence both slavery and habits of industry. The pernicious practice of inhaling the fumes of hemp has come also with Arab domination. In the centre of the country the race remains more pure.

Political Organization.—Present native customs show traces of a former supremacy of one chief over the others. There are unmistakable signs both of vassalage and of suzerainty. The tribes are ruled by a chief (*m'fumu*) whose authority, however, is checked by the presence of a council of elders. The succession to the chieftaincy is hereditary, but not in the direct line of male descent. While only males can occupy the throne, the succession passes not to the son, but in the collateral line to the brother and then to the son of the daughter. Other information on ethnographical questions is given under VIII. MISSIONS IN THE CONGO.

Commerce.—Some figures with regard to the commerce of the Congo may be given here. In 1887 when a total of the exportations of the Independent State was first made, the figure was about \$396,088. This we may compare with the figures of subsequent years:—1890, \$1,648,439; 1895, \$2,188,603; 1900, \$9,475,480; 1905, \$10,606,432; 1906, \$11,655,566. Caoutchouc represents the greater part of this output. Its value was, in 1905, \$8,751,180 (10,938,975 lbs.). The value of ivory (473,260 lbs.) for the same year was \$967,554; palm nuts (11,355,529 lbs.), \$302,817; palm-oil (4,335,229 lbs.), \$220,678. Import statistics date only from the establishment of import duties in the second quarter of 1892. We append some dates and figures:—1893, \$1,835,020; 1895, \$2,137,169; 1900, \$4,944,821; 1905, \$4,015,072; 1906, \$4,295,517. These figures represent largely Belgian commerce. In 1906 the Congo's exports to Belgium reached \$10,860,939; the imports from Belgium were \$3,057,058. Imports from the United States do not exceed \$6,000.

IV. WHEN AND BY WHAT RIGHT THE CONGO STATE WAS CREATED.—How did the Congo State arise? The question is not an easy one to answer. Certain authors, the mouthpieces of the State, regard the Independent State as the natural heir of the petty chiefs who governed the various Congolese tribes. They maintain that through the treaties made with these chiefs the supreme power passed from native to European hands. This is a thesis easy to formulate, but impossible to defend. For in fact an international treaty supposes the existence of two nations. Now it may be admitted that the Congolese had, at the period in question, a political organization—though this point has been doubted by some; at any rate the International Association was at the time surely nothing more than a private company. Again, when the native chiefs agreed to put their mark at the bottom of a treaty in exchange for a few pieces of cloth, did they realize what they were doing? Did they realize that they were veritably abdicating, and not simply authorizing some European to settle on their land? A recent defender of the position stated above has gone so far as to imagine that Stanley improvised on the Congo coast a course of international law for the use of the native chiefs. For this Stanley had neither time nor means at his disposal, and he would have found it difficult to do so through an interpreter. Further, even if the chiefs did wish to transfer their authority, could they have done so without the consent of their tribes? Lastly, the treaties in question were nearly all made with chiefs who inhabited the present French Congo; they affected only a very small part of the present Congo State.

Others say that the Independent State was created by the Berlin Conference. This hypothesis is also unacceptable. What right had this Conference over the Congo Basin? The plenipotentiaries claimed none;

what they wished to do was not to create new States, but to make the Powers, present and future, holding interests in Central Africa, accept a regime of free trade. As a matter of fact it was during the intervals between the meetings of the Conference that the Independent State had its flag recognized by the different Powers one after another. The Conference, as such, only congratulated the State. It supplied the means of existence, but it did not create. M. Cattier (*Droit et administration de l'Etat Indépendant*, p. 43) is rightly of opinion that the Independent State owes its origin to an act of occupation. But was this lawful? Doubtless it was. First the land was a prey to the most revolting savage cruelties, even to cannibalism; second, it was ravaged by ceaseless intestine wars and by the slave trade; third, it denied strangers the protection of the *jus gentium*, or law of nations. In such a case the common good of mankind sanctioned the imposition of a state of order and security, and hence the creation of a civilizing power. The Powers represented at the Berlin Conference gave the king-sovereign a free hand in the political occupation of the Congo Basin, while the treaties made with the native chiefs and the victories won over the Arabs likewise contributed to this end. But it was only when this occupation grew sufficiently effective (about 1895) that the embryonic polity of 1885 became in a true sense the Independent State. It is carefully to be noted that the occupation above referred to did nothing more than transfer the political authority; it did not modify or affect any private rights, e. g. property rights.

V. INTERIOR ORGANIZATION.—**Legislative and Administrative Power.**—Leopold II exercises over his Congolese subjects a sovereignty which makes him the most absolute monarch in the world: he governs them by his sole and uncontrolled will. He gives all important orders, constitutes the whole administration, and is the source of all authority in his African kingdom. He has established the Congo Central Government at Brussels. While reserving to himself the supreme legislative power, he has, since 1 Sept., 1894, confided to a secretary of state the direction of the Central Government. This official can enact measures (*Arrêts du Secrétaire d'Etat*) which have the force of laws. When he is absent his place is taken by three secretaries-general, who, acting in concert, possess his power; as a matter of fact, since the period of office of Baron Van Eetvelde there has been no secretary of state. Further, the sovereign-king instituted (16 April, 1889) at Brussels a *Conseil Supérieur*, which acts as a high court of justice and gives advice on such questions as the king submits for consideration. His Majesty names the members of this council. In the Congo territory itself a governor-general is at the head of the administration. He possesses a restricted legislative power and can make police regulations and the like. The State capital is at Boma. The country is divided into fourteen districts, governed by the *commissaires*, and these are subdivided into zones and *secteurs* which are under the authority of the *chefs de zone*, *chefs de secteur*.

Judicial Power.—For the administration of civil and criminal cases there are five lower courts, each composed of a judge, an *officier du ministère public* (*procureur d'Etat*) to represent the people, and a *greffier*; there is also a court of appeal composed of a president, two judges, an *officier du ministère public* (*procureur général*), and a *greffier*. In places where there is no regular court the *officier du ministère public* (who must be a doctor in law) can, within certain limits, exercise a summary jurisdiction. Finally, the native chiefs (*m'fumu*) have certain judicial powers over their own peoples. The repression of crimes, or, in the terminology of Congo law, infractions, which include even such offences as that of murder (see Code Pénal de l'Etat Indép.), is further confided to local

courts, appointed by the governor-general, and composed (at least normally) of a judge, who need not have studied law (very often he is the *commissaire*), and an *officier du ministère public* (substitute) who must be a doctor in law. There are also military courts (*conseil de guerre, conseil de guerre d'appel*). At the head of this administration of justice is the *conseil supérieur de Bruxelles*, which constitutes the *cour de cassation*. The judges and officers of justice are not appointed for life, but are all removable; the governor-general possesses a sort of supremacy both in their nomination and supervision.

Domainial Policy.—At first (1885–1891) the State favoured private initiative and claimed for itself no monopoly. Later on (since 1892), anxious to increase its resources, and hearing of the vast wealth of rubber and ivory in the Upper Congo, it inaugurated a regime of monopoly. Invoking an ordinance of 5 July, 1885, which had declared that “the unoccupied lands must be considered as belonging to the State”, it invalidated all acts of occupation made, whether by natives or strangers, after this date. It then put in practice a system of proprietorship and exploitation of the soil and its products. We add here a short résumé of the extremely complex legislation now in force:—(a) Concerning the Natives.—The decrees profess respect for all native occupation “such as it existed before 5 July, 1885”. Hitherto no adequate or serious inquiry has determined the rights which the natives possessed in virtue of this occupation. Does the State admit that they now have a true proprietary right to any part whatever of the soil? It is impossible to say. At any rate they may not, without the authorization of the governor-general, dispose of their lands to a third party. The natives may continue, then, to inhabit their plots of land where they plant *msiuc*; in addition, by virtue of the reform decrees of 1906 each village has been allotted an area triple the size of that which it previously inhabited and cultivated. The natives are full possessors of the products of the lands thus cultivated. Further, if they formerly enjoyed any certain use of any woods or forests they may still retain that use.

(b) Concerning the Non-Natives.—The rights above mentioned being safeguarded, all the rest of the Congo State has been declared the property of the State; it is consequently at the absolute disposition of the sovereign-king, who has distributed it thus: (1) One-third constitutes the *Domaine National*, administered by a council of six charged with the task of developing its revenues. These revenues are intended to cover the ordinary budget expenses, to pay off the public debt, to form a reserve fund, and to serve certain purposes of public utility for the Congo State and for Belgium. (2) One-ninth, selected in the richest part of the country, forms the *Domaine de la Couronne*. It is the private property of the king, who, however, has the intention of giving it eventually to some institution of public utility, and in the meantime desires that its revenues should create and subsidize certain works and institutions for the general good, whether in the State or in Belgium. Six mines, hereafter to be selected, also belong to this *Domaine*, which is administered by a committee. Hitherto both of these territories have been administered (*en régie*) by the employees of the State. (3) The rest of the territory constitutes the *Terres Domaniales*, which the State reserves to itself to sell, to let, or to grant as it pleases. All alienation or letting of these lands must, to avoid nullity, be ratified within six months by the king. Of these public lands about one third have been granted or alienated, principally to concessionary companies. The grants of use, however, far exceed the alienations, and they give to the companies in question the monopoly of exploitation. In the greater number of these companies the State owns half the stock.

Fiscal System.—(1) The State subjects non-natives

to direct and personal taxes similar to those in Europe. As a consequence of the Brussels Conference (2 July, 1890) a customs duty was laid on all imports. The export customs duty on rubber (0.65 fr. per kilogram—about 6 cts. per pound) and ivory (1 to 2.1 fr. per kilogram—about 9 cts. to 17 cts. per pound) forms one of the principal sources of revenue of the State.—(2) The natives are subject to conscription. Since the reforms of 1906 the annual contingent to be supplied is divided into two sections, one of which goes to the army and the other furnishes labourers for the public works. The soldiers serve for seven years, the workmen for five. Further, the natives who are not so engaged are subject to a poll tax affecting every adult, male or female. This tax varies from 6 to 24 fr. (about \$1.20 to \$4.80) a year; it may be paid in money, in kind (food-stuffs as a rule), or in personal labour. Every year the *commissaire* draws up for the different villages tables of equivalence between money, kind, and labour, which must, since the last

FRANCISCAN CONVENT OF ST. GABRIEL OF THE FALLS,
ORIENTAL PROVINCE

reforms, be publicly exhibited. The personal labour demanded may not exceed in duration a total of forty hours a month—hence the phrase “forty hours’ tax”. For this labour the natives receive a certain remuneration—by “an act of pure condescension” according to the latest decrees. The annual income and outlay of the State are about 30,000,000 fr. (roughly \$6,000,000). The products of the *Domaine National* together with taxes paid in kind represent 16,500,000 fr. The remuneration paid (in kind) to the natives amounts to 2,500,000 or 3,000,000 fr.

VI. CRITICISMS OF THE CONGO.—For some years past the Independent State has been the object of very severe criticism, particularly on the part of the Congo Reform Association, directed by Mr. E. D. Morel. We do not presume to judge intentions; nevertheless this hostility, directed against one only of the four Congos, and that one dependent on a people powerless to defend itself, creates in Belgium painful feelings of surprise. Grave accusations have been made against the French Congo; the German Parliament in the name of humanity has heard earnest protests against excesses in the German Congo; and it is not likely, if a commission of inquiry were to traverse Rhodesia, that it would have nothing but eulogies to record. Why then single out one country, and that a defenceless one? It seems but fair, also, to remark that one cannot justly compare a colony in its beginnings with a colony established more than a century ago. The early history of colonies has ever been a sad one, as is instanced by Macaulay’s account of Warren Hastings and the British occupation of India. On the other hand wrong does not justify wrong. The standard of a government should be absolute justice, and it is from this point of view that the wrongs imputed to the Congo administration will be considered.

The accusations fall under two heads: (1) infidelity to promises given to the civilized Powers; (2) injustice towards the Congolese.

(1) *Breach of Faith.*—The land system inaugurated in 1891 is said to be incompatible with the commercial freedom stipulated for at Berlin, in particular with Article 5, which forbade the granting of monopolies, and any privileges in commercial matters. The Independent State denies the charge of infidelity: "There is no 'commerce' in selling the product of one's own land. We do no more than that. The monopolies we accord are not commercial." In support of this view the opinions of jurists of different countries are adduced. These were consulted, especially in 1892, and included Professor Westlake and Sir Horace Davey, the latter an English judge and member of the Privy Council.

(2) *Inhuman Treatment of Natives.*—This accusation appeals to Christian people; it touches the principles of humanity. The Congo State is accused of oppressing, instead of civilizing, the Congo, and charges of atrocious cruelty have been brought. So grave were these that King Leopold thought it wise to establish an International Commission of inquiry with unlimited authority to investigate the condition of the natives. The decree of 23 July, 1904, entrusted this important duty to M. Janssens (General Advocate of the Court of Cassation of Belgium), as president of the commission, Baron Nisco, an Italian (Temporary President of the Boma Tribunal of Appeal), and Doctor de Schumacher (Counsellor of State and Chief of the Department of Justice of the Canton of Lucerne, Switzerland). The commission arrived at Boma, 5 Oct., 1904. They concluded their investigations, 13 Feb., 1905, and on the 21st of the same month embarked for Europe. The report was made public, 5 Nov., 1905, in the official bulletin of the Independent State, and is obviously the most serious item in the question that we are now discussing. We must except, however, the chapter dealing with the missionaries. In this the commissioners departed from their habitual prudence, and their expressions here—as is commonly stated—do not accurately represent their judgment. According to this report one cannot directly charge the Independent State with responsibility for cruelties inflicted upon individuals. There are doubtless isolated crimes, but these are punished. There are also the involuntary consequences of governmental measures, but these unhappy effects were not foreseen. Such were the delegation of powers to the agents of companies; the giving of firearms to black sentinels; the failure to distinguish between military demonstrations to prevent rebellion and war operations to repress a revolt. Moreover, the report drew attention to grave abuses in the recruiting of labourers, in the imposition of compulsory labour on the natives, in the land regime, and in the organization of justice.

Following the publication of this, the king named a Reform Commission, whose work resulted in certain recommendations drawn up by the secretaries-general of the State. These the king accepted and embodied in the Reform Decrees of 3 June, 1906.

It would be premature at this time to forecast the probable influence of these reforms on the general situation in the Congo; we are too near the events. Impartial history will distinguish the good from the evil, and fix the responsibilities. It may be said that the Report recognized, on the part of the Independent State, the splendid campaign against the Arabs, signalized by many deeds of heroism, which put an end to the slave trade, and rendered its resuscitation almost impossible. To the intestine wars between the chiefs have succeeded, almost everywhere, peace and security. The use of the fail and of alcohol have been rigorously prohibited, and the cannibal tribes can but very rarely find an opportunity of indulging

their savage instincts. Finally, it may be observed that in this whole affair Belgium is in no way responsible; this is an opinion expressed by two ministers of the British Government (see debates of the British Parliament for 27 Feb. and 3 March, 1908). Belgium as a whole has remained aloof from the African project, and the methods adopted were not known to it. If, indeed, the Congo Government had appealed with more simplicity and frankness to the religious sentiments of the Belgian people; if it had taken care to proclaim a programme of Christian civilization, it would have kindled more enthusiasm among them, and evoked more sympathy. In that case, also, it would have found more easily the men capable of contributing to a work of such supreme moral importance.

VII. FUTURE OF THE CONGO STATE.—By a vote of 14 Dec., 1906, the Belgian Chamber of Representatives expressed its willingness to consider as soon as possible the question of annexation. A commission of eighteen was immediately charged with making a draft of proposed colonial law. When M. de Trooz succeeded M. de Smet de Naeyer as prime minister, he announced his intention of rapidly bringing about the transfer of the Congo State to Belgium. During August, 1907, the Belgian and the Congo Governments each named four plenipotentiaries to draw up the treaty of annexation. A praiseworthy activity was displayed. The commission of eighteen adopted on the first reading a tentative body of laws; the plenipotentiaries agreed to sign a treaty. The treaty, however, was not well received by the public; the Liberal Left unanimously declared they could not accept it. The principal difficulty, it seems, was the clause in the Treaty of Cession which assures the perpetuity of the *Domaine de la Couronne*. It is true that the revenues of this *Domaine* were to be disposed of in a generous way; yet many representatives refused to bind the mother country to the maintenance of a foundation which had merely been earnestly recommended. In the meantime M. de Trooz died. M. Schollaert, his successor, pronounced in favour of annexation, and his declaration before the Chamber gave promise of more acceptable conditions of annexation. An additional clause introduced by him into the treaty greatly improved the situation.

VIII. MISSIONS IN THE CONGO.—*Ancient.*—The evangelization of the Congo began as early as 1484, when Diego Cam discovered the mouth of the Congo River, known as the Zaire until the seventeenth century. Cam's naval chaplain set himself at once to preach the "good news" to the natives, and won to the Faith the chief of Sogno, a village on the right bank of the Congo, where he first landed. Some of the inhabitants of this village accompanied Cam on his return voyage and were solemnly baptized at the court of John II of Portugal. Later, the head chief of Banza-Congo (Outeiro, the present San Salvador) asked King John for missionaries. Three were sent (whether they were Dominicans or Franciscans or members of a Lisbon chapter, we do not know); they finally baptized the head chief and many other subordinate ones at Banza-Congo, in a wooden structure called the church of the Holy Cross. In 1518 a grandson of this chief, known as Henry, who had been ordained in Portugal, was made titular Bishop of Utica, and appointed by Leo X Vicar Apostolic of Congo. Unfortunately, he died before quitting Europe. He is the only native bishop Congo has ever had.

From the beginning the Portuguese undertook to introduce European customs in Congo. The petty chiefs became kings with Portuguese names; their secretaries of State headed public documents thus: "We, Alphonso [or Diego] by the grace of God King of Congo and of Ilungo, of Caçongo, of Ngoyo, of the lands above and below the Zaire, Lord of the Amboados and of Angola . . . and of the Conquest [*sic*] of Parizon. . . ." The chiefs for the most part could

do no more than put their mark to these documents. One of them imitated the feudal system and divided his kingdom into seigniories, duchies, etc. At the beginning of the seventeenth century a native chief, Alvarez II, sent one of his relatives, a marquis, as his representative to the papal court. The ambassador arrived in Rome in a dying condition and expired the day after his arrival, the Eve of Epiphany, 1608. Paul V, who personally assisted the ambassador in his last moments, gave him a magnificent state funeral and erected to his memory a monument at St. Mary Major's. Later, Urban VIII had a superb mausoleum erected to him by Bernini; it still stands at the entrance to the choir of the basilica. The Dominicans, Franciscans, Carmélites, and Jesuits were the first missionaries of the Congo. In spite of the promising beginnings, their labours, though trying, were rather fruitless. In the seventeenth century the Jesuits had two colleges, one at Loanda, another, of minor importance, at San Salvador. On the whole, religion never really took firm root, and was early brought into discredit by the vices and slave-trading of the Portuguese. It has managed, however, to linger on in Portuguese Congo to our days. While the Portuguese always confined themselves to the Lower Congo, as early as the seventeenth century the missionaries had traversed the course of the Zaire, and a seventeenth-century map has been discovered which traces the river according to data supplied by them. From this it would seem that Stanley has not the distinction of being the first white man to explore the Upper Congo.

Modern.—French and Portuguese Congo.—On 20 May, 1716, Clement XI created the episcopal see of Santa Cruz do Reino de Angola. The residence was at first at San Salvador, but was later on transferred to Loanda. The Portuguese bishop of this town has under his jurisdiction about twenty priests. It is through this see that the ancient and modern missions of Congo are united (see ANGOLA). The first modern missionaries were the Fathers of the Holy Ghost (mother-house at Paris). Towards the middle of the nineteenth century this flourishing congregation of missionaries had the spiritual care of all the West African coast from the Senegal to the Orange River, with the exception of the Diocese of Loanda. They still have charge of all French Congo and of Portuguese Congo (Loanda excepted).

(1) French Congo.—The Fathers of the Holy Ghost have here three vicariates:—(a) Gabon, founded in 1842 and confided to them in 1845. Mgr. Adam is vicar Apostolic; 12 residences; mission staff, 42 priests, 21 brothers, 1 native priest, 7 native brothers, and 41 catechists. (b) Loango River (Lower French Congo), founded, 24 Nov., 1886; pro-vicar Apostolic, Mgr. Dérouet; 6 residences; mission staff, 18 priests, 11 brothers, 1 native priest, 8 native seminarists, 17 native brothers, and 60 catechists. (c) Ubanghi (Upper French Congo), founded, 14 Oct., 1890; vicar Apostolic is Mgr. Augouard; 7 residences; mission staff, 24 priests, 16 brothers, and 14 catechists. The Christians of these three vicariates number about 40,000, of whom more than half are catechumens.

(2) Portuguese Congo.—This has a prefecture Apostolic dating from 27 June, 1640. The Capuchins administered it until 1834, when the mission was abandoned. A pontifical decree of 1 Sept., 1865, re-established it and entrusted it to the Fathers of the Holy Ghost; 4 residences, 11 priests, 11 brothers, 12 native seminarists, 10 native brothers, and 24 catechists; Christians about 7000. These figures represent the condition of the missions of the Congregation of the Holy Ghost in March, 1906.

The Free State.—Charles George Gordon, the hero of Khartoum, a Presbyterian, was among the first to draw the attention of Leopold II to the need of establishing numerous Catholic missions in his African king-

dom. At the beginning of 1884, some days before his departure for the Sudan, Gordon was chosen General Administrator of the Stations of the International Association, and in this quality had an interview with Leopold, towards the end of which Gordon remarked: "Sire, we have forgotten the principal thing—the missionaries". "Oh, I have already considered the question", said Leopold. "The Association gives help and protection to all missionaries; further, it has given a subsidy to the missionaries of the Bible Society, to the Baptists . . ." "Yes," replied Gordon, "but you must also send Roman missionaries, many Roman missionaries" (*Revue Générale*, 1885, p. 116). From 24 Feb., 1878, there was at the extreme east of the Congo State a pro-vicariate Apostolic for the Upper Congo. This became, in 1880, a vicariate, and was served by the White Fathers of Cardinal Lavigerie (q. v.). But after the

MISSION OF THE WHITE FATHERS, TANGANYIKA

establishment of the new State in 1885, Leopold persuaded the Holy See to reserve the Catholic evangelization of his African dominion to Belgian missionaries. Cardinal Lavigerie did not, however, abandon this post of honour, but founded a Belgian branch of his institute, which, by a pontifical Brief of 30 Dec., 1886, was placed in charge of the Vicariate of the Upper Congo. Its activities are confined to the Independent State; vicar Apostolic, Mgr. Roelens. An African seminary was founded at Louvain (1886) and placed under the direction of Canon Forget, professor of theology at the University of Louvain. The difficulties attached to such an enterprise soon made themselves felt, and it was found impossible to carry it on without the help of some religious institute. The aid of the young but already flourishing Congregation of the Missionaries of the Sacred Heart of Mary (known also as the Congregation of Scheutveld, after the mother-house at Scheutveld near Brussels) had already been sought in 1876, and they were again appealed to in 1884. Though the missions in China and Mongolia absorbed nearly all their strength, they determined (1886-87) to make an effort to assist the Congo. In 1888 they took over the African seminary, and on 11 May of the same year Leo XIII created the immense Vicariate Apostolic (present incumbent, Mgr. Van Ronslé) of the Belgian Congo, which he committed to their care. On 26 July, 1901, a part of this territory was detached, though still left in their charge, to form the new Prefecture Apostolic of the Upper Kassai; pref. Ap. (1908) is Mgr. Henri Cambier.

Towards the end of 1891 the Belgian Jesuits, already overburdened with two foreign missions, undertook to send a body of missionaries to the Congo. They were placed in charge of a portion of the Belgian Congo vicariate; on 31 Jan., 1903, their mission became the Prefecture Apostolic of Kwango. The superior and pref. Ap. (1908) is the Rev. Julian Banckaert, S. J. There are also a prefecture Apostolic: Welle, founded 12 May, 1898, Premonstratensians of the Abbey of

Tongerloo (pref. Ap., Rev. M. L. Derikx) and a vicariate Apostolic: Stanley Falls, founded as a prefecture 3 Aug., 1904, Priests of the Sacred Heart (vic. Ap., Rev. G. Grison). There are other missionaries in the Belgian vicariate who, though having no autonomous territory, nevertheless render very important service in the evangelization of the country. Among these are the Trappists and the Redemptorists. The former went from the Abbey of Westmalle in 1894, hoping to acquire in Africa, by the foundation of agricultural colonies, a civilizing influence similar to that of the medieval Benedictines. Their first efforts in the Lower Congo were fruitless; later they established themselves in the Upper Congo beyond the confluence of the Congo and the Ruki, almost on the Equator. Their principal post is at Bamania. The Redemptorists have succeeded the secular priests at Matadi in the evangelization of the town and of the railway employees. In 1905-06 the Mill Hill Missionaries (English) accepted two posts in the Upper Congo. The Vicariate Apostolic of Sudan, administered by the White Fathers, has under its jurisdiction a portion of the Congo State; vicar Apostolic, Mgr. H. L. Bazin. In May, 1907, the Fathers of the Holy Ghost were engaged as chaplains to the second railway section of the Great Lakes.—The numerous sisters of various religious institutes who have devoted their fortunes and their lives to the moral and religious education of the Congolese women do an amount of good beyond all praise. The Sisters of Charity of Jesus and Mary (Ghent Institute) were the first to enter on this arduous mission. They are found in the districts evangelized by the Fathers of Scheutveld and are assisted by the Franciscan Sisters, from Gooreind, Antwerp province. The Missionary Sisters of the Precious Blood (Natal, Holland) are employed in the missions of the Trappist Fathers. The Congregation of Our Lady of Africa (White Sisters) devote themselves to the natives in the Vicariate of Upper Congo. In the Prefecture of Kwango the Notre Dame Sisters (Namur) are established; in Welle the Sisters of the Sacred Heart of Mary (Berlaer-lez-Lierre). For statistics see below the table of Catholic missions.

German East Africa.—The German possessions occupy but a very small part of the Congo Basin. There are three vicariates in charge of the White Fathers: South Nyanza under Mgr. J. J. Hirth; Unyamezi under Mgr. F. Gerboin; and Tanganyika under Mgr. A. Le Chaptois. In addition there is the Vicariate of Central Zanzibar, in charge of the Fathers of the Holy Ghost, under Mgr. F. X. Vogt. Finally, the Vicariate of South Zanzibar, or Dar es Salaam, in charge of the Bavarian Congregation of St. Odile under Mgr. T. Spreiter.

Non-Catholic Missions.—There are very few of these in the French Congo. We may mention the two missions of Ogowe, formerly held by the American Presbyterians, and now by the Paris Evangelical Missions. Quite recently a Swedish mission has been established in Loango. In Portuguese Congo the Methodists have nine missions. Six missionary societies devote themselves to the evangelization of German East Africa, viz.: the Evangelical Missionary Society for German East Africa, the Pagan Missionary Society, the Community of Brothers, and the Evangelical Missionary Society of Leipzig; and two English, viz.: the Universities Mission to Central Africa and the Church Missionary Society. In the Congo Independent State there are many Protestant missions. The longest established is the English Baptist Missionary Society, Lower Congo (1877). In 1879 followed the Livingstone Inland Mission; Lutheran Svenska or Swedish Mission (1881); American Baptist Missionary Union (1883); Bishop Taylor's Self-Supporting Mission (1886); Congo Balolo Mission (1889); International Missionary Alliance (1889); American Southern Presbyterian Mission (1891);

Arnot Scotch Presbyterian Mission (1891); Seventh Day Baptists (1893). In 1897 there were 56 stations with 221 mission workers of both sexes.

The Natives.—The irreligion and ignorance of the Congolese have often been exaggerated and misrepresented. They are not so debased as many pretend. They recognize a supreme God, Creator of all things, but they seem very largely to ignore His immediate Providence and His intervention in the affairs of this world. They believe in the existence of spirits, and admit a metempsychosis more or less happy in a future life. Their worship is a species of gross fetishism, propagated by the sorcerers, whose influence is very great and often most pernicious. These sorcerers are the "wise men" of Congo; they are consulted about everything. If misfortune comes or crime is committed, it is to them that recourse must be had, and whoever is designated by them as the cause of the evil must pass through the test of fire or of *casque* (poisoned drink). The State forbids such tests under most severe penalties. Superstitious fears and slavish attachment to amulets are the chief obstacles to conversion. Others are the practice of polygamy, largely due to the custom which prevents the wife from having any relations with her husband during the period of lactation—from two to three years—lest she should make her child unhappy; the cannibalism which exists in certain parts; ingrained habits of idleness; gross egoism; the worship of might as confounded with right—in short that sum of differences which separates, as by an abyss, the essentially pagan soul of the Congolese from the Christian conception of right and wrong which the missionaries try to impart. The excesses and the evil example of the Europeans themselves render the missionary's task even more difficult. Add to this the abuse which, in districts where the rubber trade flourishes or in the neighbourhood of towns, imposes a hard task of from fifteen to twenty days per month of forced labour instead of the forty hours fixed by the law; the unfortunate divisions between the Christian churches and the acts of petty opposition consequent thereon—and the problem is still further complicated. Nor is all ended when the Congolese is converted; he must be continually urged to hold fast to the gift he has received, for his fickleness is very great. Often he imagines that his obligation to remain a Christian ceases with the contract which binds him to a mission or to the service of Europeans. In the eastern part of Upper Congo the Arabs, who frequently make slave raids, have managed to win over to their religion many of the intelligent tribes of the Bakus. These proselytes regard all their workmen as slaves for life; they are immoral, fanatic, and very hostile to the Gospel.

The noble work of evangelization in the Congo, however, is far from being fruitless. As formerly under the Portuguese rule, so to-day the missionaries find souls in which their teaching takes firm root. Mgr. Augouard gives the example of a catechist of the tribe of Babois who, seeing the resources of the mission failing, undertook to feed and clothe the children of his school with the profits of his sewing-machine. The most intelligent part of the population inhabits the *Domaine de la Couronne* and is well disposed towards Christianity. Until 1908 these people were shut off from all immediate missionary influence; they were evangelized, however, by some of their countrymen who had become Christians while serving in the army. Many travelled long distances to see and speak with the Catholic missionaries, and both men and women, nothing daunted, undertook perilous journeys in order to reach the mission stations. It is not surprising, therefore, that the missionaries have been received everywhere with enthusiasm, and that the natives have offered to build their simple habitations and schools.

The Manner of Evangelizing.—Guided by experi-

ence, the present missionaries confer baptism only on those who have been well instructed and well tested. Their chief reliance is placed in the education of the young. Hence in the stations they have founded schools where religion is taught along with the trades. For the Catholics it is the religious, men and women, who have devoted themselves to this work; among the Protestants Mrs. Bentley deserves the highest praise for the intelligent direction she has given to the trade instruction. The *fermes-chapelles*, of which mention is often made, are rural schools where, under the guidance of certain picked pupils, the young Congolese are taught agriculture. The missionary who regularly visits these posts supplies the farm instruments and the seeds; the chief who grants the use

Fathers possessed a school of catechists with 73 pupils, a *petit séminaire* with 14 pupils, and a *grand séminaire* with one pupil. The resources of the Catholic missions are mostly derived from private charity. Many Protestant missions are very richly endowed.

						Included among figures given above	

of the plot of ground still retains his title to the property; while the pupils, who form a sort of community round a little chapel, have the usufruct. A wise law of the State places at the disposal of charitable and philanthropical institutions the orphans and abandoned children, who are very numerous in the Congo. Hitherto the Catholics (with the exception of one Protestant mission) have been the only missionaries to claim them. The catechists render very valuable services to the missionaries; they are always selected from among the cleverest and best trained of the young native Christians. The sleeping-sickness has given rise to several hospitals, or lazarets, conducted by the missionaries. Both Protestant and Catholic missions have established printing presses; that of the Catholics is at Kisantu. To facilitate transportation the Protestants have four steamers, and the Catholics two. In respect to the relations between the missions and the civil power we may cite the convention concluded May, 1906, between the Holy See and the State. The latter agreed to grant certain lands to the missions, in return for which it stipulated for the opening and maintenance of schools and religious services in the principal centres. Both agreed to maintain harmony between their respective subjects, and to regulate amicably all differences. In 1907 the White

A. VERMEERSCH.

Congregatio de Auxiliis, a commission established by Pope Clement VIII to settle the theological controversy regarding grace which arose between the Dominicans and the Jesuits towards the close of the sixteenth century. Vast as was the subject of that controversy, its principal question, and the one which gave its name to the whole dispute, concerned the help (*auxilia*) afforded by grace; while the crucial point was the reconciliation of the efficacy of grace with human freedom. We know on the one hand that the efficacious grace given for the performance of an action obtains, infallibly, man's consent and that the action takes place. On the other hand, it is certain that in so acting man is free. Hence the question: How can these two things—the infallible result and liberty—be harmonized? The Dominicans solved the difficulty by their theory of physical pre-motion and predetermination; grace is efficacious when, in addition to the assistance necessary for an action, it gives a physical impulsion by means of which God determines and applies our faculties to the action. The Jesuits found the explanation in that mediate knowledge (*scientia media*) whereby God knows in the objective reality of things what a man, under any circumstances in which he might be placed, would do. Foreseeing, for instance, that a man would correspond freely with grace A, and that he, freely, would not correspond with grace B, God, desirous of the man's conversion, gives him grace A. This is efficacious grace. The Dominicans declared that the Jesuits conceded too much to free will, and so tended towards Pelagianism. In turn, the Jesuits complained that the Dominicans did not sufficiently safeguard human liberty, and seemed in consequence to lean towards Calvinism.

The controversy is usually supposed to have begun in the year 1581, when the Jesuit Prudencio de Montemayor defended certain theses on grace which were vigorously attacked by the Dominican Domingo

Bañez. That this debate took place is certain, but the text of the Jesuit's theses has never been published. As to those which were reported to the Inquisition, neither Montemayor nor any other Jesuit ever acknowledged them as his. The controversy went on for six years, passing through three phases—in Louvain, in Spain, and in Rome. At Louvain was the famous Michel Baius (q. v.) whose propositions were condemned by the Church. The Jesuit (afterwards Cardinal) Francisco de Toledo, authorized by Gregory XIII, had obliged Baius, in 1580, to retract his errors in presence of the entire university. Baius thereupon conceived a deep aversion for the Jesuits and determined to have revenge. During the Lent of 1597 he, with some of his colleagues, extracted from the notebooks of certain students who were disciples of the Jesuits, thirty-four propositions, many of them plainly erroneous, and asked the university to condemn "these Jesuit doctrines". Learning of this scheme, Leonard Lessius, the most distinguished theologian of the Society in the Low Countries and the special object of Baius' attacks, drew up another list of thirty-four propositions containing the genuine doctrine of the Jesuits, presented them to the dean of the university, and asked for a hearing before some of the professors, in order to show how different his teaching was from that which was ascribed to him. The request was not granted. The university published, 9 September, 1587, a condemnation of the first thirty-four propositions. At once, throughout Belgium, the Jesuits were called heretics and Lutherans. The university urged the bishops of the Low Countries and the other universities to endorse its censure, and this in fact was done by some of the prelates and in particular by the University of Douai. In view of these measures, the Belgian provincial of the Society, Francis Coster, issued a protest against the action of those who, without letting the Jesuits be heard, accused them of heresy. Lessius also published a statement to the effect that the university professors had misrepresented the Jesuit doctrine. The professors replied with warmth. To clear up the issue Lessius, at the instance of the Archbishop of Mechlin, formulated six *antitheses*, or brief statements, embodying the doctrine of the Jesuits relative to the matter of the condemned propositions, the third and the fourth antithesis bearing upon the main problem, i. e. efficacious grace. The discussion was kept up on both sides for a year longer, until the papal nuncio succeeded in softening its asperities. He reminded the contestants that definitive judgment in such matters belonged to the Holy See, and he forwarded to Sixtus V the principal publications of both parties with a petition for a final decision. This, however, was not rendered; a controversy on the same lines had been started at Salamanca, and attention now centred on Spain, where the two discussions were merged in one.

In 1588 the Spanish Jesuit Luis de Molina published at Lisbon his "Concordia liberi arbitrii cum gratiae donis", in which he explained efficacious grace on the basis of *scientia media*. Bañez, the Dominican professor at Salamanca, informed the Archduke Albert, Viceroy of Portugal, that the work contained certainly thirteen propositions which the Spanish Inquisition had censured. The archduke forbade the sale of the book and sent a copy to Salamanca. Bañez examined it and reported to the archduke that out of the thirteen propositions nine were held by Molina and that in consequence the book ought not to be circulated. He also noted the passages which, as he thought, contained the errors. Albert referred these comments to Molina who drew up his rejoinder. As the book had been approved by the Inquisition in Portugal, and its sale permitted by the Councils of Portugal and of Castile and Aragon it was thought proper to print at the end the replies of Molina; with these the work appeared in 1589. The Dominicans

attacked it on the ground that Molina and all the Jesuits denied efficacious grace. The latter replied that such a denial was impossible on the part of any Catholic. What they, the Jesuits, attacked was the Dominican theory of predetermination, which they regarded as incompatible with human freedom. The debates continued for five years and, in 1594, became public and turbulent at Valladolid, when Antonio de Padilla, S. J., and Diego Nuño, O. P., defended their respective positions. Similar encounters took place at Salamanca, Saragossa, Cordova, and other Spanish cities. In view of the disturbances thus created, Clement VIII took the matter into his own hands and ordered both parties to refrain from further discussion and await the decision of the Apostolic See.

The pope then asked an expression of opinion from various universities and distinguished theologians of Spain. Between 1594 and 1597 twelve reports were submitted; by the three universities of Salamanca, Alcalá, and Sigüenza; by the bishops of Coria, Segovia, Plasencia, Cartagena, and Mondoñedo; by Serra, Miguel Salón (Augustinian Friar), Castro (Canon of Toledo), and Luis Coloma, Prior of the Augustinians at Valladolid. There were also forwarded to Rome some statements in explanation and defence of the Jesuit and of the Dominican theory. Clement VIII appointed a commission under the presidency of Cardinals Madrucci and Arrigone, which began its labours 2 Jan., 1598, and on 19 March handed in the result condemning Molina's book. Displeased at their haste in treating a question of such importance, the pope ordered them to go over the work again, keeping in view the documents sent from Spain. Though the examination of these would have required several years, the commission reported again in November and insisted on the condemnation of Molina. Thereupon Clement VIII ordered the generals of the Dominicans and Jesuits, respectively, to appear with some of their theologians before the commission, explain their doctrines, and settle their differences. In obedience to this command, both generals began (22 February, 1599) before the commission a series of conferences which lasted through that year. Bellarmine, created cardinal in March, was admitted to the sessions. Little, however, was accomplished, the Dominicans aiming at criticism of Molina rather than exposition of their own views. The death of Cardinal Madrucci interrupted these conferences, and Clement VIII, seeing that no solution was to be reached on those lines, determined to have the matter discussed in his presence. At the first debate, 19 March, 1602, the pope presided, with Cardinals Borghese (later Paul V) and Arrigone assisting, as well as the members of the former commission and various theologians summoned by the pope. Sixty-eight sessions were thus held (1602-1605).

Clement VIII died 5 March, 1605, and after the brief reign of Leo XI, Paul V ascended the papal throne. In his presence seventeen debates took place. The Dominicans were represented by Diego Alvarez and Tomás de Lemos; the Jesuits by Gregorio de Valencia, Pedro de Arrubal, Fernando de Bastida and Juan de Salas. Finally, after twenty years of discussion private and public, and eighty-five conferences in presence of the popes, the question was not solved, but an end was put to the disputes. The pope's decree, communicated (5 September, 1607) to both Dominicans and Jesuits, allowed each party to defend its own doctrine, enjoined each from censuring or condemning the opposite opinion, and commanded them to await as loyal sons of the Church the final decision of the Apostolic See. That decision, however, has not been reached, and both orders, consequently, maintain their respective theories, just as any other theological opinion is held. The long controversy had aroused considerable feeling, and the pope, aiming at the restoration of peace and charity between the religious orders, forbade by a decree of the Inquisition

(1 December, 1611) the publication of any book concerning efficacious grace until further action by the Holy See. The prohibition remained in force during the greater part of the seventeenth century.

ANTONIO ASTRIN.

Congregationalism.—The retention by the Anglican State Church of the prelatical form of government and of many Catholic rites and ceremonies offensive to genuine Protestants resulted in the formation of innumerable Puritan factions, with varying degrees of radicalism. The violent measures adopted by Elizabeth and the Stuarts to enforce conformity caused the more timid and moderate of the Puritans to remain in communion with the State Church, though keeping up to the present day an incessant protest against "popish tendencies"; but the more advanced and daring of their leaders began to perceive that there was no place for them in a Church governed by a hierarchy and enslaved to the civil power. To many of them, Geneva was the realization of Christ's kingdom on earth, and, influenced by the example of neighbouring Scotland, they began to form churches on the model of Presbyterianism (q. v.). Many, however, who had withdrawn from the "tyranny" of the episcopate, were loath to submit to the dominion of presbyteries and formed themselves into religious communities acknowledging "no head, priest, prophet or king save Christ". These dissenters were known as "Independents", and in spite of fines, imprisonments, and the execution of at least five of their leaders, they increased steadily in numbers and influence, until they played a conspicuous part in the revolution that cost Charles I his crown and life. The earliest literary exponent of Independence was Robert Brown, from whom the dissenters were nicknamed Brownists. Brown was born in 1550, of a good family, in Rutlandshire, and studied at Cambridge. About 1580 he began to circulate pamphlets in which the State Church was denounced in unmeasured terms and the duty was inculcated of separating from communion with it. The godly were not to look to the State for the reform of the Church; they must set about it themselves on the Apostolic model. Brown defines the Church as "a company or number of Christians or believers, who, by a willing covenant made with their God, are under the government of God and Christ, and keep his laws in one holy communion". This new gospel attracted numerous adherents. A congregation was formed in Norwich which grew rapidly. Summoned before the bishop's court, Brown escaped the consequences of his zeal through the intervention of his powerful relation, Lord Burghley, and, with his followers, migrated to Holland, the common refuge of the persecuted reformers of all Europe. The Netherlands were soon flooded with refugees from England, and large congregations were established in the principal cities. The most flourishing Independent Church was that of Leyden under the direction of John Robinson. It was to this congregation that the "Pilgrim Fathers" belonged, who in 1620 set sail in the Mayflower for the New World.

The successful establishment of the New England colonies was an event of the utmost importance in the

development of Congregationalism, a term preferred by the American Puritans to Independency and gradually adopted by their coreligionists in Great Britain. Not only was a safe haven now opened to the fugitives from persecution, but the example of orderly communities based entirely on congregational principles, "without pope, prelate, presbytery, prince or parliament", was a complete refutation of the charge advanced by Anglicans and Presbyterians that Independency meant anarchy and chaos, civil and religious. In the Massachusetts settlements, "the New England way", as it was termed, developed, not indeed without strifes and dissensions, but without external molestation. They formed, from the Puritan standpoint, the veritable kingdom of the saints; and the slightest expression of dissent from the Gospel as preached by the ministers was punished with scourging, exile, and even death. The importance of stamping out Nonconformity in the American colonies did not escape the vigilance of Archbishop Laud; he had concerted measures with Charles I for imposing the episcopacy upon them, when war broke out between the king and the Parliament. During the Civil War in England, though few in number compared with the Presbyterians, they grew in importance through the ability of their leaders, notably of Oliver Cromwell who gained for them the ascendancy in the army and the Commonwealth. In the Westminster Assembly convened by the Long Parliament in 1643, Independency was ably represented by five ministers, Thomas Goodwin, Philip Nye, Jeremiah Burroughs, William Bridge and Sidrach Simpson, known as "The Five Dissenting Brethren", and ten or eleven laymen. They all took a prominent part in the debates of the Assembly, pleading strongly for toleration at the hands of the Presbyterian majority. They adopted the doctrinal articles of the Westminster Confession with slight modifications; but as there could be no basis of agreement between them and the Presbyterians regarding church government, a meeting of "elders and messengers" of "the Congregational churches" was held at the Savoy in 1658 and drew up the famous "Savoy Declaration", which was also accepted in New England and long remained as authoritative as such a document could be in a denomination which, theoretically, rejected all authority. From this Declaration we obtain a clear idea of the Congregationalist notion of the Church.

The elect are called individually by the Lord, but "those thus called (through the ministry of the word by His Spirit) he commandeth to walk together in particular Societies or Churches, for their mutual edification and the due performance of that Public Worship which He requireth of them in this world". Each of these particular churches is the Church in the full sense of the term and is not subject to any outside jurisdiction. The officers of the church, pastors, teachers, elders, and deacons, are "chosen by the common suffrage of the church itself, and solemnly set apart by fasting and prayer, with imposition of hands of the eldership of that church, if there be any before constituted therein"; the essence of the call consists in election by the Church. To preserve harmony, no person ought to be added to the Church without the consent of the Church itself. The Church has power to admonish and excommunicate disorderly members, but this power of censure "is to be exercised only towards particular members of each church as such". "In case of difficulties or differences, either in point of doctrine or administration, wherein either the churches in general are concerned, or any one church, in their peace, union, and edification, or any member or members of any church are injured in or by any proceeding in censures not agreeable to truth and order, it is according to the mind of Christ that many churches holding one communion together do by their messengers meet in a Synod or Council to consider and give their advice in

or about that matter in difference, to be reported to all the churches concerned: Howbeit, these Synods so assembled are not entrusted with any church power properly so called, or with any jurisdiction over the churches themselves, to exercise any censures, either over any churches or persons, or to impose their determination on the churches or officers." If any person, for specified reasons, be dissatisfied with his church, "he, consulting with the church, or the officer or officers thereof, may peaceably depart from the communion of the church wherewith he hath so walked, to join himself to some other church". Finally it is stated that "churches gathered and walking according to the mind of Christ, judging other churches (though less pure) to be true churches, may receive unto occasional communion with them such members of these churches as are credibly testified to be godly and to live without offense".

Such are the main principles of Congregationalism regarding the constitution of the Church; in doctrine the Congregational teachers were, for the most part, strictly Calvinistic. Independent ascendancy came to an abrupt close at the death of Cromwell and the restoration of Charles II. The Presbyterians, who had seated the Stuart on his throne, might hope for his favour; there was slight prospect that he would tolerate the democratic tenets of Congregationalism. As a matter of fact Charles and his servile parliament persecuted both forms of dissent. A succession of severe edicts, the Corporation Act, 1661, the Act of Uniformity, 1662, the Conventicle Act, 1663, renewed, 1670, the Five-Mile Act, 1665, and the Test Act, 1673, made existence almost impossible to Nonconformists of all shades of belief. Yet in spite of persecution, they held out until the eighteenth century brought toleration and finally freedom. It is characteristic of the Puritans that, notwithstanding the sufferings they had undergone they spurned the indulgence offered by James II, because it tolerated popery; in fact, they were more zealous than the rest of the nation in driving James from the throne. The exclusion of Dissenters from the British universities created a serious problem for the Congregationalists as well as for the Catholics; to the sacrifices which these and other denominations out of communion with the State Church made for the maintenance of academies and colleges conducted according to their respective principles, England, like America, owes that great boon so essential to the well-being of civilized nations, freedom of education. During the eighteenth century, while the clergy of the Established Church, educated and maintained by the State, were notoriously incapable and apathetic, whatever there was of spiritual energy in the nation emanated from the denominational colleges.

CONGREGATIONAL UNIONS.—The Congregational churches were at their best while the pressure of persecution served to cement them; this removed, the absence of organization left them an easy prey to the inroads of rationalism and infidelity. Before the end of the eighteenth century many of them lapsed into Unitarianism, alike in England and America. A new problem was thus forced upon them, viz. how to maintain the unity of the denomination without consciously violating their fundamental doctrine of the entire independence of each particular church. "A Congregational Union of England and Wales", formed in 1833 and revised in 1871, issued a "Declaration of the Faith, Church Order, and Discipline of the Congregational or Independent Dissenters", and provided for annual meetings and a president who should hold office for a year. American Congregationalism has always been of a more organic character. While persisting in emphasizing the complete independence of particular churches, it has made ample provision, at the expense of consistency, for holding the denomination together. No minister is admitted except upon

approval of the clerical "association" to which he must belong. To be acknowledged as Congregationalist, a new community must be received into fellowship by the churches of its district. Should a church fall into serious error, or tolerate and uphold notorious scandals, the other churches may withdraw their fellowship, and it ceases to be recognized as Congregationalist. If a minister is found guilty of gross heresy or evil life, a council summoned to examine his case may, if necessary, withdraw from him the fellowship of the churches. The statements of Henry M. Dexter, D. D., the historian of his sect ("American Encyclopædia", s. v. "Congregationalism"), prove that there is a marked contrast between Congregational theory and practice. The Congregationalists have been very active in home and foreign mission work and possess eight theological seminaries, in the United States, viz. Andover, Massachusetts; Atlanta, Georgia; Bangor, Maine; New Haven and Hartford, Connecticut; Oberlin, Ohio; Chicago, Illinois; and the Pacific, Berkeley, California. Since 1871 national councils, composed of delegates from all the States of the Union, are convened every third year. "The Congregational Handbook for 1907" gives the following statistics of the denomination in America: Churches 5931; ministers 5933; members 668,736. Included in this count are Cuba with 6 ministers and 636 members and Porto Rico with 3 ministers and 50 members. In England and Wales the statistics for 1907 were: sittings 1,801,447; communicants 498,953; ministers 3197; local preachers 5603. The efforts made in recent years to find a basis for some kind of corporate union between the Congregationalists, the Methodist Protestants, and the United Brethren in Christ have not been successful.

WALKER, A History of the Congregational Churches in the United States (New York, 1894); IDEM, The Creeds and Platforms of Congregationalism (ibid., 1893); DEXTER, The Congregationalism of the last 300 years, as seen in its Literature (ibid., 1880). Each of these works contains a good bibliography.

J. F. LOUGHLIN.

Congregational Singing.—In his Instruction on sacred music, commonly referred to as the *Motu Proprio* (22 Nov., 1903), Pius X says (no. 3): "Special efforts are to be made to restore the use of Gregorian chant by the people, so that the faithful may again take a more active part in ecclesiastical offices, as was the case in ancient times". These words suggest a brief treatment of congregational singing with respect to (a) its ancient use, (b) its formal prohibition and gradual decay, (c) its present-day revival, (d) the character which that revival may assume.

(a) The first testimony is found in the Epistle of St. Paul to the Ephesians (v, 19): "Speaking to yourselves in psalms, and hymns, and spiritual canticles, singing and making melody in your hearts to the Lord". Cardinal Bona finds in these words a witness to the fact that "from the very beginnings of the Church, psalms and hymns were sung in the assembly of the faithful", and understands them to refer to an alternated chant (*mutuo et alterno cantu*). McEvilly in his "Commentary" applies them to public and private meetings. St. Augustine (Ep. cxix, ch. xviii) says: "As to the singing of psalms and hymns, we have the proofs, the examples, and the instructions of the Lord Himself, and of the Apostles". (Cf. also Col., iii, 16; I Cor., xiv, 26.) In the ancient congregational singing both sexes took part; the words of St. Paul imposing silence on women in church being interpreted to refer only to exhorting or instructing. Duchesne describes how the earliest worship of the Christians was parallel to that, not of the Temple of the Jews at Jerusalem, but of the local synagogues, the Christians borrowing thence their four elements of Divine service—the lections, the chants (of the Psalter), the homilies, and the prayers. In treating of the Syrian Liturgy of the fourth century, he makes up a composite picture from the 23rd catechetical dis-

course of St. Cyril of Jerusalem (about the year 347), the Apostolic Constitutions (II, 57; VIII, 5-15), and the homilies of St. John Chrysostom, and describes the Divine service (Christian Worship: Its Origin and Evolution, London, 1903, pp. 57-64), and incidentally shows the part the congregation took in the singing.

(b) A council held at Laodicea in the fourth century decreed (can. xv), that "besides the appointed singers who mount the ambo and sing from the book, others shall not sing in the Church". Cardinal Bona (Rerum Liturg., Bk. I, ch. xxv, sect. 19) explains that this canon was issued because the unskillful singing of the people interfered with the decorous performance of the chant. The decree was not accepted everywhere, as Bona shows. With respect to France, he also remarks that the custom of popular (congregational) song ceased a few years after Caesarius; for the Second Synod of Tours decreed "that the laity, whether in vigils or at Masses, should not presume to stand with the clergy near the altar whereon the Sacred Mysteries are celebrated, and that the chancel should be reserved to the choirs of singing clerics". Hereupon Sala notes (no. 4) that "this custom still obtains, nevertheless, in the Eastern Church; and in many places in the Western Church, very remote from cities, and therefore tenacious of older customs and less influenced by newer ones, the people learn the ecclesiastical chant and sing it together with the clergy". Many causes, doubtless, combined to bring about the present lamentable silence of our congregations, amongst which the most prominent was probably the one mentioned by Bona as having occasioned the decree of the Council of Laodicea. That the cause was not, as Dickinson thinks, "the steady progress of ritualism and the growth of sacerdotal ideas", which "inevitably deprived the people of all initiative in the worship, and concentrated the offices of public devotion, including that of song, in the hands of the clergy" (Music in the History of the Western Church, New York, 1902, p. 48), may be inferred from the efforts of ecclesiastical authority to revive the older custom of congregational singing, as will be seen under (c).

(c) The Second Plenary Council of Baltimore (1866) expressed (no. 380) its earnest wish that the rudiments of Gregorian chant should be taught in the parish schools, in order that "the number of those who can sing the chant well having increased more and more, gradually the greater part, at least, of the people should, after the fashion still existing in some places of the Primitive Church, learn to sing Vespers and the like together with the sacred ministers and the choir". The Third Plenary Council of Baltimore (1884) repeats (no. 119) the words of the Second Council, prefacing them with *denuo confirmamus*.

(d) The words of the quoted councils and of the pope imply a restoration of congregational singing through instruction in Gregorian chant, and therefore clearly refer to the strictly liturgical offices such as solemn or high Mass, Vespers, Benediction (after the Tantum Ergo has begun). Congregational singing at low Mass and at other services in the church, not strictly "liturgical" in ceremonial character, has always obtained, more or less, in our churches. With respect to the strictly liturgical services, it is to be hoped that the congregation may be instructed sufficiently to sing, besides the responses to the celebrant (especially those of the Preface), the ordinary (i. e. the Kyrie, Gloria, Credo, Sanctus, Benedictus, Agnus Dei) of the Mass in plain chant; leaving the Introit, Gradual or Tract, sequence (if there be one), Offertory, and Communion to the choir; the Psalms and hymns at Vespers, leaving the antiphons to the choir. The singing might well be made to alternate between congregation and choir. Perosi made a strong plea to the musical congress of Padua (June, 1907) for such congregational singing of the Credo (cf. Civiltà

Cattolica, 6 July, 1907). (See CHOIR; MUSIC; SINGING, CHORAL.)

WAGNER, *Origine et Développement du Chant Liturgique*, tr. BOUR (Journal, 1904), 14 sqq. gives a good summary of the history of the earliest congregational singing. Two articles in the *American Ecclesiastical Review* (July, 1892, 19-29, and August, 1892, 120-133) give history, references, limits of vernacular singing, and methods of training. See also *Manual of Church Music* (Dolphin Press, Philadelphia, 1905), 112-118; *Church Music* (quarterly) (December, 1905), 21-33 for methods; also DICKINSON, *Music in the History of the Western Church*, 223, 242, 376 for congregational singing in Protestant churches.

Congresses, CATHOLIC.—One of the remarkable and important manifestations of the social and religious life of the present day are gatherings of Catholics in general public conferences. This is the case both when these assemblies consist of delegates representing the entire Catholic population of a country or nation meeting to express opinions concerning matters close to its heart; or when they consist simply of the members of some one Catholic association who have come together for the advancement of the particular aims of the society. Taken collectively, these congresses prove that the life of the Catholic Church of the present day is not confined to Church devotions; that not merely individual classes and circles, but all Catholics, men of every rank and of every degree of culture, of all callings, all ages, and of all nations have been quickened to an unheard-of extent by the ecclesiastical movement of the nineteenth century, and gladly co-operate with it. This movement in Catholic life has been made possible by the development of travelling facilities, the multiplication of social interests, and also by the political freedom of modern nations. But Catholics would probably not have made use of these aids in such large measure if they had not been stirred up by extraordinary zeal.

I. HISTORY.—The first large Congress was held by the Catholics of Germany. In the year of political revolutions, 1848, they founded throughout Germany local Catholic associations, called "Piusvereine" after Pope Pius IX, the Catholics of Mainz taking the lead. Their object was to stimulate Catholics to make use of the favourable moment to free the Church from dependence on the State. In accordance with an agreement made by a number of distinguished Catholics at the festivities held to celebrate the completion of a portion of the cathedral of Cologne, August, 1848, these associations met in convention at Mainz, 3-6 October of the same year. In the neighbouring city of Frankfort the German Diet was in session. Only a few weeks before, this body had decided to separate the schools from the Church, in spite of the opposing votes of the Catholic deputies, and had filled the Catholic people with a deep distrust of the Frankfort Assembly. A large part of the Catholic members of the Diet went to Mainz, and expressed their views, thus directing widespread attention to the convention and arousing the enthusiasm of its members, which reached its highest pitch when one of the deputies, Wilhelm Emanuel von Ketteler, the parish priest of Hopsten, arose and urged the Congress to give their attention to social as well as religious questions. Thenceforth the General German Catholic Congresses had a distinctive character impressed upon them. It became their mission to prove and intensify the de-

votion of German Catholics to their Church, to defend the rights of the Church and the liberties of Catholics as citizens, to preserve the Christian character of the schools, and to further the Christian spirit in society. At first the congress met semi-annually; after 1850, it met annually in a German or Austrian city. From the start it regarded the development of German Catholic societies into a power in national affairs as one of the most important means of gaining its ends. Consequently the Congress gave its attention not only to the "Piusvereine" but also interested itself in all other Catholic societies, e. g. the St. Vincent de Paul Conferences, the Gesellenvereine (journeymen's unions), the reading-circles, the students' corps, etc., and also encouraged the founding of important new associations, such as the societies in aid of German emigrants, the St. Boniface Association, the St. Augustine Association for the development of the Catholic press, and others. The end sought was to combine the general assemblies of as many of these societies as possible with that of the "Piusvereine," or to secure their convening at the same time and place. Thus the Catholic Congress became in a few years and is still an annual general meeting for the majority of German Catholic societies. This appears from the programme of every German Catholic Congress. As long as the Catholic Congress was principally a representative general meeting of Catholic societies, its proceedings were chiefly discussions and debates and the number of those who attended was relatively small. This was the case in the first decade of its existence. Still even at this time one or more public mass-meetings were held at each Congress, in order to arouse the interest of the Catholic population of the place of assembly and its vicinity. The most celebrated address of the first decade was made in 1849 at Ratisbon by Döllinger on the "Independence of the Church." The most important of the early German Catholic Congresses was the session held at Vienna, 1853.

Owing to epidemics and political difficulties up to 1858 the congress met irregularly and the attendance decreased so that its future appeared doubtful. After 1858, however, the congress rose again in importance while at the same time its character gradually changed. It became a general assembly of German Catholics, and the attendance greatly increased. In these changed conditions the public sessions devoted to oratorical addresses from distinguished speakers as well as the private sessions for deliberation grew in importance. In these years Catholic Germany could boast of several very eloquent orators, the best among whom were Moufang, Heinrich, and Haffner, theologians of Mainz, and after these Lindau, a merchant of Heidelberg. The participation by the Catholic nobility in the meetings made them socially more impressive. The most striking speech of this period was made at Aachen in 1862 by Moufang on the "Duties of Catholic Men." Among the subjects debated the school and education aroused the most feeling; in connexion with these great discussions great attention was given, under the guidance of Dr. Hülskamp, editor of "The Literarischer Handweiser", to the development of the press and popular literature. Since the Frankfort Congress of 1863 the labour question has occupied more and more of the attention of the assembly.

The hope awakened in the hearts of Catholics by the apparently victorious progress of the Catholic movement in Western Europe gave special inspiration to the gatherings of these years. A similar congress was held by the Swiss Catholics; a more important development was the resolve of the Belgian Catholics, instigated by the success of the German Catholic Congress near them at Aachen, to hold Catholic congresses for Belgium and to invite the most distinguished Catholic men of the entire world

to participate. The intention was to form a central point for the Catholic movement of Western Europe and to give it a perpetual organization, making it an international movement, so that in the future Catholics of all nations could work together. The chief organizer of the preparatory plans was Dupétioux. The first Belgian congress was held at Mechlin, 18-22 August, 1863, and was a great success. The most prominent champions of the Church in Europe attended the Belgian Congresses: Montalembert, Prince Albert de Broglie, Cardinals Wiseman and Manning, the two Reichenspergers and Kölping, the Abbé Mermillod; representing the United States were Bishop Fitzpatrick, of Boston, and L. Silliman Ives, of New York. Reports on the Catholic life and work of every country were presented; much time was devoted to the discussion of social questions, and decided differences of opinion were expressed. The most brilliant success was achieved by two discourses by Montalembert on "A Free Church in a Free State." A second congress took place in September of the next year, and the intention was to hold yearly meetings; but already the first clouds of internal conflict among Catholics began to appear. According to their views on political liberalism and modern science, men's minds drifted apart. Henceforth Catholics could not be gathered together for a common meeting. The only later congress was held at Mechlin in 1867; the Swiss assemblies also ceased after a short time, so that soon the German Catholic Congresses were the only large assemblies of the kind. At the Bamberg Congress, 1868, a standing Central Committee was formed, which gave a permanent form of organization to the German Catholic gathering.

Development in France.—Towards the end of the sixties a third period of progressive development began, due to the increasing interest of Catholics in social problems and the growth of the spirit of association among Catholic workmen. In Belgium, in 1867, it was decided to form a union of all workmen's associations in order to systematize their development and growth. A standing committee was formed, and a first congress was called to meet at Mons in 1871. Its object was to strengthen and aid the movement for organization among workmen, and at the same time to give it a Christian character and to enable workmen to make their views and wishes effective. The work grew rapidly in importance; up to 1875 the president was Clément Bivort, and over 50,000 workmen were connected with it. The most successful congress was that held in 1875 at Mechlin. After this, the organization declined, partly it would seem, because, instead of following purely practical economic ends, under French influence politics were introduced; so much weight was laid on the religious element that social interests did not receive their due, because the members were not agreed as to the intervention of the State in socio-economic activities, and because sufficient consideration was not given to the growing independence of workmen. A Catholic workmen's movement also sprang up in the great German industrial region of the Lower Rhine; this did not grow into a national convention, but it exerted its influence at the meetings of the general Catholic Congress, especially at the one held at Düsseldorf, 1869. In France there was formed an "Union des associations ouvrières catholiques" for the purpose of promoting all Catholic efforts and "to develop a race of Christian workmen's families for the Church and State".

The first congress of this association was held at Nevers, 1871, but it never grew to much importance, although a permanent central office was founded, and special committees were appointed to encourage sports, clubs for study, etc. The association laid undue stress on the cultivation of religious life, and did nothing to develop social economics in connexion with

politics and but little for the class interests of workmen; it was hardly more than a confraternity. In Northern France it succeeded owing to personal influence. The "Cercles d'ouvriers catholiques", founded by the Comte de Mun in 1873, were much more successful. De Mun desired to unite in these *cercles* the best mechanical and agricultural labourers, to bring them under the influence of educated practical Catholic gentlemen, so that, led by the latter, the workmen might exert a social and political influence in the world of labour. At the same time he wished the organization to frame and advocate a distinct plan of social reforms. From 1875 the work of advocating reforms fell chiefly to the annual sessions which were composed of the delegates of the "Secretariates" of the circles, the deputies from all the circles of the province, and Catholic dignitaries who were interested in social questions. The sessions for deliberation had an average attendance of from three to four hundred members, and the public meetings were often attended by several thousand persons. The assemblies were managed by the Comte de Mun, assisted by the Marquis de la Tour du Pin, M. de la Guillonnière, and M. Florroy. These meetings and the work of the various circles first spread among French Catholics correct conceptions of social problems. The practical social results became, however, gradually smaller. With the help of the congress De Mun gradually worked out a complete social programme; by means of industrial associations, with perfect freedom of organization, laws were to be obtained granting to the working classes proper representation in the political bodies of the country, effective measures were to be taken to aid workmen by means of insurance and the regulation of wages, their corporal and mental well-being were to be protected by Sunday rest, limitation of working-hours, etc.; compulsory arbitration in disputes between masters and workmen was to be legally enforced. The programme is noteworthy because it included reform of taxation, and also because it aimed to aid agricultural labourers as well as mechanics. De Mun's main mistake was, that he refused on principle to allow the workmen to organize independently, and permitted only organizations common to workmen and employers. Although apparently the congresses just described and the societies connected with them were the proofs of the growth in strength of the economic movement, yet in their first development they did not advance far enough to be able to impress their character upon the Catholic congresses of the third period. This was defined by the further growth of the general Catholic conventions. After the successful settlement of the differences in the Church by the Vatican Council, in consequence of the Kulturkampf, the German Catholic Congresses regained their former importance with a religious enthusiasm never before witnessed. At the same time the French Catholics also started general congresses.

During the siege of Paris by the Germans, a committee had been formed in the city to protect Catholic interests against the danger from anti-religious and revolutionary sects. In a circular of 25 August, 1872, this committee proposed that all forms of Catholic associations of the country and all French Catholic organizations should create a general representative body for the purpose of defending their common interests. This circular led to the convening of the first "Congrès des comités catholiques" at Paris, 1872, and the sessions of this body were held annually until 1892. They were originally presided over by M. Bailloud, their founder, afterwards by Senator Chesnelong. The congress, divided into different sections, busied itself with purely religious questions, with teaching, education, the press, and social subjects. A large part of the attention of these assemblies was given to the non-governmental schools, and much was done for them. On the other hand, the incessant

and vehement agitation of the assemblies against free, obligatory, lay instruction had no apparent effect. The French, like the German congresses, received strong encouragement from the pope, and the bishops ardently promoted them. Nevertheless, owing to its composition, the French congress never attained the importance of the German assemblage. Although intended to be a union of all the Catholic forces of France, it drew together only the Monarchists. For although its constitution excluded politics, nevertheless, as the circular of August, 1872, said, it supported the Conservative candidates as a matter of course. The connexion with the Royalists made the congress unfruitful also in social questions; its social political position was not sufficiently advanced, and it offended the classes that were fighting their way up. When it became evident that the Royalist party had failed, the congress declined with it. The sessions ceased when Leo XIII, on receiving the congratulatory telegram of the congress of 1892, expressed the hope that, following his wishes, they should uphold the Republican constitution. The place of the former organization was taken by the "Congrès nationaux catholiques". The first session, held at Reims, was a preparatory one; this was followed by two congresses at Paris, 1897 and 1898. Both their organization and aim were the same as those of the congress of the "Comités catholiques", but the political views held were different; the meetings were gatherings or "Ralliés", that is, of Royalists who had become Republicans and of Christian Democrats. The history of this organization is, briefly, that of the "Ralliés" movement, and it went to pieces with the latter. A working together in the congress of those who were democrats from honest conviction, the politically indifferent "New Catholics", and the "Ralliés", or "Constitutional Righters", who obeyed the papal command against inclination and conviction, proved to be impossible. The "Christian Democrats" met separately, in 1896 and 1897, at Lyons and received the blessing of Leo XIII. But it was found that the views of the members were too divergent to make a continuation of these assemblies profitable. The meetings of the "Cercles d'ouvriers" also came to an end through the failure of the "Ralliés" or "Constitutional Right". From the decade 1880-90 these circles, like those of the "Union des associations ouvrières", were gradually transformed by their leaders into pious confraternities, and the clergy sought to control them more than was wise, making the members feel like irresponsible children. Most of the members of the circles were Royalists, and few of them obeyed the suggestion of the pope as sincerely as did De Mun. In 1892 the congress assembled for the last time; but even before this, of the 1200 still existing circles, a part had combined with the new diocesan organizations, and a part with the "Association catholique de la jeunesse française".

Fourth Period of Development.—The fourth and latest period in the development of the Catholic Congresses dates from the last years of the nineteenth century. About 1890, the year when the "People's Union [*Volksverein*]" of Catholic Germany" was founded, the Catholic social movement reached its full strength and became the leading factor among German Catholic societies. Its influence was well shown by the multiplying of Catholic societies in all directions; it shaped the form and aims of organization, checked the spirit of particularism, induced the societies to combine in a united body, and brought thousands of new members into the branch associations, while directing Catholic organization more and more toward practical social work. The meetings of the congresses are the tangible sign of this social movement; their increase in strength and influence is furthered by the growing interest of the civilized world in all kinds of congresses. It is owing to the centralized, many-sided propaganda of the well-

organized "Volksverein", with its 600,000 members, that the German Catholic Congresses have been so successful. The aims of the societies are limited to social work of a practical character, and the annual meetings are held on one of the five days of the session of the Catholic Congress and at the same place. Since the Mannheim Congress of 1892 the meetings of the congresses have been attended by larger numbers of workmen than any other such conventions in Europe, from twenty-five thousand to forty thousand being present at the sessions, the number at a single session often reaching ten thousand persons. In Austria after two decades of hard struggle Christian socialism finally reached success. After 1867 it was for a long time almost impossible to hold a Catholic convention in Austria; now a General Catholic Congress is held every other year, while numerous assemblies convene in the different states forming the Austro-Hungarian Monarchy; the general congress of November, 1907, attained nearly as much influence over public opinion as the German Congress; a speech of Burgomaster Luegers of Vienna started the "high-school movement" which has since greatly agitated Austria. Since 1900 a Catholic Congress has been held annually in Hungary; in Spain since 1889 Catholic assemblies have met from time to time; in Switzerland, after suspension for a generation, the first general congress was held in 1903 on the basis of an excellent organization. In 1908 the Danish Catholics of the Copenhagen district met for the first time to discuss their school interests. Before this, in 1886 and 1889, they had met for anniversary celebrations, the first time, in 1886, in conjunction with representatives from Sweden and Norway. About the close of the nineteenth century a congress was held in Italy representing all the Catholic organizations of that country. Not only among the above-named great nations of Europe has Catholic zeal led to the meeting of general congresses, but on both sides of the ocean hardly a year passes in which the Catholics of some country do not unite in a public congress.

However numerous and large these assemblies, whether general or special, have been, they do not represent the whole number of Catholics who take an interest in social reorganization. Catholics have taken a prominent part in many movements which have an interdenominational, universal Christian, or neutral character, because this form of organization can lead to better results. Among these may be mentioned the "Christian Trade Unions" of Germany, the "Christian Farmers' Unions" of Germany and Austria, and the "Société d'économie sociale et union de la paix sociale" of France, founded by Le Play, in 1856, with annual congresses since 1882. A German branch is the "Gesellschaft für sozial Reform" (founded 1890), which gives its attention largely to scientific investigations, but has at times also had much influence on legislation; besides these may be cited the "Workingmen's Gardens", founded in 1897 by Abbé Lemire, with international congresses in 1903 and 1906; the work of the "Raiffeisen Bank" (international assemblies at Tarbes, 1897, and Paris, 1900); the "Anti-Duelling Society", founded by Prince Löwenstein, the last international convention being held at Budapest, 1908; and the association for suppressing public vice, which held an international congress in 1908.

II. INTERNATIONAL CONGRESSES.—The forerunner of the international congresses of the present was the Mechlin general congress of 1863-64. Since then international Catholic congresses of general scope have been abandoned as unlikely to be profitable, and it has been sufficient, especially as between Germany, Austria, and Switzerland, to invite a few foreign representatives. It was only by limiting the scope of discussion to a few topics, especially religious, that it has been possible to hold Catholic congresses of an

international character. Among the best known of these assemblies is the "Eucharistic Congress", the aim of which is to increase and deepen the love of Christ in every way tolerated by the Church: by general communions, general adoration of the Blessed Sacrament, and discussion of the best means of increasing devotion to the Blessed Sacrament. Between its sessions the Eucharistic League endeavours to promote and intensify Eucharistic devotion in the various dioceses in which it is organized. Nineteen of these meetings have been held since the first in Lille in 1881, most of them being preponderantly French, the inspiration of the first coming from Mgr. de Ségur. The first to attract the attention of the Catholic world was that held at Jerusalem in 1893, and they have since grown more solemn and influential. A general congress was held at Rome, 1905, another at Metz, 1907, and one in London 9-13 September, 1908. Both Leo XIII and Pius X manifested great interest in these congresses. Less successful, however, was the attempt of Leo XIII, by means of international congresses, to make the Third Order of St. Francis once more a great socio-religious influence. After he had indicated his plan of Christian social politics in his encyclical "Novarum rerum", he hoped to change the Third Order of St. Francis from a purely pious organization into an instrument for the regeneration of society such as it had been in the thirteenth century. For a time efforts were made, especially in France, to carry out this ambition of the pope. A committee met at Val-des-Bois, July, 1893, at the call of the Minister-General of the Franciscans, and under the presidency of Léon Harmel a plan of action was drawn up: several meetings were held in France, and in 1900 an international congress met at Rome. After this the movement came to an end. The political-social scientists, who were too much absorbed in their political schemes, were unable to grasp the grandeur of the pontiff's idea, and the Tertiaries clung to their accustomed exercises and preferred to remain a pious confraternity rather than to transform themselves into a world-wide religious and social organization.

For a time the Congress of Catholic Savants had nearly as successful a career as the Eucharistic Congress. This was also of French origin, and founded by Mgr. d'Hulst, rector of the Institut Catholique at Paris, in pursuance of a suggestion of Canon Duilhé de Saint-Projet. The founders meant to prove to mankind that Catholics, instead of being opposed to science, were vigorously active in scientific work; to show the harmony of faith and science, and to stimulate the slackened interest of Catholics in science. The plan of the congress was, therefore, largely apologetic; it received the approval of Leo XIII, and from 1888 the sessions were triennial. The first two meetings, at Paris, had an attendance, respectively, of 1605 and 2494 persons; the third congress, at Brussels, 2518; the fourth, at Fribourg, in Switzerland, 3007; the fifth, at Munich, 3367; a sixth was to be held at Rome, 1903, but it did not take place. Originally this congress was divided into six sections; theology, philosophy, law, history, natural sciences, anthropology; four more were added later; exegesis, philology, biology, and Christian art. The character of the international congress of Catholic physicians which met at Rome, 1900, was largely religious.

International meetings are also held by the "Association catholique internationale pour la protection de la jeune fille", a society that looks after young girls who are seeking employment, guards them from dangers, and aids in their training and secures employment for them. It was founded by a Swiss lady, Frau von Reynold, 1896-97. Up to 1897 the sessions were at Fribourg, Switzerland; 1900, at Paris; 1902, at Munich; and in 1906, again at Paris. Fribourg, Switzerland, is the headquarters of the society. Ten countries are represented in it, among them Argen-

tina, South America. Each national society holds its own annual meeting; the French branch, formed in 1898, alternately in the provinces and at Paris; the German, founded 1905, at the session of the Strasburg Catholic Congress in connexion with the Charities Congress. Among national Catholic assemblages may be also included the so-called "Social Week" started by the "Volksverein" (People's Union) of Catholic Germany. Its sessions were held annually, 1892-1900, with the exception of 1897, in different places. About a week was given to an introduction to practical social work. The original attendance of 582 in time rose to about 1000. The sessions were devoted not to discussions, but to instructive lectures and the answering of questions, thus making what might be called a popular travelling school. But a week was too short a period of instruction, and the constant change of place made it difficult to obtain good teachers, consequently a permanent home was given to the association at München-Gladbach, and the annual session was made a two months' course in political economy. A limited number of men and women selected by a committee of the "Volksverein" assisted at these lectures. Since 1904 the shorter courses, in improved form, have been resumed in addition to the longer ones, and the attendance has largely increased. The French Catholics were the first to imitate this example, holding a similar assembly at Lyons in 1904; since then sessions have been held at various places, that of 1907 being at Amiens, and the next at Marseilles. The best of their national economists give their assistance; the programme differs from the German in as much as the topics treated are not exclusively practical, but that the lectures include the philosophical and religious premises of modern social politics, and the part Christians should take in political life. The movement spread to the other Romance countries during 1906-08, and also to Belgium and Holland, and made great progress, thanks to the efforts of Professor Toniolo in organizing a social-science week at Pisa, followed by a larger meeting at Pistoja in October and another at Valencia in December, 1907. In France, Spain, and Italy, this social-science week will hereafter be held according to a joint programme.

III. NATIONAL CATHOLIC CONGRESSES.—*France*.—Since 1898 the French Catholics have held provincial conventions in place of general congresses, and since the separation of Church and State, these have given place to diocesan conferences. Such gatherings have been held in about half of the dioceses, the most important being those of the Archdiocese of Paris. Their aim is to unite all Catholic social societies, especially those for the young which in many dioceses have a large membership. In results they are not as effective as general Catholic congresses, but they seem rather to tend to supply what has hitherto been lacking in France, a steady and even attention to details, as the Volksverein has done in Germany, eloquent orations giving place to quiet, practical work. This would be an important result. On the other hand, it is possible that the inclination of the French to overburden even socio-political societies with religious issues, to give them a denominational aspect, and place them under strict clerical control, may be kept alive by the diocesan societies. Before this the impulse to permanent organization came from a congress, whereas now the bishop or an ecclesiastic commissioned by him is the head of the diocesan committee, and the parish priest of the parish committee.

Religious Congresses.—In certain French dioceses e. g. at Paris, 1902-1908, special diocesan Eucharistic Congresses have been held. A "Congrès national de l'œuvre des Catéchismes" was held at Paris under the presidency of Mgr. Amette, Archbishop of Paris, 24-26 February, 1908. Seventy dioceses were officially represented, and the attendance was over 2000. It was reported that 20,000 lay catechists, chiefly women,

voluntarily assisted the French clergy in the religious instruction of the young. These teachers are united in an archconfraternity, publish a periodical, and receive special preparatory training. Charitable and social care of the families of the pupils is united with the catechetical work.

Sociological Congresses.—The "Union des associations ouvrières catholiques" has held, since 1871, annual meetings attended by about 500 delegates. The "Association catholique de la jeunesse française", founded in 1886 by Robert de Roquefeuil, which aims to gather together the Catholic youth of the country, in order to strengthen them in their Faith and to train them to do their duty in the struggle for the reorganization of French society in a Christian spirit, has held several hundred interesting meetings. They have served in part to spread a more thorough knowledge of certain social truths or of certain important problems of religious life; but they have principally made known the work of the "Jeunesse catholique" throughout France. Their assemblies which took up the first mentioned class of subjects were held at Châlons, 1903, where trusts were discussed; at Arras, 1904, which discussed mutual benefit schemes; at Albi, 1905, regulations governing the labour of youthful workmen was the topic; and at Angers, 1908, the agrarian movement. The treatment of these problems at these conventions was excellent. The meetings held to arouse interest in the membership were chiefly provincial, only a few being national assemblies. The growth of the association is best shown by the national conventions: Angers, 1887, 17 groups having 782 members were represented; Besançon, 1898, 25 groups with 16,000 members; Bordeaux, 1907, 180 groups with 75,000 members. There has been a great increase since the meeting at Besançon, chiefly by the admission of young mechanics and farm labourers as well as of the student class. The association has placed itself in all things under the guidance of the Church authorities, consequently, its social as well as its religious activities rest on a denominational basis without any further enunciation of principles, and it has always been very favourably regarded both by the bishops and the Roman authorities. The "Jeunesse catholique" has not been undisturbed by the political troubles of French Catholics. At the congress of Grenoble, 1892, it accepted unconditionally the advice of Leo XIII, but declared at the same time that, in accordance with its statutes, the association had nothing to do with party conflicts. Some of the groups, however, still adhere to the Monarchists. Fortunately, these differences of opinion have not checked the development of the society, the religious and social influence of which on the youth of France is not equalled by that of any other organization.

About the close of the nineteenth century Marc Sangnier and some of his friends founded the society called the "Sillon" (the Furrow). Convinced that in future democracy, which they took as their ideal, would rule the State and society, and desiring to prevent its degeneration under bad and godless leaders, while hoping to keep it from turning against the Church, these young men resolved to build up a democratic constituency of high-minded Christians devoted to the Church and well-informed on political and social questions. The idealism characteristic of the "Sillon" has gained for it the respect of the working-classes. In the beginning the tendencies of the society were not clear, as was shown in the first four general meetings: Paris, 1902; Tours, 1903; Lyons, 1904; Paris, 1905. More definiteness of plan was evident at the later gatherings, Paris, 1906; Orléans, 1907; and especially at Paris, 1908, giving promise that the "Sillon" would develop into a socio-political party taking an active part in national politics. This explains why it asserted its independence of the bishops and intention always to support

any political measure that may aid in improving the condition of the working-classes, and especially all efforts aiming at thorough social regeneration and a genuinely democratic form of society and government. Only in this way, it is held, will the workman be able to obtain an equal share of the material, intellectual, and moral possessions belonging to the whole nation. Collectivism is absolutely rejected by the association. The growth of the "Sillon" into an independent socio-political party, its refusal to be "avant tout catholique" aroused the distrust of some of the bishops. Consequently the clergy held back from it. Nevertheless, the membership did not fall off. The first congress represented 45 members; the second, 300; the third, 800; the fourth, 1100; the fifth, 1500; the sixth, 1896. The "Fédération gymnastique et sportive des patronages catholiques de France" intended to aid all Catholic societies in honour of a local saint by arranging sports for the members of the *patronage* has held annual meetings since 1898 when the federation began in a union of 13 *patronages*; the number is now 450, representing 50,000 young people in all parts of France.

Political Congresses.—The "Action libérale populaire", founded by M. Piou on the basis of the Associations Law of 1901, is a political association led by him with much skill and energy. Its task is to defend civil rights derived from the Constitution in all legal ways, to promote reform in law-making by energetic work at elections, to develop or create anew sociological influence and methods, and to improve the lot of the workman. Only Catholics are members, but it claims that it is not a "Catholic party." Its first general session convened at Paris, December, 1904, with 900 delegates representing 648 *comités* or branches and 150,000 members. The statistics for the following years are as follows: Paris, 1905, 1400 delegates from 1000 *comités* with 200,000 members; Lyons, 1906, 1600 delegates representing 1500 *comités* and 225,000 members; Bordeaux, 1907, 1740 *comités* with 250,000 members. The proceedings of all four congresses were of great interest. The society, conducted by a central committee, is divided into provincial and town committees which, though controlled by the general committee, are allowed much independence of action. Besides assiduous efforts to educate the voter the society has turned its attention more and more to practical sociological work, as the discussions held at the various congresses show. The reactionary methods which so greatly damaged the Monarchists have never been adopted. However, the growth of the association has not equalled expectations, because at the first election which took place after its establishment (1906), while the "Action libérale" did not disappoint its friends, the parties of the Right, without the aid of which it could not succeed, were completely defeated at the polls. Besides, the distrust of many Frenchmen was aroused because in order to gain numerical strength it admitted as members many who, until their reception into its ranks, had been known as opponents of the Republic.

The Women's Movement.—The "Ligue patriotique des Françaises", formed in 1901, to collect funds for the election expenses of the candidates of the "Action libérale populaire", aims to arouse interest among women in the efforts of the "Action" to defend civil liberty and to promote sociological activity. Since then the league has declared that it does not pursue political ends. The movement had as its leaders such able women as the Baroness Reille, Mademoiselle Frossard, Mademoiselle de Valette, and others, and in 1908 the league numbered 700 branches with 328,000 members, 28,000 more than in 1906. The league holds numerous district sessions and an annual general meeting. At the last two annual sessions at Lourdes, 2000 women attended. The addresses and discussions at these conventions show that the

attention of the league is more and more fixed on attaining practical social ends. This, however, is made more difficult by the mistaken conception that all Catholic Frenchwomen, because they are Catholics, should belong to the league; consequently, the programme lacks definiteness, and many problems are taken up in a hesitating and incomplete manner. Moreover, this policy prevents a correct perception of the sociological character of the organizations in question and their accommodation to the needs of the workingman. They are turned too much into the direction of charitable and benevolent activities. The work of the league in social economics is as yet only in its infancy. The "Jeanne d'Arc" Federation aims to unite all Catholic women of France who take up questions of social betterment, in an annual assembly for exchange of views and combined effort. Since 1901 a well-attended annual meeting has been held at Paris, but so far has resulted only in an interchange of opinion and resolutions. This is due to the fact that the federation has no regular and recognized authority over the manifold associations affiliated in it.

Educational Congresses.—Up to 1908 three congresses of French priests had been held: Saint-Quentin, 1895; Reims, 1897; Bourges, 1898. The first, which differed in aims from those following, met at the suggestion of Léon Harmel and confined itself to considering the share the clergy should take in the efforts to better present social conditions. The attendance was about two hundred. The two following congresses called by the Abbé Lemire, supported by the Abbés Dabry, Naudet, Gibier, Lacroix, had an attendance of from six hundred to eight hundred persons. Questions touching the sacerdotal life were discussed: training of the clergy; continuation of clerical studies; activity in the cure of souls; organization to secure a continuous succession of clergy; priests' unions; mutual aid societies, etc. The conventions were presided over by bishops. Leo XIII sent his blessing, and the influence on the younger clergy was excellent. There was much opposition to them, however, on the part of some of the bishops and some of the older clergy, and especially on the part of the Conservatives in politics. The "Congrès de l'Alliance des grands-séminaires" met at Paris, 21–22, July, 1908, the questions taken up were mainly the preparatory training of the clergy in letters and in ascetic life. Conventions of delegates of the teachers of higher and elementary schools not under State control, the "Syndicats et associations de l'enseignement libre", met: at Bordeaux, 1906; Poitiers, 1907; Paris, 1908. At Paris, the delegates represented 2300 teachers belonging to teachers' unions and 3000 not connected with such organizations, from a teaching force of 20,000. Among the subjects discussed were pedagogical questions, school-organization, instruction in industrial and high schools, matters of professional interest. The association of Catholic Lawyers has met yearly since 1876, the first session being held at Lyons, that of 1907 at Angers. Those legal questions are taken up which, at the moment, are of practical importance for the continuance of the Church as an organized society, for its endowments and institutions. The "Alliance des maisons d'éducation chrétienne" aims to secure for independent schools those advantages which a centralized organization confers on those under State control. Up to 1908 the annual sessions were organized by Abbé Ragon, Professor at the Catholic Institute of Paris. The subjects discussed are methods of instruction and school organization. The Alliance originally represented 75 schools; the number rose to 600, but on account of the law of 1901, which reduced the number of schools independent of the State, those in the Alliance fell to 500 in 1908.

Germany.—Up to 1908, fifty-five congresses have been held, the last, 1908, at Düsseldorf, those previous met at: Mannheim, 1902; Cologne, 1903; Ratisbon,

1904; Strasburg, 1905; Essen, 1906; Würzburg, 1907. The Central Committee, formed in 1868, superintends the preparations for the sessions and directs the conventions. When the *Kulturkampf* began the committee was dissolved, and its work was done by Prince Karl Löwenstein-Wertheim-Rosenberg, the "Standing commissioner of the Catholic Congress". In 1898 a new committee was formed, Count Clemens Droste-Vischering being chairman. The president of the congress changes every year, and the most distinguished representatives of Catholicism in Germany and the leading members of the nobility are regularly selected for the presidency, which office is always held by a layman. On the other hand the chairman of the committee of arrangements is always the bishop of the diocese in which the coming session is to be held. Each congress lasts five days, the meeting being held in August. A number of Catholic societies, especially the Volksverein, founded 1901, the St. Augustine Association for the Development of the Catholic Press, founded 1877, at the second Catholic congress at Würzburg, and the Catholic Students' societies, founded 1867, take advantage of the occasion to hold their own conventions at the same time and place. In addition to the sessions of the General Catholic Congress, in 1850 arrangements were made for diocesan conventions; these, however, seldom meet. Conventions are more common for the various Prussian provinces and the different states of the confederation, e. g. for Silesia, Bavaria, and the last held for Württemberg at Ulm, 1901. Early in 1904, by order of the Archbishop of Cologne, all the charitable societies and those for social betterment of the diocese were federated, the first convention of this general organization meeting in May, 1904. The first congress of the "Bonifacius Association" was held 8–9 July, 1908, at Paderborn; the object of the society is to collect funds for Catholic churches and schools among Germans scattered abroad, for the Scandinavian mission, and to aid the religious needs of the Catholics.

Social Congresses.—General conventions are held of the "Arbeiterwohl" (Society for Bettering the Condition of the Working-Classes); "Society of Catholic Manufacturers and Friends of Workmen", founded in 1905; and "Society for Social Culture and Communal Betterment", founded 1880 with the aid of Franz Brandts, Hitzte, etc. At the last-named general assembly held annually all members can take part in the discussions of the questions brought up. A congress of the "Volksverein" has been held annually since 1890 in connexion with the General Catholic Congress. At these sessions, open to all, annual reports and explanation of the object of the union are given. The president of these annual congresses was generally Franz Brandts of München-Gladbach, and the chief speakers Gröber, Trimborne, and Lieber. Under the direction and leadership of Mgr. Werthmann of Freiburg, Baden, the Association for Charitable Work has met annually as a national assembly since 1896, when it convened at Schwäbisch-Gmünd. The session of 1907 was at Hildesheim, the next, the thirtieth, at Ravensburg. Reports of committees and addresses are alternately made at the sessions. The Congress for Charitable Work came into existence through the sociological activity of the "Volksverein"; its aim being to show that Catholic charities should be more extensively guided by sociological considerations, and that they stand in need of closer union and greater zeal. In 1897 a "Union of Charitable Societies" grew out of this congress; the Union is divided into local and provincial societies under the direction of a well-organized central management which, without interfering with the subordinate organizations, exerts on them a beneficial influence. Especially important are its training courses; the local and provincial societies also frequently hold district and diocesan conventions. A reorganization of the St. Vin-

cent de Paul societies has been broached, the societies for the protection of young girls, and the women's movement have also received encouragement from this charitable organization. The United Catholic Workingmen's Union has its head-quarters at Berlin. Although the greater number of organized Catholic workmen are members of trade unions not denominational in character, an effort has been made, since the end of the nineteenth century, to unite other Catholic workmen in a denominational union. This work has been done chiefly among the East German workmen and in the Diocese of Trier. Conventions of delegates have been held annually since 1898, the eleventh having taken place in 1908. The Union of the Associations of Catholic Wage-earning Women and Girls is a branch of the one just mentioned. Four congresses have been held, the fourth in 1908. The Catholic Association for German Young Men was formed to exert religious influence on boys who have left school and are apprentices until they are prepared to enter a workmen's union. So far, not over twenty per cent of Catholic apprentices have joined the union. To remedy this it has been proposed to give a more social character to the union, and to form diocesan and a national union, and to convene the presidents of all the branch unions throughout Germany in a general meeting. The first of these general conventions was held in 1896; followed by four others, up to 1899; then the assemblies lapsed until 1905, when, through the efforts of the "Arbeiterwohl" (Society for Bettering the Condition of the Working-Classes) the union was reorganized, and a general meeting held at Cologne. Future sessions are to be held triennially.

The "Association of Catholic Women" was founded at the Congress for Charitable Work held at Frankfurt, 1903. Two meetings have been held: Frankfurt, 1904; Munich, 1906. Its weakness, so far, has been a lack of definiteness in its aims, for, although an offshoot of the "Charitasverband" (Charitable Union), it has been influenced, more or less, by the general women's movement in Germany and its tendencies, which deal less with sociological problems than with the general interests of the sex. It works for sociological improvement through charity; for the education of women; and in the interests of wage-earning women and women outside of the family circle.

The "Catholic Teachers' Union" in Germany, comprising male teachers of primary and middle schools, was founded in 1899, at Bochum. It numbers 19,000 members, and thirteen conventions, semi-annual as a rule, have been held; latterly it has met at Strasburg, Berlin, and Breslau. The union is made up of sixteen branches which meet, generally, once a year. Württemberg has formed a union of its own. The "Union of Catholic Women Teachers of Germany," founded in 1885, developed slowly until 1891. Thirteen conventions have been held, the last three in Strasburg, Bochum, and Munich. It is composed of teachers, both of the primary and higher schools for girls; in 1903 it organized a section of the teachers in middle and higher girls' schools which holds special sessions during the meeting of the general convention. The "Union of the Associations of Catholic Merchants," with head-quarters at Essen, founded in 1877, has 20,000 members; its delegates hold a meeting a few days before the General Catholic Congress and at another place. The union of the Catholic Students' Corps who do not wear colours, has held regular annual conventions since 1866, the sessions convened in a different university town each year with the exception of 1906, when Wiesbaden was chosen. Some sixty societies are thus united; as many societies belong to the union of Catholic Students' Corps in which are included also some Swiss and Austrian organizations. The St. Cecilia Society was founded in 1868 to promote interest in Church music. The eighteenth general assembly took place at Eichstätt in 1908.

Political Congresses.—As political congresses,⁴ up to 1907, should be mentioned the general meetings of the "Windthorstbund", the first session of which was held at Essen, 1895. Their object was to interest young Catholics in politics so as to insure constant recruits for the Centre Party. The membership increasing, it was formed into unions. Since 1897 an annual convention of delegates has met. At Wiesbaden, 1907, it was decided that, in accordance with its statutes and the party it represented, the local unions could not have a denominational character, consequently some of them withdrew from the association.

Educational Congresses.—The Association of Catholic Lawyers, held two meetings without achieving success, and was merged, 1907, with the "Görres Association" for the encouragement of science in Catholic Germany, founded 1876, at Coblenz. Since this first general session, the latter society has held annual sessions in other cities. Its importance lies in the discussions of its different sections. At first, these treated topics in philosophy and history, only of late other sections have been added for the natural sciences, law, and archæology. At times, there are two meetings with lectures for larger audiences, which are attended by members and their guests. A general meeting of the "Association for Christian Art" has taken place annually, the object of which is to encourage Catholic artists and develop religious art. The "Catholic Press Club", largely a Bavarian association, is intended to encourage Catholic journals, Catholic popular libraries, and Catholic culture. Its annual meetings are held at Munich.

Denmark.—In 1886 various Catholic communities, with delegates from Norway and Sweden, united to celebrate the eight-hundredth anniversary of the martyrdom of King Canute (Knut) by a festival at Odense. Some two hundred persons attended, and the exercises were largely religious. In 1889 a meeting was held at Randers to celebrate the seven hundredth anniversary of the canonization of St. Kjeld, the attendance being entirely Danish. In 1908 the Catholics of Copenhagen and its vicinity met to discuss questions concerning the Church and schools for all Denmark. Seven conferences of the Society of St. Vincent de Paul have been held since 1885.

Switzerland.—Besides the general assemblies of the nineteenth century mentioned above, two sessions of a General Catholic Congress, in imitation of the German Congress, have been held in Switzerland: Lucerne, 27-29 September, 1903; Freiburg, 22-25 September, 1906. At Lucerne it was resolved to unite all Catholic associations into one organization, of which the Swiss "Volksverein" (People's Union) was to be the nucleus. This arrangement held until 1905. The central committee of the "Volksverein" now forms the standing committee of the Catholic Congresses, and all Catholic societies of Switzerland, charitable, social, and religious, societies to further education, culture, women's, and trades' unions are affiliated with it. The general organization is divided into cantonal unions, of which several meet annually. Special mention should be made of the first Swiss congress of the Sacred Heart of Jesus at Einsiedeln, 20-21 August, 1907. At the suggestion of Bishop Mermillod international conferences of those interested in political movements for social betterment met annually at Freiburg, Switzerland, 1883-93, to discuss the principles underlying modern political economy. A similar meeting was held here, 20-22 October, 1903; the discussions concerned Christian Socialism in the different countries, trade unions, women's work, and the international protection of labourers. Practical courses in sociology were held at: Lucerne, 1896; Zurich, 1898, and 1904; in 1894 a "Congrès d'étude et de propagande" was held at Freiburg for the French Swiss; after this, these assemblies were adopted by the French Catholics.

Austria (including Bohemia).—Up to 1867 the Austrian General Congress formed part of the German Congress; since this date six independent Austrian congresses have met, the last at Vienna, 16–19 November, 1907. The organization is similar to the German, consequently, the annual meetings of various other societies are held at the same time as the important "Pius Verein" for the development of the Catholic press. Besides the General Congress there are various national congresses: (1) The first congress for Northern Bohemia was held in 1887; the fourth, 1890; after a long intermission the fifth, 1904; the sixth, 1906. (2) The first congress for Lower Austria met, 1894; the second, 1898; the third, 1903; this was followed, 1905, by a meeting of delegates of the Catholic societies of the crown lands; a national assembly was held in 1908. (3) The first Slovenian congress was held in 1892; the second, 1900. (4) A Czech congress was held in 1907 with an attendance of about 30,000 persons. In 1903 the "Union of Catholic Benevolent Societies of the Austrian Empire" was founded; a charity congress met at Vienna, 1901; a second at Graz, 1903; a third at Linz, 1906. The second assembly brought about the formation of the Charity Union for the whole empire. This union includes the benevolent associations of the different crown lands without, however, lessening their independence, and the latter include the individual societies of each part of the empire. Besides the general congress, the imperial organization, in accordance with its statutes, holds semi-annually a convention to which the provincial unions send delegates. During the last decade a number of various other assemblies have been held in Austria, among them a congress for priests, one session; a congress for the veneration of the Blessed Virgin, St. Poelten, 1901; Prague, 1905, etc.

Hungary.—Six Catholic congresses have been held in Hungary since 1900, the first at Stuhlweissenburg, the four following at Budapest, the last, 1907, at Fünfkirchen. The language used is Magyar, but the language spoken at the place of meeting receives recognition. The perpetual president is Count Johann Zichy, Jr., president of the Central Union of the Catholic Societies of Hungary. Up to 1908 the meetings of the congress mainly discussed the press and the needs of Catholic young men. At the last meeting a Catholic Federation, similar to the Volksverein of Germany, was founded. Some of the bishops are greatly interested in the congresses and their results.

Belgium.—In Belgium a large number of societies hold conventions, but owing to the many divisions of Catholic associations statistics are not available.

Holland.—Each diocese of Holland holds a convention from time to time of all its Catholic organizations; the agricultural associations as well as societies for schools, religious or social purposes, are included, but each society holds its own sessions and also joins in a general meeting of all. The "Sociological Week" has been held three times in the last few years. The bishop of the diocese controls the organization.

Spain.—Since 1889 six Catholic congresses have been held, the last in 1903. Lately more attention has been paid to social improvement, especially by means of sociological associations; consequently, the scheme of the Sociological Week is developing. The International Marian Congress met at Lyons, 1900, at Einsiedeln, 1903, and at Saragossa, Sept., 1908.

Argentina.—Up to 1908 two Catholic congresses were held at Buenos Aires, one, 15–30 August, 1884; the other, 20–28 October, 1907. The first aroused great enthusiasm, but the results were meagre. The second had an attendance of about 350 delegates, the president being Dr. Emil Lamarca. Its chief aim was to found a Catholic daily newspaper. Besides this a Catholic Education League was organized to reform the school-laws.

MARTIN SPAHN.

III. IN ENGLISH-SPEAKING COUNTRIES.—In English-speaking countries the term "congress" is usually applied only to gatherings of an important national character, hence the assemblies in the United States of such bodies as the Federation of Catholic Societies, the Central Verein, the Staats-verbund, the Catholic Young Men's National Union, the Catholic Total Abstinence Union, and other associations are treated under their separate titles.

In England, meetings are held annually of the Catholic Truth Society, founded in 1872 by Cardinal Vaughan, at which papers are read on various subjects connected with Catholic interests. The Catholic Truth Society of Ireland, organized in 1903, has also done excellent work by its conventions and the diffusion of sound Catholic literature in popular form (see TRUTH SOCIETIES, CATHOLIC). Federations for the defence of Catholic interests have been formed in the dioceses of Salford, Westminster, and Leeds. This federation movement has done much to organize the Catholic forces, and has been characterized by the number of popular gatherings which it has promoted especially in connexion with the defence of Catholic education. The Catholic Union of Great Britain which represents an influential body of English Catholics; the Catholic Association, to promote Catholic organization and organizes social gatherings; the Catholic Young Men's Society (founded in 1854); the Catholic Education Council, established by the bishops of Great Britain in 1905; the Conference of Catholic Colleges, founded by Cardinal Vaughan 1896, and other bodies representing Catholic education hold annual or occasional conventions. Conferences for specific social or religious purposes are held by such bodies as the Catholic Guardians Association (charitable), the League of the Cross (temperance), the Guild of Our Lady of Ransom (conversion of England). Diocesan or local conventions are found especially in London and Lancashire. The Catholics of Birmingham have held an annual reunion for over half a century. Catholic women are being effectively organized by the Catholic Women's League, founded by Miss Fletcher, London, 1907, with branches in the provinces.

The most imposing religious convocation England has seen since pre-Reformation times was the international congress of the Eucharistic League held in London, 9–13 September, 1908. Vincenzo Vannutelli, Cardinal-Bishop of Palestrina, presided as the legate of the pope—the first occasion on which so exalted a representative of the Holy See had appeared in England since the days of Reginald Pole. France and Germany, as well as all the English-speaking countries, were represented by such a gathering of cardinals as is seldom seen outside of Rome. More than one hundred archbishops, bishops, and mitred abbots, from all parts of the world—even the great missionary fields of Central Africa, Cape Colony, India, Burma, with thousands of the laity, were also in attendance. The religious functions took place in Westminster Cathedral, where, on one of the mornings during the congress, by special permission of the pope, a high Mass according to the Greek Rite was sung.

The United States.—There have been two congresses of Catholic laymen held in the United States. In conjunction with the celebration of the centenary of the establishment of the hierarchy of the United States by Pius VII in 1789, and the dedication of the Catholic University, at Washington, the first Catholic Congress of the United States met in Baltimore, Maryland, on November 11 and 12, 1889. The delegates were selected by the bishops of the various dioceses and were in the main representative of a certain

percentage of the Catholic population in each. About twelve hundred delegates were present. In preparation for the gathering a meeting had been held in Chicago the previous May attended by Archbishop Ireland of St. Paul and Messrs. Henry J. Spaunhorst, of St. Louis, William J. Onahan, of Chicago, and Henry F. Brownson, of Detroit. The objects proposed for the congress were the closer union of all the members of the Catholic body in the country, increased activity of the laity in aid of the clergy in religious work, and a declaration of views on the important questions of the hour, and for the assistance and relief of the poorer classes of society. Cardinal Gibbons, considering the congress as in some sense part of the religious function taking place at the centenary celebration in Baltimore, deemed it desirable that the papers to be read during its sessions should first be submitted to an advisory committee of the hierarchy and named as such committee: Archbishop Ireland (chairman) and Bishops Gilmour, of Cleveland, Maes, of Covington, Ryan, of Buffalo, Harkins, of Providence, and Foley, of Detroit. A committee on Organization, consisting of Messrs. Onahan, Spaunhorst, D. A. Rudd, of Cincinnati, J. D. Keiley, of Brooklyn, and Dr. John Gilmory Shea, the historian, was authorized to issue a call for the congress and to organize it; and a Committee on Papers—Messrs. Brownson, Peter L. Foy, of St. Louis, and M. J. Harson, of Providence—to prepare the work for the several sessions.

Beginning with a solemn pontifical Mass at the cathedral on the morning of 11 November, celebrated by Archbishop Corrigan of New York, and at which Archbishop Gross of Oregon preached, the sessions of the congress were opened in the Concordia Opera House, former Governor John Lee Carroll, of Maryland, presiding. The Most Rev. Archbishop Francesco Satolli, representing the pope, Cardinals Taschereau of Quebec, Gibbons of Baltimore, with representatives of the English and Irish hierarchy, and from Mexico, with many of the bishops of the United States, in addition to the lay delegates, were present. The pope, through Cardinal Rampolla, sent his blessing to the congress, and at the first session addresses were made by Cardinal Gibbons, the Rev. James Nugent of Liverpool, England, Daniel Dougherty, Francis Kernan, Honoré Mercier, Premier of Quebec, followed by the formal papers of the programme: "Catholic Congresses", by Dr. John Gilmory Shea; "Lay Action of the Church", by Henry F. Brownson; and "The Independence of the Holy See", by Charles J. Bonaparte. On the second day, the first paper, "Archbishop Carroll as a Statesman", was read by Honoré Mercier, Premier of Quebec, and at its conclusion a formal resolution sending greetings to the people of Quebec was adopted. Mgr. Gadd who represented Cardinal Manning, Archbishop of Westminster, then tendered the greetings of that prelate and the English hierarchy to the congress, and Peter L. Foy, of St. Louis, read the fourth regular paper, "The New Social Order," which dealt with philanthropic movements in general. Other papers read were "Education: the rights and duties of the State, the Church, and the Parent in that Regard", by Edmund F. Dunne, of Florida; "The Catholic Periodical Press", by George Deering Wolf of Norristown, Pennsylvania; "Societies", by Henry J. Spaunhorst, of St. Louis; "Catholic American Literature", by Condé B. Pallen, of St. Louis; "Temperance", by John H. Campbell, of Philadelphia; "Sunday Observance", by Manly Tello, of Cleveland; "Labour and Capital", by William Richards, of Washington; "What Catholics have Done in the Last Hundred Years", by Richard H. Clarke, of New York; "Church Music", by Heman Allen, of Chicago.

The resolutions adopted rejoiced in the progress of the Church, advocated sound Catholic education, denounced Mormonism, divorce, and secret societies;

Nihilism, Socialism, and Communism; commended Catholic charitable, social, and benevolent societies, the support of the Catholic press, Sunday observance; and pledged loyalty and devotion to the pope and demanded the temporal freedom of the Holy See. It was resolved to hold the next congress during the Columbian celebration of 1892, and in the concluding address of the congress Archbishop Ireland said:—"I am overjoyed to see so many laymen, overjoyed to listen to such magnificent discourses and such grand papers, and to have realized that there is among our Catholics in America so much talent, so much strong faith. As one of your bishops I am ashamed of myself that I was not conscious before this of the power existing in the midst of the laity, and that I have not done anything to bring it out. But one thing I will do with God's help. In the future I shall do all I can to bring out this power."

Second Congress.—The sessions of the Second Catholic Congress of the United States were held at Chicago on 4, 5, and 6 September, 1893, as incidental to the World's Congresses Auxiliary of the Columbus Exposition and World's Fair of that year. Archbishop Feehan of Chicago and William J. Onahan were president and secretary of the committee on organization, by which it was decided that three topics should be treated during the sessions: "The Social Question as outlined by Leo XIII in his encyclical 'Rerum Novarum'", "Catholic Education", and "The Independence of the Holy See". No discussion of the papers was allowed, but each was submitted to its proper section for consideration. Archbishop Feehan opened the congress, and President Bonney, of the World's Congress Auxiliary, welcomed the delegates "on behalf of the World's Exposition and the fifty million non-Catholics who loved justice and religious liberty". Cardinal Gibbons also spoke, and on the second day Archbishop Satolli, who represented the pope at the World's Exposition, greeted the congress in the name of the Holy Father. Other visitors were Archbishop Redwood of Australia, and Count de Kaefstein of Austria. Letters from Cardinals Vaughan and Logue were read.

Judge Morgan J. O'Brien, of New York, presided over the sessions during which these papers were read: "The Relations of the Catholic Church in the Social, Civil, and Political Institutions of the United States", Edgar H. Gans, of Baltimore; "Civil Government and the Catholic Citizen", Walter George Smith, of Philadelphia; "The Independence of the Holy See", Martin P. Morris, of Washington; "Columbus, His Mission and Character", Richard H. Clarke, of New York; "Isabella the Catholic", Mary J. Onahan, of Chicago; "The Colonization of the American Continent", George Parsons Lathrop, of New York; "The Encyclical of Pope Leo XIII on the Condition of Labor", H. C. Semple, of Montgomery, Alabama; "The Rights of Labour and the Duties of Capital", Edward O. Brown, of Chicago, and the Rev. Dr. William Barry of Dorchester, England; "Pauperism, the Cause and the Remedy", Dr. Thomas Dwight, of Boston, and Miss M. T. Elder of New Orleans; "Public and Private Charities", Charles A. Wingerer, of Wheeling, Thomas F. Ring of Boston, R. R. Elliott of Detroit, and the Rev. Francis Maguire of Albany; "Workingmen's Organizations and Societies for Young Men", Warren T. Mosher of Youngstown; "Trade Combinations and Arbitration", Robert M. Douglas, Greensboro; "Temperance", the Rev. James M. Cleary; "Women's Work in Religious Communities", F. M. Edselas; "Women in the Middle Ages", Anna T. Sadlier; "Life Insurance and Pension Funds for Wage Workers", John P. Lauth, of Chicago; "Immigration and Colonization", the Rev. M. J. Callahan, of New York; "The Need of Catholic Colleges", Maurice Francis Egan.

Australia.—Two congresses have been held by the Catholics of Australasia, the first at Sydney in Sep-

tember, 1900, and the second at Melbourne in October, 1904. The first congress followed immediately after the dedication of St. Mary's cathedral, Sydney, on 9 September, 1900, at which Cardinal Moran presided, and three archbishops, eight bishops, two hundred priests, with the Governors of New South Wales, Queensland, New Guinea, and a great congregation of the laity were present. The congress received its impetus from Rome, as affording Catholics an opportunity to manifest their faith and devotion at the close of the nineteenth century; to make non-Catholics understand more about their religion; to answer calumnies such as were made current in the Dreyfus case; to urge a reform of divorce laws; and to promote harmonious relations between capital and labour. In opening the congress Cardinal Moran spoke on "The Catholic Church in the Nineteenth Century", using the progress of Catholicism in the United States as an illustration. The sessions of the congress, which lasted a week, were held in the cathedral and the topics treated included social questions, Catholic apologetics, education, science, and sacred art, ethnology and statistics, history and the Catholic missions.

The second congress met in Cathedral Hall, Melbourne, 24 to 31 October, 1904, the Most Rev. Thomas J. Carr, Archbishop of Melbourne, presiding, and the gathering was made one of the details of the local celebration of the golden jubilee of the proclamation of the dogma of the Immaculate Conception. Its delegates included bishops, priests, and laymen not only from all the States of the Commonwealth, but also from New Zealand and the islands of the Pacific. The topics discussed in the various sections were Marian and religious: Education, History, and Missions, Charitable Organizations, Social Questions, Sacred Art, Science, Christian Woman, Medical Questions, and the Catholic Newspaper. Perhaps the most practical outcome of the gathering was the establishment of the Catholic Truth Society of Australia.

THOMAS F. MEEHAN.

Congress of Vienne. See VIENNE, CONGRESS OF.

Congrua (i. e. CONGRUA PORTIO), a canonical term to designate the lowest sum proper for the yearly income of a cleric. It is sometimes used in the same sense as *competency* (q. v.). Owing to the many charges to which a benefice is liable, it became necessary for the ecclesiastical authority to decree that first and foremost the proper sustenance of the holder of the benefice should be provided for, and that a minimum revenue should be determined, below which his income was not to fall. This was all the more necessary in cases where benefices had been incorporated with monasteries or collegiate churches. Very often the curate of such incorporated benefices received only one-sixteenth of the revenue. To remedy this abuse a number of ordinances were passed which reserved to the person having cure of souls a decent subsistence. The Council of Trent (Sess. XXI, c. iv, de Ref.) leaves the determination of the congrua to the judgment of the bishop. This sum must, of course, vary with the fluctuation of values at different times. It must not be so parsimoniously fixed as to provide for the beneficiary the mere necessities of life. To be a proper income in accordance with the dignity of his state, it should likewise be sufficient to enable him to dispense moderate hospitality and almsgiving and supply himself with books, etc. The Council of Trent did not determine the amount of the congrua. It suggested, however, that about one-third of the revenue of the benefice should be assigned to the vicar. When the benefice can not furnish a proper sustenance,

it is the duty of the bishop to see that several benefices be united or that the deficit be made up from other sources, as tithes, collections, etc. If these means fail, the benefice must be suppressed. It is to be noted that in determining the congrua the bishop can not take into consideration emoluments that are uncertain, such as offerings at funerals or marriages, or Mass stipends; nor what the vicar might earn by his labour; nor what he receives from his patrimony; for these are not fruits of the benefice. When the congrua has been fixed for a certain benefice, it is always presumed to be sufficient, unless it be proved to have been lessened. Hence, if the beneficiary declare the congrua to be insufficient, especially when it has sufficed for his predecessors, the burden of proof rests on him. If the congrua had been sufficient at the time a pension was reserved to another from the fruits of the benefice and later became insufficient, the amount necessary to provide proper sustenance must be taken from the pension, for those who have cure of souls are to be preferred to pensioners. Even a curate who is removable and a temporary vicar are to have a congrua assigned to them. Although, in speaking of the congrua, authors generally limit the question to the inferior clergy, yet all rectors of churches, hence also bishops, are entitled to it. The Council of Trent (Sess. XXIV, cap. xiii) declared that a cathedral church whose revenue did not exceed one thousand *scudi* (about one thousand dollars) should not be burdened with pensions or reservations. The bishop is entitled to an income that will allow him to live according to his dignity. If he have a coadjutor, the ordinary must provide a congrua for him. In many European countries, where church property has passed into the possession of the State, the civil laws have determined the congrua of the clergy more or less liberally. Such laws are yet in force in Austria and Germany, and until the end of 1905 existed in France. The salary for rectors of churches in the United States, fixed by plenary or diocesan synods, has nothing in common with the canonical congrua.

WILLIAM H. W. FANNING.

Congruism (*congrua*, suitable, adapted) is the term by which theologians denote a theory according to which the efficacy of efficacious grace (see GRACE) is due, at least in part, to the fact that the grace is given in circumstances favourable to its operation, i. e. "congruous" in that sense. The distinction between *gratia congrua* and *gratia incongrua* is found in St. Augustine where he speaks of the elect as *congruenter vocati* (Ad Simplicianum, Bk. I, Q. ii, no. 13). The system known as Congruism was developed by eminent Jesuit theologians at the close of the sixteenth century and the beginning of the seventeenth. All Molinists regard actual grace as being really identified with supernatural action, actual grace of will, technically called inspiration, being an act of will. This act invariably begins necessarily, and may become free at a certain point in its duration; so, however, that, should it become free, there will be no complete break in the individuality, but only a modification of the action; the original necessary motion continuing in a modified form after the point where freedom commences has been reached. An actual grace of will which is merely sufficient never gets beyond this point. Whenever the motion does get beyond and become free, it is called an efficacious grace; the term being applied, not merely to the second stage of the action, wherein it is free, but even to the first stage, wherein it was necessary, with a tendency, however, to continue after the crucial point where freedom begins. This tendency to continue as a free act is found in the grace which re-

mains merely sufficient, in the sense that the second, or free, stage may be, but is not, reached in that case; whereas, in the case of efficacious grace, the second or free stage is actually attained.

Hereupon the question arises: what is the precise reason why, of two motions which may be supposed to be similar in every respect as far as their intrinsic constitution is concerned—to be of the same intensity as well as of the same kind—one does not last beyond the critical point where freedom begins, whereas the other does? It is of the essence of Molinism that this is due in part to the will itself continuing to act under the Divine grace or not continuing. To which Bellarmine adds that grace which proves efficacious is given by God to one who, He foresees, will use it freely; whereas He foresees no less surely, when giving a grace which remains merely sufficient, that it will not last in the recipient beyond the initial or necessary stage of its duration. Congruism further insists that the motion passes into the free stage when the circumstances are comparatively favourable (congruous) to it; but when they are comparatively adverse (not congruous), it will not continue, at least as a rule. The circumstances are to be deemed favourable or unfavourable not absolutely, but comparatively, that is, in proportion to the intensity of the grace; for it is plain that, no matter how adverse they may be, God can overcome them by a strong impulse of grace such as would not be needed in other less stubborn cases; and, vice versa, very powerful Divine impulses may fail where the temptation to sin is very great. Not that in the necessary stage of the motion there is not sufficient energy, as we may say, to continue, always supposing freedom; or that it is not within the competence of the will, when the crucial point has been reached, to discontinue the motion which is congruous or to continue that which is not so. The will can continue to act or can abstain in either case; as a rule, however, it continues to act when the circumstances are favourable to that precise form and intensity of motion, thereby becoming efficacious; and does not continue when the circumstances are unfavourable, thereby proving a merely sufficient grace.

To anyone who reflects on the way in which the will is influenced by motives it must be obvious that any movement or tendency that may arise towards a particular object, whether good or evil, is more or less likely to continue according as it harmonizes or conflicts with other motions or tendencies towards objects which are incompatible with the first. The whole theory of reflection or meditation is based on this truth. Concomitant states, in sympathy with the motions of grace, make the favourable or congruous circumstances in which these motions operate; just as a tendency towards vice, if accompanied by other appetites favourable to its working, must be deemed congruous or fortunate as regards the circumstances in which it intervenes. Jansenists, Augustinians, Molinists, Determinists, all should and do agree, therefore, in admitting the strengthening influence of a number of confluent motions and, conversely, the weakening effect on any tendency of a simultaneous tendency in an opposite direction. So far all are Congruists; the difference being that whereas Jansenists and Determinists do not admit that the will is free to resist the stronger combination of motives; and while Augustinians proclaim this in words but seem to deny it in reality; all Molinists maintain that the will can effectually cease to tend towards an object, even though it should be proposed as more perfect than what is seen to be incompatible with it; provided always this more perfect object is not presented as absolutely or infinitely perfect in every way. The will is likely to be drawn, and almost invariably is drawn, by the stronger, i. e. more congruous, motive; it is not, however, drawn of necessity, nor even quite invariably, if Molinism is true. In this, which is the only psychologically intelligible sense

of Congruism, Molina, Lessius, and all their followers were Congruists just as much as Suarez or Bellarmine.

All true Molinists admit and contend that, antecedently to the concession of grace, whether merely sufficient or efficacious, God knows by *scientia media* whether it will actually result in the free action for which it is given, or will remain inefficacious though sufficient. All likewise admit and proclaim that a specially benevolent Providence is exercised towards the recipient of grace when, with His knowledge of conditional results, God gives graces which He foresees to be efficacious, rather than others which He foresees would be inefficacious and which He is free to give. Bellarmine (*De Gratia et Lib. Arbitrio*, Bk. I, ch. xii) seems to accuse Molina, unjustly, of not admitting this latter point. Difference of opinion among Molinists is manifested only when they proceed to inquire into the cause of the Divine selection: whether it is due to any antecedent decree of predestination which God means to carry out at all costs, selecting purposely to this end only such graces as He foresees to prove efficacious, and passing over or omitting to select, no less purposely, such as He foresees would be without result if given. Suarez holds that the selection of graces which are foreseen to prove efficacious is consequent on and necessitated by such an antecedent decree, whereby all, and only, those who will actually be saved were infallibly predestined to salvation, and this antecedently to any foreknowledge, whether of their actual or merely conditional correspondence with the graces they may receive. The great body of the theologians of the Society of Jesus, as well as of other followers of Molina, while admitting that individuals, such as St. Paul, may be, and have been, predestined in that way, do not regard it as the only, or even the ordinary, course of Divine Providence. (See PREDESTINATION.)

Though this difference of opinion has really nothing to do with Congruism, it is probably the main reason why Billuart and other opponents of Molinism have maintained that Suarez and Bellarmine differ from Molina and Lessius not merely as regards predestination, but also as regards the nature of efficacious grace; that the opinion of Suarez is the only true Congruism as distinguished from the pure Molinism of the others; and that Congruism in this sense was made obligatory on all the schools of the Society by Acquaviva, the fifth general (1613). The precise bearing of his decree has been rather hotly disputed, Father Schneemann, Cardinal Mazella, and others maintaining that it did not in any way command a departure from the teaching of Molina. Père de Regnon candidly, and rightly, admits that it did; not as regards the nature of efficacious grace but only as regards predestination. (See CONGREGATIO DE AUXILIIS; GRACE; PREDESTINATION; MOLINA; SUAREZ.)

On Congruism proper the best author is probably SUAREZ, *De Gratia*, Bk. V, ch. xxi, nos. 4 sqq.; IDEM, *ibid.*, *Appendix Prior*, *De verâ intelligentiâ*, etc.; IDEM, *Opusc. I de auxiliis*, etc., Bk. III, ch. xiv. Of recent writers see MAZZELLA, *De Gratia Christi* (3rd ed., Rome, 1882), nos. 677 sqq.; CH. PESCH, *De Gratia* (Freiburg, 1897), Prop. xxiii; SCHNEEMANN, *Controversiarum de Deo Gratia*, diss. v, art. 2, sect. 3; GRAYSON, *Epistola theol.-hist.-polemica* (Bassano, 1785), *Classis I*, n. 1, pp. 5 sqq.; GAZZANIGA, *De Gratia*, Pt. I, diss. v, ch. ii, no. 110. For the views of the other side see MAZZELLA, *op. cit.*, nos. 717 sqq.; SCHIFFINI, *De Gratia* (Freiburg, 1901), IV, no. 275; SCHNEEMANN, *Controversiarum*, etc., sect. 16; de REGNON, *op. cit.*, loc. cit.

WALTER McDONALD.

Conimbricenses (or COLLEGIUM CONIMBRICENSE), the name by which the Jesuits of the University of Coimbra (q. v.) in Portugal were known. On the register of the college at various times appeared the names

of two hundred Jesuits including professors and students. Towards the end of the sixteenth century and the beginning of the seventeenth, voluminous commentaries on the philosophical writings of Aristotle went forth from the university. These commentaries were dictations to the students by the professors and as such were not intended for publication. Still they were actually published, but fraudulently. In order to intercept and disown incorrect and unauthorized editions, Father Claudius Aquaviva, the General of the Society of Jesus, assigned to Father Peter Fonseca, the provincial of the Portuguese province, the task of supervising the revision of these commentaries for publication. Father Fonseca was widely known as the Aristotle of Portugal. The different treatises appeared in the following order:—(1) "Commentarii Collegii Conimbricensis Societatis Jesu in octo libros Physicorum Aristotelis Stagyratæ" (Coimbra, 1591). (2) "Commentarii Collegii Conimbricensis Societatis Jesu in quattuor libros Aristotelis de Cælo" (Coimbra, 1592). (3) "Commentarii etc. in libros meteorum Aristotelis Stagyratæ" (Coimbra, 1592). (4) "Commentarii etc. in libros Aristotelis qui parva naturalia appellantur" (Coimbra, 1592). (5) "Commentarii etc. in libros Ethicorum Aristotelis ad Nichomachum aliquot Cursus Conimbricensis disputationes in quibus præcipua quædam Ethicæ disciplinæ capita continentur" (Coimbra, 1595). (6) "Commentarii etc. in duos libros Aristotelis de generatione et corruptione" (Coimbra, 1595). (7) "Commentarii etc. in tres libros Aristotelis de Animâ" (Coimbra, 1595). This treatise was published after the death of Father Emmanuel Golz (whom Father Fonseca had commissioned to publish the earlier volumes) by Father Cosmas Maggalliano (Magalhães). To it he added a treatise of Father Balthazar Alvarez "De Animâ Separatâ" and his own work "Tractatio aliquot problematum ad quinque Sensus Spectantium". (8) "Commentarii etc. in universam dialecticam Aristotelis nunc primum" (ed. Venice, 1606).

To this last treatise was prefixed a foreword disowning any connexion whatever with the work published at Frankfort in 1604 and claiming to be the "Commentarii Conimbricensis". The portion of the preface here referred to is substantially the following: "Before we could finish the task entrusted to us of editing our Logic, to which we were bound by many promises, certain German publishers fraudulently brought out a work professing to be from us, abounding in errors and inaccuracies which were really their own. They also substituted for our commentaries certain glosses gotten furtively. It is true these writings thirty years previously were the work of one of our professors not indeed intended for publication. They were the fruit of his zeal and he never dreamed they would appear in print". The last treatise was prepared for printing by Father Sebastian Couto. The entire eight parts formed five quarto volumes, enjoyed a wide circulation, and appeared in many editions, the best known being those of Lyons, Lisbon, and Cologne. The Commentaries are in flowing Latin and are supplemented by reliable explanations of the text and exhaustive discussion of the system of Aristotle. Karl Werner says that the Jesuits of Coimbra gave to the world a masterpiece, whose equal is yet to be seen and which has received the admiration that it deserves. Father de Backer gives an exact list of all the editions. The later ones have added the Greek text of Aristotle.

JOHN J. CASSIDY.

Coninck, GILES DE (also called REGIUS), Jesuit theologian, b. 20 Dec., 1571, at Bailleul in French Flanders; d. 31 May, 1633, at Louvain. At the age of twenty-one he entered the Society of Jesus. During

his course of studies at Louvain he had Lessius among his professors, and became the worthy successor of his illustrious teacher in the chair of scholastic theology, which he held for eighteen years. St. Alphonsus considers Coninck a moral theologian of distinction. Though de Lugo impugned his views on many questions, he is acknowledged to have rendered considerable services to moral theology. His style is concise, clear, and direct; on several points his writings are exhaustive. Coninck's principal works are: "Commentariorum ac disputationum in universam doctrinam D. Thomæ", etc. (Antwerp, 1616; enlarged and revised 1619, 1624; Lyons, 1619, 1624, 1625, 1643; Rouen, 1630. The last edition was among the Jesuit works condemned to be torn and burnt, by an act of the parliament of Rouen, 12 Feb., 1762). "De Moralitate, naturâ et effectibus actuum supernaturalium", etc. (Antwerp, 1623; Lyons, 1623; Paris, 1624. The author is said to have left very ample additions intended to appear in the subsequent editions of the work. Father Müllendorff assures his readers that this treatise may be recommended to the theologians even of to-day). "Responsio ad dissertationem impugnantem absolutum moribundi sensibus destitutum", etc. (Antwerp, 1625); "Disputationes theologice" (Antwerp, 1645, published posthumously, though finished twelve years before the author's death).

HUNTER, *Nomenclator* (Innsbruck, 1892), I, 361; MÜLLENDORFF in *Kirchenlex.*, III, 947; SOMMERVOGEL, *Bibliothèque de la c. de J.*, II, 1369 sq. A. J. MAAS.

Connecticut.—This State, comprising an area of substantially 5000 square miles, was one of the thirteen colonies which, in 1776, declared their independence from England. It was among the first to ratify the Federal Constitution under which, in 1789, the republic known as the United States of America established its present form of government. The population enrolled in the census of 1900 was 908,420, and in 1908 undoubtedly exceeded 1,000,000, the increase being in the cities, while the rural communities barely held their own. Manufacturing industries, rather than agricultural or commercial, are the principal resources of the State.

EARLY SETTLERS.—The first English settlement was established on the Connecticut River at Windsor by traders from the Plymouth Colony in 1633. In the same year the Dutch from New Amsterdam had sailed up the river and erected a trading house and fort where the city of Hartford now stands, a few miles below Windsor. The Dutch soon after withdrew, leaving the English to establish the first permanent settlements within the boundaries of Connecticut. Saybrook, at the mouth of the Connecticut River, was settled by the English in 1636, and New Haven by colonists from Massachusetts Bay in 1638. In 1664 the New Haven Colony, then comprising the various settlements along the coast, was forced to unite with those in the Connecticut valley, thus forming one commonwealth thereafter known as Connecticut.

On 24 January, 1639, settlers of Windsor, Hartford, and Wethersfield then "cohabiting and dwelling in and upon the River of Connectecotte and the lands thereunto adjoining" united in the adoption of the first written constitution known in history. The "Fundamental Orders", as they were called, established a Christian commonwealth, and provided for the election of a governor and other magistrates, together with a General Court having both legislative

SEAL OF CONNECTICUT

and judicial powers. This General Court consisted of deputies who were to be Freemen elected from the several towns. The towns named above were each to send four deputies, and other towns thereafter added to the jurisdiction were to send such numbers as the court should judge meet, to be reasonably proportioned to the number of Freemen in each town. In 1661 Governor Winthrop was sent to England to petition the king for a charter confirming such privileges and liberties as were necessary for the permanent welfare of the colony. He secured from the reigning sovereign, Charles II, a most liberal charter which remained the organic law of the commonwealth until the adoption of the present State Constitution in 1818, almost half a century after the State had severed its allegiance to the English Crown. This charter conferred upon the people of the colony the right to elect their own governor and other officers, and the largest measure of self-government. It is of interest to note the territorial boundaries of the colony set forth in the charter. It was bounded on the east by Narragansett Bay, on the north by the line of the Massachusetts Plantation, and on the south by the sea. It was to extend to the west in longitude with the line of the Massachusetts Colony to the South Sea "on the west part with the islands there adjoining".

In 1786 Connecticut ceded to the United States all its public land, reserving, however, about three and a half million acres in what is now the State of Ohio. This was known for many years as the "Connecticut Reserve" or "Western Reserve". The legislature granted some five hundred thousand acres of the reservation to the citizens of the towns of Danbury, Fairfield, Norwalk, New London, and Groton to indemnify them for special losses during the War of the Revolution when these towns were burned by the British troops. The grant was afterwards known as the "Fire Lands". In 1795 a committee was appointed to dispose of the reservation. It was sold to a syndicate organized to effect the purchase for \$1,200,000. The income from this fund is devoted to the support of common schools, and the State Constitution declares it shall never be directed to any other purpose.

The present Constitution was adopted in 1818. Under its provisions the town is the basis of representation in the lower house of the legislature rather than population. This has brought about, by the growth of the larger cities and towns, a most undemocratic form of government. The cities of New Haven, Hartford and Bridgeport, each having a population of more than 100,000, have only two representatives in the lower house, while a large number of towns with a population of less than 1000 have the same number of representatives. In 1902 a constitutional convention was held in the hope that this inequitable system of representation would be corrected. The convention was so constituted, however, as to make any hope of a radical change of the system of representation impossible. The convention numbered 167 delegates, one from each town. The constitution finally proposed by this convention made but a slight change in the basis of representation, and was rejected by the people when submitted for their ratification.

The early settlers of Connecticut were for the most part English of the upper middle class. Their ministers, many of them, had been clergymen of the Established Church who had been deprived of their English livings for non-conformity. Their devoted congregations followed them across the Atlantic and founded the settlement at Massachusetts Bay. From thence came chiefly the first emigrants, attracted by the fertile soil of the Connecticut valley and the sequestered harbours along the Sound. Before the War of the Revolution, however, Ireland had contributed quite a noticeable percentage to the population of the various settlements. This seems to be established from the considerable number of Irish names disclosed in the

official military documents of that period. The vast majority of the population, however, remained distinctively English of Puritan origin until the great emigration set in from Ireland, prompted by the disastrous famine in 1846. There is also a considerable German element distributed pretty evenly throughout the State. Since the close of the Civil War French Canadians have come down from the Province of Quebec, and have settled more numerous in the eastern part of the State where they have found employment in the manufacturing towns. More recently the Italians, in large numbers, have located in the cities and larger towns. New Haven, alone, it is estimated, has an Italian population of upwards of 20,000. Russian Jews have also become very numerous, principally in the cities, while Scandinavians, Lithuanians, and Greeks are becoming an increasingly prominent element of the urban population. In common with all the other States of the Atlantic seaboard, while the language and customs of the Anglo-Saxon are still overwhelmingly dominant, the strain of English blood is becoming more and more attenuated with the passing of each decade. In colonial times and during the earlier days of the Republic, Connecticut occupied a place of distinction and commanding influence among her sister commonwealths. At the close of the War of the Revolution she was the eighth in respect to population among the thirteen States that formed the Union, having by the census of 1790, 238,141 souls. She furnished, however, 31,959 soldiers to armies of the Revolution, thus exceeding by 5281 the number furnished by Virginia, then the most populous of all the States, and having at that time more than three times the population of Connecticut. In this respect Connecticut was surpassed only by Massachusetts, which furnished 67,097 soldiers, from a population of 475,257 souls.

RELIGIOUS POLITY.—The planters of the Connecticut River towns, in formulating their first constitution in 1639, were all of them Puritans of the sect subsequently known throughout all of the New England States as Congregationalists. The distinctive theory of their ecclesiastical polity regarded each congregation as a self-governing body, with power to formulate its own creed and prescribe its own conditions of membership. They repudiated all allegiance to any central ecclesiastical authority, and the various congregations or churches, as they were then called, were independent and self-governing, bound to each other by ties of fellowship and community of interest, rather than by canons prescribed by any superior ecclesiastical authority. (See CONGREGATIONALISM.) There was from the very first, however, the most intimate relation between the churches and the civil authority. Church membership was an indispensable qualification for civil office, and for the exercise of the rights of Freemen. In the preamble of their first constitution they declared that they were entering into a combination or confederation "to maintain and preserve the liberty and purity of the Gospel of our Lord Jesus which we now profess, as also the discipline of the churches which according to the truth of the said Gospel is now practiced among us". Freedom of religious worship, as now understood and demanded everywhere in America, was a principle to which they accorded but scant and reluctant acceptance. For a century and a half Congregationalism was the established religion supported by public taxation. Other Christian sects were merely tolerated. Not until the adoption of the Constitution of 1818 did the principle of true religious freedom receive governmental recognition. It was then declared that it being the duty of all men to worship the Supreme Being, and to render their worship in the mode most consistent with the dictates of their consciences, that no person should by law be compelled to join or support, be classed with, or associated to any congregation,

church or religious association. It was further declared that every society or denomination of Christians should have and enjoy the same and equal powers, rights, and privileges. Among such powers was specified authority in such denominations to support and maintain ministers or teachers, and to build and repair houses for public worship by a tax on the members of such society only, to be laid by a majority vote of the legal voters assembled at any society meeting warned and held according to law or in any manner. It was further provided that any person might separate himself from the society or denomination of Christians to which he belonged by leaving a written notice to that effect with the clerk of the society, and should thereupon cease to be liable for any future expenses incurred by such society. This power of taxation has for many years ceased to be exercised by the constituent societies of any of the denominations, which are now usually maintained by pew rents, voluntary offerings, and the income of specific charitable trusts where such exist.

The observance of Sunday has always been strictly provided for by law. The statutes now in force had their origin about the beginning of the eighteenth century. They forbid any secular business or labour, except works of necessity or mercy, the keeping open of any shop, warehouse, or manufacturing establishment, the exposing of any property for sale, or the engaging in any sport on Sunday, and the person offending may be fined not to exceed fifty dollars. These statutes also provide that any person who is present at any concert of music, dancing, or other public diversion on Sunday, or the evening thereof, may be fined not more than four dollars. The keeping open of saloons and sale of liquor on Sunday is also prohibited under severe penalties. These laws still have public opinion strongly in their favour, and are in consequence pretty generally respected and enforced. Special laws allow the running of railway trains and trolley cars on Sundays during such hours and with such frequency as the State railroad commissioners may, from time to time, prescribe.

All judges and magistrates, clerks of courts, and certain other officials in special cases are empowered by statute to administer oaths. An oath of faithful performance is usually required from the incumbent before entering upon the duties of any public office. Administrators and others when making return of the duties they have performed are required to make oath that the duties have been faithfully performed or that the return they make thereof is true and correct. The ceremonial of the oath universally employed is by raising the right hand in the presence of the magistrate administering it, who recites the statutory form, always beginning with the words "You solemnly swear", and ending with the invocation "So help you God". For many years the statutes have permitted any person having conscientious scruples to affirm in lieu of being sworn. Such persons "solemnly and sincerely affirm and declare", "upon the pains and penalties of perjury". If the authority administering the oath shall have reason to believe that any other ceremony will be more binding upon the conscience of a witness, he may permit or require any other ceremony to be used.
